The Weld County Lamb Feeders Association is a voluntary association formed for the purpose of promoting and advertising lamb. It has about 175 members and has been in existence since 1928. I am President of this Association and have held that office since 1928. Of course, I am also a member of the Association. The Association which I represent and, I, as an individual, have about the same interest in this proceeding. If there is any difference in that respect, it is only because I also feed cattle in addition to lambs, whereas the essential function of the members of the Association is lamb feeding.

Perhaps, it will simplify matters if I explain the nature of my own feeding operations in the Greeley area. Myself and Farr Farms feed about 25,000 lambs a year, and from 10,000 to 12,000 cattle. These lambs are purchased wher-

ever the opportunity affords, and taking into consideration [fol. 2105] such factors as price, freight rate and time of delivery. In the past, we have purchased and shipped lambs from Idaho, Utah, Montana, Wyoming, New Mexico, Arizona and southwest Colorado. As to cattle, these have been bought and shipped from practically all states in the Inter-Mountain country, including Idaho and Montana, and in Texas and the southwest.

The lambs which we feed eventually go to Denver or Missouri River markets like Kansas City and Omaha, and even to points farther east. Our cattle, after feeding, go mostly to Denver, but some of these reach the Omaha and other eastern markets.

My purpose in appearing here in the dual capacity which I have just explained is to register my protest against the proposal of the Denver & Rio Grande Western Railroad to secure the opening of the so-called Ogden Gateway, as against the Union Pacific. At the present time sheep and cattle are fed extensively in the Arkansas Valley in southeastern Colorado, and I want to emphasize that these operations are carried on in competition with similar feeding operations in northern Colorado conducted by members of our Association, including myself. While I am not thoroughly versed in the matter of freight rates, it is my information that rates on cattle and sheep from Idaho and Montana to Omaha, for instance, via feed yards in northern Colorado, are predicated upon the Union Pacific direct short line distance. Because of the longer distance involved the rates from Idaho and Montana to Omaha via Denver and the Arkansas Valley are somewhat higher than our rates. For instance, the rate from Dillon, Montana, at which [fol. 2106] point we have purchased and shipped a large number of sheep, to Omaha, after stopping at Greeley, Colorado, for feeding in transit, is $1.12 per cwt., while the rate via Denver and the Arkansas Valley to Omaha is $1.22, a spread of only 10 cents. On the other hand, when I and members of our Association go into New Mexico for sheep, and we have done this to a considerable extent in the past, we are, because of the longer distance involved through Greeley thence to Omaha as compared with that through Arkansas Valley to Omaha, forced to pay a rate which is 12 cents higher from such a representative shipping point

as La- Vegas, New Mexico, while the differential from Gallup, New Mexico, where we have purchased a large number of sheep in the past, is 15 cents.

The point that I want to emphasize is that at present, feeders in the Greeley, Colorado, district (Weld County), by reason of the shorter distance involved from Idaho and Montana, have the rate advantage in competition with feeders in the Arkansas Valley, who might purchase lambs and cattle in that territory. On the other hand, Arkansas Valley feeders have even a greater advantage than we do by reason of the shorter distance involved when they purchase lambs or cattle in Texas and New Mexico in competition with us when we find it necessary to go into those areas. I am not complaining about this situation, but as I understand the Rio Grande's proposal here, they now seek the same rate on cattle and sheep from Idaho and Montana via Ogden and points in the Arkansas Valley to the ultimate market that now applies via the short route of the Union Pacific through northern Colorado. Thus, our Arkansas [fol. 2107] Valley competitors would be placed on a rate equality with feeders in northern Colorado, but we would continue to be at a distinct disadvantage when we go into the Southwest for lambs and cattle. To me, the objective of the Rio Grande Railroad here is unfair and economically unsound—unfair because it seeks an advantage for itself and for feeders on its railroad at the expense of the Union Pacific Railroad and feeders in northern Colorado; uneconomic because it results in the wasteful use of transportation and the use of a route that is expensive by reason of being substantially longer and because it would involve at least two more interchanges than are now required over the direct route of the Union Pacific.

For the reasons I have explained, we earnestly hope that the Commission will deny the petition of the Rio Grande Railroad. My appearance here today was specifically approved by the Board of Directors of the Weld County Lamb Feeders' Association by resolution adopted on March 11, 1950. I have reproduced that resolution and an excerpt from the Minutes of that meeting of the Board of Directors, which I offer now as Exhibit No.—

[fol. 2108] EXHIBIT TO VERIFIED STATEMENT No. 44

I. C. C. Docket No. 30297

Witness: H. W. Farr

Extract from Minutes of Meeting of Board of Directors of Weld County Lamb Feeders' Association Held at Greeley, Colorado, on the 11th Day of March, 1950

President Farr brought up for discussion the proceeding now pending before the Interstate Commerce Commission involving complaint filed with that body by the Denver and Rio Grande Western Railroad Company against Union Pacific Railroad Company and certain other railroads in the country in which the Rio Grande Railroad seeks an order from said Commission requiring the opening up of the so-called Ogden Gateway on traffic; including sheep and cattle, moving between points in Idaho, Montana and the Pacific Northwest, on the one hand, and certain eastern territory.

He explained his reasons for feeling that this Association and its members have a direct and vital interest in this proceeding because if the Rio Grande Railroad is successful in its complaint before said Commission, then there will immediately be involved the freight rates on sheep and cattle moving from the States of Idaho, Montana, Oregon and Washington to the east over the Union Pacific and the Rio Grande Railroad through Ogden to competitive feed yards located in southeastern Colorado. He explained that if the Rio Grande Railroad should succeed in its endeavor here, it would have the very effect of placing these competitive feed yards on a relatively more favorable freight rate basis than applies to feed yards in northern Colorado, and [fol. 2109] that by reason of that fact, the members of this Association would be seriously affected. Accordingly, he recommends that this Association take an active part in the proceeding in order to represent and protect the interests of its members.

Now, therefore, on motion, duly made and seconded, it was resolved that this Association should interest itself in and take an active part in the above mentioned proceeding in opposition to the contentions of and relief sought by the Rio Grande Railroad, and

Be it further resolved, that Mr. H. W. Farr, President of this Association, be and he is hereby authorized to attend the forthcoming proceeding scheduled to be held at Boise, Idaho, on April 3rd, 1950, to represent and speak for this Association and its members in opposition to the petition of the Rio Grande Railroad, and to take such other and further action as he deems advisable and necessary to actively oppose said petition on behalf of this Association and its members.

I, W. D. Farr, Secretary of the Weld County Lamb Feeders' Association, do hereby certify that the above and foregoing is a true and correct copy of the preamble and resolutions duly adopted by the Board of Directors of the said Association at a meeting of said Board held at Greeley, Colorado, on the 11th day of March, 1950, at which a quorum was present.

Dated at Greeley, Colorado this 11th day of March, 1950.

(S.) W. D. Farr, Secretary, Weld County Lamb Feeders' Association.

[fol. 2110] WELD COUNTY LAMB FEEDERS ASSOCIATION

Greeley, Colorado
March 11, 1950

A special meeting of the Board of Directors of the Weld County Lamb Feeders Association was held at 701 Seventh Street, Greeley, Colorado, at 1:30 p. m. Saturday, March 11th. The following resolution was unanimously adopted at this meeting:

Resolved: That the President be authorized to appear on behalf of the Weld County Lamb Feeders at the Ogden Gateway hearing to be held in Boise, Idaho, before the Interstate Commerce Commission, beginning April 3, 1950.

Signed by the following Directors present:

H. W. Farr.
C. E. Veden.
Otto Wykert.

John S. Peterson.
David Simpson.
Henry Danielsen.
Geo. L. Andersen.

[fol. 2111] VERIFIED STATEMENT No. 45

I. C. C. Docket No. 30297

Statement of Harold Smillie, Eaton, Colorado

My name is Harold Smillie. I live at Eaton, Colo. I am a partner in the firm of Gilbreath Bros. & Smillie of Eaton and Monte Vista, Colorado, which engages in the business of buying, feeding and selling sheep. I should also mention that my other business connection consists of being a member of a partnership with J. D. Wilson of Eaton, which is entirely a commission business engaged in selling feeder lambs, which total 40,000 to 60,000 annually, for various clients. I have been in the sheep business for about 30 years.

We handle approximately 8,000 to 10,000 sheep a year at Eaton. The lambs which we feed are shipped mostly to Missouri River points and east. About half the lambs which our firm feeds at Eaton, Colorado were secured last year from the Dillon, Montana area and the remainder from Wyoming. The transportation movement from both Montana and Wyoming to Eaton was over the lines of the Union Pacific entirely.

I am appearing in this proceeding in opposition to the complaint of the D&RGW Railroad Company for the reason that as I understand it the rates from Idaho and Montana available to lamb feeders in southeastern Colorado will be reduced if the Rio Grande is successful here, but that no change in my rates will be made. Distances from Idaho and Montana via northern Colorado, such as Eaton, to eastern markets are substantially shorter than via the route of the Rio Grande through the Arkansas Valley where other feeders are located and their rates are higher, as they should be, because of the longer distance involved.

[fol. 2112] From Texas, New Mexico and Arizona the rates to eastern markets are lower through Arkansas

Valley feeding points than through northern Colorado because of the shorter distances, and I have no complaint to make about that. I do object, though, to the opening of a new route via the Rio Grande which will reduce the rates from Idaho and Montana to the east via the Arkansas Valley and cause me to lose the advantage which my shorter distances entitle me to unless the same equalization of rates is made from Texas, New Mexico and Arizona to the east via Eaton. It seems to me that northern Colorado and the Arkansas Valley now both have what their shorter mileage entitles them to in the way of rates and I am opposed to any change that would give our competitors an advantage to which I do not think they are entitled. There was a time when in our business we sold on commission and shipped a large number of lambs from Texas and the southwest but because of the higher rates from that territory through northern Colorado to the east, we are not able now to handle any large number of animals from that territory in competition with the Arkansas Valley.

So far as my own operations are concerned, I want to close by saying that the service of the Union Pacific rendered on my lamb shipments from Montana in the past has been very satisfactory.

[fol. 2113] VERIFIED STATEMENT No. 46

I. C. C. Docket No. 30297

Statement of Walter J. Gooding Salt Lake City, Utah.

My name is Walter J. Gooding. I reside in Salt Lake City, Utah. I am one of the partners of the Inland Wool Company, a co-partnership, with principal place of business at Salt Lake City, Utah. The Inland Wool Company is engaged in the commission business and purchases wool from growers in the States of Idaho, Oregon, Utah and Wyoming. The wool purchased from those locations is shipped to the Inland Wool Company and received in its warehouse at Salt Lake City, located on Union Pacific tracks. After receipt of the wool in the warehouse at

Salt Lake City, it is graded and then shipped to manufacturers and top makers in various parts of the country, namely, Rhode Island, New Jersey, Massachusetts, New York, Kentucky, Illinois, Pennsylvania and Oregon.

During the year 1949, the Inland Wool Company received from the points above mentioned 75 carloads of wool, all routed via the lines of the Union Pacific, and shipped from Salt Lake City 88 carloads of wool, which would include the 75 carloads above referred to, plus wool received in its Salt Lake City warehouse via truck from local areas. The 88 carloads of wool shipped from Salt Lake City were transported via the lines of the Union Pacific and delivered by that railroad to eastern connections at Council Bluffs, Iowa, or Kansas City.

In addition to shipments above referred to, the Inland Wool Company also receives wool in its Salt Lake City plant shipped via the D&RGW from Rio Grande local points, and such wool, when graded and shipped from the [fol. 2114] Salt Lake City warehouse, is routed via the D&RGW so as to take advantage of the transit.

There is no advantage nor would there be any advantage to the Inland Wool Company to route via the lines of the D&RGW shipments of wool received in its Salt Lake City plant which originated on the lines of the Union Pacific at the points above mentioned, nor has the Inland Wool Company ever requested the Union Pacific or the D&RGW to establish joint rates with respect to such shipments since the services and facilities of the Union Pacific are adequate for its needs with respect to this wool.

The Union Pacific has rendered satisfactory and adequate service for the requirements of the Inland Wool Company and has been reasonably prompt in supplying cars for its shipments. No benefit would be derived by the Inland Wool Company with respect to shipments of wool originating on the lines of the Union Pacific if joint rates were established via the D&RGW as our company has had no occasion to route any such shipments via the lines of the D&RGW, nor does not anticipate that it ever would require such routing. The route of the Union Pacific is more direct on wool originated on its lines and there is an advantage to the Inland Wool Company in shipping via the

direct route and in avoiding delay on such shipments which would be occasioned if the wool were interchanged to the D&RGW at Ogden and there handled by that line to Salt Lake City, where it would again be necessary to interchange back to the Union Pacific for delivery to our warehouse on the tracks of the Union Pacific.

It is my understanding that the D&RGW in this case seeks to have diverted to its lines a substantial amount of traffic presently moving via the lines of the Union [fol. 2115] Pacific. Any loss of revenue to the Union Pacific would necessarily affect the economic condition of that railroad and might result in an application for increases in rates or curtailment of service, either of which would work to the disadvantage of the Inland Wool Company.

I expressed my views with respect to this case in a letter to Mr. H. S. Bennett, Chairman, Public Service Commission of Utah, under date of November 18, 1949, reading as follows:

"9-7671

November 18, 1949

Mr. H. S. Bennett, Chairman
Public Service Commission of Utah
Salt Lake City, Utah

Dear Sir:

We are substantial shippers of wool in the State of Utah to various markets and practically all of our tonnage moves via railroad.

We are especially interested in the so-called "Ogden Gateway Case" that is to be heard by the Interstate Commerce Commission, December 12th, in Salt Lake City and we respectfully request that the Utah Commission intervene in behalf of the Union Pacific Railroad in these proceedings.

The present service from the territory in question is more direct via Union Pacific and movement by the Denver and Rio Grande Western would result in delay of at least 24 hours on the Eastbound movement. The present service is adequate and any impairment of

the Union Pacific to serve the territory in question would be detrimental to our best interests.

Respectfully, Inland Wool Company, (Sgd.) W. J. Gooding

I am, therefore, appearing in this case as a witness for the Union Pacific Railroad in opposition to the petition of the D&RGW.

[fol. 2116] VERIFIED STATEMENT No. 47

I. C. C. Docket No. 30297

Statement of Paul Blood, Morrill, Nebraska

My name is Paul Blood. I reside near Morrill, Nebraska, and am engaged in the livestock feeding business, principally at South Morrill, but also at numerous other places in the North Platte Valley, in Nebraska and eastern Wyoming. I am President of the Colorado-Nebraska Lamb Feeders' Association, but I am appearing here only as an individual. I have been engaged in this business about 15 years. Most of my feeding operations are adjacent to the Union Pacific Railroad Company.

In my business, I feed approximately 75,000 lambs and 1,000 cattle each year and also engage in order buying, principally lambs (sheep) for various purchasers.

Sources of supply of feeding stock, especially lambs (sheep) are varied, ranging through New Mexico, Arizona, Colorado, Wyoming, Utah, Idaho, Montana and California, depending upon market conditions and availability. Idaho is usually one of the principal sources. For example, in the Fall of 1949, I received 42 carloads (about 12,000 head) from that area. Some of these were direct purchases and some from the market at Ogden on Union Pacific Idaho transit billing and all were shipped to me in the North Platte Valley via Union Pacific Railroad Company.

There have been times, especially in recent years due to reduced lamb population in the country, when supplies were difficult to obtain, that we have on several occasions purchased feeder stock without regard to transit con-

[fol. 2117] siderations. This, however, is not generally economical and stock which can feed in transit without charge for out-of-line haul is naturally more desirable to handle.

Feeder lambs from Idaho can move on through rate via the Union Pacific Railroad to the East via North Platte Valley points stopping there for feeding in transit, without additional charge other than the usual transit charge. From Arizona and New Mexico, on the other hand, for example, there is a substantial charge for out-of-line haul when moved via Pueblo and Denver to Union Pacific Railroad North Platte Valley stations for feed, thence to eastern markets.

There are feeders in the Arkansas Valley in Colorado (east of Pueblo) who are in direct competition with my operation, who buy and sell in the same general markets. These Arkansas Valley feeders have an advantage on New Mexico or Arizona lambs by reason of the lower rates applying via those points. These Arkansas Valley feeders may use Idaho lambs at an added charge of 8½ cents per 100 pounds when moving via Union Pacific-Denver and connecting lines, however, this 8½ cent added charge is less than the similar added charges applying on the New Mexico and Arizona lambs fed in the North Platte Valley which varies somewhat according to origin.

If the Commission should grant the petition of the Denver & Rio Grande Western Railroad in this case, the Arkansas Valley feders would in almost all instances be able to purchase feeder lambs in Idaho, moving them on through rates via Ogden, thence D&RGW, feeding in transit in the Arkansas Valley at no additional charge other than the tran- [fol. 2118] sit charge, placing them on an equality with my operation from that territory, and still retaining their advantage on the New Mexico and Arizona origins. This would also be true of any feeding operation on the D&RGW in Colorado west of Pueblo or Denver, or between those two points. This would work a definite hardship on my business by adding competition in purchasing in the Idaho origin territory. The same hardship would be felt by all other feeders in the Association and in this North Platte Valley area.

I have never, in my experience, felt any need for through routes via the D&RGW to and from Idaho and the Pacific Northwest territory involved, nor do I anticipate any such need. Such through routes if established would be of no advantage whatever to me, but would result in a definite disadvantage, and could in certain circumstances result in a curtailment of my operations.

[fol. 2119] VERIFIED STATEMENT No. 48

I.C.C. Docket No. 30297

Statement of W. E. Anderson, Topeka, Kansas

My name is W. E. Anderson. I am one of the partners in Anderson Brothers, a produce firm, with houses at Topeka, Salina, and Hays, Kansas. I reside in Topeka and am in charge of the Topeka house. Our firm was started by my father, W. O. Anderson about 61 years ago. I grew up in the business, and have been operating the Topeka house since 1925. I am a past president of the United Fresh Fruit & Vegetable Association, having served in that capacity in 1937 and 1938.

For about the past 8 or 9 years, our firm has received annually approximately 2,000 cars of fresh fruits, vegetables and paper products. The majority of these cars have moved to our business locations from the Pacific Northwest, Idaho, Utah and from California and the southwest. All of our places of business are located on the Union Pacific Railroad and practically all of our shipments have moved over the lines of that road so far as possible. The Union Pacific's service has been very satisfactory from the standpoint of supplying cars, and moving our shipments to our destinations. Its routes and service are adequate and sufficient for our purposes. It furnishes excellent tracing service, and virtually daily, we are provided with list of cars, by car numbers and commodities, and location or progress of our cars in transit.

The subject matter of this proceeding has been explained to me, and I am familiar with what is involved. In my busi-

ness, I have never felt any need, and I do not anticipate any future need for the routes and rates sought by the [fol. 2120] D&RGW in this case, nor have I asked either the D&RGW or the Union Pacific to establish such routes. There is no way that I can think of that I could derive any use or benefit from them in the form of transit, or reconsignment or diversions.

In the fresh fruit and vegetable business, time is of utmost importance in the movement of our shipments. Union Pacific's service has been very satisfactory and I can see no present or future need for a longer route from the Pacific Northwest by way of the D&RGW which would, of course, require more time in transit.

In our territory, any dealer with any volume of business would not have use for a stop to partly unload privilege except in an unusual case, for example, where a commodity was very scarce or the price exceptionally high. This might occasionally apply with respect to new onions from Texas, as they are very highly perishable, and the price is high, but potatoes and onions from Idaho move in substantial volume regularly. In addition, the cost of the stop to partly unload privilege would be prohibitive on all except unusual shipments.

As I understand it, the D&RGW, if successful in this case, will be in position to divert traffic now handled by the Union Pacific to and from points on its lines, and to its connecting lines, with the result that Union Pacific would lose substantial amounts of traffic, and consequently its revenue thereon. It has been my experience that when traffic and revenues fall off, the service of the railroad suffers, and the shippers are hurt thereby. Any deterioration in service on the Union Pacific, either line-haul service, switching service, or even reduction in other services, such as the [fol. 2121] tracing service I mentioned, would be a disadvantage to me and would be injurious to our business.

I am familiar with what is known as the "pocket market" situation, but it plays only a minor part in our business, and our rejections of shipments for any cause is so small as to be almost negligbile. However, any fruit and vegetable shipper accepts the "pocket market" as a normal incident of their business, and is bound to encounter it some time,

and will expect it, and make his shipping and selling arrangements accordingly.

For the reasons I have stated, I am opposed to the position of the D&RGW in this case.

[fol. 2122]. VERIFIED STATEMENT No. 49

I.C.C. Docket No. 45-30297

Statement of Leeland U. Grieve, Savery, Wyoming

My name is Leeland U. Grieve. My address is Savery, Wyoming. I am a cattle and sheep rancher and as a livestock shipper am interested in the service of the Union Pacific Railroad. My ranch holdings are located near the Colorado-Wyoming border south of Rawlins, Wyoming and we have access to both the former Denver & Salt Lake Railroad (now Denver and Rio Grande Western) and the Union Pacific. Years ago our stock, that is, from my ranch and others in the same vicinity, was trailed over Battle Mountain to Encampment, Wyoming a station on the Saratoga & Encampment Valley Railroad, operated by the Union Pacific. For some years now since the highways have been improved in our section, it is more economical to truck the livestock to the railroad, than to trail. We move most of our stock since the trucking started to the stockyards on the former Denver & Salt Lake Railroad because the highway has been better and the distance shorter than to go to Rawlins or Wamsutter on the Union Pacific. However, we do still ship some stock on the Union Pacific and because of the generally unsatisfactory service on the former Denver & Salt Lake road in recent years, I recently joined with a number of other ranchers in our section, asking the Union Pacific to construct a stock shipping yards at Creston, a station at the junction of the Baggs highway from our section, with Highway 30 where it crosses the Continental Divide west of Rawlins. This would give us about the same trucking distance as it is to Craig, Colorado, on the former D.&S.L. Line.

[fol. 2123] I have been in the ranching business in Wyoming all of my life and in addition have been active in

handling stockmen's problems as well as other civic affairs. At present, I am President of the Snake River Cattlemen's Association, a local organization with a membership of about 56 livestock shippers. I am also a member of the Executive Board of the Wyoming Stock Growers' Association; on the board of the Green River Development Company, handling reclamation development. I am a member of the Wyoming legislature as State Senator from Carbon County. Because of these activities, I am frequently in contact with ranchers and other business people in our state and am familiar to a considerable extent with their problems, including the rail transportation service needs of ranchers.

The Denver & Rio Grande Western has only one stock train a day, which requires ranchers to have their stock ready to load at a specified time to be picked up on that train. This is difficult because delays are encountered getting stock into the pens at the ranch to load, loading onto the trucks and hauling 50 miles or more to the railroad which has no facilities to feed and water livestock which are held over in the railroad stock pens. Various delays are possible that make it difficult to reach the railroad at a specified time.

On the Union Pacific with a number of fast freight trains moving each day, we are assured of service even though we are delayed getting the stock to the railroad yards.

As I understand this case, the Denver & Rio Grande Western Railroad are asking that a route through Ogden be opened to permit that line to handle traffic from the Northwest via Denver for example. This, of course, would [fol. 2124] reduce the number of trains handled over the Union Pacific and to that extent would give less service to the Wyoming livestock shippers using that line. While this would increase the business on the Denver & Rio Grande, it would not in any way help our present service, or improve the service on the former Denver & Salt Lake Line which is operated by the Rio Grande. The Rio Grande has had difficulties in clearing livestock shipments at Utah Junction without delay. In many cases, livestock are held over at this point for from 12 to 18 hours. The Commission men naturally don't like this kind of service and neither

does the shipper for the reason that it is financially unprofitable to both of them, besides it's cruel to the stock in transit. The service situation in our territory has reached the point where unless we can get some help from the Union Pacific for a stock yards at Creston, we ranchers will have to arrange for trucks to get our stock to Denver. We have objections to trucking for the reason we do not get as good a sale by truck as by rail shipments. There is also a benefit from railroad billing, as the railroads permit a sale in transit on the Denver market with the buyer taking up the rail billing at the rate from origin, when stock is moved beyond Denver to markets, packers or feed lots. With my ranch located tributary to both the old D.&S.L. line and the Union Pacific and my attendance at conventions or other meetings as a representative of the Stock Growers Association, I come in contact with livestock shippers using the old D.&S.L., D.&R.G.W., Union Pacific and other railroads. Also as a shipper on both the D.&S.L. and Union Pacific; I am familiar with the service and opinions expressed by others, including the members of the Snake River Cattle-[fol. 2125] men's Association. I can say from my own knowledge and the opinion of others shipping stock, the Union Pacific has a reputation for giving better local service on livestock than either the former D.&S.L. or D.&R.G.W. We have also had less difficulty getting stock cars during the heavy shipping season as the Union Pacific have the reputation of filling the orders on time, while delays have been encountered on the D.&S.L. and D.&R.G.W. lines.

I wish to enter my protest to the opening of the route through Ogden. I and other land owners are taxed for the cost and maintenance of the Moffat Tunnel. When the D.&R.G.W. acquired control of the D.&S.L., it acquired control of the tunnel. Since then, the service on the D.&S.L. has become very poor. The result is that after the D.&R.G.W. acquired the tunnel which we are paying for, it gave preference to its service over the D.&R.G.W. Line and deprived us of the good service we previously had on the D.&S.L. Line. I regard this as unfair and as an improper rail transportation policy, as we who are paying for the tunnel are entitled to service through the tunnel sufficient to get our livestock to market. What the D.&R.G.W. is

attempting to do in this proceeding is to divert from the Union Pacific traffic the Union Pacific has developed, which appears to be a repetition of the tactics or business methods used to deprive us of service over the former D.&S.L.

[fol. 2126] VERIFIED STATEMENT No. 50

I.C.C. Docket No. 30297

Statement of L. G. Harding, Chugwater, Wyoming

My name is L. G. Harding. I am a resident of Chugwater, Wyoming, operating ranches in that vicinity, also raise sheep on ranches near Rock River, Wyoming; have a cattle ranch in South Dakota and feed lambs in Worland, Torrington, Wheatland, Wyoming, with extensive sheep feeding operations in Kansas in feed lots located on the Union Pacific, Missouri Pacific, Rock Island and the Santa Fe lines. I was raised on a farm and have been in the livestock business all of my life. I have lived on a ranch in Wyoming since 1916, attended schools and the University at Laramie, Wyoming, and have been on stock judging teams while in school. I have been in the sheep feeding business since about 1932 and a lamb and wool buyer since 1934. We feed from 20,000 to 50,000 lambs a year at the present time and will lamb about 10,500 ewes from our sheep raising operations this year. In addition, I buy wool for Webb & Company of Philadelphia and buy fat lambs for Morrell & Company and Hormel & Company.

Our feeding operations are carried on all over the wheat feeding area of western Kansas, also western Nebraska, southeastern Wyoming and some at Worland in northern Wyoming, so these operations bring me in contact with most of the railroads in this area. We purchase our feeding lambs generally in Wyoming, Montana, Colorado, Utah and Idaho. We have purchased a small number of lambs in New Mexico, but generally we are out of that territory due to freight rates. This also applies to Texas or Arizona lambs.

[fol. 2127] I have read the statement made at the Salt Lake hearing in the Ogden Gateway case by Mr. Elmer J.

Wagner of the Arkansas Valley Stock Feeders Association regarding the competitive situation and their opinion about buying Idaho lambs to feed in Kansas and the Arkansas Valley. We have bought Idaho lambs in the past, but this was during the war when it was advantageous to buy heavy feeding lambs weighing 80 to 90 pounds. These heavier lambs when fat weigh 105 pounds or more and during the war could be sold more readily and for higher prices than did lighter lambs. The service forces found these big lambs cut up to better advantage so there was a ready market because of this Government demand for all we could produce. Normally, there is a good limited market for a relatively small amount of heavy lambs to supply the U. S. Government service needs and possibly some discriminating hotel, resort or other such trade. The housewife insists on smaller cuts of lamb and as a result most lambs now are sold at a weight of about 100 pounds and these weights dress out to around 45 to 47 pounds a carcass, there being a differential of 6 to 8 cents per pound on lamb carcasses of similar grade in favor of those weighing under 45 pounds as compared with those weighing over 55 pounds. Since the war, because of the change in the market for fat lambs, where only a limited number of lambs of 105 pounds or more can be marketed at a price, we are, in our feeding operations, taking very few of the Idaho lambs and getting back to buying lambs weighing 60 to 70 pounds which when fattened up make the handy weight lambs of 95 to 100 pounds, bringing the top market price. We have some feeders in Wyoming in the Torrington-Scottsbluff area who like the [fol. 2128] Idaho lambs because they, what we term, force feed them, that is, put on a short number of pounds in a short time, then market them. In the Kansas wheat fields, we put on more pounds in a longer time, which we think makes a much safer business operation. I mention this from my experience, as I believe other Kansas feeders are in the same position we are and the reason they do not buy more Idaho lambs is because of these changed market conditions.

With regard to freight rates, while they, of course, are an item of expense to be considered in stock feeding operations, the most important item is the gain made in weight

of the animal. We frequently buy and ship lambs that have extra freight from a combination or a differential. For example, Northern Montana lambs where we have paid 20 or 30 cents extra freight. When we route lambs into Kansas wheat fields, if they originate on the Union Pacific in Wyoming for instance and the feed lot we have for them is on the Rock Island, we pay 8½ cents differential in freight. This figures 8 or 9 cents an animal. We have paid the 8½ cents to get quicker and better rail service and avoid shrinkage. We paid this extra freight to get our lambs on the Union Pacific when the through billing did not apply over that line.

With fat lambs especially, service on the way to the packer is all important as the first unloading for feed takes off one per cent of the yield and each following feed cuts the yield down one-half per cent. In money, this would represent 50 cents a hundred on the first feed and 25 cents a hundred pounds on each following feed, because each pound of lamb [fol. 2129] is worth about 50 cents a pound wholesale. In other words, 25 cents per hundred freight only figures about 25 cents per animal. Weight gain in feeding or loss in shrinkage in shipping the fat animal is represented by the price of 25 to 27 cents per pound live weight. When we feed a 70 pound animal up to 100 pounds or a 30 pound gain, this represents a money gain of $6.00 to $8.00 an animal so you can see the item of 25 to 50 cents out-of-line freight would not stop our purchase of good lambs if we feel we can put on the gain at a comparative cheap price as we do in the Kansas wheat fields.

This sheep feeding business is competitive. We in our operations know about where we can secure feeder lambs that can be shipped into our feed lots economically and speedily with a proper opportunity for profit. Other feeders have the same situation. If the Arkansas Valley feeders were given what they ask—a cheaper freight rate from Idaho and other northwest points—they would be given an additioanl advantage and be additional competition to Wyoming feeders, or other feeders such as we are with operations in Wyoming and Kansas, without relinquishing the present advantage the Arkansas Valley feeders have on buying lambs from Arizona, New Mexico and Texas where

we are practically shut out. I see no reason for disturbing this present situation without making it equally beneficial for all feeders, at least so far as Wyoming feeders are concerned. As a matter of fact, I do not see just where the Ogden Gateway would enter into feeding lambs in Kansas is concerned, as they can be shipped via the Union Pacific to Denver and beyond to Kansas at the through rate if fed on the Union Pacific, or distributed to feed lots on other [fol. 2130] lines at the 8½ cent differential as previously explained.

The Union Pacific in my opinion based on my shipping experience, have livestock service equal to any of the railroads in this area and better than most. They have feed yards at terminals such as Green River, Rawlins and Laramie to properly feed and water animals in transit and they give special attention to the service and handling of livestock. In fact, we make an extra effort to get our lambs on the Union Pacific for shipment because we feel they will receive the best possible handling. To further indicate why we believe in the Union Pacific service to stockmen, during the storm a year ago, we had lambs at Chappel, Nebraska, without feed and while the railroad was in serious trouble with delayed trains in the storm, they furnished us over night about 26 stock cars to get these lambs out of the storm area. We also had a band of sheep near Rock River without feed and the railroad put men and machines in their Rock River stockyards to clear the snow out so we could get these lambs into the yards and loaded on the cars. You can understand from this why we in Wyoming protest any change that would take business away from the Union Pacific. Less trains would give livestock shippers less service on the railroad and it could possibly result in stockyards or other facilities not being kept up in the shape we have been accustomed to, if the railroad's revenues are reduced. I have had experience shipping on many railroads, some on which the service was not too good and we are interested in maintaining this Union Pacific service which is so important in our business.

[fol. 2131] VERIFIED STATEMENT No. 51

I.C.C. Docket No. 30297

Statement of Ralph R. Crow, Saratoga, Wyoming

My name is Ralph R. Crow. My address is Saratoga, Wyoming. I am President of the R. R. Crow & Company of Saratoga, Wyoming. This is a forest products milling operation and we produce various lumber products including railroad ties and timbers and coal mine ties, props and timbers.

I am a member of the Western Pine Association, also a director on the board of this Association. Several months ago, the question of the D.&R.G.W. request for opening the Ogden Gateway was brought before the Association and later it was brought up for a vote by the directors, a majority at that time voting not in favor of entering the case. At our San Francisco directors' meeting in February, the matter was again brought to a vote and in this instance a slight majority voted in favor of entering the case.

However, such action by the association is contrary to the best interests of my business and I have notified the Association President and Secretary in writing that my firm is not to be represented by the Association in their intervention in behalf of the D.&R.G.W. Railroad. In fact, I wish to state for the record in this case that R. R. Crow & Company are opposed to granting the request of the D.&R.G.W. as it will not only adversely affect my timber business, but also have a generally adverse affect on the economy of Wyoming, at least to the economy of Southern Wyoming along the line of the Union Pacific. My company furnishes railroad ties to the Union Pacific and mine props and timbers to the Union Pacific Coal Company. The [fol. 2132] furnishing of rail ties and mine props is directly connected with the railroad tonnage handled and the coal produced for the railroad company. In other words, when rail tonnage is down, coal production would be down and our prop or other timbers would follow the same course. I have an investment in a timber mill and timber in the forest built up to a large extent to take care of railroad

and coal company orders and have made these investments with the expectation that Union Pacific business would be fairly well stabilized because of the large territory they serve as a trans-continental railroad. Diversion of a share of the Northwest traffic as here proposed by the D.&R.G.W. via the line in Colorado would result in curtailment of my timber operations and that of other operators in the Medicine Bow Forest area adjacent to the Union Pacific. This would result in laying off timber and mill workers and in turn a loss of business to merchants and others in that area. These workers could no be absorbed as there is no other employment available, or any other industry that could use these workers and they would be required to leave our community to seek employment elsewhere.

My plant and our community is served by the Saratoga & Encampment Valley Railroad, a branch of the Union Pacific, running south from Walcott, Wyoming, the connection with the main line of the Union Pacific, a distance of 20 miles to Saratoga and 24 miles to Encampment. This branch line has operated at a loss for years so far as local operations are concerned and early in the war, the Union Pacific petitioned the Interstate Commerce Commission for permission to abandon the line. This petition was later withdrawn before hearings were held on the expectation and [fol. 2133] hopes of additional business, some of which has developed from my milling operations, but not as expected from other industry. I would be fearful that a reduction such as testified to by the D.&R.G.W. indicating they could secure from the present Union Pacific traffic, as much as four trains daily each way, would make it necessary for the Union Pacific to again consider savings necessary and to again ask for abandonment of this branch.

I wish to strongly oppose the granting of the request of the D.&R.G.W. that would divert traffic to Colorado that has and is now moving through Southern Wyoming as being extremely detrimental to my business and to the economy generally of Southern Wyoming.

[fol. 2134] VERIFIED STATEMENT NO. 52

I.C.C. Docket No. 30297

Statement of Wayne I. Snyder, Morrill, Nebraska

My name is Wayne I. Snyder. I am Assistant Sales Manager of Chester B. Brown Company, carlot dried bean and pea dealer, with headquarters in Morrill, Nebraska. Our company has plants for cleaning, sorting and packaging of dried beans and peas at Morrill, Nebraska, on the CB&Q Railroad, and Gering, Nebraska, on the Union Pacific Railroad. We also have receiving and storage warehouses at Lyman and South Mitchell on the Union Pacific Railroad and at Lingle and Torrington, Wyoming and at Morrill, Minatare and Bayard, Nebraska, on the CB&Q Railroad.

I am appearing at this hearing in opposition to the application of the Denver & Rio Grande Western Railroad that routing to and from Idaho and the Pacific Northwest generally be established in connection with the Denver & Rio Grande Western Railroad and the Union Pacific Railroad through Ogden, Utah. Our company feels the establishment of such routing would serve no useful purpose generally so far as distribution of the bean crop from the territory involved is concerned, but it would, on the other hand, work a definite hardship on our operations.

Our business consists of assembling dried beans (and peas, but principally beans) of various varieties, in carload lots from producing areas in California, Utah, Oregon, Washington, Idaho, Colorado, Wyoming, Montana and Nebraska, cleaning, sorting and packaging them at our plants at Morrill and Gering, Nebraska, and shipping from those points [fol. 2135] in carload lots to jobbers for distribution to retail trade in the territory generally east of Colorado and Wyoming to the Atlantic Seaboard, including also Oklahoma and Texas.

The packaging of beans especially is accomplished in a wide range of package sizes and varieties of beans. For example, we pack individual 1#, 2#, and 5# cellophane bags of the several varieties from the various producing territories and also put up 25 pound paper bags and larger units of each up to 100# cloth bags. Thus, in filling a car-

load order for a jobber from our Gering, Nebraska, plant, the car may and usually does contain a large assortment of varieties and package sizes. As illustrative, it may contain both large and small lima beans from California, red and Great Northern beans from Idaho, pinto beans from Colorado, and locally grown beans from the North Platte Valley in Wyoming and Nebraska, all packaged in various sizes according to the wishes of the customer.

This cleaning, sorting and packaging operation is performed on an "in transit" basis (except for strictly local origin beans), under the privileges authorized in the applicable tariffs naming rates from origin to final destination and the charges for the allowable transit privileges, out-of-line hauls, etc. These transit privileges are a very important factor in our business as is source of supply.

We often find it necessary, in order to maintain a full line of varieties of beans, to purchase certain varieties in origin territory from which through rates do not apply to the final destination to which we may ultimately ship, [fol. 2136] there being an added charge in some instances for certain out-of-line hauls, which must be absorbed in meeting competition. Then, too, there are instances in which, to fill an order, we will use beans from origins on which no transit is available and on which the combination of rates into the processing station and from there to the destination is the only rate applicable. This is, of course, avoided if possible.

As an illustration of the out-of-line haul situation just mentioned, we must and do secure considerable tonnage of pinto beans from Colorado, largely in D&RGW territory (some 60,000 one hundred pound bags per year), on which the added charge for out-of-line haul over the direct through rate is presently 7 cents per 100 pounds when processed at Gering on the Union Pacific and the final destination is at the Missouri River or beyond. We cannot handle Colorado beans via Gering to points west of the Missouri River except at combination of rates into and out of Gering.

This is not an unusual situation and many bean dealers in the western territory find themselves in a similar position with respect to supplies from certain origins and either absorb the added cost or avoid such sources of supply.

As I said earlier in this statement, our company has two plants at which this processing is done, relatively close together, at Gering, Nebraska, on the Union Pacific, and at Morrill, Nebraska, on the CB&Q, both involving a large investment. These were established in order to handle beans from as large an origin area as possible and with the least possible absorption of costs for out-of-line haul, etc., [fol. 2137] recognizing that a railroad granting the transit privileges and performing the terminal services, is entitled to its long haul into and out of the transit station from its origin territory. Thus, as a rule, we process at Gering, Nebraska, on the Union Pacific, beans from Idaho, California, Washington, Colorado and Nebraska, for example, and at Morrill, beans from Wyoming, Montana and other origins where rates are applicable via Morrill, as well as Nebraska and Colorado beans.

Should the request of the D&RGW in this case be granted, it would have a detrimental effect on our business for the reason it would open up to our competition, now located or later locating south of Denver to Pueblo on the D&RGW especially, sources of supply in Idaho and the Pacific Northwest on the Union Pacific Railroad, for movement to consuming territory at the Missouri River and beyond which they cannot now handle on an equal basis.

Such a processor would be added competition in purchasing in the Idaho market, where we obtain some 65,000 one hundred pound bags per year, and would be better able to invade our eastern markets without losing any advantage he now has. He can now obtain Colorado beans at no cost over the through rate, on which we pay the out-of-line haul charge of 7 cents per 100 pounds when final destination is at the Missouri River or beyond and a straight combination of local rates when destination is west of the Missouri River. In addition, he now already has free access to Utah and California and would have added free access to Idaho, Oregon and Washington on the Union Pacific for shipment to Missouri River and beyond.

[fol. 2138] There is no need for the D&RGW routing so far as distribution of the bean crop in the territory under discussion is concerned. Beans from all origins involved can move freely to any consuming territory. The addition of

the route would not result in any rate reduction or saving to the growers, processors of the consuming public generally, and the only advantage we can see would accrue to the processor or processors located south of Denver on the D&RGW at the expense of others, including ourselves, and the additional traffic the D&RGW might obtain at the expense of the Union Pacific Railroad.

[fol. 2139] VERIFIED STATEMENT NO. 53

I.C.C. Docket 30297

Statement of N. H. Troelstrup, Julesburg, Colorado

My name is N. H. Troelstrup. I presently reside and maintain an office in Julesburg, Colorado.

I am appearing in this case as an individual engaged in the livestock business, principally feeder cattle, which are handled at and through my home ranch near Barton, Nebraska, a siding on the Union Pacific Railroad just east of Julesburg, Colorado. I am a member of the Denver Livestock Exchange.

I have been in the livestock business for approximately 38 years, purchasing feeder cattle mostly on the Denver market which have been shipped in for sale from a wide range of origins, including Colorado, New Mexico, Texas, Wyoming, Utah, Idaho, Montana, Oregon, and Washington. In purchasing feeder cattle, we prefer to buy those with rail billing, or those that have moved in by rail, although, we do purchase local cattle which may have been trucked in. The cattle are then shipped by rail from Denver to Barton, Nebraska, where they are distributed to various feeders for feeding in transit and movement out to market. During recent years, we have handled some 5,000 or more head per year.

I am appearing in this case in opposition to the application of the Denver & Rio Grande Western Railroad that routing to and from Idaho and the Pacific Northwest be established between that railroad and the Union Pacific Railroad through Ogden, Utah.

In all my years in the cattle business, I have felt no need for this routing nor can I anticipate any future need for it. [fol. 2140] So far as I can determine, the establishment of such routing would be of no benefit to the livestock industry generally.

In purchasing feeder cattle on the Denver market, we are always glad of an opportunity to purchase stock from Idaho and eastern Oregon on transit billing; however, in the past few years, it has been difficult to obtain cattle from that area as West Coast markets are taking a greater share of the supply. In 1949, we were able to get only six cars from Idaho, and none in 1948 or 1947.

It has been necessary then that we go to other origins and we have found generally ample supplies from the D&RGW Western Slope territory in Colorado, also in the Trinidad, Colorado, area and in West Texas and New Mexico.

We find that cattle from the Texas and New Mexico origins, although generally available, bear a penalty out-of-line haul rate when fed in transit at Barton, Nebraska. This may range rather widely. However, for example, from Las Vegas, New Mexico, a shipment of cattle feeding in transit at Barton, Nebraska, and finally moving out to Chicago, would pay a rate of $1.26 per 100 pounds, plus the feed in transit charge of $11.34 per car. If this same shipment fed in transit at Lamar, Colorado, in the Arkansas Valley, with final destination Chicago, the rate would be $1.13 per 100 pounds, plus $11.34 per car for the feeding in transit privilege. This represents 13 cents per hundred pounds when feeding at Barton over the cost when feeding at Lamar, Colorado, by reason of the out-of-line haul.

Another example would be a shipment from Raton, New Mexico, from where the rate to Chicago, stopping to feed [fol. 2141] at Barton, Nebraska, would be $1.21 per 100 pounds, plus $11.34 per car for feeding in transit privilege, where as if the same shipment fed at Lamar, Colorado, the rate would be $1.07 per 100 pounds, plus $11.34 feeding in transit privilege charge. The difference here is 14 cents per 100 pounds in favor of the Arkansas Valley operator.

A similar situation obtains in the case of a shipment from

Raton, New Mexico, feeding in transit at Barton, Nebraska, with final destination at Kansas City, Missouri. The rate in this instance would be 89 cents per 100 pounds, plus $11.34 per car feeding in transit charge. The rate on the same shipment if fed in transit at Lamar, Colorado, would be 76 cents per 100 pounds, plus the feeding in transit charge of $11.34 per car or 13 cents in favor of Lamar.

Cattle from Idaho may be moved via Union Pacific through Denver and connecting lines at an extra charge of 8½ cents per 100 pounds, plus the $11.34 feeding in transit charge when fed in transit at Arkansas Valley points, with final destination at eastern markets, such as Kansas City, Chicago, etc. This would apply at Lamar, Colorado. Idaho cattle may be fed in transit at Barton, Nebraska, without any out-of-line charge and pay only the $11.34 per car charge for the privilege. This is, of course, an advantage Barton has over the Arkansas Valley feeder on Idaho cattle, but that advantage is much less than 13 cents, 14 cents and 15 cents per 100 pounds the Arkansas Valley feeder has over Barton, Nebraska, as shown in the preceeding examples, on cattle from Las Vegas, and Raton, New Mexico. Similar examples from other origins could be found, and these are only cited as representative.

[fol. 2142] If the Ogden Gateway is opened and through rates applies via Union Pacific Railroad-Ogden-D&RGW and its connections, the Arkansas Valley feeder (Lamar for example) will no longer be at a disadvantage with feeders at Barton, Nebraska, and other Union Pacific Nebraska points on Idaho cattle, as the 8½ cent charge previously referred to would be eliminated. There would, however, be no change in the out-of-line charges at Barton or similar Nebraska points on the Union Pacific on cattle from Texas and New Mexico as represented by the examples cited heretofore.

This would be a definite hardship to us in the purchase of Idaho cattle, already in short supply for this territory by reason of increased competition, and except for some advantage to a small number of individual operators in the Arkansas Valley and eastern Colorado (west of Denver and Pueblo) at the expense of my own operation and those of other Nebraska operators, there would be no real

advantage to the livestock industry. No rate reductions or improved service are involved and in the circumstances, am definitely opposed to the application.

[fol. 2143] VERIFIED STATEMENT No. 54

I.C.C. Docket No. 30297

Statement of Emmett A. Torney, Kellogg, Idaho

Testimony to be given at
Ogden Gateway Hearing at
Boise, Idaho April 3, 1950

My name is Emmett A. Torney. I reside at Kellogg, Idaho and I am presently employed by the Bunker Hill & Sullivan Mining and Concentrating Company, Smelter Division, as Office Manager. I have been with this Company for 21 years and was its Traffic Manager for 13 years. I am testifying in behalf of that Company and also the Sullivan Mining Company of Kellogg, Idaho.

The Bunker Hill & Sullivan Mining and Concentrating Company and the Sullivan Mining Company are engaged in the business of mining, milling, smelting and shipping by freight, various non-ferrous metals including lead, zinc, cadmium and antimony, and various smelter by-products, including baghouse fume, drosses, matte and speiss.

During 1948, a representative year, we shipped approximately 2420 carloads of such products, of which approximately 73% were destined to points on and east of the Missouri River. In addition, we received approximately 70 carloads of machinery, fire brick, steel, etc., from points on and east of the Missouri River. Of the carloads moving from and to points east, all but 42 carloads were handled via Union Pacific long haul routes.

In this connection, the service afforded us has been ample and satisfactory from the standpoint of supplying cars, [fol. 2144] transit time, switching, tracing, etc.

To my knowledge, we have never been requested to include the D&RGW in routings on Eastern shipments, nor have we ever had a reason to prefer such a routing. To my

knowledge, we have never lost any business because the D&RGW was not a party to tariffs covering such shipments.

The Union Pacific has testified that if this request is granted and used, they will suffer a decrease in revenue, and with less revenue they maintain, they might be required to curtail service and take other economic measures that might seriously affect the business of the Companies which I represent.

Assuming these contentions to be correct, we are opposed to the position of the D&RGW in this case and request that the Commission take no action which might result in the impairment of the ability of the Union Pacific to continue to render the satisfactory service it now provides.

[fol. 2145] VERIFIED STATEMENT No. 55

I.C.C. Docket No. 30297

Statement of Sam W. Ditty, Dillon, Montana

My name is Sam W. Ditty. I live at Dillon, Montana. My principal business is the purchase and sale of livestock, mainly sheep although I handle some cattle. I have been engaged in this business during the past 26 years and I ship livestock principally from the following stations on the lines of Union Pacific:

Dillon, Montana	Lima, Montana
Divide, Montana	Monida, Montana
Silver Bow, Montana	Spencer, Idaho
Armstead, Montana	Dubois, Idaho
Dell, Montana	Idaho Falls, Idaho

Also from the following stations on the lines of the Northern Pacific:

Deer Lodge, Montana	Polson, Montana
Gold Creek, Montana	Helena, Montana
Drummond, Montana	Avon, Montana
Missoula, Montana	

During the year 1948, I shipped 104 carloads of sheep and approximately 15 cars of cattle and less number in 1949

because of a decrease of sheep. With few exceptions all of these livestock shipments were routed via the lines of the Union Pacific Railroad Company to destination points in the States of Idaho, Utah, Colorado, Minnesota, Iowa, Illinois and Indiana, with the preponderance of the shipments to destination in the State of Iowa. The Union Pacific service and routes are satisfactory and adequate for my business. The Union Pacific has been reasonably prompt in furnishing a car supply. I have never had the occasion, either from Union Pacific or the D&RGW, to seek joint [fol. 2146] rates via the D&RGW Railroad. I have no interest in using the lines of the D&RGW in the handling of the shipments of livestock above enumerated, all of which are shipped via the Union Pacific Railroad with the exception of a few carloads of breeding ewes originating in Montana and destined to Grand Junction, Colorado and Rifle, Colorado, located on the lines of the D&RGW. On such shipments, there is now existing a through rate with the D&RGW so that there would be no occasion for any further through rates, such as requested in this case, because they don't go into Grand Junction and Rifle for feeder purposes. In the event I ship replacement ewes from points on the Northern Pacific or Great Northern Railroads to points on the D&RGW there would be no through rate to Denver or eastern destinations in any event, whether the Rio Grande or the Union Pacific got the haul beyond Ogden.

It is my understanding that the D&RGW in this case seeks to have the Ogden Gateway open so that it may, through solicitation, secure routing of some traffic via its lines and participate in revenue on this traffic to the detriment of Union Pacific Railroad Company. I, as a shipper of livestock and as a citizen of the State of Montana, am interested in the Union Pacific, who is a large tax payer in the State, maintaining its financial position so that it may continue to pay taxes, maintain its railroad and render service to the shippers on its line, and am particularly interested in the Railroad Company being in position to render service to myself as a shipper.

I am opposed to the petition of the D&RGW in this case and am appearing in behalf of the defendants in this case, but particularly the Union Pacific Railroad Company.

[fol. 2147] VERIFIED STATEMENT No. 56

I.C.C. Docket No. 30297

Statement of Leo J. Falk, Boise, Idaho

My name is Leo J. Falk. I reside at Boise, Idaho, and am President of The Falk Mercantile Co., Ltd., with stores at Boise, Caldwell, Nampa, Twin Falls, Idaho, and La Grande, Oregon. All of these towns are located on the Union Pacific Railroad. These stores are department stores, handling general lines of dry goods, clothing, major appliances, furniture, shoes, etc. We are probably the oldest business concern in the State, and were among the first users of Union Pacific railroad service, our original store in Boise having been established in 1868, prior to the coming of the railroad.

First, I want to point out that all of the towns in which our stores are located are served by only one railroad, and that is the Union Pacific. While we receive comparatively few of our shipments in carload lots, and make only less-than-carload shipments, it is true that we receive many thousands of pounds of traffic each year, mainly through use of forwarder rail service. In all above mentioned towns, the Union Pacific maintains a very substantial payroll, and its employees constitute a goodly number of our customers. Therefore, anything that affects the general welfare of the Union Pacific and its employees, indirectly affects our Company.

As I understand the proposal of the Rio Grande, it does not intend to serve the southern Idaho area with its own rails, but merely seeks to share in the traffic which the Union Pacific is already handling by way of denying the [fol. 2148] Union Pacific its long haul to eastern points, but to turn it over to the Rio Grande at Ogden. The Rio Grande would not bring anything new to this community in the way of capital improvements and new employees, and neither would it assume or relieve the Union Pacific of some of the taxes which it pays for the upkeep of our local government, schools, etc. In short, the Rio Grande's gain would be the Union Pacific's loss.

The Union Pacific is the railroad upon which we necessarily must depend for rail transportation whether or not

the Rio Grande is successful here. As a businessman, I can readily understand that the Union Pacific, like any other organization, must have just so much money to run its business, and any substantial reduction or depletion of its gross earnings will obviously call for offsetting reductions in operating expenses, including reduction in working forces. This, of course, would have a direct and immediate adverse effect upon my business and all other kinds of businesses in this area.

I do not believe that the benefits to be derived from the opening of The Ogden Gateway would in any way offset the disadvantages and the loss to Southern Idaho. In conclusion, there is a matter that I wish to deal with because of the personal aspect. It was just twenty-five years ago this month that the Union Pacific connected up what was then known as the Boise Branch with its main line at Orchard, Idaho, and put Boise on the Main line. Since then, all the Union Pacific trans-continental passenger trains run via Boise. This project included the construction of our beautiful new passenger station and called for the [fol. 2149] expenditure of a large amount of money. I mention this because I was a member of the local committee that worked so hard to encourage the Union Pacific to put Boise on the Main line, and the results have been most satisfactory to Boise.

[fol. 2150] VERIFIED STATEMENT NO. 57

I.C.C. Docket No. 30297

Statement of Joe Hirschfeld, North Platte, Nebraska

I am Joe Hirschfeld. I reside at North Platte, Nebraska. I operate two men's clothing stores at North Platte and one at Kearney, Nebraska. I am a director of the McDonald State Bank of North Platte, and I am a member of the North Platte Chamber of Commerce.

I have been in business in North Platte 32 years. I came here when it was a town of less than 10,000 and I have seen it grow to a city of approximately 20,000.

Throughout that time, a large part of my business has been with employees of Union Pacific Railroad, and with

their families. I would estimate at the present time that approximately 35% of our business comes from Union Pacific employees.

A force reduction on the Union Pacific at North Platte is noticeable immediately in our businesses, both in cash sales and in credit business. A loss of half a million dollars payroll in North Platte would be a serious thing to the community, and would be reflected in almost exact proportion in our business. We depend upon the Union Pacific payroll to a large extent for our livelihood and it is to our interest, and to the interest of the entire community, that the Union Pacific remain in good financial condition and maintain its traffic and revenues so that our town can continue to be a prosperous and growing community.

[fol. 2151] VERIFIED STATEMENT No. 58

I.C.C. Docket No. 30297

Statement of H. D. Wiese, North Platte, Nebraska

My name is H. D. Wiese. I am Secretary-Treasurer of the Mutual Building and Loan Association of North Platte, Nebraska, an institution with assets of three and a half million dollars, which has assisted in the development of North Platte during the past sixty two years. I have been employed as managing officer of the Mutual Building and Loan Association for the past twenty six years and, prior to that, was employed by the McDonald State Bank of North Platte.

I am a member of the board of directors of the North Platte Chamber of Commerce, have twice served as president of that organization, and I was present at a meeting of that Chamber at which a resolution was adopted supporting the Union Pacific position in this case, and I voted for that resolution.

Our Association is vitally interested in the welfare of the Union Pacific in general and especially at North Platte for the prosperity of our community is directly dependent on the prosperity of the Union Pacific.

Four hundred eight of our 1120 borrowers and 420 of our 1530 savings accounts are Union Pacific employees and their families. This represents 37% of our outstanding loans and 28% of our savings accounts. The percentages in each category would be higher, a great deal higher, if they were made to include the borrowers and the savers whose well being depended on their business dealings with the people who are directly dependent on the Union Pacific for their employment. Any reduction in force at North [fol. 2152] Platte is immediately reflected in our business. If one of our borrowers is laid off, in a force reduction, it usually means a payment missed and, unless he goes back to work soon, we may lose the loan and he may lose his home.

We are presently financing about 60% of the new home construction and much of this construction is by Union Pacific employees. Our town has a 1950 building program under way amounting to several hundred thousand dollars and, since we are a railroad town, this construction consists mostly of small homes and apartments for wage earning, working people, the majority of them employed by the Union Pacific.

The Union Pacific has constructed a three and a half million dollar retarder yard at North Platte and a new freight transfer station which, I understand, is bringing about 200 additional families to North Platte. All of these employees must have housing and a substantial portion of it is being financed by our Association.

If the Union Pacific lost 157,000 odd cars of traffic to the Denver and Rio Grande with an attendant loss of 125 employees in North Platte, the effect upon our business, and upon all North Platte businesses would be great indeed. We are dependent largely upon the Union Pacific North Platte payroll of nearly eight million dollars; and, if that should be reduced by the nearly $600,000.00 pay of the 125 employees who might be dismissed, then it is certain that our building program would be slowed down or stopped entirely, home values would decline sharply, and general business would be seriously affected.

[fol. 2153] North Platte has grown steadily since the early days. In 1910 it was a town of about 5000 people. At the present time its population is probably sixteen to seventeen

thousand people, including 1800 Union Pacific employees. These employees, with their families, would probably total about 4000 people.

Our growth has not been spectacular but has been a steady, healthy one with the fortunes and prosperity of our people closely tied to the fortunes and prosperity of our largest employer, the Union Pacific Railroad. It would mean a serious loss to our community, to our Association, and to the people we are helping buy homes if Union Pacific revenue, through loss of this traffic, declined so that 125 of our fellow townsmen were thrown out of employment. These 125 families, however, are not the only ones to be affected; each and every family in North Platte is deeply concerned.

For the reasons I have stated, I am opposed to the D&RGW's attempt to open the Ogden Gateway.

[fol. 2154] VERIFIED STATEMENT No. 59

I.C.C. Docket No. 30297

Statement of W. A. Reutlinger, Grand Island, Nebraska

I am W. A. Reutlinger. I am Manager of Kaufman Stores and live at Grand Island. Kaufman Stores operates "junior department stores" at Grand Island, Kearney and Lexington, and has been in business 43 years in Grand Island. I have been in their employ 41 years at Grand Island.

Our volume of sales in our Grand Island store for 1949 was $727,000, and it is estimated that approximately 10% of this was derived from the 800 Union Pacific employees in Grand Island and their families. It is estimated that Union Pacific employees and their families make up 2,500 of our population, which is now estimated to be 25,000. Union Pacific's pay roll in Grand Island amounts to $3,101,121 annually.

I understand that if the Union Pacific is required to make the joint rates which the Denver & Rio Grande seeks it would result in laying off 72 employees at Grand Island, with pay roll of $305,000. This is serious to Grand Island,

and would have a substantial effect on our business here, and to a lesser extent, would affect our business at Kearney and Lexington.

Our business is dependent upon rapid turnover of our stock. Since we receive at least 75% of our merchandise by rail, the greater portion originating in Chicago and points east, it is of vital importance that the service of the [fol. 2155] Union Pacific Railroad be maintained. Its service is excellent at this time and they have many trains passing through Grand Island. If this service were curtailed, we would again experience the same difficulties we encountered during the depression when the number of trains was drastically reduced. The result was a definite detriment to business in general and particularly to businesses who depend on the railroad for transportation.

It is our sincere belief that if the Union Pacific found it necessary to discontinue any of their trains through Grand Island it would reduce our present rail service and would directly affect our business.

Our business establishment, as well as many others in Grand Island, has given the Union Pacific the major proportion of our freight business. This has been mutually beneficial, enabling the railroad to maintain its forces and pay roll at Grand Island, which in turn contributes to the progress of our business and to the community as a whole. We are all vitally interested in the welfare of our community and in seeing it continue to grow and progress.

The Union Pacific has one of the largest pay rolls in Grand Island and our prosperity is closely geared to the prosperity of the Union Pacific and the maintenance of that pay roll.

If we lose any of that pay roll or any of the present Union Pacific employees and their families from Grand Island as [fol. 2156] a result of the action of the D&RGW, it is bound to be a serious blow to our business as well as to many others in Grand Island. For these reasons I am opposed to the position of the Rio Grande.

[fol. 2157] VERIFIED STATEMENT No. 60

I.C.C. Docket No. 30297

Statement of George Martin, Grand Island, Nebraska

My name is George Martin. I am Manager and part owner of George W. Martin Company, which operates O. P. Skaggs stores at Grand Island, Hastings, Kearney and Holdrege, Nebraska. We are now completing a second store in Grand Island. I have been in Grand Island for 11 years, and have held my present position during that time.

We operate grocery and food stores. Our annual sales volume at Grand Island is $920,000. Of this, it is conservatively estimated, Union Pacific employees and their families account for $125,000. The Union Pacific has 805 employees at Grand Island with an annual payroll of $3,000,000 upon which Grand Island merchants depend for a large portion of their business. In addition to the amount of business we do directly with Union Pacific employees we also consider that a considerable portion of our volume is derived indirectly from the Union Pacific's payroll because other people who depend on the Union Pacific's business also trade with us.

It is my understanding that if the Denver & Rio Grande is successful in obtaining the business it anticipates, it would result in a force reduction at Grand Island of 72 employees, with annual payroll of $305,000. This loss would have a substantial effect on our business and on our community, both directly and indirectly. We are therefore opposed to the position of the D&RGW.

[fol. 2158] VERIFIED STATEMENT No. 61

Statement of B. K. Smoot

My name is B. K. Smoot, 1029 United Building, Salina, Kansas, representing Smoot Elevator Company at Salina, Salina Terminal Elevator Company operating at Kansas City, Missouri, Salina, Kansas, Hutchison, Kansas, Enid, Oklahoma, the Western State Mill Company of Salina,

Kansas, Weber Flour Mills Company, Salina, Kansas, Gooch Milling and Elevator Company, Lincoln, Nebraska, and Inland Mills, Incorporated, Des Moines, Iowa. I am in charge of management of the Smoot Grain Company and the Salina Terminal Elevator Company and in charge of the grain departments which handle grain purchases for the above milling companies. My grain experience started in 1915. The Smoot Grain Company was organized in 1926. From my knowledge of grain operations in Kansas I believe I can say that our operation is typical of the elevator and milling operations in that State.

I have had experience purchasing grain from Utah, Idaho, Oregon and Washington for movement east whenever market conditions justified from 1923 to current date. Our purchases of soft white wheat, hard white wheat and winter wheat in recent years from Northern Utah and Southern Idaho have been:

1945	31 cars	1948	219 cars
1946	20 cars	1949	296 cars
1947	1178 cars	1950	43 cars

For purposes of our grain operations and our milling operations we do not buy grain from that territory unless it is competitive with Missouri River values.

[fol. 2159] We handle about forty million bushels of wheat per year of which about one million bushels per month, or 12 million bushels per year, are consumed in milling operations. The bulk of our grain for merchandising and milling operations is procured from the southwest wheat area, but at times when values are competitive we obtain a portion of our requirements from the northwest.

In addition to our wheat purchases for milling we use in a portion of our milling operations approximately ¼ of 1% of malted wheat. This is wheat which originates in the northwest and is malted at Wichita, coming to us on transit billing from Wichita with other than northwest billing applied.

In our experience we have found that the routing we have is adequate for our needs. I am opposed to the opening of the Ogden Gateway or any gateway that short hauls the originating carrier who is responsible for fur-

nishing of adequate car supply and the maintenance of such supply during times of car shortages, particularly during the grain shipping season. It has been my purpose throughout the years in recognition of this principle to accord the originating line the longest possible haul, and I believe such practice to be fundamental in the continued efficient operation of American railroads.

. . . . . .

[Vol. 2160] VERIFIED STATEMENT No. 62

I.C.C. Docket No. 30297

Statement of James E. Dyer, Bronxville, New York

My name is James E. Dyer and I live at 447 California Road, Bronxville, New York. My office address is 630 Fifth Avenue, New York City, N.Y.

I am Vice President and a Director of Sinclair Refining Company. Among other duties, I am Manager of the Transportation Supply and Distribution Department of the Company.

I have spent more than 35 years in the oil industry and I have been with Sinclair Refining Company ever since it started in operation.

Sinclair Refining Company is the manufacturing, marketing and transportation subsidiary of Sinclair Oil Corporation whose interests embrace all of the divisions of the industry, namely, production, refining, transportation, distribution and marketing of petroleum and petroleum products.

I am here today to appear on behalf of our company in opposition to the complaint and to urge that the prayer of the complainant be denied. From our examination of the complaint, it appears to us that the granting of the prayer would result in great damage to our interests and we appear in order to protect our own interests as we see them.

The Sinclair interests in Wyoming and contiguous areas served by the Union Pacific consist of crude oil reserves, producing crude oil wells, crude oil pipelines, a refinery at Sinclair, Wyoming, and marketing and distribution facilities, altogether having an estimated value of approxi-

mately one hundred million dollars. It is, of course, impos- [fol. 2161] sible to give any precise value to oil underground and to the value of a going business, but I think the figure I have named is a fair reflection of the size of this part of the enterprise.

The Sinclair Companies in the State of Wyoming employ over 600 employees who, as well as their families and dependents, are residents and citizens of the State of Wyoming.

Sinclair's refinery at Sinclair, Wyoming, is a modern, up-to-date refinery which has a capacity of approximately 21,000 barrels per day of crude oil and which now is running at the average daily level of 15,000 barrels per day. It is Sinclair's policy to develop and utilize its resources in Wyoming to the greatest extent possible within the State. That has been, is now, and will continue to be our policy. Our refinery at Sinclair, Wyoming, is the only means by which we can convert the Wyoming raw materials into finished saleable products for the market.

Our Company's shipments over the Union Pacific Railroad, practically all of which originate at Sinclair, Wyoming, have averaged about 15,000 cars per year over the past three years. We are the largest industry and shipper on the Union Pacific rails in the State of Wyoming and one of the largest on the entire Union Pacific System.

If the prayer of the complainant is granted, it is our understanding that a large volume of traffic now moving over the rails of the Union Pacific through the State of Wyoming will be diverted. The diversion of this large tonnage from the Union Pacific through Wyoming will result in a curtailment of the number of trains operated and a lowering of both the quality and quantity of service rendered to shippers.

[fol. 2162] With the loss of tonnage and the lowering of services by the railroad, shippers finding the service inadequate or unsatisfactory will look for alternatives. It is not necessary for me to be an alarmist to envision the ultimate inescapable consequences of this process. Reduced and impaired service invites further reductions in tonnage, all touched off by the chain reactions following the first serious blow.

As far as we are concerned on our traffic out of Sinclair, Wyoming, delays and lacks in service will put us at a serious competitive disadvantage as against those operators using pipe lines or other methods of transportation. The Sinclair refinery is now a highly efficient manufacturing unit, the efficiency of which depends on sustained high-yield production. Any service disability will result in loss of business and that, in turn, will curtail or eliminate the profit which this unit now shows. Reduced refinery production will necessitate cutting back crude oil production with further losses in revenue to our company. The State of Wyoming will also experience a loss since a portion of our crude oil production in the State is on leases from which the State receives rentals and royalties. There will also be a loss of revenue to various tax authorities; Federal, State and Local.

Such a reduction in our traffic will result in further losses to the Union Pacific; over and above those involved in the movement of traffic to and from the territory actually involved in the complaint.

We submit that granting the prayer of the complaint would do incalculable and irreparable damage to our own interests and we respectfully request that the complainant's prayer be denied.

[fol. 2163] VERIFIED STATEMENT No. 63

I.C.C. Docket No. 30297

Statement of Emmet J. Smith, Chicago, Illinois

My name is Emmet J. Smith. I am General Traffic Manager of Edward Hines Lumber Company and Traffic Manager of the Oregon and Northwestern Railroad Company. My headquarters are in Chicago, Illinois. I have occupied my present position 2-½ years and have been in the employ of the Edward Hines Lumber Company more than four years, and prior thereto was in the employ of the Grand Trunk-Canadian National Railway System at Chicago, Illinois, from 1929 to 1946.

Edward Hines Lumber Company is engaged in the lumber and millwork business, conducting logging operations on a sustained-yield basis at Burns, Oregon, and Westfir, Oregon; saw mills at both of these points as well as at Bergland, Michigan, and Park Falls, Wisconsin; wholesale yards at Chicago, Illinois, and Park Falls, Wisconsin; also 23 retail yards in Chicago and environs. In addition, we handle a substantial volume of lumber from other origins on a wholesale or brokerage basis. In short, the Hines Lumber Company provides a complete service on lumber and related products from forest to ultimate consumer.

Our principal milling operation is located at Burns, Oregon, from which point we ship 4,000 to 5,000 cars annually, all of which leave Burns via Union Pacific. In addition, we favor the Union Pacific with a comparable volume of competitive traffic from other territories.

[fol. 2164] Our experience with the Union Pacific has generally been most satisfactory. Their schedules are fast and their service in moving our traffic, in handling tracing records, in accomplishing diversions and related matters is very good. Our only real complaint concerns periodic shortages in car supply which have developed during recent years at the time of the Fall heavy grain shipping season. We recognize this is not wholly within the control of the Union Pacific and want the record to show that we feel we have been fairly treated in the distribution among all shippers of the available car supply. However, we wish to emphasize that a car shortage is extremely costly to our mill and our customers. It badly disrupts our business at the busiest season of the year. It can diminish our total lumber production which is badly needed for construction purposes.

Edward Hines Lumber Company also favors the D&RGW with a substantial volume of traffic from territory where through rates and competitive services are available in connection with that line. During the year 1949, 266 cars of our traffic were routed via D&RGW. I mention this so it will be understood that we are not unfriendly to that railroad.

Insofar as the complaint in this case is concerned, we have never had reason to request the establishment of routing from our Burns mill to eastern territory via Ogden and

the D&RGW. Present rates and routing in connection with the Union Pacific have been entirely adequate for our purposes. Much of our competition is with southern lumber producers, and the through movement time is an important [fol. 2165] consideration in the successful marketing of our production at Burns. Inclusion of the D&RGW between Ogden and Denver or Pueblo would add considerably to the distance shipments must be transported and to the time required for such movement, hence is neither necessary nor desirable from our standpoint.

I mentioned our difficulty with occasional car shortages. This is expensive for us because it means we lose mill operating days. The longer time via D&RGW, on both loaded and empty cars, will require additional car-days without adding to the over-all car supply. This will directly reduce efficient use of available equipment and will contribute further to our occasional difficulties in obtaining a full car supply during car shortage periods.

I mentioned earlier that I am Traffic Manager of the Oregon and Northwestern Railroad Company. This railroad extends 51 miles from Seneca, Oregon, to Burns, Oregon, at which point it connects with the Union Pacific exclusively. It has no other interchange with any other railroad. The Oregon and Northwestern Railroad Company participates in through rates with the Union Pacific and connections on lumber and miscellaneous class and commodity rates on other traffic originating or terminating at points on its line.

Previously, I commented on the equitable car distribution practices of the Union Pacific during car shortages. We have some direct experience on this through the Oregon and Northwestern which serves a number of mills located on its line, and which mills are direct competitors of Edward Hines Lumber Company. I know for a fact that on empties brought into Burns, the distribution which the Union Pacific [fol. 2166] makes as between those loaded by Edward Hines Lumber Company and those delivered to the Oregon and Northwestern Railroad for placement at the other mills mentioned, has been accomplished in a meticulously equitable manner.

The Oregon and Northwestern Railroad is a member of the American Short Line Railroad Association, which As-

sociation has intervened in this proceeding in behalf of complainants. The Oregon and Northwestern does not agree with this action by the American Short Line Railroad Association and desires the record to show that Association had no authority to speak for the Oregon and Northwestern Railroad in the premises.

We are not in accord with intervention of the American Short Line Association in this case because the Oregon and Northwestern, unlike any other short line railroads, is a stub-end railroad which connects only with a long line railroad at only one junction. The Oregon and Northwestern Railroad in effect is comparable to a branch line of the Union Pacific Railroad. Witnesses have testified in this case that any action which tends to reduce the amount of revenue chargeable to Union Pacific branch line operations makes the affected branch line less able to operate at a profit and more susceptible to eventual abandonment. Any action which tends to reduce the Union Pacific's revenue on traffic from and to points on the Oregon and Northwestern Railroad will ultimately place the Union Pacific in a position of needing to re-adjust downward the divisions which accrue to the Oregon and Northwestern Railroad.

[fol. 2167] The successful operation of the Edward Hines Lumber Company's Burns properties and of the Oregon and Northwestern Railroad is dependent in large measure upon a continuation of the present adequate service now provided by the Union Pacific. Curtailment of train service, switching service, higher rates, fewer cars, decreased maintenance of roadway and equipment and any similar forms of retrenchment which Union Pacific witnesses have indicated they might find it necessary to adopt if the complainant is successful, will adversely influence the conduct of our own business. Accordingly, Edward Hines Lumber Company and the Oregon and Northwestern Railroad are opposed to the complaint in this proceeding and respectfully request the Interstate Commerce Commission to give full and careful consideration to their position in the matter.

[fol. 2168] VERIFIED STATEMENT NO. 64

I.C.C. Docket No. 30297

Statement of E. G. McGovern, Minneapolis, Minnesota

My name is E. G. McGovern. I have been employed as General Traffic Manager for Gamble-Skogmo, Inc., for the past twenty years. Prior to that time, I was employed by the Minnesota Transfer Railroad Company in both the Operating Department and the Traffic Department. My job is to supervise, or to handle any transportation problems throughout our entire territory and also to supervise the expenditure of over eight million dollars annually in transportation.

In addition to my work in the Traffic Department, I am the Chairman of our Distribution Committee, which is made up of representatives of the following departments: hard lines, soft lines, pricing, warehousing, stock control and traffic. This committee has the responsibility of deciding the best and most economical method of distributing our merchandise. It also has the responsibility of properly pricing the merchandise.

Gamble-Skogmo, Inc., with its Home Office at 15 North 8th Street in Minneapolis, are wholesalers and retailers of general merchandise, such as electrical appliances; household goods; sporting goods; hard lines; soft lines; groceries; meats; paint; batteries; washing machines, etc. It is made up of four divisions, namely, the Eastern Division operating under the name of Gamble Stores and Gamble Authorized Dealer Stores; the Western Division operating under the names of Western Auto Stores of Los Angles and Western Dealer Stores; the Canadian Division [fol. 2169] operating under the name of MacLeod Stores; and the Manufacturing Division operating under the name of Solar Corporation.

Gamble-Skogmo, Inc., have ten warehouses, located in the following towns:

Chicago, Illinois	Billings, Montana
Minneapolis, Minnesota	Denver, Colorado
Moorhead, Minnesota	Ogden, Utah
Sioux Falls, South Dakota	Portland, Oregon
Fremont, Nebraska	Los Angeles, California

They also have over two thousand retail stores in twenty-six states, four Canadian Provinces, Mexico and Hawaii. Their sales amounted to over one hundred twenty-three million dollars in the year of 1949. The manufacturing division (the Solar Corporation) has battery manufacturing plants in Milwaukee, Wisconsin, and Ogden, Utah. They also have a paint manufacturing plant in Milwaukee, Wisconsin.

During the year 1949 we shipped via the Union Pacific Railroad 5 carloads of insulation from Denver, Colorado, to points on the Union Pacific north of Ogden, 10 carloads of furniture from Pendleton, Oregon, to Denver, Colorado, 14 carloads of batteries from Ogden, Utah, to Denver, and 119 carloads of other commodities moving to or from points in the territory north of Ogden.

During the same year, we also shipped via the Union Pacific Railroad the following carloads of freight to Denver, Colorado. The rate application is not involved on this movement but the service is definitely involved in this hearing. From Council Bluffs, 39 carloads of refrigerators, 28 carloads of washing machines, 3 carloads of dry batteries, [fol. 2170] 5 carloads of paint, 54 carloads of miscellaneous freight.

From Kansas City, 10 carloads of refrigerators and 35 carloads of miscellaneous freight; or, a total of 185 carloads. In the same year, we also shipped 22 carloads of refrigerators and 7 carloads of miscellaneous merchandise from Missouri River to Ogden, Utah, via the Union Pacific Railroad.

In our business we have never felt any need for the routes and the rates via the D&RGW sought in this case. We have never asked either the D&RGW or the Union Pacific Railroad for the establishment of such routes, nor would we derive any benefit from them in the form of transit at points on the D&RGW or reconsignments or diversions. Time is an important factor in our merchandising. A day's delay may result in a loss in sales, a loss of a customer, his friends and relatives. The Union Pacific Railroad Company's service has been entirely satisfactory and their facilities are adequate. We see no need of short-routing this railroad and opening up a longer route by the way of the D&RGW, which, of course, would require more time in transit.

We understand the purpose of this complaint is to divert to the D&RGW traffic now handled by the Union Pacific Railroad to and from points on its own line and to its connecting line. This would in no way increase the movement of freight in this territory, but the result would be that the Union Pacific Railroad would lose a substantial amount [fol. 2171] of its revenues. From our past experience we know that, following any reduction in traffic and revenue, the service of the railroads, including that of the Union Pacific, falls off in the form of less frequent train schedules and less frequent movements for spotting inbound and outbound cars.

In each one of our warehouses, located at Portland, Ogden, and Denver, we carry an inventory of approximately seven hundred thousand dollars, which is a sixty-day stock. A one-day increase in transportation time would force us to increase our inventory by one-sixtieth, which amounts to eleven thousand-six hundred sixty-six dollars for one warehouse. At all three warehouses we would be forced to increase our inventory thirty-four thousand, nine hundred ninety-eight dollars. Anything that would tend to slow up our train service would hurt us and for that reason we are opposed to the position of the D&RGW in this case.

[fol. 2172] VERIFIED STATEMENT No. 65

I.C.C. Docket No. 30297

Statement of M. E. Hollingsworth

My name is M. E. Hollingsworth and I reside at Council Bluffs, Iowa. I have been employed by the Chicago, Milwaukee, St. Paul and Pacific Railroad Company at the Council Bluffs, Iowa Yard for more than forty years, and I am the senior switchman.

I am local chairman of the Brotherhood of Railway Trainmen on the Milwaukee at Council Bluffs, and I am also vice-chairman of the General Grievance Committee of that organization on the Milwaukee Railroad.

I am appearing here on behalf of the organizations on the Milwaukee, representing the engineers, firemen and

engine men, conductors and trainmen, all of which organizations have intervened in this proceeding opposing the application of The Denver & Rio Grande Western Railroad Company. These intervening organizations represent the employes engaged in yard service as well as those in road service.

I have had long service in the Milwaukee's Council Bluffs Yard and have personal knowledge that a large amount of carload freight is interchanged daily between our railroad and the Union Pacific.

[fol. 2173] The number of Milwaukee freight trains operated in and out of the Council Bluffs, Iowa Yard is of great importance to the organizations which I represent for it is the number of trains operated which determines the number of employes who will be engaged by the Milwaukee in road and yard service on the line extending between Council Bluffs and Chicago. The cars interchanged by the line with the Union Pacific account for many of these trains during a year.

While I have no personal knowledge of the total number of cars interchanged between the two railroads, I do know it is a very large number, and I am sure that the eastbound loads interchanged at Council Bluffs exceed 30,000 cars per year and this means approximately the same number of loads and empties at Council Bluffs in the opposite direction. We know, of course, that only a part of this traffic is involved in this proceeding.

The Denver & Rio Grande Western Railroad Company is seeking routes and rates which will permit the diversion of traffic destined to and from points on the Union Pacific north of Ogden from the Union Pacific line and its connections to The D. & R. G. W. R. R. Co. and its connections. We do know there is very large amount of traffic involved as has been asserted by witnesses for both of these railroads.

The organizations which I represent feel very certain that any substantial diversion of this traffic from the Union Pacific at Ogden will mean fewer cars and fewer trains on the Milwaukee, with resulting reduction in employment of road and Yard employes.

[fol. 2174] The Milwaukee has no connection with The D.&R.G.W.R.R. Co., and unless the Union Pacific can handle

the traffic to and from Council Bluffs, the Milwaukee cannot hope to participate in the handling of the traffic.

The traffic that now comes into Council Bluffs from territory north of Ogden, destined to points east of Council Bluffs on the Milwaukee, or its connections, is available to the Milwaukee and we handle many thousands of cars of this traffic and this means a lot of jobs for our men.

[fol. 2175] VERIFIED STATEMENT NO. 66

Statement of Alfred M. Pence

I am an attorney engaged in the general practice of law at Laramie, Wyoming, which has been my home since 1924. I was reared on a ranch approximately forty-five miles northeast of Cheyenne, Wyoming, and have lived forty-three years in southern Wyoming. I am familiar with the ranching business and the problems of the rancher in this area. My family has shipped livestock over the Union Pacific for over thirty-five years. I have been familiar with the Union Pacific and its services all of my mature lifetime. I graduated from the University of Wyoming Law School and was admitted to practice in 1929. I have practiced at Laramie since that time except for four years during the recent war when I was an infantry officer in the United States Army. I belong to various civic organizations at Laramie, including the Laramie Chamber of Commerce. At the present time I am President of the Wyoming State Bar Association.

I appear as a witness in behalf of the Laramie Chamber of Commerce to protest the granting of the prayer of the complaint in this proceeding upon the grounds and for the reasons hereinafter stated.

My law practice brings me into direct contact with all the civic and business life of Laramie people and businesses; I am on the Board of Directors of five business corporations and am familiar with business and living conditions there. I am now City Attorney at Laramie and I have [fol. 2176] served as City Attorney or Assistant City Attorney at various times for a total period of eleven years.

The present estimated population of Laramie, Wyoming, is about 14,000, exclusive of the University of Wyoming population of more than 5,000. Albany County, of which Laramie is the county seat, is sparsely settled, being exclusively a livestock and timber country. With some variance as to industry and agriculture, this is true of all of the State of Wyoming.

The Union Pacific has always been an important element in the community and business life of Laramie and southern Wyoming. Through the years, it has constituted our most important individual industrial plant. It has been the life blood of this community. In 1868 Laramie was selected as a terminal site for the Union Pacific. When the railroad moved on, Laramie remained and has grown up with the Union Pacific. Our business, our municipal and school institutions and facilities, and our tax structure have all grown as the Union Pacific has grown. Anything which affects the Union Pacific employment and payrolls immediately and directly affects Laramie and business there. The railroad is the barometer of our business life.

A diversion of traffic from the Union Pacific which would displace 80 employees with an annual payroll of over $300,000 or any other substantial number of employees or annual payroll at Laramie would substantially and ad- [fol. 2177] versely affect our community. Should 80 employees be displaced, it is easy to see that with their families as many as 280 persons in the community would be affected.

As an illustration of the interdependence between the Union Pacific and our community, the water situation at Laramie is in point. For many years the Union Pacific and the City obtained their water from the city springs east of Laramie. This water supply was jointly owned by the railroad and the city but the railroad had a priority right. As the railroad and the city grew and their respective water requirements increased, the supply became inadequate. In this situation, the parties cooperated in obtaining an additional supply of water from the Laramie River, and the Union Pacific agreed to trade its right to water from city springs for river water, in order that the citizens of Laramie might enjoy the use of spring water for domestic purposes which they considered more desirable. Bonds in the

total amount of $750,000 were issued for the construction of this project. A large part of the cost of the improvement fell on the Union Pacific as it is our most substantial individual taxpayer. This is an example of future planning, geared to meet the requirements of a constantly growing railroad population.

The Union Pacific paid 24.1 per cent of all taxes paid in Albany County in 1949. Some of our school districts could not have survived without the tax revenue they have received from the Union Pacific. As examples, Districts 16 [fol. 2178] and 25 levy a full 13 mills special levy and are in terrible condition, whereas districts along the railroad have no special levy and are in fine condition. It is not unusual in this entire area to see a fine brick school building standing practically alone on the prairie along the line of the Union Pacific and serving a large surrounding area. Conversely, in districts removed from the railroad, it is not unusual to find schools housed in the ranch bunkhouse or the living room of a ranch home. The Union Pacific, its affiliates and employees constitute a large source of tax revenue to Wyoming, particularly in southern Wyoming.

The Union Pacific furnishes highly satisfactory rail transportation service, both freight and passenger, to and through our community and the State of Wyoming. The ranching experience of my own family is a good illustration of this. During all of the years my father has shipped livestock on the Union Pacific, I know of no instance in which he has had any substantial complaint with respect to Union Pacific service for the handling of his livestock. This has been generally true among my many rancher clients, and I have heard no complaints with respect to livestock transportation service from other than my clients which merited substantial consideration. During the last 18 months of the war, I had considerable experience with respect to the transportation of troops in my position as Assistant G-3 of the Replacement and School Command, Army Ground Forces. We moved more than a half million men every [fol. 2179] 17 weeks over the railroads of this country. The record of the railroads generally with respect to such transportation was good, but the record of the Union Pacific was outstanding. It is of considerable advantage to shippers

of livestock to have numerous freight train schedules available for shipment of his stock. Conditions frequently arise which delay transfer of livestock to the shipping point. The more train schedules available, the greater the opportunity the shipper has to get the livestock to market promptly. Prompt shipment is, of course, very important to livestock shippers to avoid shrinkage and to be on the market as planned. Anything which would result in reducing the number of train schedules would work hardships on livestock shippers.

Our community is too small to absorb reduced payrolls. Displacements would would be inevitable. Wyoming being a sparsely settled State, the ill effects of displacement of employees and the movement of populations from one place to another is more pronounced than in a more densely populated area. I have had personal experience in this regard with respect to legislative activities involving such displacement of persons and have observed the bad effects of such activities upon the persons involved. Such displacements are always destructive and not constructive, and should be avoided in the absence of some impelling reason therefor.

Many Union Pacific employees own their own homes in our community, and they and their families are in many [fol. 2180] instances deeply rooted here, three generations having served the railroad. Displacement of these people would cause irreparable hardship.

The University of Wyoming is located at Laramie. It is the only State institution of higher education. It is dependent upon the Union Pacific for support from tax revenue and student support from children of Union Pacific employees, including children of Union Pacific miners, and others dependent upon Union Pacific employment. I have been familiar with the University and its student personnel since 1924. In 1928-29 I was President of the student body and traveled throughout the state in the interests of future enrollment at the University, and I know that there has always been a larger number of students at the University who are children of the Union Pacific Railway of mine employees. Many of these have had distinguished careers at the University and in the State. The Union

Pacific has furnished employment for many students while attending the University of Wyoming. The University is another institution which has grown with the Union Pacific and in a substantial measure has grown to meet the educational requirements of Union Pacific personnel. The University is bound to be adversely affected by any substantial decrease in Union Pacific employment and payroll, which is illustrated by the following figures: Although the Union Pacific runs through only seven of Wyoming's twenty-three counties, yet those counties furnished in 1948-49 59.1 per [fol. 2181] cent of the Wyoming students attending the University, and at present furnish 58.5 per cent of the Wyoming students.

It seems clearly against the public interest:

1. To divert traffic from the Union Pacific which is rendering highly satisfactory service.

2. To displace employees who have become a part of our community.

3. To disrupt in any substantial way a community and its businesses and institutions and the tax structure upon which it depends, by diverting the business of an industry which the community was in large part built up to support.

4. To discourage the cooperative relationship which must necessarily exist between such a community as Laramie and an important industry such as the Union Pacific.

5. To undermine the potential support of an important institution like the University of Wyoming which was built to meet the requirements of a state-wide community of which the southern tier of counties are such an important part.

[fol. 2182] VERIFIED STATEMENT No. 67

Statement of Frederick W. Marble

I live at Cheyenne, Wyoming and have lived there a considerable portion of my life. I am a banker and at present am President of the Stock Growers National Bank at Cheyenne and have been an officer of this bank since 1936. I am also interested in the banking business at Billings, Montana being Vice-President of the Montana National

Bank at Billings where I lived for a number of years just prior to returning to Cheyenne. I am a director of the Federal Reserve Bank at Omaha, Nebraska and in 1942 was President of the Wyoming Bankers Association. I have also been extensively engaged in the livestock business on my own account and have handled the banking business of a great many livestock producers over a period of years. Through my own ranching operations and the handling of financial matters for many ranchers I am familiar with the livestock business in this area.

I am a member of various civic organizations in Cheyenne including the Chamber of Commerce and in the past have been President and director of that organization. I am a member of the Cheyenne Water Board. By reason of my banking connections and other relations in Cheyenne I am familiar with business and living conditions in this city.

[fol. 2183] The Wyoming Bankers Association is one of the intervenors in this case and the Executive Council of that Association has delegated me to make a statement on behalf of the Association. I am also speaking for the Cheyenne Chamber of Commerce and the business interests of Cheyenne.

The interest of the Wyoming Bankers Association, the Cheyenne Chamber of Commerce and the business men of Cheyenne arises from the fact that the Union Pacific Railroad and its coal mining subsidiary is the largest single employer in our state; its operations afford a living to more than 30,000 people of our state which is over 10 percent of our total population. It is estimated that about 40% of the total population of Wyoming, of over 100,000 people live in the six southern counties of the state directly served by the main lines of the Union Pacific Railroad and in this six county area about 30 percent of the population is directly dependent upon Union Pacific employment for its livelihood. In this same area the Union Pacific pays over 25 percent of the ad valorum general property taxes required for support of state, county, and municipal governments and schools.

These figures make it evident that the economic welfare of Wyoming is closely and directly tied in to the number of workers required by the Union Pacific Railroad to run its trains across our state. In the six county area where

40% of our people live Union Pacific is unquestionably the [fol. 2184] major factor in the economic life of the region—this section is prosperous when traffic and employment are high on the Union Pacific and conversely any decline in Union Pacific employment is immediately reflected by declining trade in the communities affected. When we take into consideration the number of people in service and distributing lines indirectly dependent upon Union Pacific payrolls for their livelihood it is apparent that a very substantial portion of the fixed urban investment in housing, business property, schools and municipal improvements has been built up on the basis of Union Pacific through traffic originated outside the State of Wyoming since Wyoming itself generates only a modest amount of traffic.

It is this phase of the problem that concerns us deeply. We have over a period of years built up a large part of our economy in southern Wyoming on the basis of this through Union Pacific rail traffic which originates outside our borders, workers have their homes, business buildings and schools have been erected to serve the workers. We have little or no industry of our own where rail workers and miners could find employment in the communities where they now live should they permanently lose their jobs as a result of traffic taken away from the Union Pacific. The loss of any substantial number of Union Pacific jobs brought about by a diversion of through rail traffic could only mean [fol. 2185] that the job holders and a proportionate number of other workers who serve the rail employees and miners would be required to move out of the state and find a means of livelihood elsewhere. Such a movement of any size would result in most unfortunate after effects on urban property and business values along the Union Pacific line in our state. Discharged employees would undoubtedly suffer immediately and direct financial loss on the homes they would be required to sell.

It is most important to our state that property values of Union Pacific itself be maintained. In the 6 counties traversed by the railroad's main lines the percentage of the total of all property taxes paid by Union Pacific runs from a minimum of 20 percent in Laramie County up to a maximum of 37½% in both Uinta and Sweetwater Counties. This is the most dependable and steadiest source of

tax revenue these counties have. Wyoming has a general state levy of 6 mills which is collected by the state on all property in the state and then distributed by the state to all public schools on the basis of need. The Union Pacific and its mines pay on this 6 mill levy alone approximately $360,000.00 annually while the total raised over the whole state is about $3,400,000.00. Thus Union Pacific is most important to our school system—especially so to the more needy rural schools all over the state.

[fol. 2186] Users of Transportation are interested only in rates, speed, adequacy, safety, convenience and dependability of service. If the users were to be substantially benefited in some of these respects by the diversion of traffic proposed in this case we in Wyoming would, I think, take our beating gracefully as one of the inevitable but unfortunate after effects of economic progress. Here though we cannot help feeling that the economy we have built up over a long period of years to adequately serve this traffic is now being put in jeopardy, not in the interest of savings of time or money or providing better service to users but rather to permit another carrier to share a part of the freight revenues now enjoyed by the Union Pacific. It seems to us that the loss we might suffer in Wyoming in jobs and property values would far exceed any possible benefits that might accrue to shippers of through freight if the proposed diversion is granted. It seems inequitable to us to expose our people to the risk of losing their jobs, moving away from their homes and suffering financial losses on their properties unless it can be clearly demonstrated that users of rail service will be substantially benefited by the proposed change.

[fol. 2187] VERIFIED STATEMENT No. 68

Statement of Rudolph Anselmi

I live in Rock Springs, Wyoming. I was born there on May 1, 1904 and have lived there all my life. I graduated from the University of Wyoming in 1925. I am part owner and operator of the Miners Mercantile Company—a retail department store. I belong to various civic organizations

in Rock Springs. I am president of the School Board there —School District No. 4—being a member since 1936. I am a Senator from Sweetwater County in the State Legislature where I have served for 13 years. I have been a member of the Ways and Means Committee of the Senate which considers the budgets of the various departments of state government. The work of the committee leads into consideration of all state revenue and of state expenditures. I appear as a witness for the Rock Springs Chamber of Commerce and in support of Chambers of Commerce and civic organizations which have intervened in this proceeding.

Rock Springs is primarily a coal mining community. It is also the center of a livestock industry with some farming and in recent years there has been oil and gas development. But the pulse of Rock Springs is the coal mining industry. Coal is mined in Rock Springs and in the surrounding coal mining camps. Ninety per cent of the coal mined in this area is mined by the Union Pacific Coal Company and is used by the Union Pacific Railroad in railroad operations. The importance of railroad use of coal to this community is therefore very clear.

We who are in business in Rock Springs are extremely [fol. 2188] sensitive to the ups and downs in the coal industry. Seasonal lay-offs, strikes and similar work stoppages in the coal mines are immediately felt in our business houses. If such stoppages involve substantial numbers of miners and continue for substantial periods of time, they affect the economy of our community in a critical way and may, and sometimes do, result in great distress. Such conditions are felt in the community not only in a material way but the psychological effects are detrimental to our business and the morale of the community. The population of Rock Springs—approximately 12,000. The population of Sweetwater County is approximately 22,500 with Rock Springs the trading center for the entire county; the area is approximately 11,520 square miles. The surrounding trade area is all very sparsely settled.

Any diversion of business from the railroad which would diminish the amount of coal requirements from the Rock Springs area would be immediately felt here. If such di-

version should result in the discontinuance of employment of as many as 250 miners, as Union Pacific witnesses have indicated it may—with the reduction of more than a million dollar payroll, it would have serious effects. From personal knowledge of Rock Springs miners and their families I know that they have large families. A family of five would, in my opinion, be the average. On this basis, therefore, 1,500 persons in the community would be affected. Many of the miners have lived there many years. Their families have been born and brought up there. They have built themselves into the community. The displacement [fol. 2189] of these persons would seriously affect their living conditions.

The principal development of Rock Springs has been in its coal mining industry. This has kept pace with the development of the Union Pacific Railroad. The railroad and the community have grown hand in hand, and the community has developed to support the Railroad and the miners who mine coal for the Railroad. All of the facilities of the community, its business, its schools, its private utilities, its sewer systems, and its bonded indebtedness have developed and grown for this purpose. If traffic is now to be deiverted away from the Union Pacific, this community and all of its facilities and property values are bound to suffer great loss.

We do not believe such a loss, brought about in such a way is in the public interest. If communities such as Rock Springs, and its business facilities, of which I have spoken, cannot be developed in reliance upon a continuance of the right of the railroad to transport the traffic it had developed, so long as it does a good job, then such communities will be discouraged in such development to the detriment of such railroads in the Union Pacific.

I know enough of the geography of Idaho and the northwest territory traversed by the Union Pacific to know that it has been the principal transportation factor in the development of that area. The complainant has no rail facilities in that area. Knowing from my personal knowledge that the rail lines and facilities of the Union Pacific operated through Rock Springs and across Wyoming are of [fol. 2190] first quality there can be no substantial complaint about them. The Union Pacific is doing an out-

standing transportation job through Wyoming. I have developed from my inquiries that the routes of the complainant, to which they seek to divert traffic from the Union Pacific, are no shorter than those of the Union Pacific.

I repeat then, that we of Rock Springs do not feel that it is in the public interest to tear down this community, developed to support the efficient transportation lines of the Union Pacific in order to divert traffic to the complainant which has no rail facilities in the territory from which they seek to solicit and divert such traffic.

I know from my personal knowledge, supplemented by my legislative experience, that the Union Pacific, with its subsidiaries, pays a substantial portion of the taxes and the Wyoming counties it passes through and only in lesser degree in the entire state. In Sweetwater County the Union Pacific pays a major part of all taxes. My inquiries develop that it paid about 50% of all taxes in the county for 1949. In some school districts in this county, it pays as high as 90% of all taxes. Its potential ability to continue such tax payments are bound to be lessened by the diversion of traffic in substantial amounts from its lines through this state. What I have said applies to the Union Pacific with its subsidiaries as a taxpayer. Loss of employment by Union Pacific miners in this county in substantial numbers would obviously have an additional serious effect from the point of view of tax revenue.

[fol. 2191] Union Pacific witnesses have testified that it may be necessary to abandon the Stansbury mining district. The importance of the Union Pacific as a taxpayer may be illustrated with respect to School District No. 7 in which Stansbury is located. Mr. Bayless has said that the loss in traffic subject to solicitation by the Rio Grande may result in elimination of the mining of 385,000 tons of coal. Coal production was assessed in 1949 at $2.15 a ton. This would represent $827,750 of valuation in School District No. 7. Valuation of Union Pacific mining facilities in this district were assessed at an additional amount of $2,129,872.00. Thus the total Union Pacific Coal Company valuation in the Stansbury district was $2,957,622.00. The total valuation of district No. 7 was $6,348,050.00. Therefore, the loss of tax valuation to District No. 7 would be 46%. Dis-

trict No. 7 includes schools in Reliance, Dines and Winton in addition to Stansbury.

Coal mining is very important as an industry in Wyoming. This state contains some of the greatest known coal deposits in the world. Rock Springs is the center of the coal mining industry in the state. The Union Pacific Railroad has consistently clung to the use of coal in this area in the face if the insistent appeals of competitive fuels. It is its declared policy to continue the use of coal in this area. These facts make it of additional importance to Rock Springs and to the entire state to retain the mining of coal threatened by the proposed diversion of traffic involved in this proceeding.

[fol. 2192] I have made no reference to loss of employment by railroad employees in this county. I understand from the statements of railroad witnesses that as many as 100 railroad employees, principally at Green River, may be displaced. Such displacement would affect the families of these men, perhaps between 350 to 500 persons as a total. Such a loss would have its effect not only upon Green River but also upon Rock Springs as the latter is in many respects a market center for all the population of Sweetwater County.

I should also refer to the secondary effect which would result from any such mass population displacement as may result from possible diversion of traffic. I do not have specific figures but it is obvious that the effect would reach out and effect an additional portion of the population primarily displaced.

For the foregoing reasons I wish to protest the granting of the relief sorght in this proceeding.

[fol. 2193] VERIFIED STATEMENT NO. 69

Thomas E. Rogers

I live at Green River, Wyoming, and have lived there about 45 years. I am in the banking business, the mercantile business and other businesses in Green River. I am familiar with the sheep business in the area. I am familiar with housing conditions in Green River. I am Vice-President of

the State Bank of Green River and am manager of the Green River Mercantile Company. I am auditor for the Big Sandy Live Stock Company and the Green River Live Stock Company. I belong to various civic organizations at Green River including the Green River Community Club. I appear here as a witness for the Green River Community Club and the Lion's Club and indirectly for the business interests in Wyoming which may be affected by this proceeding.

Green River is a division point on the Union Pacific Railroad. It is the county seat of Sweetwater County. The Union Pacific Railroad is the principal and practically the only industry in Green River. It has terminal facilities for trainmen operating both east and west, including the line thru Granger into Idaho, and also has extensive terminal facilities, including a large round house for power units operating in all such directions. There are extensive switching yards and switching facilities. The community has grown with the railroad, and it exists largely to accom-odate the railroad and its employees who live there. A large num-
[fol. 2194] ber of railroad employees own their own homes. The city and its businesses, its schools, its municipal facilities have all been built up along with the railroad.

Any fluctuation in employment on the Union Pacific is immediately felt in our banks and our business houses. Any diversion of traffic which would result in substantially reducing railroad employment in Green River would seriously affect the community. Green River has a population of about 3600. Assuming 100 employees were displaced, this would account for from 350 to 500 members of the community who would be affected. Such displacement would seriously affect the living conditions of these persons. The business of the community, municipal facilities and institutions and property values would suffer serious loss.

The taxpaying ability of the Union Pacific would be decreased. Taxes now realized from its employees who would be displaced would be lost. The level to which the community, its business and its institutions have been developed would be lowered in proportion to the loss of employment and of wage earnings in the community.

Lack of housing has at times been a serious problem in the course of the growth of railroad facilities at Green

River. Houses have been constructed by members of the community to meet this need. This illustrates the direct connection between growth and development of the railroad [fol. 2195] and that of the community. It does not seem to us in Green River that it is in the public interest to discourage such necessary cooperation between a transcontinental railroad and the communities thru which it passes, by diversion of traffic when the railroad is performing satisfactory service. I say satisfactory service, but by comparison with rail transportation service generally the service of the Union Pacific at and thru Green River from my experience and observation is well above average. The importance of protecting division points on the railroad like Green River from the effects of such diversions of traffic would seem particularly important.

I am a member of the School Board at Green River. It is School District Number 2. The Union Pacific Railroad and its subsidiaries paid about 56% of the taxes in that district in 1949. The importance of the Union Pacific as a taxpayer and of its continuing ability to pay taxes under such circumstances is clear. The importance of loss of tax revenue from any displaced Union Pacific employees is also obvious. As an illustration of the importance of the Union Pacific as a taxpayer in the District we have just sold an issue of building bonds at the low rate of 1.6%, which would be impossible in the absence of the long tax paying record of the Union Pacific. Our school facilities have been increased and modernized to meet the growing needs of the community as it now exists. Any substantial loss of em- [fol. 2196] ployment, wage earnings, or tax revenue would have a serious and detrimental effect on these schools.

I am also a member of the Board of Trustees of Memorial Hospital of Sweetwater County which is located at Rock Springs. This hospital serves the entire area, including Green River. The hospital cannot operate except at a deficit and the deficit is made up by taxation. Anything affecting the ability of the Union Pacific Railroad, its subsidiaries and its employees to continue paying their quota of these taxes would directly and adversely affect this institution which serves the human needs of the area; and would shift the burden of such taxation to others in the community who

might not be able to assume the burden in view of the effect upon them of any reduction in Union Pacific employment.

Reduction of number of trains operated in this area is not to the advantage of livestock shippers. It is to the interest of such shippers to have their livestock moved to market points as quickly as possible in order to avoid shrinkage and other results of delay. Loss of four trains per day would result in poorer service for these shippers.

[fol. 2197] VERIFIED STATEMENT No. 70

Statement of Timon A. Walter

I am a resident of Laramie, Wyoming. I am twenty-nine years old. My education has been as follows: I attended and graduated from North High School in Denver, Colorado. I then attended the University of Denver and received an A. B. Degree in 1947. I received a degree of Master of Business Administration from Denver University in 1948. During the war I was in service in the air corps as a glider co-pilot. I am at present employed as an instructor at the University of Wyoming in the Department of Statistics, College of Commerce and Industry.

At the request of various Chambers of Commerce and civic organizations in the State of Wyoming, headed by the Cheyenne Chamber of Commerce, I have made a statistical study of the possible effect of this proceeding upon the economy of the communities in Wyoming along the line of Union Pacific, that is Laramie County, Albany County, Carbon County, and Sweetwater County.

It is my understanding that the anticipated effect of the granting of the relief sought in this proceeding will be to divert certain traffic now moving from Idaho and northwest points across Wyoming via the Union Pacific from Green River eastward, to the lines of the Denver & Rio Grande via Ogden and thence through Colorado.

[fol. 2198] I have read a transcript of that part of the testimony of T. K. Earley, Assistant Freight Traffic Manager, The Denver and Rio Grande Western Railroad Company, at the hearing in this proceeding in Salt Lake City to the effect that the potential traffic subject to solicitation

of the Rio Grande for transportation over its lines if the through rates sought herein are granted is 101,476 cars east bound and 56,286 cars west bound, or a total of 157,762 cars per year.

I have read the statements of Union Pacific witnesses at this hearing, to the effect that the diversion of such an amount of traffic per year would result in a reduction of four trains each way per day over the lines of the Union Pacific in Wyoming through the counties which I have referred to, together with estimates of the number of employees whose services would be dispensed with as a result of such a loss of traffic in the areas involved in the State of Wyoming, including coal miners. I have assumed for the purposes of my testimony that if there is such a potential amount of traffic subject to Rio Grande solicitation as I have previously stated, that the Rio Grande can and will solicit such traffic away from the lines of the Union Pacific passing through Wyoming and through the areas referred to. I have taken the estimates by the Union Pacific witnesses as a basis for my testimony as to the effect of such loss of employment in the areas in Wyoming involved.

I have prepared an exhibit which I have with me. This [fol. 2199] has been marked Exhibit . Such Exhibit represents the results of my statistical studies and my conclusions with respect to the effect on the southern Wyoming counties involved of the loss of traffic represented by the potential traffic subject to solicitation by the Rio Grande as testified by their witness, Mr. T. K. Earley, and the resulting effect on railroad and railroad coal mine employment in such Wyoming counties as stated by the Union Pacific witnesses.

(Here follows 1 Paster, side folio 2200)

[fol. 2200]

I. C. C. Docket 30297
EXHIBIT ——
Witness: Timon Walther

Part III—The Loss of Employment in Four Counties in Wyoming Resulting from a Possible Reduction of Railroad and Mine Employees and Their Payroll of $3,340,000

	Number of Workers Unemployed:					
24	Mine and Railroad	386	64	92	284	826
25	Service, Wholesale	42	10	21	55	128
26	Education & Hospital	21	4	3	7	35
27	Clerks & Bookkeepers	110	25	32	100	267
28	Total	559	103	148	446	1256

Exhibit is in three parts, as follows:

Part I: The *Loss of Sales* in Four Counties in Wyoming Resulting from a Possible $3,340,000 Reduction of Railroad and Mine Payroll.

Part II: The *Loss of Personal Income* in Four Counties in Wyoming Resulting from a Possible $3,340,000 Reduction of Railroad and Mine Payroll.

Part III: The *Loss of Employment* in Four Counties in Wyoming Resulting from a Possible Reduction of Railroad and Mine Employees and Their Payroll of $3,340,000.

Exhibit is broken down with respect to the several counties involved, that is, Sweetwater County, Carbon County, Laramie County and Albany County, and the total for each of such counties is shown.

In Sweetwater County there are two principal municipalities, that is, Rock Springs (Population, 12,000) and Green River (Population, 3600); in Carbon County there are likewise two principal municipalities, that is Rawlins (Population, 8500) and Hanna (Population, 1,127); in Laramie County there is one principal municipality, that [fol. 2201] is Cheyenne, (Population, 35,000); and in Albany County there is likewise but one principal municipality, that is, Laramie (Population, 14,000).

Referring to Part I of the Exhibit with respect to "Loss of Sales", I have included two columns, that is (1) Total Loss of Sales, and (2) Cost of Goods Sold. Cost of Goods sold would constitute an additional loss within Wyoming if the goods were manufactured in this State. However, with some exceptions, goods sold in Wyoming are purchased outside of the State.

Referring to Part I of the Exhibit, It will be noted that losses of sales are broken down with respect to: Restaurants; Food Stores; Apparel; Furniture and Appliances; New and Used Automobiles and Parts; Gasoline; Drug Stores and Professional Supplies; Lumber, Hardware, and Variety Stores; Utilities, Amusements and Miscellaneous. These classifications were followed because they are basicly those used by the Sales Tax Department of Wyoming,

subject to some modifications which I worked out for the purposes of this study. The classifications are also approximately the same as those used by the U.S. Department of Commerce in publishing statistical information in their *Survey of Current Business.*

Total losses of sales in the several classifications were calculated as follows:

I took first the total income for the county involved. Total income for the county was determined from figures [fol. 2202] available from several sources. Income with respect to the following groups, that is, mining, construction, manufacturing, transportation and public utilities, wholesale trade, retail trade, finance service and professional and miscellaneous, were obtained from the Social Security authorities. Figures for agricultural income were obtained from the U.S. Department of Agriculture. Figures for educational salaries were obtained from the Wyoming State Board of Education. Figures for the tourist trade were obtained from the Commerce and Industry Commission of the State of Wyoming. State salaries were obtained from the State Auditor. Figures for the Union Pacific Railroad were obtained from the Auditing Department of the Railroad. Proprietorship income was based upon an estimate which in turn was based upon sales tax figures obtained from the Sales Tax Department of the State of Wyoming and upon national studies of ratios of proprietorship income to such total sales. In Laramie County there was also personal income for Fort Warren and Frontier Days, figures for which were obtained from the Cheyenne Chamber of Commerce.

Ratios were then computed for each classification by taking the total income figure for each County and dividing it into the total sales in each of the several classifications as shown by figures obtained from the Sales Tax Department of Wyoming. I will call these consumption ratios. These ratios were then applied to the total payroll loss of [fol. 2203] Union Pacific employees (railroad and mine employees) as estimated by Union Pacific witnesses, by multiplying such payroll losses by such ratio figures with respect to each classification, that is, restaurants, etc. The result thus obtained constituted what may be called the

initial loss. To show succeeding losses resulting from loss of employment by employees other than railroad and railroad mine employees, further calculations were made. The basis for such calculations was a sample study made in Rock Springs in order to determine the average volume of sales per worker in each classification and their average salaries. The average volume per worker was divided into the total initial loss of sales in each classification in order to determine the number of workers displaced. The number of workers displaced as thus determined was multiplied by the average pay per worker in each classification. This determined the loss in wages of employees displaced in each classification. The total of such loss in wages for all of the classifications was then multiplied by the original ratios referred to above to determine the additional or secondary loss in sales for each classification. This process was repeated until I approached, in statistical terms an asymptote, that is a point where further loss was considered infinitesimal.

Therefore the first column in Part I of this Exhibit represents the total losses resulting from loss of employment by Union Pacific railroad and mine employees cal- [fol. 2204] culated in the manner previously described, together with losses so calculated with respect to salary losses of workers in wholesale trade, finance, service employments and education, who would be affected by the loss of business involved.

The second column of Part I of this Exhibit, that is "Cost of Goods Sold" will be referred to again in connection with Part II of the Exhibit covering "Loss of Personal Income". However the figures in this column 2 were calculated by applying to total loss of sales appearing in column one, certain ratios based upon studies made by nationally recognized trade associations and published by the Department of Commerce of the United States. These ratios are recognized and are generally used by statisticians.

Referring to Part II of this Exhibit entitled "Loss of Personal Income", the first genefal classification in the exhibit is entitled "Workers Wage Loss". The figures appearing under this first general classification in column

1 were calculated as follows: The figures appearing in column 1 after the sub-classification entitled "Miners' and Railroad" is the total of wage losses in railroad and mine employment as estimated in the testimony of Union Pacific witnesses, including the testimony of Mr. Bayless. The figures appearing after each of the succeeding sub-classifications in column 1 under the first general classification are calculated on the basis heretofore explained in explaining losses of sales resulting from loss of employment [fol. 2205] by employees other than Union Pacific Railroad and mine employees in Part I. Part II is also broken down with respect to the four counties covered by my study.

The next general classification in Part II is "Loss of Rent". This was calculated as follows. I made a personal investigation in each of the counties and from that investigation I conservatively estimated the average rent for all classes of labor. For the several counties such estimate was as follows: Sweetwater County, $40.00 per month; Carbon County, $45.00 per month; Laramie County, $50.00 per month; Albany County, $55.00 per month. Applying this rent factor to the number of employees shown in Part III the results shown were obtained.

The next general classification in Part II is "Proprietorship Income", which includes business rent, managerial salaries, profits. The figures shown were calculated as follows: ratios were used for each of the business classifications shown in Part I covering "Loss of Sales". These ratios were: the ratio of proprietorship income, that is business rents, managerial salaries and profits to per dollar of sales with respect to each business classification shown. The ratios were obtained from studies made by national associations in the various classifications as published by the Department of Commerce of the United States. Such ratios are considered to be reasonably accurate by statisticians generally, and I consider them to be so. These ratios were applied to total losses of sales shown in Part [fol. 2206] I above and totalled to equal the loss for each of the four counties.

Part III is entitled "Loss of Employment". The figures appearing in this Exhibit were calculated as follows: The number of workers appearing after the classification

"Miners and Railroad" is the number who will lose employment, including coal miners, as estimated by the witnesses for the Union Pacific. The numbers shown with respect to the other classifications of employment were calculated on the basis already explained under the explanation in Part I with respect to losses of sales arising from loss of employment by employees other than Union Pacific railroad and mine employees.

Exhibit shows these total losses: Loss of sales, about $3,900,000; loss of personal income, over $5,200,000; and loss of employment, over 1200 wage earners.

The cost of goods sold, which is over $2,600,000, was included to emphasize the fact that this loss in *no way* contributed to the other losses shown. It was assumed that these products were purchased outside the four counties involved and did not affect these counties. However, a portion of this sum will unquestionably affect other Wyoming areas, that is, those areas that produce meat, beet, sugar, poultry, eggs, and similar items.

In camparison with total sales and personal income of the entire United States these figures might seem unim- [fol. 2207] portant. But to those sparsely settled communities, the cumulative effect of the loss is a serious matter.

These facts are doubly significant in that the powers of absorption of these communities with respect to such a loss of population are negligible. These communities originated to service the Union Pacific Railroad and their employees and the largest portion of community income is still derived from that one source.

The State of Wyoming through its University and other organizations spends large sums of money on research and publicity to make feasible and to attract the settlement of industries within the States' boundaries. These organizations think in terms of considerably smaller payrolls than the $3,340,000 payroll involved in this case.

This study has only considered measurable consequences of this possible loss. It is my opinion that the actual loss would be much greater. For example, withdrawal of over 1200 living units from these communities would not only cause a cumulative reduction of all rents, but also might possibly stop completely the major portion of home con-

struction in the communities and add the loss involved in loss of construction employment.

These communities are struggling, as many in the United States, to compensate for loss of the high level of war-time activity. A further blow such as this would in all probability cancel the gains made in the last ten years.

[fol. 2208] VERIFIED STATEMENT NO. 71

Statement of Carleton A. Lathrop

I live at Cheyenne, Wyoming and have lived in that city since 1929. Previous to my residence in Cheyenne I lived at Kemmerer, Wyoming, for a short period. I am a practicing lawyer. I have belonged and belong now to various civic organizations. I have been a director of the Cheyenne Chamber of Commerce and I am now a director and President of that organization. I was City Attorney of the City of Cheyenne from 1940 to 1946. At the present time I am attorney for the Cheyenne Water Board. Such board is a branch or department of the city government which has exclusive control of its water facilities. As an attorney I come into contact with a representative cross section of the people and business of the city and I am familiar with business conditions in the community.

I appear here as a witness for the Cheyenne Chamber of Commerce, and indirectly for the other Chambers of Commerce in Wyoming who have intervened in this proceeding.

The present population of Cheyenne is estimated at from 30,000 to 35,000; 32,000 would be a conservative estimate of the population. This of course is a relatively small city. The Union Pacific constitutes one of the principal industries, if not the principal industry, of the city. This has always been true since I have lived in Cheyenne. The number of its employees living in the city has fluctuated from [fol. 2209] time to time but its employees always constituted a most important and substantial part of the population. I think it would be conservative to say that Union Pacific employees and their families constitute at least one-fourth of the population of Cheyenne.

As illustrative of the important position the Union Pacific occupies as an industry in Cheyenne, its water consumption is significant. On the Water Board we estimate that the use by the Union Pacific as an industry accounts for approximately one-third of the water consumption in the city. This does not take into account the very large amount of water used by Union Pacific employees.

In a city as small as Cheyenne a citizen actively engaged in business there, as I am, has an intimate and personal knowledge of the people and their affairs. I have Union Pacific employees as my clients and I know how Union Pacific employees live. I can say of my own knowledge that a very high percentage of the Union Pacific employees own their own homes and have lived here all of their lives.

As the Union Pacific develops and prospers so does Cheyenne, and of course the contrary is likewise true.

As the Union Pacific has developed and grown the city of Cheyenne has developed and grown with it. The requirements of the city have been developed to meet the requirements of the Union Pacific. This expansion and growth has applied with respect to all of the facilities of the city, that is public utilities facilities, including water, electric, gas [fol. 2210] and telephone; also school facilities; also all the facilities of city government such as street and alley construction, development and maintenance, sewer development and maintenance, police and fire service, etc. In connection with public facilities such as water facilities and schools, bonds have been issued from time to time in connection with the development of those facilities. These bonds are outstanding to the extent that they have not matured and been paid, and constitute a continuing obligation of the city and its taxpayers. At the present time a bond issue of over one million dollars for development of a sewage disposal plant has been voted by the citizens of Cheyenne.

Likewise the tax structure of the community has also developed in connection and commensurate with the growth and development of the Union Pacific.

I have heard the testimony of witnesses for the Union Pacific to the effect that success of the complainant in this proceeding may result in the discontinuance of as many as

four trains each way per day along the lines of the Union Pacific through Cheyenne; also that this may in turn result in the discontinuance of employment of over 250 employees in Cheyenne, representing wages of over a million dollars per year.

Such a loss of employment in the city would, of course, be only a beginning. Assuming that families of Union Pacific employees here average four persons, and I am inclined [fol. 2211] to think that the average may be higher, such loss of employment would affect a total of approximately 1,000 Cheyenne citizens. This of course represents only the persons directly involved with Union Pacific employees. It would be obvious that anything which affects such a great number of Cheyenne citizens would eventually affect others who are directly or indirectly involved in supplying the material and intangible requirements of such Union Pacific employees living in Cheyenne. It is easy to conceive that at least 1500 Cheyenne citizens might be affected, and I believe this would be a conservative estimate.

Loss of wage earnings of $1,000,000 in the city would also be a serious thing to the city. And here again this would only be a beginning of the loss of personal income within the city.

All of us who live and work in Cheyenne are conscious of the effect on the economy of the community of any shrinkage of Union Pacific employment in the city. As illustrative of this, any seasonal lay-off of Union Pacific employees directly affects the community not only in a material way but it also has a psychological reaction on the people and business of the city.

As President of the Chamber of Commerce and as a citizen of the community it is my opinion that there is no need for the service via Rio Grande lines which is involved in [fol. 2212] this proceeding, that is from Ogden and Salt Lake to Denver and thence to Cheyenne. Business concerns in Cheyenne are being adequately served by the railroads presently serving Wyoming. So far as Cheyenne is concerned I have heard no complaints as to the adequacy of Union Pacific service and it is my opinion that such service is not only adequate but that it constitutes rail transportation service of the best quality.

It is obvious that if traffic which the Union Pacific has built up to serve is now diverted to other rail lines which do not pass through Cheyenne, this city and the facilities which have been developed to serve the handling of such traffic will substantially suffer. The potential customers of stores and other businesses, and of our municipal and public utility facilities, will be adversely affected and decreased. The potential ability of the railroad, its employees and other affected taxpayers, to meet the tax requirements of the community will be decreased. The soundness of outstanding municipal bonds will be adversely affected. All of these things and other obvious examples which could be mentioned will have a serious and detrimental effect upon the economy of the city.

Since the railroad has been built up to adequately serve the traffic which it has developed, and since the City of Cheyenne has been built up and developed to meet the requirements of the railroad and its employees to handle such traffic, I wish to point out that it is not in the public interest [fol. 2213] to make the proposed diversion of traffic with its obvious adverse effects upon the Union Pacific as a transportation system, and upon Cheyenne as a community which supports it. Certainly this is contrary to the public interest of those who live in Cheyenne. A repetition of such an effect upon other communities similarly situated adversely affects public interest on a very broad basis. It is necessary to have some stability if communities are to meet their responsibilities in supporting rail lines which pass thru them.

Any weakening of the Union Pacific may result in attempts to abandon its subsidiary rail lines, the Laramie, North Park and Western and the Saratoga and Encampment Valley, as necessary retrenchments. This would adversely affect the territories affected with respect to which I have had some experience in my law practice.

[fol. 2214] VERIFIED STATEMENT No. 72

Statement of Glenn E. Sorensen

My name is Glenn E. Sorensen, and my address is Frontier, Wyoming.

I have been a resident of southwestern Wyoming for twenty-four years. I have been intimately connected with the coal industry in southwestern Wyoming for that entire period.

I am now:

President and a Director of the Lincoln Service Corporation, a Public Utility company operating in southern Lincoln County;

General Manager of the Kemmerer Coal Company, with operations in southern Lincoln County;

General Manager and a Director of the Gunn Quealy Coal Company, operating in Sweetwater County, Wyoming;

Affiliated with the Pinnacle-Kolorado Coal Company, Denver, Colorado;

Associated with the Continental Live Stock Company and with other livestock interests through land leasing agreements on grazing lands leased by The Kemmerer Coal Company;

Wyoming State Chairman of the Central Western Shippers Advisory Board.

I am appearing here representing the Lions Club and the South Lincoln Junior Chamber of Commerce and as a businessman, personally connected with and associated with the economy and industry of the area embraced in southwestern Wyoming, to state to this Commission the reasons why I believe the application of the Petitioner in this matter, the Denver & Rio Grande Railroad, should be denied.

As the Commission well knows, historically this area grew and its entire economy was developed by and around the railroad. This applies to the agricultural as well as the mineral development.

[fol. 2215] The coal industry of southwestern Wyoming is integrated with the operations of the railroad. The Kemmerer Coal Company is now the only major coal producer in southern Lincoln County; our companies' combined production is approximately one half million tons per year. All of this tonnage is moved by the Union Pacific Railroad and part of this tonnage is purchased by the Union Pacific Railroad for their consumption.

The Kemmerer Coal Company is one of the longest continuing commercial coal operating companies in the Intermountain area, and in fact it has grown and prospered with the Union Pacific Railroad. In a sense it may be said that this area, as much as any section in the United States has grown with, and is dependent on the railroad.

The livestock industry of this area is confined to cattle and sheep. Practically all of the livestock products of this area are moved out by rail. As the Commission well knows, adequate and prompt service by train crews, power, and equipment is most important in service to this industry, particularly in the movement of livestock in condition for marketing. Delays in movement of a comparatively short time may be disasterous. A less number of trains through Kemmerer, which I have noted from testimony of railroad witnesses, might be as many as four each way each day, should traffic from the Union Pacific be diverted through Ogden as proposed by the D&RG, would be considerably less freight train service. This would give less opportunity to move livestock without delays which is of extreme importance to the livestock shippers and it is also important to [fol. 2216] our business that coal move promptly to help us meet our already difficult competitive situation with the best possible rail service. From my experience shipping coal and my extensive acquaintance with other shippers including stockmen, I can state the service rendered by the Union Pacific has been good and that railroad has the reputation of giving the best in rail service. We are interested in having that service maintained.

As the Commission is further aware, this area consists of small communities made up of numerous small businesses which are founded upon the basic industries of livestock, mining, and the railroad. A reduction in rail traffic in this area would affect these businesses vitally in two

ways; first, a direct reduction in the payroll of the railroad company would materially reduce the source of income—this, in turn, would naturally cause a disruption in their own payrolls. Any reduction in payrolls will be accompanied by business casualties which will affect the general economy, income, and the tax revenues of the district. From my experience and work with our operating company in Sweetwater County, it is my opinion that these observations would apply to that area also.

I, along with other associates in Lincoln County, have a great fear that anything affecting the vigorous performance by the Union Pacific Railroad throughout this area will have a very serious affect upon the continuing prosperity of this district, as well as upon the operations of our own companies.

[fol. 2217] VERIFIED STATEMENT No. 73

Statement of R. J. Hofmann

I have been a resident of Cheyenne all of my life, having been born in that city over fifty-five years ago. At the present time I am President of the American National Bank of Cheyenne and owner of the Cheyenne Elevator and interested in various other business in Cheyenne. I have, for many years, been active in various civic organizations and am at present a director of the Chamber of Commerce. I feel that because of my long residence and business and civic activities I am familiar with the population of the city, its business and living conditions.

In my opinion, Cheyenne is essentially a Union Pacific city. Employees and their families probably represent conservatively 20% of the population of Cheyenne. Based on a population of 35,000, there are probably 7,000 dependent directly uopn the Union Pacific for their livelihood.

Over the years the Union Pacific employees in Cheyenne have been home owners. Many of them have lived here for years and have brought up their families in the community and consider themselves a part of the community.

Anything which might displace 250 employees in Cheyenne earning over a million dollars a year, or any other substan-

final displacement of such employees, is of vital importance to the city. Loss of employment by such persons in the city would be only a beginning of the final results. Other [fol. 2218] persons supporting such employees in one way or another would also lose their employment, and in the same manner loss of further personal income would result in the community.

Business of all kinds would be adversely affected by such loss of employment and personal income in the community. Private public utility service would be adversely affected. The municipal bonds will feel the effect. Our tax structure would be affected because the potential ability of taxpayers to pay their taxes would be involved. The Union Pacific itself is a taxpayer. Its employees are taxpayers and other taxpayers are likewise affected.

Since the war a number of new schools have been built in Cheyenne to take care of the increase in the number of children of school age. These schools were financed by means of bond issues. Should a number of Union Pacific employees be removed from Cheyenne due to diversion of traffic over the D&RGW we might be in a position of having difficulty in taking care of these bond issues because of the shrinkage in taxes. It would definitely be detrimental to the public interest to have such a shrinkage in values therefore in taxes.

No one in Wyoming questions that the Union Pacific furnishes transportation facilities of the highest quality. Such facilities are adequate and efficient. If they were not [fol. 2219] I would hear complaints and I do not hear complaints of any substantial character.

In my feed business I ship salt from Salt Lake City and the existing facilities are sufficient for that purpose and I do not need additional facilities over the complainant's lines. With my wide knowledge of shipping conditions in Cheyenne I am sure that other shippers here do not require service over the complainant's lines. My contacts with local railroad users as well as business acquaintances in other states have confirmed my views that the Union Pacific Railroad service is generally considered to be above average for railroads of the country. In our vicinity they have continually furnished adequate and efficient transportation service.

I appear as a witness in behalf of the Cheyenne Chamber of Commerce and in support of the business interests of Wyoming and the communities along the Union Pacific which would be adversely affected and I wish to protest the granting of the relief asked by the complainant.

[fol. 2220] VERIFIED STATEMENT No. 74

Statement of E. D. Crippa, Rock Springs Wyoming, Representative of Rock Springs Chamber of Commerce

At a recent meeting of the Rock Springs Chamber of Commerce I was selected as one of the witnesses to appear in behalf of the Rock Springs Chamber of Commerce in opposition to the opening of the Ogden Gateway to the Denver & Rio Grande Western.

My name is E. D. Crippa, I am fifty-one years of age, reside at Rock Springs, Wyoming. I was born in Rock Springs, Wyoming, and have spent my entire lifetime in Rock Springs, Wyoming. I have seen Rock Springs develop from a rough coal camp to a modern up-to-date city. I can remember when Rock Springs had dirt streets, a few wooden sidewalks, and all the plumbing was outside. Today we have many paved streets, storm sewers and sanitary sewers, cement sidewalks, and modern up-to-date stores and markets.

At the present time, I am a partner and manager of the Crippa Motor Company, which is a Ford dealership and general garage. I have been in the automobile and garage business for the past sixteen years. For thirteen years prior to that, I was manager of the Union Mercantile and Supply Company, a general merchandise store in Rock Springs, Wyoming. At this time, I am President of the North Side State Bank of Rock Springs, Wyoming, which is considered the working men's bank in Rock Springs.

The City of Rock Springs had an official population in 1940 of 9680 people, today it is estimated to have between 10,000 and 12,000 people. Rock Springs to-day as in the past 50 years or more is dependent in most part upon the coal mines in this area. There are five Union Pacific Coal

[fol. 2221] Company mining districts in Sweetwater County. The Rock Springs mines, located within the City; Reliance, approximately 8 miles from Rock Springs; Stansbury, approximately 10 miles from Rock Springs; Winton, approximately 14 miles from Rock Springs; and Superior, approximately 26 miles from Rock Springs. Although most of the 2400 men employed in these five mining districts are employed in the four districts outside of the city limits more than one-half of these employees and their families actually reside in Rock Springs and commute to the camps. Even though the Union Pacific Coal Company maintains a commissary in each of the camps, all of the people who reside in the camps do most of their trading in Rock Springs. There are no banks and no automobile dealers in any of the camps. There are no stores or other business establishments in any of the camps, other than the Coal Company commissaries, except in the Town of Superior, which does have a few small stores in an adjoining Town known as the Town of South Superior.

It can be readily seen that Rock Springs is very dependent upon the amount of employment in the coal mines and railroad. It has been my observation, during the time I have been in business in Rock Springs, that the prosperity of Rock Springs and all its people is directly based upon the volume of business of the Union Pacific Railroad Company, which is in turn reflected in the amount of coal produced by the Union Pacific Coal Company.

We have been informed that the opening of the Ogden Gateway to the Denver & Rio Grande Western would result [fol. 2222] in a decrease of the amount of business handled by the Union Pacific Railroad across the State of Wyoming and through the City of Rock Springs. It has been estimated this decrease might amount to 4 trains eastbound and 4 trains westbound per day. Such a reduction in number of trains would in turn result in the reduction of amount of coal that would be produced by the Union Pacific Coal Company for the operation of these trains. It has been estimated that this might result in a reduction of 400,000 tons of coal per year to be mined in the Rock Springs area. This would reduce the number of miners needed to mine the coal and the number of railroad people to transport the

coal, and would in turn reduce employment in other businesses in the community. It has been estimated that this would reduce employment between 300 to 400 men. Based upon the average working man's family in our community this would mean the displacement of between 1500 and 2000 people.

As previouly stated, the principal backbone of our community is the payroll of the Union Pacific Coal Company mines and the Union Pacific Railroad, and any reduction in their business, no matter how small, has a damaging effect upon the people of Rock Springs. A substantial reduction, as would result from the diverting of traffic from the Union Pacific Railroad Company by reason of the opening of the Ogden Gateway, would have a very serious effect on every workingman and every business man in Rock Springs. From my past experience, it is my belief that such a substantial reduction would result in a number of business failures in [fol. 2223] our community, and of course, a substantial loss in all property values and the general economy of our community would be seriously disrupted.

We have discussed this matter at many meetings of our Rock Springs Chamber of Commerce and we are unable to see where the public interest would be benefited by the opening of the Ogden Gateway to the Denver and Rio Grande Western thereby permitting the diversion of traffic from the Union Pacific Railroad Company with the result that the general economy of our community would be seriously disrupted.

We also wish to point out that although the amount of traffic diverted might represent only a small percentage of the overall traffic of the Union Pacific Railroad, insofar as Rock Springs is concerned it would be a very important part.

In view of the foregoing, in behalf of the Rock Springs Chamber of Commerce, and individually, I wish to protest against the opening of the Ogden Gateway to the Denver and Rio Grande Western, for the reason that the public interest would not be benefitted when the adverse effects upon Rock Springs, Sweetwater County and the State of Wyoming are considered.

[fol. 2224] VERIFIED STATEMENT No. 75

Statement of John W. Hay, Jr.

My name is John W. Hay, Jr. My home is in Rock Springs, Wyoming. I am President of the Rock Springs National Bank, President of the Rock Springs Grazing Association, and President of the Blair and Hay Land and Livestock Company. I was born and reared in Rock Springs and have spent my entire life there.

Rock Springs is a coal mining community. Most of the tonnage of coal is produced in mines operated by the Union Pacific Coal Company to furnish fuel for the Union Pacific Railroad Company.

I have seen a copy of the testimony of Mr. Earley, a witness for the Rio Grande at the Salt Lake hearing in this proceeding in which he testified that if the through rates through the Ogden Gateway were granted in this proceeding there would be over 157,000 carloads of freight per year available to the solicitation of the Rio Grande over their lines. I assume that the Rio Grande could solicit all, or a substantial portion, of this traffic. Union Pacific witnesses have testified at this hearing that if that amount of potential traffic were diverted to the Rio Grande it would have the following results in Sweetwater County: as many as 100 railroad workers in this county would be displaced; the amount of coal needed by the railroad would be reduced by approximately 400,000 tons annually, resulting in a reduction of as many as 260 Union Pacific Coal Company miners. Such a reduction or any substantial reduction in employment, would have a serious effect on the economic [fol. 2225] well being of Rock Springs and Sweetwater County.

Payrolls from the coal mining industry and the railroad industry in Sweetwater County constitutes a very substantial part of the total income of the county. I would say that the payroll income from those two industries constitutes over 60% of the total income in the county.

At the present time there are no industries in our area that would be capable of supplying work to these men laid off by the coal companies and the railroad, and the workers would find it necessary to go to other localities to find new

employment. The Union Pacific Coal Company pre-war production was about 3,000,000 tons of coal annually; this was doubled during the war years, we are now back on a 3,000,000 ton production schedule, and we have had assurance from the railroad management that they wish to retain the coal-burning power in the eastern territory of the railroad, so our merchants have felt the coal production should remain around the 3,000,000 ton annual figure. The proposal of the Denver and Rio Grande Railroad would reduce traffic and would cause permanent loss to the number of workers in this community, and I strongly oppose that.

I have been in the ranching business in Sweetwater County for some 25 years. Adequate, fast transportation is essential to the livestock industry to move cattle or sheep to the markets or feed lots with the least possible delay or the least possible shrinkage. The Rock Springs stockyards load from 550 to 700 carloads of livestock each year. [fol. 2226] Most of this stock is trucked or trailed to Rock Springs from the Jackson Hole Area in Teton County to the north some 186 miles, from the Pinedale area in Sublette County 100 miles to the north, or from that area along the Colorado-Utah-Wyoming line south of Rock Springs and Green River, to be shipped to market on the Union Pacific Railroad. This livestock arrives at the stockyards at various times of the day and night and it is to the advantage of the livestock people to have this loaded and moved as soon as possible.

It has been the practice of the Union Pacific Railroad to stop freights at Rock Springs in order to pull out the loaded cars of livestock and speed them on their way to the feed lots or packing plants as rapidly as possible. More trains operating means better service to the grower, less shrinkage, and more dollars per animal. The livestock growers in our section are opposed to any change that would result in fewer freight trains and less desirable livestock service.

I sincerely believe that the opening of the Ogden Gateway to the Denver and Rio Grande Western would result in a reduction of coal production in the Rock Springs area. It in turn would reduce the employment substantially and that such a reduction would seriously disrupt the economy of Rock Springs and Sweetwater County, Wyoming. In

addition, it would result in less service to the livestock shippers, therefore, as a business man, a livestock man and a citizen vitally interested in Rock Springs and Sweetwater County, Wyoming, I wish to protest against the opening of [fol. 2227] the Ogden Gateway to the Denver and Rio Grande Western, on the basis that the public interest would not be benefitted when the adverse effects upon the people of Rock Springs, Sweetwater County and State of Wyoming, are considered.

[fol. 2228] VERIFIED STATEMENT No. 76

Statement of John A. Reed

I live at Kemmerer, Wyoming. I have lived in Wyoming for thirty-eight years. I am engaged in the banking, livestock and coal business. At the present time I am President and Director of the First National Bank of Kemmerer and of the Bear River Mercantile Company of Cokeville, Wyoming, also of the Continental Live Stock Company of Cokeville, Wyoming. I am owner of the business known as J. A. Reed & Son Cattle Breeders, Cokeville, Wyoming. I am President and Director of the Pinnacle-Kolorado Coal Company of Denver, and Director of the State Bank of Big Piney, Wyoming. I am associated with the Kemmerer Coal Company and its associated interests in Lincoln County, Wyoming. I am Vice President and a member of the Executive Committee of the National Wool Growers Association; member of the American National Live Stock Association; Past President and a present member of the Finance Committee of the Wyoming Wool Growers Association; Banking Committee Chairman of the Central Western shippers Advisory Board and Past Chairman of that Board; Member of the National Live Stock Tax Committee representing Wyoming and the National Wool Growers Association and the Wyoming Stock Growers Association; Member of the Board of Trustees of the University of Wyoming. I was formerly State Examiner of the State of Wyoming.

My business interests keep me in contact with economic [fol. 2229] conditions in Wyoming in general, and in par-

ticular with the situation in the southern part of the State served by the Union Pacific railroad.

I have been greatly disturbed over the so-called Ogden Gateway case because of the testimony given by the Denver & Rio Grande Railroad at the Salt Lake hearing to the effect that there is a traffic potential of over 150,000 carloads of traffic per year which is subject to diversion to the Rio Grande. I understand such diversion could result in loss of employment of as many as 750 railroad and mine workers in Wyoming. This would have a serious effect upon the economy of the State and particularly the southern part of the State. The development of southern Wyoming has been linked through the years with the progress and development of the Union Pacific railroad. The diversion of any substantial amount of traffic to the Rio Grande as the result of this proceeding would necessarily have an adverse effect upon the general economy and the tax structure of Wyoming. If such diversion should result in the loss of four trains per day each way through Kemmerer, as it is anticipated it may, then such loss would affect railroad employment in Kemmerer where I live and have my business headquarters. Employees who might be displaced here would find it difficult to get other employment as there is limited industrial development in this area.

[fol. 2230] The range livestock business is dependent upon available and rapid transportation for shipment to market. Numerous train schedules are advantageous so that shipments can be made promptly when they are ready for loading and brought as quickly as possible to the market to avoid shrink and other loss. Reductions of train schedules are not conducive to the continuance of good livestock transportation service.

In general the granting of the relief sought in this proceeding would not be in the public interest for the following reasons:

(1) It is not to the public interest to divert business established in an area which has become dependent upon that business, to another area which is in nowise dependent upon it.

(2) It is contrary to the public interest in Wyoming to affect such a payroll loss as would be involved here.

(3) The industrial loss to Wyoming could not be replaced.

(4) The tax structure built up to support the business involved would be torn down or adversely affected.

For the foregoing reasons I protest the granting of the relief sought by the complainant in this proceeding.

[fol. 2231] BEFORE THE INTERSTATE COMMERCE COMMISSION

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY ET AL.

REPORT AND ORDER

Submitted October 16, 1952. Decided January 12, 1953.

1. Through routes and joint rates found necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with complainant, on certain commodities from and to points in the excluded territory in the northwest area as described in the report, to and from points in official, southern, and southwestern territories, including Missouri and a portion of Iowa.

2. Rates on the same commodities from and to the same points over complainant's routes via Ogden or Salt Lake City, found unreasonable and unduly prejudicial to and preferential of shippers and receivers.

3. Maintenance by defendants of joint rates between points in the northwest area, on one hand, and points on the Bamberger Railroad south of Ogden on the other hand, while refusing to participate in like rates to and from the same points on the line of complainant south of Ogden, found to subject complainant to unlawful discrimination.

4. Order entered requiring removal of unlawfulness found to exist and establishment of through routes and joint rates found reasonable.

[fol. 2232] Robert E. Quirk, Otis J. Gibson, and H. L. Mulliner for complainant.

Elmer B. Collins, L. H. Anderson, John B. Burchell, Robert H. Bierma, L. E. Clarahan, F. H. Cole, Jr., Eugene S. Davis, Lee S. Davis, P. H. Draver, F. G. Fitzpatrick, P. F. Gault, R. J. Hagman, L. W. Hobbs, Roland J. Lehman, B. P. Leverich, James E. Lyons, E. F. McGuire, F. J. Melia, Conrad Olson, W. R. Rouse, James S. Souby, Jr., Carson L. Taylor, and L. E. Torinus, Jr., for defendants.

C. A. Miller for American Short Line Railroad Association; Chas. B. Bowling, Carl R. Bullock, Henry A. Cockrum, and J. L. Pease for Secretary of Agriculture; Ralph C. Horton, John H. Winchell, Joseph W. Hawley, T. S. Wood, and Ralph Sargent, Jr., for Public Utilities Commission of the State of Colorado; W. B. Joy, H. N. Beamer, B. Auger and L. F. Purvis for Public Utilities Commission of Idaho; Byron M. Gray for State Corporation Commission of the State of Kansas; Edwin S. Booth and Sidney T. Smith for Board of Railroad Commissioners of the State of Montana; Clarence S. Beck, Harold A. Palmer, Bert L. Overcash, and Harry C. King for State of Nebraska and Nebraska State Railway Commission; John H. Carkin and Thomas W. Dench for Public Utilities Commissioners of Oregon; Smith Troy, Phil H. Gallagher, Joseph Starin, and Bartlett Burns for Washington Public Service Commission; Norman B. Gray and Jefferson C. Church for the State Board of Equalization and Public Service Commission of Wyoming; Hal S. Bennett, Donald Hacking, W. R. McEntire, and Chas. A. Root for Public Service Commission of Utah; and George F. Guy for the City of Cheyenne, Wyo., interveners.

Calvin L. Blaine, Chas. E. Blaine, Maurice H. Greene, Alden T. Hill, E. E. Kohlwes, Lowe P. Siddons, Reginald T. Titus, and Lee J. Quasey for other interveners.

[fol. 2233] REPORT OF THE COMMISSION

By the Commission:

Exceptions to the report proposed by the examiner were filed by the complainants, the defendants, and certain interveners, and the issues were twice argued orally. Our conclusions differ in part from those recommended. Ex-

ceptions and requested findings not discussed in this report nor reflected in our findings or conclusions have been given consideration and found not justified.

The complainant, sometimes called the Rio Grande, a common carrier by railroad operating in interstate commerce within the States of Colorado, Utah, and New Mexico, requests us to order the Union Pacific Railroad Company, which with its leased lines is referred to as the Union Pacific System or the Union Pacific, and the other defendants, to establish and maintain for the future just, reasonable, and non-discriminatory competitive joint through rates [1] and charges for the transportation of freight in connection with the complainant through Lake Salt City or Ogden Utah, referred to as the Ogden gateway. More particularly, we are asked to require the defendants to establish such joint rates on freight traffic in connection with the complainant through its Colorado and Utah gateways, (1) between (a) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington, [2] and British Columbia, Canada, and (b) Colorado common points and points east thereof; and (2) between Utah common points and the northwest territory specified in 1(a).

[fol. 2234]. No evidence was submitted with respect to rates from or to British Columbia, and such rates will not be considered.

Interveners in support of the complaint include the Secretary of Agriculture of the United States, the public utility commissions of the States of Colorado and Utah, the American National Live Stock Association, other livestock and stock-feeder associations, various shippers' and producers' association , milling companies, farm bureaus, chambers of commerce, and certain groups of employees of the complainant.

Interveners in support of the defendants include the State

---

[1] Rates and rate differences named herein are per 100 pounds and are those in effect at the time of the hearing herein.

[2] This area is referred to in this report as the northwest area or territory.

of Nebraska, City of Cheyenne, Wyo., the public utility commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska, and Kansas, various chambers of commerce and other associations, certain employee groups in Wyoming, and employee groups of the Union Pacific, the Chicago and North Western Railway Company and the Wabash Railroad Company.

In its exceptions to the proposed report, the State Corporation Commission of the State of Kansas took the position that the recommended finding that joint rates should be established over the existing through routes by way of Ogden and the Rio Grande is amply sustained by the evidence with respect to the rates on wheat and livestock but not otherwise, and that the recommended findings as to commodities generally are too broad in scope.

The Public Utility Commission of the State of Idaho intervened but presented no evidence. It filed a brief in which it took the position that the relief sought by the complainant should be denied, except that joint through competitive rates should be required to be established via Ogden and the Rio Grande on livestock and fruits and vegetables.

[fol. 2235] We granted a petition for leave to intervene filed by the American Short Line Railroad Association. That association appeared in support of the complaint and was represented at the hearing and the oral argument, but offered no evidence. The defendants filed a petition for reconsideration of the order permitting intervention. The request was denied at the hearing, but it is renewed on brief. It appears that 44 of the defendants named in the complaint are members of the association and that 8 defendant members are subsidiaries under common control and management with other defendants. Additional facts were developed at the hearing with respect to the relation of certain members of the association as defendants and indicating that they, as well as some others, opposed the complaint. The association filed a brief from which it appears that it has a current membership of 314 common carriers by railroad and that the association as such and many of its members are interested in the issues presented in the complaint. The intervention sought and granted was by the association as such, and not by or in behalf of the respective members thereof named herein as defendants. The peti-

tion of intervention was properly granted, and the petition for reconsideration is denied.

Immediately prior to the oral argument, counsel for the defendants submitted a memorandum of additional authorities and discussion relating to certain exceptions filed by the Union Pacific to the proposed report of the examiner. The complainant and certain interveners objected to the receipt of the document. Our rules of practice do not permit the submission of such a document so late in the proceeding. Permission to file it was not requested in time to permit opposing parties to examine it and to make reply thereto prior to the oral argument when the proceeding was finally submitted. The objection to its receipt in the proceeding is sustained.

[fol. 2236] The complainant alleges that the defendants' failure and refusal to join with it in establishing joint rates to and from the territories described on transcontinental and other traffic through the gateways referred to result in violations of sections 1(4) and 3 of the Interstate Commerce Act, and is contrary to the national transportation policy as declared by the Congress. We are asked to prescribe just and reasonable rates over the Rio Grande routes to remove the alleged unlawfulnes

Transcontinental rates apply between points in the Pacific coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions of restrictions, the rates generally apply over all routes, but there are many exceptions. The principal ones of importance in this proceeding are those under which the Union Pacific for the most part restricts routing on traffic to and from points in Utah north of Ogden and in Idaho, Montana, Oregon, and Washington over its lines so that it may obtain the long haul from and to the Missouri River. On transcontinental traffic that moves over its lines to and from California, Nevada, and portions of Utah, the Union Pacific participates in through routes and joint rates with other lines, includ-

ing the Rio Grande. On that traffic interchange is made with the Rio Grande at Salt Lake City and Provo, Utah. [fol. 2237] As hereinafter explained, the Rio Grande participates in joint rates on transcontinental traffic with all of its connections at its Utah junctions, except the Union Pacific, from and to the western portions of the northwest area. Routes are available to and from points in the northwest area over the Union Pacific from and to Ogden and the Rio Grande and its eastern connections beyond, but generally shippers must pay combination rates when using such routes. The maintenance of those rates produces higher charges than those resulting from the joint rates maintained by the defendants over other routes. The higher rates and charges act as deterrents to shippers and, in effect, close the Ogden gateway in a commercial sense. We are asked, to exercise our authority under section 15(3) of the act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest.

The power to establish through routes and joint rates is limited by the provisions of section 15(4), which declares that, except as provided in section 3 of the act, and except where one of the carriers is a water line, we may not require a railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless we find that the through route proposed is needed in order to provide "adequate, and more efficient or more economic, transportation." The foregoing pro- [fol. 2238] visions are subject to the further proviso that in prescribing through routes, we shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. The section further provides that no through route and joint rates applicable thereto shall be established by us

for the purpose of assisting any carrier that would participate therein to meet its financial needs.

The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15(4) are not applicable and need not be considered. It further contends that the principal task here is to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such through routes are unjust, unreasonable, or discriminatory, in violation of sections 1 and 3 of the act, and contrary to the national transportation policy. The complainant argues that there is public need for joint rates via the Ogden gateway equal to the joint rates now maintained by the defendants over the competitive routes, and that the public interest as well as the national transportation policy will be served by the establishment of such rates.

Through Routes

The first question for our determination, therefore, is whether or not the present routes by way of the Ogden gateway constitute "through routes" as that term is used in section 15(3) and (4) of the act. As above stated and [fol. 2239] as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess.

In *Thompson* v. *United States*, 343 U. S. 549, decided June 2, 1952, the Supreme Court considered the question of the content of the term "through route" as used in the act, upon an appeal from a decision of a lower court sustaining our order in *Omaha Grain Exc. of Omaha, Nebr.* v. *Missouri Pacific R. Co.*, 278 I. C. C. 519. Therein, we had affirmed a prior finding of division 2 that a through route on

grain from points on the Central branch of the Missouri Pacific Railroad Company in Kansas, Concordia and west thereof (Lenora, Kans., was used as a typical origin), to Omaha, Nebr., and Council Bluffs, Iowa, in connection with the line of the Chicago, Burlington & Quincy Railroad Company beyond Concordia, was already in existence and therefore did not have to be established preliminary to the exercise of our power to prescribe reasonable rates under sections 1 and 15(1) of the act. The Court held:

> In short, the test of the existence of a "through route" is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.
>
> In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such through route. * * * Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha * * *. Since there is admittedly no evidence that the Missouri Pacific ever offered through transportation service over the route in question, the Commission's order is without evidentiary support under the accepted tests for determining the existence of a through route.

[fol. 2240] The Court cited with approval *Beaman Elevator Co.* v. *Chicago & N. W. Ry Co.*, 155 I. C. C. 313, wherein the Comission held that proof of one shipment on a through bill of lading over a particular route was not sufficient to show the existence of a through route, because, as stated by the Court, "that one shipment was not representative of the carriers' course of business". It thus becomes necessary to determine whether the carriers in this proceeding "hold themselves out as offering through transportation service" from and to the points here concerned via the Ogden gateway as indicated by their "course of business" in respect of traffic over the routes in question.

The evidence shows that 37 carload shipments were made

in 1948, which may be accepted as a representative year, on through bills of lading from Origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned goods, canned salmon, machinery, contractors' equipment, paper bags, lumber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that two carloads of canned salmon moved from Seattle, Wash., to Provo, two carloads of acid from Dupont, Wash., to Louviers, two carloads of canned goods from Logan, Utah, to Denver, two carloads of sheep from Bellevue, Idaho, to Pueblo, three [fol. 2241] carloads of lumber from McCall, Idaho, to Salt Lake City, three carloads of canned goods from Logan to Pueblo, and six carloads of lumber from Emmett, Idaho, to Midvale. No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points.

Westbound, in the same year, 18 carload shipments were made on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed hull bran, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two

of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destination so as to avoid paying the applicable combination rates on Ogden.

In that same year, 21 carload shipments moving on through bills of lading from various origins east of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint through rates were not applicable over that road via the Ogden gateway. Under service orders issued by us during and subsequent to World War II, a substantial number of shipments were diverted from the regularly-used routes to the routes here sought to be opened commercially. For ex- [fol. 2242] ample, in February 1949, when the main line of the Union Pacific in Wyoming was blocked by snow storms, the traffic was diverted to the route of the Rio Grande between Denver and junctions with the Union Pacific in Utah. During World War II, special combination trains of troops in passenger cars and of military supplies in freight cars from eastern and southern origins to destinations in the northwest area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific. The rates and charges for these freight movements were not filed with us and were adjusted, under the authority of section 22 of the act, on the basis of the joint rates applicable over the Union Pacific routes through Wyoming. These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute "through routes" within the meaning of that term as used in the act.

So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so

by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, "the carriers' course of business" has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is [fol. 2243] now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads eastbound, none to destinations east of Colorado common points, and 18 carloads westbound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co.* v. *Chicago & N. W. Ry Co., supra,* cited with approval by the Supreme Court in *Thompson* v. *United States, supra.* Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, as result plainly not intended by the Congress, as evidenced by the amendments to section 15(4) made in 1940 (see *D. A. Stickell & Sons, Inc.* v. *Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson* v. *United States, supra.*

We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic [3] here concerned, and that

[3] Except on eastbound shipments of sheep or goats, to which reference is made later in this report.

any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order [fol. 2244] to provide adequate, and more efficient or more economic transportation.

The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15(3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together.

Before proceeding to a discussion of the evidence relating to the foregoing issues, we shall give consideration to a procedural contention and a motion made by the defendants. The contention is that an allegation of undue prejudice and preference under section 3(1) of the act is not properly before us. As stated, the complaint embodies an allegation, among other things, of violation of section 3, without specifying any particular paragraph or paragraphs of that section. We agree that complainant, a railroad, could not raise, in its own behalf, an issue under section 3(1) against another railroad. Intervening shippers, however, have raised such an issue. Testimony, pro and con, was received on this issue and we think it has been fairly tendered here for decision.

[fol. 2245] The motion is that the complaint be dismissed on the ground that the request of the complainant for joint rates over the Rio Grande via the Ogden gateway is for the purpose of assisting that carrier to meet its financial needs. As stated, section 15(4) of the act forbids us to require the establishment of any through route and joint rate applicable thereto for the purpose of assisting any car-

rier that would participate therein to meet its financial needs. Consistently throughout the proceeding, the complainant disclaimed any intent to prosecute the complaint with the object of assisting it in meeting its financial needs. The prohibition referred to is directed to us; not to any complaining carrier. In reaching our conclusions herein, no consideration has been given to the financial needs of the complainant. The motion is overruled.

[fol. 2246] Proponents' Testimony

Joint rates now apply via the Ogden gateway over the Rio Grande on traffic from and to Colorado common points and points east thereof to and from California and certain Pacific coast points in connection with the Union Pacific, the Southern Pacific Company, The Western Pacific Railroad Company, and The Great Northern Railway Company, as more particularly described later.

The Union Pacific with its leased lines has operated since January, 1936, as a single system. It consists of the Union Pacific Railroad Company operating from Omaha, Nebr., and Kansas City, Mo., to Ogden via Julesburg, Colo., Cheyenne and Granger, Wyo., and via Limon and Denver, Colo., and Cheyenne; the Oregon Short Line Railroad Company operating in Utah north of Ogden, and in Wyoming, Idaho, Oregon, Montana, and Nevada, extending from Salt Lake City to Butte, Mont., and Huntington, Oreg.; the Oregon-Washington Railroad and Navigation Company operating in Idaho, Oregon, and Washington north and west of Huntington to Spokane, Wash., Portland, Oreg., and Seattle, Wash.; the Los Angeles & Salt Lake Railroad Company from Salt Lake City to Los Angeles, Calif.; and the St. Joseph & Grand Island Railroad Company in Kansas, Nebraska, and Missouri from St. Joseph, Mo., and Grand Island, Nebr. Lease of the properties of the foregoing roads, which had been operated with the Union Pacific under common control and management, was considered and approved in *Union Pac. R. Co. Unification*, 189 I. C. C. 357 (1933) and 207 I. C. C. 543 (1935).

[fol. 2247] The railroad now operated by the complainant was originally the Denver, Rio Grande Railway organized in 1870 as a narrow-gauge line. After passing through

various hands and receiverships, the Denver and Rio Grande Railroad Company was organized in 1886 to operate the property. When the main line was converted to standard gauge in 1890, the railroad was opened for through traffic between Denver and Ogden by way of Pueblo, Rio Grande, and Tennessee Pass, Colo. Prior to that date, the Rio Grande could participate in transcontinental traffic only by transferring the lading to its narrow-gauge cars. In 1901, it acquired the Rio Grande Western Railroad Company operating between Grand Junction, Colo., and Ogden via Provo and Salt Lake City.

Although opened for through business, the line was handicapped by the fact, among others, that traffic originated at or destined to its Colorado gateways or east thereof could not be interchanged at joint through rates at Ogden or Salt Lake City with its connection, the Oregon Short Line, to or from points on that line in Utah north of Ogden and through southern Idaho to Butte and Huntington. Also, traffic from and to Oregon over the Southern Pacific, to or from Colorado common points and east, could not be transported over the Rio Grande at joint rates equal to those over competitive routes. In 1897, however, the Union Pacific and its controlled lines, the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company operating north and west of Huntington, were in separate receiverships. In that year the two lines last named established joint through rates to and from points in the northwest area with the Rio Grande via Ogden and thus opened that gateway at rates equal to the rates then in effect over the Wyoming line of the Union Pacific through [fol. 2248] Cheyenne and Granger. Those rates applied on traffic between the Pacific coast terminals, including Portland, Tacoma, and Seattle, and Missouri and Mississippi River points and numerous points east thereof.

In the same year, the Oregon-Washington Railroad and Navigation Company established joint through rates between its Oregon and Washington stations and points on, or reached by, the lines of the Great Northern and Northern Pacific Railway Company through Spokane and Wallula, Wash. Joint rates through those junctions from and to Union Pacific stations have been continued in effect.

Ogden remained as an open gateway through which joint rates over the Rio Grande applied until 1906, when such rates were canceled by the Union Pacific from and to Colorado common points and east, to and from points in Montana, Idaho, and Oregon on the Oregon Short Line and its connections. In 1912, transcontinental freight rates to and from points on the Oregon-Washington Railroad and Navigation Company (resulting from reorganizations in in the interval) over the Rio Grande and its Utah junctions were also canceled. During this period the Southern Pacific was controlled by the Union Pacific and that circumstance greatly influenced the routing of freight and passenger traffic over the Union Pacific to and from Oregon and California. As a result of competitive stresses, as well as for other reasons, the Rio Grande financed the construction of a new railroad, the Western Pacific, to obtain an outlet to the Pacific coast. The Western Pacific was opened in July, 1911, and participates in through routes and joint rates on transcontinental traffic via Salt Lake City with the Rio Grande and the Union Pacific, its two connections at that point. In 1912, the Union Pacific was [fol. 2249] required to divest itself of control of the Southern Pacific. *United States* v. *Union Pacific R. Co.*, 226 U.S. 61.

Through passenger fares also were in effect over the lines of the Union Pacific and the Rio Grande via the latter's Colorado and Utah junctions from 1897 to 1915, when they were canceled by the Union Pacific. *The Ogden Gateway Case*, 35 I.C.C. 131.

In 1915, the Western Pacific, and in 1918, the Rio Grande, went into receivership. After various changes, the latter was reorganized on April 11, 1947, as The Denver and Rio Grande Western Railroad Company. *Denver & Rio Grande Western R. R. Reorganization*, 267 I.C.C. 862. As a part of its reorganization on that date, the Rio Grande merged with the Denver and Salt Lake Railway Company, and thereby acquired the Moffat Tunnel line of that carrier. By that line and the Dotsero cutoff, completed in 1934, from Orestod, Colo., on the Denver & Salt Lake to Dotsero, Colo., on its own line, the Rio Grande obtained a route from Denver to Ogden 175 miles shorter than its route through Pueblo.

The Rio Grande now operates between Denver and Ogden over the two routes. By way of the Moffat Tunnel the distance is 607 miles, and the other route through Pueblo is 782 miles. These two are the main lines and constitute 951 miles, or 51 percent, of the Rio Grande standard-gauge tracks. In addition, there are 1,452 miles of branch lines, of which 527 miles are narrow gauge serving western Colorado and northwestern New Mexico in areas of small population and light traffic. In all, it operates about 2,400 miles of road.

[fol. 2250] Eastern connections of the Rio Grande are in Colorado at Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad. At Denver, it connects and interchanges traffic with the Union Pacific, the Chicago, Burlington & Quincy Railroad Company, called the Burlington, the Chicago, Rock Island and Pacific Railroad Company, called the Rock Island, The Atchison, Topeka and Santa Fe Railway Company, called the Santa Fe, and The Colorado and Southern Railway Company, of the Burlington system. At Colorado Springs, 75 miles south of Denver, it interchanges with the Rock Island and the Santa Fe. At Pueblo, 119 miles south of Denver, it interchanges with the Missouri Pacific Railroad Company (Guy A. Thompson, Trustee), the Santa Fe, and the Colorado & Southern. At Walsenburg, 51 miles farther south, it interchanges with the Colorado & Southern. At Trinidad, a short distance from the Colorado-New Mexico State line and 92 miles south of Pueblo, it interchanges with the Colorado & Southern and the Santa Fe.

Western connections of the Rio Grande are in Utah at Ogden, Salt Lake City, and Provo. At Ogden, the connecting lines are the Union Pacific and the Southern Pacific. At Salt Lake City, 37 miles south of Ogden, the connections are the Western Pacific and the Los Angeles line of the Union Pacific. At Provo, 44 miles south of Salt Lake City, it again connects with the Union Pacific's Los Angeles line.

Since 1890, when its standard-gauge line was completed between Denver and Ogden via Pueblo, the Rio Grande, through its eastern and western connections, has been a part of several transcontinental routes. It now participates in through routes and joint rates on equal terms with other

carriers on transcontinental traffic between (1) points in [fol. 2251] an area generally described as west of a line beginning at Vancouver, British Columbia, thence south, just east of Seattle and Portland, and southeasterly to a point west of Ogden and Salt Lake City, crossing the line of the Union Pacific at Lynndyl, Utah, 118 miles west of Salt Lake City, and thence southwesterly, east of the Union Pacific's Los Angeles line, to a point south of San Diego, Calif., and (2) all points in the United States east of a line beginning at the Canadian border and extending southward along the Montana-North Dakota State line and the western border of South Dakota, thence southwesterly through the extreme southeastern portion of Wyoming, west of Cheyenne, and the eastern part of Colorado just west of Denver, Pueblo, and Trinidad, thence southwest and south through the central or western part of New Mexico to a point just west of El Paso. However, joint rates generally do not apply in connection with the Rio Grande on transcontinental traffic originating at or destined to points in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington east of the line first described. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande such traffic would move at higher combinations of rates to and from Ogden or Salt Lake City.

The area in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington, to and from which joint rates generally do not apply in connection with the Union Pacific and the Rio Grande, will be referred to as the excluded territory. Transcontinental traffic to or from such territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than over the Rio Grande route, because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio [fol. 2252] Grande route. The Rio Grande desires to participate as a bridge line on such traffic via its Colorado gateways and Ogden at the joint through rates. This also would include traffic to or from points in the excluded territory on lines which join with the Union Pacific in joint rates.

Representative origins, destinations, commodities, rates, distances, average loadings per car, and revenues per car-

mile are shown in an appendix to this report, for eastbound and westbound movements, compiled from exhibits of record. The distances shown are those over existing routes over the Union Pacific and its connections by which joint through rates apply, and over the Rio Grande and its connections over which combination rates apply. Revenues per car-mile are computed for such rates and distances and, in addition, for the distances over the Rio Grande at joint rates on the same basis as those over the Union Pacific routes, as sought herein.

Traffic between the excluded territory and Colorado common-point territory (points in eastern Colorado from Denver south to Trinidad and west to Canon City) generally must move over the Union Pacific through Denver to get the lowest rate. Similarly, traffic between the excluded territory and Utah common-point territory (points in Utah from Ogden south to Provo and Payson) generally must move over the Union Pacific to get the lowest rate. There are some exceptions, however, with respect to rates between Utah common points on the Rio Grande and the northwest area on livestock, lumber, grain, and other commodities.

[fol. 2253] An analysis of distances from and to five representative points [4] on the Union Pacific in Utah north of Ogden, and in Idaho and Washington, to 14 destinations, Denver and east, over restricted routes of the Union Pacific for distances, computed over the short routes, ranging from 649 miles to Denver to 3,279 to Boston, Mass., shows that routes via Ogden and the Rio Grande to the same points are longer by from 1 percent (from Spokane to New Orleans, La.) to 16 percent (from Idaho Falls to Kansas City). To the same destinations from 9 other representative points [5] on the Union Pacific, from which through routes and joint rates are available in connection with the Chicago, Milwaukee, St. Paul and Pacific Railroad Company, referred to as the Milwaukee, the Great Northern, the Northern Pacific, or the Southern Pacific, the routes via

---

[4] Logan, Utah; Boise, Idaho Falls, and Twin Falls, Idaho; and Spokane, Wash.

[5] Hood River, Milton, Pendleton, Portland, Elgin, and Redmond, Oreg., and Yakima, Kent, and Seattle, Wash.

Ogden and the Rio Grande would be longer than the short workable and service routes by from 4 percent (from Seattle to Fort Worth, Tex., and Oklahoma City, Okla.) to 37.5 percent (from Yakima to Minneapolis, Minn.). To Minneapolis from 7 of the 9 origin points, the routes via the Great Northern form the short workable and service routes.

The Ogden gateway routes of the Union Pacific consist of two lines. The Los Angeles line runs southwesterly through Salt Lake City, Provo, and Delta, Utah, Caliente and Las Vegas, Nev., and Barstow, Calif., to Los Angeles. Through routes with joint rates are maintained over that route in connection with the Rio Grande, as hereinbefore [fol. 2254] described. The other line of the Union Pacific runs north from Ogden, 111 miles to McCammon in southeastern Idaho. At that point it meets the Wyoming line of the Union Pacific leading west 186 miles from Granger, the junction point with the main line through Cheyenne to Ogden from the east. From McCammon the line extends north to Pocatello, Idaho, 22 miles, and from that point the main line runs in a northwesterly direction across Idaho into Oregon and Washington. From Pocatello another line extends northerly to Butte. From Cheyenne, the main line extends east across Nebraska to Omaha, 507 miles, and south to Denver, 109 miles. From Ogden through Granger to Cheyenne the distance is 483 miles.

All shipments to or from points in Idaho, Montana, Oregon, and Washington north or west of McCammon over present Union Pacific routes, or over routes through Ogden and the Rio Grande, must pass through McCammon. That point, therefore, is used as the point of divergence in computing distances over the Union Pacific routes and the routes over the Rio Grande by way of Ogden. A shipment from McCammon over the Union Pacific to Cheyenne would move 529 miles; and to the Denver gateway, also over the Union Pacific, 623 miles. But over the Union Pacific to Ogden, thence the Rio Grande to the Denver gateway, the shipment would move 718 miles, or 198 miles farther than over the Union Pacific route to Cheyenne and 95 miles farther than over its route to Denver. On shipments carried through to the Missouri River and points east, the Union Pacific route through Cheyenne also has the advantage in distance.

[fol. 2255] From Cheyenne to Kansas City a shipment would move 624 miles, as compared with 636 miles for a movement off the Rio Grande from Denver to Kansas City over the Rock Island, its short-line connection. A through shipment, therefore, from McCammon to Kansas City over the direct line of the Union Pacific through Granger and Cheyenne would move 1,153 miles, as compared with 1,352 miles, 199 miles longer via Ogden and the Rio Grande to Denver, thence the Rock Island. The latter route on such a shipment would be 17.2 percent circuitous. To points east of Kansas City the maximum excess mileage from McCammon over the Rio Grande route is on a haul to Pittsburgh, Pa. Over the Union Pacific to Omaha, thence the Chicago & North Western to Chicago, Ill., and The Pennsylvania Railroad Company beyond, the haul would be 1,991 miles, and over the Union Pacific to Ogden, the Rio Grande to Denver, the Burlington to Chicago, thence the Pennsylvania, the haul would be 2,203 miles, 212 miles longer, or a circuity of 10.7 percent.

In the following table are shown representative destinations and the distances from McCammon over routes using the Rio Grande from Ogden to Denver, as compared with distances over routes using the Union Pacific through Wyoming. Joint through rates apply over the latter routes. Over routes that include the Rio Grande higher combination rates apply. The table does not contain complete routing, except over the Union Pacific direct to Omaha and Kansas City. The last column of the table shows the percentages by which the Rio Grande routes are longer, or the circuity, from the point of divergence, McCammon, to the points shown.

[fol. 2256]

From McCammon, Idaho to—	Via Union Pacific	Distance Miles	Via Rio Grande	Distance Miles	Difference Miles	Circuity via Rio Grande Percent
Omaha, Nebr.	2	1,036	3	1,255	219	21.1
Kansas City, Mo.	1	1,153	3	1,352	199	17.2
Minneapolis, Minn.	1	1,396	3	1,593	197	14.1
St. Louis, Mo.	1	1,428	3	1,627	199	13.9
Chicago, Ill.	2	1,524	3	1,735	211	13.8
Pittsburgh, Pa.	2	1,991	3	2,203	212	10.7
Charleston, W. Va.	1	2,018	3	2,218	200	10.0
Columbia, S. C.	1	2,274	3	2,473	199	8.8

Savannah, Ga.	1	2,327	4	2,486	159	6.8

1—Union Pacific through Wyoming to Kansas City.
2—Union Pacific through Wyoming to Omaha.
3—Union Pacific to Ogden, Rio Grande to Denver.
4—Union Pacific to Ogden, Rio Grande to Pueblo.
5—Union Pacific to Pacific Junction, Kans.
6—Union Pacific to Denver, Colorado & Southern to Sixala, N. Mex.

The differences in the distances to destinations in the Southwest over routes including the Rio Grande from points in the excluded territory, as compared with the Union Pacific routes through Wyoming, are much less than they are to Missouri River crossings and points east and southeast. About 90 percent of the traffic upon which joint through rates are sought via Ogden and the Rio Grande moves to the latter areas, and about 10 percent to the Southwest.

Over its routes through Wyoming, the Union Pacific get its long haul from McCammon to Omaha, 1,036 miles, and to Kansas City, 1,153 miles. If joint rates were prescribed over the Union Pacific to Ogden and the Rio Grande to Denver, the Union Pacific's haul from McCammon to Ogden

on traffic to Omaha or Kansas City and beyond would be 111 miles. However, if such traffic were routed beyond Denver over the Union Pacific, the latter would get a fur- [fol. 2257] ther haul of 560 miles to Omaha via Julesburg, or 640 miles to Kansas City via Salina, Kans., a total haul from McCammon of 671 miles to Omaha or 751 miles to Kansas City. Joint through rates are in effect over that route on sheep from Union Pacific origins in southern Idaho and eastern Oregon, but are 19 cents higher to the Missouri River and east (20 cents to Chicago) than rates over more direct routes of the Union Pacific. That railroad would establish a similar basis on cattle if requested. Over the route in connection with the Rio Grande, it would lose its haul of 529 miles from McCammon to Cheyenne, or 623 miles to Denver. On traffic routed via Ogden, the Rio Grande, and Pueblo to destinations east thereof, the Union Pacific would not be in a position to get any additional haul.

All of the foregoing distances, as stated, are computed from McCammon as the point of divergence. The great bulk of the traffic, however, from the excluded territory in Idaho, Montana, Oregon, and Washington originates or terminates on the Union Pacific or its connections west and north of that junction. On such traffic the Union Pacific would have a substantial haul in addition to that of 111 miles from McCammon to Ogden.

The hauls to Ogden would be, for example, from Lewiston, Idaho, 847 miles; from Centralia, Wash., 937 miles; and from Seattle, 1,029 miles. Over the Union Pacific direct from those respective origins to Omaha, the hauls would be 1,772, 1,862, and 1,954 miles. Those figures show the extent to which the Union Pacific would lose its long haul, the loss in mileage being 925 miles in each instance. [fol. 2258] From and to points in the excluded territory in Oregon and Washington, and on the Burke and Headquarters branches of the Union Pacific in northern Idaho, the Union Pacific and certain other defendants have arrangements for the interchange of traffic in various commodities at junctions or gateways in Oregon, Washington, and Idaho, under joint rates. On traffic through such gateways moving under the joint rates, the Union Pacific in many instances foregoes its long haul. The gateways

through which the rates are in effect, with certain limitations upon their application specified in the tariff, are: Portland, in connection with the Southern Pacific, Marengo, Wash., and Plummer, Idaho, in connection with the Milwaukee; Spokane, in connection with the Great Northern; Wallula, Wash., and Spokane, in connection with the Northern Pacific; and Spokane, in connection with the Spokane International Railroad Company connecting with the Canadian Pacific Railway Company at Eastport, Idaho, at the Canadian border.

Illustrative of the hauls over the Union Pacific on traffic routed through these gateways are the following: From Lewiston, 132 miles via Marengo or 193 miles via Spokane; from Centralia, 393 miles on a route through Marengo; from Seattle, 184 miles through Portland; and from Pendleton, Oreg., 165 miles via Marengo, 227 miles via Spokane, or 70 miles via Wallula, Wash., on traffic routed over its connections at such points. If joint rates were established from the same origin points to Omaha and beyond via Ogden and the Rio Grande, the hauls of the Union Pacific to Ogden would be substantially greater than many of its hauls via other junctions with its connections, as illustrated.

[fol. 2259] For example, from Pendleton, a representative point, on traffic to Chicago the Union Pacific has a haul of 1,560 miles on its route through Omaha, but only 70 miles over an established through route via Wallula and the Northern Pacific and connections. The rates are the same over both routes. Over a route via Ogden and the Rio Grande to Denver, thence the Burlington, the distance is 2,257 miles, or 6.4 percent longer than the route via Wallula and 10.4 percent longer than the Union Pacific route through Omaha. The Union Pacific's haul over the Rio Grande route would be 633 miles. From Pendleton to St. Louis, the Rio Grande route sought would be shorter by 168 miles than a through route now available via Spokane and the Spokane International and its connections, and would be 201 miles, or 10.3 percent, longer than the Union Pacific route through Kansas City. To Oklahoma City, Okla., the haul of the Union Pacific would be increased from 227 miles, over the present route via Wallula and the Northern Pacific and connections, to 633 miles via Ogden and the Rio

Grande to Pueblo and the Santa Fe beyond. The distance over the latter route is 1,910 miles, or only 34 miles, 1.3 percent, longer than the route which gives the Union Pacific its long haul, and 692 miles, or 36.2 percent, shorter than the foregoing route through Wallula.

The foregoing are illustrative of numerous established through routes in which the Union Pacific participates from points in the excluded territory which short-haul that carrier. Many of such routes are longer than those here sought via Ogden and the Rio Grande, and this is true to all sections of the country east of the Rocky Mountains, except western trunk-line territory. To the latter territory the short-hauling routes are generally shorter than the [fol. 2260] routes by which the Union Pacific retains its long haul, and considerably shorter, for example, by 37.5 percent from Yakima to Minneapolis, than the routes sought via Ogden and the Rio Grande. As indicated, the portion of the excluded territory from and to which this short-hauling of the Union Pacific occurs does not include points in Utah nor points in Idaho, except on the Burke and Headquarters branches of the Union Pacific in the northern portion of that State.

These short-hauling routes have been in effect for many years. Most of them were established prior to the dates when the Union Pacific assumed control of the portions of its line west of Huntington and south of Salt Lake City. Joint rates with the Southern Pacific through Portland have been in effect since about 1910, with the Milwaukee through Marengo and Plummer since about 1902, with the Great Northern through Spokane since about 1894, with the Northern Pacific through Wallula since about 1883, and with the Spokane International through Spokane since about 1907.

On some of the traffic interchanged at these gateways the Union Pacific obtains a short haul, as compared with its connections, and on other traffic a long haul. Eastbound traffic through the specified Washington and Idaho gateways consists of apples, pears, lumber and other forest products, some steel products, and miscellaneous commodities. A large portion of the traffic, particularly lumber, moves to North and South Dakota, Minnesota, and Wis-

consist over the northern routes. Traffic over such routes moves also to midwestern States and to States east of the Mississippi River. Westbound traffic through the same gateways consists of manufactured products and miscellaneous commodities from the middle West and from eastern and southern territories.

[fol. 2261] These interchange arrangements are warranted and in the public interest, according to the defendants, because each carrier shares in long hauls on some traffic as well as short hauls on other traffic, and because the arrangements make it possible for the carriers to handle traffic over shorter routes in many instances. This latter statement, however, applies only, except to an insignificant extent, to such routes to and from points in western trunk-line territory.

As indicated, through routes and joint rates apply in connection with the Rio Grande through Provo on traffic to or from points on the Los Angeles line of the Union Pacific. Such routes generally are shorter than routes over the Union Pacific direct to or from Omaha, Kansas City, or Denver. The following is illustrative:

From Los Angeles, Calif., to—	Via Union Pacific	Distance Miles	Via Rio Grande	Distance Miles
Omaha, Nebr.	1	1,808	3	1,813
Minneapolis, Minn.	1	2,168	3	2,152
Kansas City, Mo.	2	1,925	3	1,911
St. Louis, Mo.	2	2,200	3	2,185
Denver, Colo.	4	1,395	3	1,276
Chicago, Ill.	1	2,296	3	2,293
Atlanta, Ga.	2	2,816	5	2,762
Little Rock, Ark.	2	2,430	5	2,272
Dallas, Tex.	4	2,226	5	2,045

1—Union Pacific to Omaha.
2—Union Pacific to Kansas City.
3—Union Pacific to Provo and Rio Grande to Denver.
4—Union Pacific to Denver.
5—Union Pacific to Provo and Rio Grande to Pueblo.

[fol. 2262] Other defendants also participate in through routes with joint rates on traffic moving to or from points on the Union Pacific in the excluded territory from and to eastern points and voluntarily forego their long hauls. For example, the Burlington, the Rock Island, the Santa Fe, and the Missouri Pacific participate in joint rates with the Union Pacific through Kansas City and Omaha. The rail-

roads named could haul the traffic for longer distances over their own rails to Pueblo, Denver, or Cheyenne, instead of permitting shippers to route through Kansas City and Omaha in connection with the Union Pacific.

The total amount of traffic moving between the four northwestern States and points east of the Colorado common points is substantial. According to figures computed by the Union Pacific, transcontinental carload traffic from the East in the year 1948 over the Union Pacific through Wyoming to those northwestern States totaled 55,631 cars. Of these, (1) 81.7 percent originated in eastern Colorado, Kansas, Missouri, Kentucky, Virginia and all States north thereof, (2) 10.8 percent in Texas, Oklahoma, Arkansas, and Louisiana, and (3) 7.5 percent in Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina, and South Carolina. About 62 percent of the total consisted of manufactures and miscellaneous traffic, most of which originated in group (1). Eastbound traffic from the four States to the same three groups in the same year totaled 116,278 carloads, of which 84.1 percent were to group (1), 10.5 percent to group (2), and 5.4 percent to group (3). About 75 percent of that total consisted of agricultural and forest products.

[fol. 2263] Of the total carloads, 171,909 in both directions, 121,909 originated or terminated in the excluded territory and the remainder, 50,000, originated or terminated at points in Oregon and Washington west of that territory. The Rio Grande is in a position to solicit movements of the latter traffic over its line at competitive joint through rates in connection with longer routes over the Southern Pacific from Portland to Ogden or over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City. These joint rates are the same as the rates which apply over the direct routes of the Union Pacific from Oregon, Washington, and British Columbia. For excluded territory. For example, from Seattle to Denver the distance is 1,538 miles over the Union Pacific direct and 1,894 miles over the Union Pacific to Portland, the Southern Pacific to Ogden, and the Rio Grande beyond. In addition to the joint rates sought via the Ogden gateway from the excluded territory, the complainant is also seek-

ing joint rates from the northwest area west of the excluded territory, the same as those in effect over the Union Pacific, Southern Pacific, and great Northern-Western Pacific routes, for application in connection with the Union Pacific via the Ogden gateway.

A substantial volume of traffic is handled by the Rio Grande in connection with the described routes over which it participates in competitive joint through rates to and from Oregon, Washington, and British Columbia. For example, in 1948 the Rio Grande handled 30,486 carloads in connection with the Southern Pacific and 7,152 carloads in connection with the Western Pacific-Great Northern. In 1947, the volume was 22,722 and 8,909 carloads over the respective routes. Most of this consisted of lumber from [fol. 2264] Southern Pacific origins south of Portland.[6]

The complainant's estimate of the traffic in carloads that would be potentially available to and from the excluded territory for solicitation by the Rio Grande, in the event competitive joint rates were established over its line via Ogden, from Idaho, Montana, Oregon, and Washington is about 29 percent greater than the volume of traffic, according to the Union Pacific, that moved in 1948 over its Wyoming lines. The estimate was based upon the total carload traffic originated and terminated by the Union Pacific in the years 1944 to 1948, inclusive. It included commodities within the description of products of agriculture, animals and animal products, products of mines, products of forests, and manufactures and miscellaneous commodities. The total carloads estimated as originated by the Union Pacific annually in the area specified was 101,476

---

[6] Prior to February 1, 1949, joint rates applied over the Bieber route in connection with the Rio Grande to competitive territory in Colorado and east thereof on lumber from certain origins in Oregon and Washington on the Oregon Trunk Railway and the Spokane, Portland and Seattle Railway Company (subsidiaries of the Great Northern and Northern Pacific). Those rates were canceled on February 1, 1949, in connection with the Rio Grande; there is no indication that the cancellation was protested.

and the number terminated 56,286, a total "potential" of 157,762 carloads.

This estimate did not include any shipments that might originate or terminate off the line of the Union Pacific and move over that carrier as part of a longer haul. Although stated to be a conservative estimate of potential traffic, it was computed from a substantial number of reliable [fol. 2265] sources, and represents the complainant's best analysis of the traffic considered available for solicitation. No attempt was made to estimate the amount of traffic that the Rio Grande might actually obtain from these potential sources other than a statement that there was no probability that it would get more than 10 percent and that the amount probably would be less than 10 percent because of the vigorous competition of the Union Pacific. This figure of 10 percent as a maximum was derived from the experience of the Rio Grande in obtaining other transcontinental traffic now moving at joint rates in competition with the Santa Fe, Southern Pacific, Union Pacific, Great Northern, Northern Pacific, and Milwaukee. If the Ogden gateway were opened to traffic to and from the four States named, there would be active competition with the Union Pacific, the Wabash, the Chicago & North Western and the Missouri River connections that favor Union Pacific routing. At the present time the Rio Grande gets less than 5 percent of the traffic to and from California over the available through routes, with joint rates in connection with its line, because of competition with other routes.

A transportation specialist of the United States Department of Agriculture testified that the Rio Grande would be doing well if it obtained 1,000 cars additional annually from this traffic, an amount that is less than 1 percent of the estimated potential total traffic.

Whatever the amount, it would be the result mainly of (a) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (b) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that

[fol. 2266] line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it.

Since 1934, when the Dotsero cutoff was constructed, affording a shorter route by the Rio Grande between Denver and the Utah gateways, there has been a marked increase in the traffic carried over that railroad. For the two years prior thereto, the total tons carried were less than 6,000,000, although the tons carried exceeded that figure in each year before that, back to 1924. Beginning in 1934, the traffic gradually increased and reached a maximum of 18,517,000 tons in the war year of 1944.

[fol. 2267] In 1945 it dropped to 14,213,000 tons, but increased in 1947 to 18,331,000 tons and in 1948 to 18,473,000 tons. This tonnage has shown a considerable increase percentagewise in traffic received from connecting lines and a decrease in traffic originated. In 1924, 23.2 percent was received from connections and 76.8 percent originated. In 1934, the respective percentages were 39.3 and 60.7. In 1947, they were 49.8 and 50.2, and in 1948 they were 52.3 and 47.7 percent. This traffic in 1948 did not differ markedly from the traffic handled in the four war years, 1942-1945, when the percentages of traffic received from connections ranged from 52.6 percent in 1942 to 58.2 percent in 1945.

Of the traffic received from connections in the 15-year period 1934 to 1948, inclusive, the percentage terminated on the line of the Rio Grande has ranged from 16.4 percent in 1941 to 20.7 percent in 1948. In the war years the percentages were 16.7 to 19.9 percent. In the same 15-year period, of the traffic received from connections, the amount delivered to connections; that is, bridge traffic, ranged from 20.7 percent in 1935 to 39.6 percent in the war year of 1945. Excluding the war years, the percentage of traffic received from connections that was delivered to connections was

30.1 percent in 1947 and 31.6 percent in 1948. In 1934, the corresponding percentage was 21.7 percent and in 1924 it was 9 percent. These percentages show the increasing importance of the Rio Grande as a bridge line. In tons of freight carried in 1947, such traffic accounted for 5,519,239 tons out of a total of 18,331,176 tons, and in 1948 accounted for 5,846,793 tons of a total of 18,473,356 tons carried. In revenue, the Rio Grande received in 1947 from its bridge traffic $22,894,412, which was 43.3 percent of its total revenue of $52,883,339; and in 1948, $27,654,086 [fol. 2268] or 44.2 percent of its total revenue of $62,505,951.

Although the percentage relation of the traffic originated on the Rio Grande to the total traffic of that carrier has decreased, such traffic both in tonnage and revenue has increased in the same 15-year period. In 1934, the tons originated were 3,826,049 and the revenue received therefrom was $8,311,254; in 1947, the tons originated were 9,202,867 and the revenue therefrom $20,190,318; and in 1948, the corresponding figures were 8,804,334 tons and $22,018,519. The 1947 and 1948 figures exceeded those of the war years. The volume of strictly local traffic; that is, traffic both originated and terminated on the line, also increased; this traffic in 1934, for example, accounted for 2,048,544 tons and $4,351,807 in revenue, and in 1948, for 3,307,374 tons and $7,630,587. Strictly local traffic was less annually throughout the 15-year period, including the war years, than during the 6-year period 1924 to 1929, inclusive.

The reasons given for the decline or lack of proportionate growth in traffic originated are, (1) depletion of nonferrous ores in Colorado and the closing of smelters, except one now operating at Leadville, Colo.; (2) decline in the amount of coal originating on the road; (3) decline in production of lumber and its products in the area served, and the discontinuance of operation by many saw mills; and (4) loss of local traffic to other forms of transportation.

[fol. 2269] The relative decline in strictly local traffic has been offset by increases in traffic originated and shipped out over connecting lines, and traffic received from con-

necting lines and terminated. Such traffic affords a measure of the increasing importance of the Rio Grande to the shippers and receivers of freight in the localities and areas in the States of Colorado and Utah served by it. Although percentagewise, bridge traffic in relation to the total was greater in 1948 than in 1934, and increased by over 326 percent in the 15-year period, traffic originated or terminated also increased by substantial amounts, or over 155 percent. In terms of revenue, however, less was received from bridge traffic than from the other traffic. In 1934, for example, the Rio Grande received from bridge traffic $5,648,981, and in 1948 it received $27,654,086; from the other traffic, it received $11,519,335 in 1934 and $34,851,865 in 1948.

The record shows that both the Rio Grande and the Union Pacific sought to interest the public in the controversy and to inform other persons, especially shippers, as to the merits of their respective views. For example, the Rio Grande issued a pamphlet entitled "20 Questions" as a means of informing the public of the Rio Grande's side of the case and its reasons for seeking opening of the gateway. In its brief, the Railroad Commission of the State of Montana states that it had informal conferences with official representatives of both the complainant and the defendants before it intervened in the proceeding. A number of witnesses related that they had listened to representatives of both sides before appearing to give testimony. All witnesses were men of responsibility in their communities and were successfully engaged in their respective occupations. Many appeared and testified as [fol. 2270] representatives of large groups of producers, shippers, and receivers of freight in their areas. There is no indication that these witnesses, whether for or against the complaint, were improperly influenced, or that their respective interests in the subject matter of the controversy had been stimulated in any questionable manner.

Transit.—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be stopped in transit for various commercial operations and reshipped at the balance of the joint rate from the point of origin are of great value to shippers, receivers, and dis-

tributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.

The Rio Grande, like other railroads, offers a large number of such transit arrangements, including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding. Such arrangements are of importance to shippers and receivers in the territory served by the Rio Grande. Traffic [fol. 2271] from the excluded territory consists of perishable commodities, other agricultural products, milled products, livestock, and lumber and its products. Westbound traffic to that territory is made up for the most part of manufacturers and partially manufactured articles, some of which are stopped for storage, partial unloading at a number of points, and fabrication in transit.

On traffic from Colorado common points and points east thereof through Pueblo, Colorado Springs, or Grand Junction, and Price, Utah, to final destinations north or west of Ogden on the Union Pacific or points on its connecting lines, failure to have joint through rates in connection with the Rio Grande hinders the use of the stoppage-in-transit arrangements offered by that railroad at such Rio Grande points. Pueblo has a population of about 75,000; Colorado Springs, 50,000; Grand Junction, 17,500; and Price, 5,000. All of these are distributing points for surrounding areas. A shipper at Chicago, for example, may have a carload containing shipments for consignees at Pueblo and Boise, Idaho. If the car is partially unloaded at Pueblo, it cannot be reshipped over the Rio Grande to Boise at a joint through rate; but the car can be moved to Boise via Pueblo and Denver, thence the Union Pacific, at a joint through rate. If stops are desired on the Rio Grande at Grand Junction, Price, or Provo, for example, joint through rates would not be available.

[fol. 2272] A discussion of the evidence offered by shippers and receivers of particular commodities who testified in support of the complainant follows.

Building materials.—A dealer in and distributor of gen-

eral building materials in Salt Lake City, who handles from 400 to 500 carloads annually, obtains from 150 to 200 cars from points east of Colorado common points, including celotex from Marrero, La., roofing from Cincinnati, Ohio, doors from Louisville, Ky., hardwoods and plywoods from Algoma, Wis., and Orangeburg, N. C., asbestos products from St. Louis, and asphalt siding from Minneapolis. Distribution is made in carloads, from pool cars, and from warehouses to customers located on the Rio Grande on the western slope of Colorado, such as Glenwood Springs and Grand Junction, Colo., and in Utah, such as Price, Helper, Ephraim, and Manti; and also on the Union Pacific in northern Utah; in Wyoming, Rock Springs and west; and in southern Idaho northward to and including Ashton on the West Yellowstone branch and westward to and including Magic, Shoshone, and Buhl. This dealer cannot now serve these customers from shipments made in through cars at joint rates over the Rio Grande when such cars also carry shipments for points on the Union Pacific beyond Ogden. Ephraim and Manti are on a branch line about 52 and 59 miles, respectively, south of Thistle, Utah.

In some instances this shipper has had to forego business east of Salt Lake City at points as far as Glenwood Springs because of the rate situation. If joint through rates were established this distributor could give customers at a number of intermediate points on the Rio Grande, who generally are small dealers and can take only less-than-carload quantities, better service through partial unloading in transit and more efficient service by frequent deliveries under more flexible schedules, instead of being limited, as at present, to furnishing service in connection with pool cars consigned to Salt Lake City as the ultimate desti-
[fol. 2273] nation. Pool cars with partial loads for that point or Ogden and points on the Union Pacific beyond do not now move over the Rio Grande, but are routed over the Union Pacific to get the benefit of joint rates.

Of the 150 or more cars annually from the east, this distributor estimated that he would have stopped for partial unloading about 25 percent. Witness made no mention of commercial competition, but indicated that his chief concern was better service to his customers and a saving in cost to his company if such carloads could be stopped for par-

tial unloading at intermediate points on the Rio Grande while moving at the through rates to Union Pacific destinations in the area served by him.

Farm machinery.—A distributor of farm machinery and equipment at Salt Lake City receives carloads of these commodities from eastern origins, including farm tractors from Detroit, Mich., and distributes them by his own motor vehicles to points in Utah and Idaho. This business was established in 1947, at which time the production of these commodities was insufficient to meet all demands, and a system of allocations based on prior needs was introduced. While the system of allocations was in effect, it was found to be more convenient and efficient to bring all shipments to Salt Lake City and distribute them by truck. This distributor is located on the Rio Grande at Salt Lake City and all shipments move over that line. He expressed a desire for joint through rates from eastern origins to points in Utah and Idaho in connection with the Rio Grande, but admitted that no attempt was being made to partially unload shipments at points on the Rio Grande south of Salt Lake City when carloads are consigned to the latter point, or to ship over the Union Pacific to Salt Lake City where carloads could be partially unloaded or stored and later shipped to Union Pacific destinations in Utah and Idaho at joint through rates. The witness for this distributor [fol. 2274] stated that he preferred to ship inbound over the Rio Grande and forego the stopping-in-transit provisions that are now in effect at Salt Lake City and other points on the Union Pacific when traffic is routed over that line.

A factory branch of a large manufacturer of farm machinery and equipment which distributes in the intermountain area is located on the Rio Grande at Salt Lake City. In 1949 it received 369 carloads from its eastern manufacturing points. Of these, 70 percent were sold at points north of Salt Lake City, mostly at points served by the Union Pacific as far as Ontario, Oreg., and the remainder in Utah and western Colorado. About one-half of the shipments to Salt Lake City moved over the Rio Grande route and one-half over the Union Pacific. Shipments which move in over the Union Pacific may be stopped at Salt Lake City for partial unloading or storage in transit at

the joint through rates when the ultimate destinations are on the lines of that carrier, but combinations of rates to and from Salt Lake City apply when such shipments move into that point over the Rio Grande. The manager of this branch testified that it would be desirable to establish joint through rates over the Rio Grande so that shipments moving over that line could be stored in transit at Salt Lake City and later reshipped, or partially unloaded thereat and the remainder forwarded, to points on the Union Pacific at charges no greater than apply on similar shipments moving over the Union Pacific. However, he did not know what effect this would have on the parent company, as some shipments have been routed over the Rio Grande when Union Pacific routing was requested. To indicate a need for joint through rates, reference was made to a shipment of tractors which were routed over the Rio Grande to Salt Lake City. At that time a customer at Ontario needed [fol. 2275] two tractors, and it cost about $50 each to ship them from Salt Lake City by motor carrier. If joint through rates had been in effect, the car could have been partially unloaded at Salt Lake City and the two tractors could have been forwarded to Ontario at the joint rate from origin to Ontario. The record fails to show the difference in the joint rates to Salt Lake City and to Ontario. On a 34,000-pound shipment of tractors from Chicago, the joint through rate is $2.68 to Ogden and $2.98 to Boise, which is southeast of Ontario, representing a difference of $102 in charges.

Monuments.—A fabricator and wholesaler of granite and marble monuments at Brigham City, Utah, on the Union Pacific 21 miles north of Ogden, obtains his stone from Vermont, Georgia, Wisconsin, and Minnesota and sells in Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington. This dealer has keen competition with dealers in like articles in Salt Lake City. Its business is such that straight carloads rarely can be shipped to retailers. If joint through rates were established over the Rio Grande through Ogden, cars could be stopped in transit at Colorado points, such as Grand Junction. A retailer at the latter point testified that he finds it impracticable, except in unusual instances, to purchase the various kinds of monuments needed in the trade in carloads, and that the keen

competition cannot be met when shipments are made in less than carloads. There is thus an urgent need for the establishment of joint through rates on this traffic to destinations in the excluded territory with stop-off privileges at intermediate points on the Rio Grande. A substantial portion of this traffic has been lost to the trucks, chiefly because of rate differences and the lack of stop-off privileges on the Rio Grande at competitive through rates.

[fol. 2276] *Livestock.*—Large volumes of traffic are involved in connection with the livestock industry and with the processing and marketing of agricultural products. With respect to livestock, evidence was submitted by producers, feeders, and marketers. A number of producers in the northwest area, particularly in Idaho at such points as Pocatello, Burley, Soda Springs, and Blackfoot, desire joint rates via Ogden and the Rio Grande to markets in Denver, Pueblo, and east thereof on the same basis that applies on shipments moved over the Union Pacific through Cheyenne. Much of the evidence dealt with the advantages from such joint rates when applied on livestock shipped to grazing and feeding areas in Utah and Colorado on the Rio Grande for reshipment beyond under transit arrangements. In the areas in Utah and Colorado served by the Rio Grande are good pasture lands for grazing livestock. In addition to livestock produced locally in those areas, substantial quantities are shipped in the summer season from other sections in Colorado, Utah, and surrounding States, both for feeding in feed lots and pastures and for grazing on the livestock ranges. Movements of livestock, both sheep and cattle, into and out of Colorado are substantial in volume.

Evidence as to the needs of raisers of livestock and operators engaged in fattening livestock for markets was submitted by persons engaged in those pursuits, individually and as representatives of livestock and feeder associations. These came from several representative points or districts served by the Rio Grande, such as Heber City and La Sal, Utah, and Burns, Lamar, and Las Animas, Colo. Those served only by the Rio Grande generally buy from areas [fol. 2277] from which joint rates apply in connection with that road in order to obtain the benefit of grazing or feeding in transit on feeder stock when the fattened animals are shipped to Denver or markets east thereof. The

evidence shows that such operators have to absorb the difference in transportation cost and are not able to purchase cattle or sheep economically in the northwest area in competition with buyers from Iowa, Wyoming, Nebraska, Colorado, and Kansas that have the benefit of competitive joint rates from the excluded territory over Union Pacific routes with grazing or feeding in transit arrangements.

Due to the curtailment of the use of grazing lands in national forests in Colorado, as part of a general policy for all such forest lands, livestock raisers in Colorado have curtailed their operations in raising livestock, and have engaged more in fattening stock by grazing in private pastures or feeding in feed lots. They purchase most of their feeder stock in Colorado and surrounding areas, but for supply, quality, and price reasons they have been seeking some feeder stock from more distant origins, and the need for doing so, particularly by reason of the curtailment of the pasture area, has been increasing. Livestock produced in the northwest area, particularly in Idaho, Montana, and Oregon, is of excellent grade, does well on the range, and is considered very desirable for feeding and breeding purposes. About 90 percent of the sheep produced in Colorado are produced in the area served by the Rio Grande, and [fol. 2278] the operators in this territory purchase replacement or breeding ewes in the excluded territory for summer grazing and the production of white-faced or mutton-type lambs. One witness indicated that inbound billing on breeding ewes is used under the feeding-in-transit arrangements, when available, at points on the Rio Grande when the new-born, fattened lambs are shipped to markets, but the feeding-in-transit arrangements apparently do not apply for breeding in transit.

Operators on the Rio Grande in western Colorado and those in the eastern Arkansas Valley sections (in southeastern Colorado east of Pueblo and in southwestern Kansas) feel that they cannot now profitably purchase stock in the excluded territory for feeding in transit in competition with similar operators on the Union Pacific in Wyoming, Colorado, Nebraska, and Kansas, due to the rate situation. For example, from Dillon, Mont., to Kansas City the rate on sheep or goats in double-deck cars is $1.21

over the Union Pacific direct and $1.40 over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond, a difference of 19 cents. The 19-cent differential over the latter route applies generally on sheep and goats from Union Pacific origins in the excluded territory to Missouri River markets and points east thereof. These rates are published as joint rates over through routes via Ogden and the Rio Grande. On sheep and goats to destinations west of the Missouri River, including Colorado common points, and on cattle to all of the territory Colorado common points and east thereof, via Ogden and the Rio Grande, the rates are on a combination basis. Cattle and sheep may be shipped from the excluded territory over the Union Pacific to Denver and connecting lines beyond to points in the Arkansas Valley, such as Lamar, for feeding [fol. 2279] in transit and subsequent reshipment to Missouri River markets, or markets east thereof, at the rates applicable over the Union Pacific direct to the Missouri River markets, plus an arbitrary of 8.5 cents per 100 pounds. Feeders of livestock located on the Union Pacific in northern Colorado and Nebraska are now able to overbid the Arkansas Valley feeders on northwest stock when destined to the Missouri River and east thereof, and the latter are thus unable to compete successfully because of their unfavorable rate situation. The northern Colorado-Nebraska operators feed a majority of the lambs fattened for market in the United States.

A packing plant at Pueblo purchases lambs at the Ogden market, some of which originate at points on the Union Pacific in Idaho and Oregon. These shipments are routed over the Rio Grande from Ogden even though it costs from $70 to $80 per car more than the total charges would be if the shipments were routed over the Union Pacific to Denver at the transit balance of the through rate. The Rio Grande is used from Ogden because shipments do not have to be stopped for feed and water en route to Pueblo, whereas shipments routed from Ogden over the Union Pacific usually require feed and water at Denver. There is less shrinkage on shipments moved over the Rio Grande, but not enough to off-set the additional freight charges.

The rates on live stock in western territory were prescribed in *Livestock-Western District Rates*, 176 I. C. C. 1,

190 I. C. C. 175, 190 I. C. C. 641, 200 I. C. C. 535. Generally, the rates are predicated on the shortest routes over which carload traffic can be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short-hauling within the meaning of section 15(4) of the act. The rates on stocker or feeder livestock were prescribed on a basis not in excess of 85 percent of the rates prescribed on the same kind of stock when fit for slaughter, and the carriers were authorized to establish tariff provi- [fol. 2280] sions which allow stock moving toward a market to be fed in transit at intermediate points on the basis of the through rates plus a reasonable charge for such privilege. On December 6, 1932, the Rio Grande was authorized (190 I. C. C. 175) to add certain arbitraries to the rates prescribed for mountain-Pacific territory for hauls over its standard-gauge lines between Pueblo and Walsenburg on the east, and Provo on the west, including branch lines connecting with the main lines between those points. For hauls of 500 miles or more, the arbitrary authorized at that time was 6 cents on cattle and on hogs and sheep, double deck. Later, these same arbitraries were authorized for application between Denver and Provo over the Dotsero cut-off (200 I. C. C. 535).

In establishing the prescribed rates on livestock, the carriers appear to have limited their application over routes which do not result in short-hauling, and over other and longer routes to have provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. As indicated, operators in the Arkansas Valley may now obtain cattle and sheep in the excluded territory for feeding in transit at an arbitrary of 8.5 cents, and this same arbitrary applies when the stock originates on the Burlington in Montana and Wyoming. On the other hand, such operators may obtain feeder stock in other areas, such as Texas and New Mexico, for feeding in transit and reshipment to the Missouri River markets, or markets east thereof, at lower rates than would apply if the same stock were fed in transit by operators on the Union Pacific in Colorado, Nebraska, or Kansas. For example, the rate on cattle from Las Vegas, N. Mex.,

[fol. 2281] to Chicago is $1.13 when stopped for feeding at Lamar, but if the same cattle were fed at Barton, Nebr., just east of Julesburg on the Union Pacific, the rate would be $1.26, or 13 cents higher. On cattle from Raton, N. Mex., fed in transit at Lamar, the rates are $1.07 to Chicago and 76 cents to Kansas City, but if the same cattle were fed in transit at Barton the rates would be $1.21 and 89 cents, respectively. Many other examples of a similar nature are shown.

The arbitrary of 19 cents, originally 13 cents, applicable on lambs from the northwest area and moving over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond was established prior to the opening of the Dotsero cut-off, and was based in part on the mileage over the Rio Grande via Pueblo. The evidence indicates that this arbitrary was based on the difference between the prescribed scale rates for the average distance from 12 representative origins, on the line of the Union Pacific from Pocatello north to Butte and west to Pendleton, to the several Missouri River markets over the Union Pacific direct and over that road to Ogden, the Rio Grande to Denver via Pueblo, and the Union Pacific beyond. Using the same formula, but giving consideration to the shorter distance over the Rio Grande's Dotsero cut-off, the Union Pacific states that the arbitraries on traffic routed over the Rio Grande should be 5 cents to Denver and Pueblo and 15 cents to the Missouri River markets, and it is willing to establish these arbitraries and make them applicable to cattle as well as sheep. The arbitrary of 8.5 cents on cattle and sheep from origins on the Union Pacific and the Burlington when fed in transit at points in the Arkansas Valley and reshipped to the Missouri River and beyond apparently is based on a similar formula. Reasonable [fol. 2282] groupings were authorized in *Livestock-Western District Rates, supra.*

In seeking to have the rates on livestock which apply over the Union Pacific made applicable over its lines from Ogden, the Rio Grande indicates a desire to waive the arbitraries which were authorized over its line from Provo to Denver and Pueblo and, in addition, to have established over its routes lower rates than would result from the application of the prescribed scales for the distances over its

routes. On shipments moving over the Union Pacific-Ogden-Rio Grande route, this would result in short-hauling the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City, which are the differences in the Union Pacific distances from McCammon to Ogden and from McCammon to Denver and Kansas City.

Reference is made to *Crouch v. Nevada N. Ry. Co.*, 208 I. C. C. 586, which concerned the rates on feeder cattle moved from East Ely, Nev., to Davis, Calif., over the lines of the Nevada Northern Railway Company to Shafter, Nev., thence the Western Pacific to Sacramento, Calif., and the Southern Pacific beyond, 760.4 miles. A rate of 47.5 cents was applicable over the Nevada Northern to Shafter and the Southern Pacific beyond, 705 miles. This rate was collected, but the defendants later sought to collect a rate of 58 cents, which was the combination rate based on Sacramento. Division 4 found that the combination rate was applicable but unreasonable to the extent that it exceeded 49.5 cents, which was the prescribed scale rate for distances of 775 miles and over 750 miles. See also *Routing Livestock to and from Oregon Points*, 209 I. C. C. 349. We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive rates over the Rio Grande via the Ogden gateway.

[fol. 2283] *Agricultural commodities.*—Growers of wheat, potatoes, onions, peas, other vegetables, and fresh fruits at Idaho Falls, Burley, Twin Falls, Blackfoot, Aberdeen, Caldwell, and Parma on the Union Pacific, and also those engaged at such points in buying, selling, packing, and distributing vegetables and fresh fruits, market such products throughout the United States. In order to get as wide a distribution as possible those growers and other growers in the northwest area need as many markets and outlets as possible.

In marketing the large production of such products, particularly Idaho potatoes, it is the general practice to divert carloads in transit as markets are found and sales are made. Routes over which joint through rates apply are generally used so that a shipment can be diverted or reconsigned without the application of a combination of rates. If a shipment reaches a point through which a combination

of rates applies and the sale is lost, it is frequently necessary to dispose of the shipment at that point at a forced or distress price. Such points are called closed or pocket markets.

The principal outlets for Idaho fruits and vegetables vary from year to year, but large markets are in the central, southwestern, and southeastern States. Carloads moved over the Union Pacific to the central States can be diverted to the southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect. Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on ship- [fol. 2284] ments routed over the Rio Grande via Ogden or Salt Lake City. One Idaho shipper has made few sales of potatoes in the Southwest in the last several years because of pocket markets there.

Wichita and Liberal, Kans., are described as pocket markets on potatoes and other vegetables originating in Idaho because they cannot be diverted or reconsigned therefrom to points east of the Missouri River at joint through rates. However, the record indicates that shipments refused at these two points may be diverted or reconsigned to destinations in the Southwest at the joint through rates. Wichita is not located on the direct line of any carrier operating between the Colorado common points and the Missouri River gateways, and Liberal is located in the southwestern part of Kansas near the Oklahoma border. Shipments to Kansas City and east thereof would require an out-of-line haul via Wichita and a substantial back haul via Liberal.

Storage facilities are available at Pueblo for the storage of perishables, including potatoes, onions, apples, pears, frozen poultry, frozen foods, butter, and eggs. Joint through rates are applicable from the excluded territory via Pueblo on shipments routed over the Union Pacific to Denver and connecting lines beyond to destinations in the Southwest and to points west of the Missouri River. The

route of the Rio Grande from Ogden would be used if joint through rates were available over that route to additional destinations with storage in transit at Pueblo. Storage operators at Pueblo are now handicapped, in relation to two competitors at Denver, because the through rates do not apply via Pueblo to Denver and other northern destinations where a back haul would be required on shipments routed to Pueblo via Denver, whereas the competitors can ship at the through rates in all directions, except westward. The application of the through rates via Ogden and the Rio Grande is sought so that these shippers may have avail- [fol. 2285] able the same distribution markets as their competitors.

A shipper who deals in dried beans from Idaho and other western States is located at Colorado Springs. His principal markets are in southeastern territory. Beans which originate in California, Colorado, and Wyoming may be stopped at Colorado Springs for cleaning and packaging and reshipped at the balance of the joint through rates. Beans which originate in Idaho may be shipped over the Union Pacific to Denver and the Rio Grande or other connections to Pueblo and reshipped therefrom at the balance of the through rates, except to points east of the Missouri River. The route of the Rio Grande from Ogden would be used on Idaho beans if it would result in the application of joint through rates to points east of the Missouri River on the same competitive basis as is now applicable when such beans are transited at points on the Union Pacific. Another bean dealer at Fruita, Colo., on the Rio Grande about 10 miles west of Grand Junction, would like to transit Idaho beans on the same competitive basis as is applicable at Union Pacific points. This dealer is now engaged primarily in buying pinto beans from growers in the vicinity of Fruita and shipping them in carload lots to others, including the shipper at Colorado Springs. These dealers in dried beans are in competition with like dealers at points on the Union Pacific who have the benefit of transit at the through rates to destinations, among others, east of the Missouri River.

A company which is engaged in the purchase and sale of dried beans and peas maintains plants in Nebraska at Morrill on the Burlington and at Gering on the Union Pacific.

Carloads of dried beans and peas originating in California, Utah, Oregon, Washington, Idaho, Colorado, Wyoming, Montana, and Nebraska are shipped to Morrill and Gering where they are cleaned, sorted, and packaged, and reshipped generally eastward and to Oklahoma and Texas. This company can obtain Idaho beans and reship them from Gering to eastern and southern destinations at the joint through rates. It was stated, however, that a substan- [fol. 2286] tial amount of pinto beans (about 6,000,000 pounds per year) are obtained from Colorado, mostly on the Rio Grande, on which an out-of-line charge of 7 cents per 100 pounds is applicable in addition to the joint through rates over direct routes when such beans are processed at Gering and reshipped to the Missouri River and points east thereof; also that when such beans are processed at Gering and reshipped to destinations west of the Missouri River combinations of rates to and from Gering are applicable.

The Utah Growers' Cooperative operates throughout Utah in the production and shipment of vegetables, including potatoes and onions. It has two branches on the Union Pacific and three on the Rio Grande in Utah, the latter at Midvale, American Fork, and Springville, all south of Salt Lake City. These three points are served by the Union Pacific and the Rio Grande, but track connections exist only at Midvale. Shipments of box shooks and of seed potatoes from Idaho and of fertilizer from Montana may move into American Fork and Springville over the Union Pacific at lower rates than when they are interchanged with the Rio Grande at Ogden or Salt Lake City, but when they are received over the Union Pacific they must be trucked to the plants on the Rio Grande. The differences in the rates are not shown.

Various flour mills at southern Kansas points, such as Moundridge and Wichita, support the complaint because they cannot at present purchase wheat at points on the Union Pacific in Idaho, Oregon, and Washington, mill it in transit, and reship to the Missouri River and points east thereof at the same rates that are applicable when similar wheat is milled at points on the Union Pacific. A specific instance was shown where 9 carloads of wheat moved from Ogden to Moundridge on which the Ogden shipper applied

[fol. 2287] inbound transit billing on wheat originating at Idaho Falls. The shipments moved from Ogden over the Union Pacific to Denver, the Rio Grande to Pueblo, and the Missouri Pacific beyond. Moundridge is a local point on a branch line of the latter carrier north of Eldorado, Kansas. After the wheat was milled at Moundridge the inbound billing thereon was applied against an outbound movement of flour to New Cumberland, Pa. The rate on flour from Idaho Falls to New Cumberland over the route of movement through Denver and Moundridge was $1.35.5, or 12.5 cents higher than the rate would have been if the same wheat had been milled at a point on the Union Pacific. The distances over the route of movement through Denver and Moundridge and the more direct route of the Union Pacific are not shown.

The rate restrictions complained of by shippers of and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from the excluded territory to Colorado common points and east thereof have placed these shippers and dealers at a serious disadvantage in marketing their products, as compared with competing shippers and dealers located on the Union Pacific and having the benefit of the lower joint through rates from and to the same points. Some of these restrictions complained of, such as those by operators of flour mills in southern Kansas, could be remedied by the establishment of additional joint through rates from the excluded territory over routes of the Union Pacific to Denver and connecting lines beyond. From McCammon and points north thereof such routes would in all instances be shorter than the routes over the Union Pacific to Ogden, the Rio Grande to Denver or Pueblo, and connecting lines beyond. The Union Pacific states that it has not been requested to establish additional joint through rates via Denver. Its position with respect [fol. 2288] thereto is that the rates on agricultural commodities are on a low basis and, therefore, the carriers should be permitted to limit their application to more direct routes, thereby maintaining their long hauls and preventing undue circuity. For example, it believes that if competitive joint through rates were established on grain for milling at Wichita and other southern Kansas points and reshipment beyond to the Missouri River and east, other

and longer routes probably would be demanded on the same basis at points in Oklahoma and Texas where competing mills are located.

The establishment of additional routes and rates by way of the Union Pacific, however, would not remedy the disadvantage complained of by the shippers of and dealers in those products in the excluded territory who are compelled to pay combination rates on shipments diverted or reconsigned at intermediate points on the Rio Grande, including those stored at Pueblo or Colorado Springs on that road, and reshipped to Colorado common points and east thereof. The only effective remedy in those instances would appear to be the establishment of through rates, the same as those over the Union Pacific routes, over Rio Grande routes via Ogden or Salt Lake City.

Lumber.—A number of lumber dealers and lumber mills are located at Grand Junction and other points, and a wood-treatment or preserving plant is located at Salida, Colo., all on the Rio Grande. Generally, the complaints of these parties relate to their inability to ship lumber and millwork from the excluded territory on competitive joint rates via Ogden and the Rio Grande with stoppage in transit for partial unloading, storage, milling, or treatment and reshipment beyond to Colorado common points and east thereof at the balance of the joint rates. Mention also was [fol. 2289] made of a handicap in diverting or reconsigning at the joint rates to such points carloads originally shipped to local stations on the Rio Grande via Ogden. As previously indicated, joint through rates apply on lumber and millwork from points in California and in Oregon and Washington west of the excluded territory, including areas around Seattle, Tacoma, and Portland, over the Southern Pacific or the Western Pacific and the Rio Grande through the Utah gateways to points on the Rio Grande and east thereof, with storage, milling, and treatment under transit arrangements. Lumber may also be shipped at joint through rates from the excluded territory when the final destinations are local points on the Rio Grande, but such rates are not applicable from that territory over the Union Pacific to Ogden and the Rio Grande when the final destinations are Colorado common points or points east thereof,

whether the shipments move direct or are stopped for milling or other transit purposes.

A lumber company with a wholesale yard, a box factory, a mill, and a storage and drying yard is located at Grand Junction. This company buys most of its lumber, both rough and dressed, and plywood and doors at points west of the excluded territory and sells in Colorado and points east and south thereof. This company also has a financial interest in a wholesale lumber company at Colorado Springs. It has purchased some lumber at points in the excluded territory, such as Cascade and Winchester, Idaho, Burns, Oreg., and Metaline Falls, Wash. Lumber shipped from Cascade, Winchester, and other points in the excluded territory over the Union Pacific to Ogden and the Rio Grande to Grand Junction could not be stored in transit at the latter point and later reshipped to Colorado common points or points east thereof at the joint through rates as those rates apply only over the Union Pacific [fol. 2290] routes.

Another lumber company on the Rio Grande at Military Junction, Colo., about 10 miles south of Denver, purchases lumber in California and Oregon; also a small amount in Washington, for milling in transit and reshipment beyond. Lumber from the excluded territory can now be milled in transit at Military Junction and reshipped to Colorado points south thereof and to points in the Southwest at the joint through rates to final destination, but this is not true to other destinations east of the Rocky Mountains. Military Junction is about 1 mile outside of the Rio Grande's switching limits at Denver.

The wood-treatment plant at Salida purchases some lumber, poles, piling, and cross ties in Colorado, Utah, and New Mexico, but most is obtained from points in Oregon and Washington west of the excluded territory. This plant has a contract for treating cross ties for the Rio Grande, but about 60 percent of the forest products which it treats are reshipped to points outside of Colorado. It has not purchased products in the excluded territory, but probably would do so if the joint through rates to eastern and southern destinations were made applicable over the Union Pacific to Ogden and the Rio Grande through Salida. The company which owns the plant at Salida has a similar plant

at Denver and 22 others scattered throughout the country. The plant at Denver can perform treatment in transit at the joint through rates from the excluded territory to final destinations in the East, South, and Southwest, and apparently joint through rates apply on about 40 percent of the business at Salida which does not move outside of Colorado.

[fol. 2291] Opposition Testimony

The Union Pacific operates about 9,724 miles of railroad serving over 1,700 points in 13 States.[7] It reaches the Pacific coast at Seattle, Portland, and Los Angeles, and the Missouri River at Council Bluffs, Iowa, and Kansas City. Its line between Pocatello and North Platte, Nebr., the point of divergence of traffic via Council Bluffs and Kansas City, runs through a substantial portion of the territory principally involved in this proceeding. It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.

Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity and efficiency in operation, shows that the railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line.

The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile, as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. Eastbound on the Union Pacific the maximum grade at any point is 1.52 percent and westbound 1.55 percent. The Rio Grande's maximum grade is 2 percent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union

---

[7] Iowa, Nebraska, Wyoming, Idaho, Oregon, Washington, Missouri, Kansas, Colorado, Montana, Utah, New Mexico, and California.

[fol. 2292] Pacific. The total rise and fall in feet on the Rio Grande is 66.3 percent greater than that of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services.

The Union Pacific objects to the establishment of joint through rates to points beyond Denver or Pueblo via Salt Lake City or Ogden over the Rio Grande upon the principal grounds that such routes would short haul the Union Pacific and that the diversion of traffic over such route from the Union Pacific routes now available would curtail the service and growth of the Union Pacific in the territories it alone serves and in which it pioneered in railroad construction. Such diversion, it fears, would adversely affect the operation of its numerous branch lines in Idaho, Montana, Oregon, and Washington, which are feeders for its main line and are not self-sustaining. In those States the Union Pacific operates a total of 5,606 miles of railroad, with 2,913 miles of branch lines upon which about 46 percent of the total traffic in that territory originates or terminates. It contends that unless it has a substantial main-line haul on branch-line traffic, the operation of many, if not most, of such branches would not long be justified.

[fol. 2293] Another objection is that yard facilities of the Ogden Union Railway and Depot Company, referred to as the Depot Company, jointly owned by the Southern Pacific and the Union Pacific, at Ogden terminal are inadequate to interchange any additional volume of traffic with the Rio Grande that may be routed to or from the northwest area through Ogden, and that expansion of facilities there is not possible. Several instances of delays to trains, particularly in the fall when traffic is heavy, are shown. The record describes in detail the yard and track layout at this terminal and interchange point. At present the Union Pacific finds it necessary to bypass the Ogden terminal as much as possible by taking its trains for Pocatello, Salt Lake City, or Green River over an outside wye track

which avoids the terminal proper. In addition to these deficiencies, icing facilities now maintained at Ogden for eastbound and westbound traffic are not considered adequate for icing perishable commodities from Idaho and the Pacific northwest for delivery to the Rio Grande. The Depot Company estimated that the cost of interchanging cars between the Rio Grande and the Union Pacific and Southern Pacific is at least twice the average cost of cars in the terminal because of the additional handling required.

The largest volume of traffic was moved through the Ogden terminal in the war year 1945, when a total of 2,847,277 cars were handled. In July, the peak month in that year, the total was 284,711 cars in 2,966 trains, an average of 96 trains daily, which required an average of 70 switching shifts a day. Of that number in July, 894 were solid trains that moved through the terminal without switching. The handling of such a large volume caused considerable congestion and delays to trains. In 1949, the [fol. 2294] total number of cars handled was 1,955,219. In the peak month of that year, 2,359 trains were handled, an average of 76 trains per day, requiring about 59 switching shifts daily. These figures show that 892,058 fewer cars were handled in 1949 than in the peak year of 1945.

To show that the Union Pacific cannot afford to lose any part of its haul on traffic, attention is directed to the large deficits which the Union Pacific incurred in its passenger service. In 1948, that deficit amounted to $28,462,000, equivalent to $4,291 per mile of road operated, as compared with a passenger deficit incurred by the Rio Grande of $4,954,000, equivalent to $3,127 per mile of road. In the last 20 years the Union Pacific in only 6 years, principally in the war years, has had railway operating income sufficient to pay fixed charges plus declared dividends, and in 1949 it had a net railway operating income of $21,707,437, which was not sufficient by $10,269,865 to pay declared dividends and interest on funded debt. This is contrasted with the results on the Rio Grande, which in 1948 had a net railway operating income of $12,156,284, out of which it provided for all fixed charges, paid a declared dividend, provided for sinking-fund requirements, and had left for its surplus account $5,167,148.

The Wabash and the Chicago & North Western, important eastern connections of the Union Pacific, furnished estimates of the possible loss of traffic to those roads, and its effect upon train service and employment on their lines in the event that the volume of traffic embraced in the Rio Grand estimate of potential traffic were diverted over the Rio Grande route.

[fol. 2295] The Wabash in 1948 participated in 9.07 percent of the total traffic handled by the Union Pacific from the northwest and about one-half of that on westbound traffic to that area. It estimates the value to it of the potential traffic which it might lose at $1,602,000.

The revenue derived by the Chicago & North Western from the traffic to and from the northwest territory handled in connection with the Union Pacific in 1948 was about $4,000,000. Based on the loss of the potential traffic as estimated by the Rio Grande, it urges that it will lose that amount of revenue if the joint through rates sought in this proceeding are established.

The Great Northern, Northern Pacific, Santa Fe, and Milwaukee oppose granting the Rio Grand's request for the establishment of competitive joint through rates via Ogden. Neither of these defendants, except the Santa Fe, connects with the Rio Grande. They participate, however, in joint rates with the Union Pacific on traffic between the northwest area and eastern points, but there are numerous exceptions. For example, from origins on the Great Northern joint rates are not applicable via Spokane and the Union Pacific on wool, livestock, ores, concentrates, or smelter products, and the joint rates eastbound on fruits and vegetables over that route are limited to destinations reached by the Union Pacific. These restrictions became effective on September 15, 1932, although they were protested by various shipping interests. On lumber from origins on the Great Northern, joint rates apply over that line to Spokane and the Union Pacific only when the traffic is destined to points on and west of the Missouri River, Council Bluffs to Kansas City, thence the line of The Kansas City Southern Railway Company to the Gulf of Mexico. Reference is made also to *Transcontinental Traffic Routed via Bieber, Calif.*, 213 I. C. C. 487, wherein the Great Northern was permitted to cancel joint rates via Bieber

and Salt Lake City on transcontinental traffic originating at or destined to various points on the Great Northern in Idaho and Washington.

[fol. 2296] The Milwaukee, the Santa Fe, and the Wabash, in a joint brief, contend, as does the Great Northern, that upon the evidence submitted the establishment of joint rates which would short-haul the defendants is not warranted.

A large number of shippers and representatives of communities served by the Union Pacific, and traffic associations, opposed the complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado. Those three supported the complaint in whole or in part, and as indicated, the Kansas Commission later qualified its opposition by supporting the position of the complainant insofar as it pertains to wheat and livestock.

It is not practicable to deal with all of this evidence in detail, but the testimony and position of the parties have been considered. Most of the shippers in opposition to the complaint commented upon the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. Many of them testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event. Most of the opposition arises from the assumed effects of the diversion from the Union Pacific of the full amount, or a very large portion, of the traffic estimated by the Rio Grande as the potential traffic that would be subject to solicitation by that carrier for movement over its lines if the joint rates sought should be established. Upon the assumption that the Union Pacific would lose its long haul on the full estimated potential traffic of 101,476 carloads originated and 56,286 carloads terminated annually on the Union Pacific in the four northwestern States, a total of 157,762, that number was used [fol. 2297] as a base by the Union Pacific to determine possible revenue losses. These were computed as amounting, in the aggregate, to $49,880,000 yearly.

Diversion of traffic with such a large loss in revenue would result, according to Union Pacific estimates, in (a) the discontinuance of four trains daily eastbound and four trains daily westbound between Pocatello and North Platte; (b) three trains eastbound and three westbound daily between North Platte and Council Bluffs; and (c) one train eastbound and one westbound daily between North Platte and Kansas City. Extending this loss to show the direct effect upon employment, it was calculated that 1,240 employees, with annual payroll earnings of $5,000,000 yearly, would be laid off, with additional losses in employment by employees in other departments, bringing the total to about 5,300. Other losses are calculated, such as loss of employment of Union Pacific employees engaged in moving fuel coal from the company's mines in Wyoming. Based on these assumptions, derivative losses were computed by communities and localities on the Union Pacific's line whose local industries and merchants depend more or less upon the wages paid to railroad employees.

Considerable evidence of the same general character was submitted by representatives of employees of the Union Pacific, to show the effect upon them if all of the potential traffic were routed via Ogden and the Rio Grande. The number of employees that might be laid off was computed as 5,144, with a total loss of wages of $21,080,400. Losses by reason of possible loss of homes due to forced changes in places of employment, decline in real estate values, and other contingent losses were calculated. Similar figures for possible loss of employment were calculated for certain [fol. 2298] lines connecting with the Union Pacific, such as the Wabash, the Chicago & North Western, and the Milwaukee.

The record contains detailed computations and estimates upon all of these matters. Employee representatives contend that if joint rates are required to be established we must determine what would be the probable extent of diversion of traffic from one or more routes to the route via Ogden and the Rio Grande. Based on such a finding, they further contend that we must determine the probable adverse effects of the diversion on employees of the railroads affected and impose measures to compensate or to protect

such employees from loss, as conditions upon the establishment of the joint rates and through routes.

There is no specific provision in section 15(3) or (4) requiring that such conditions be imposed, but it is argued that in finding joint rates and through routes necessary and desirable in the public interest, as required by section 15(3), the interests of employees must be considered as they are in proceedings involving consolidations, mergers, and abandonments. Reference is made to the decision in *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183. In that proceeding certain carriers sought to cancel their joint rates over through routes with specified short lines. It was found that cancellation of the rates and routes would result in abandonment of the short lines with resulting inconvenience and loss to shippers and to carrier employees. Permission to cancel certain of the routes was denied.

[fol. 2299] Upon the record before us it is impossible to find definitely, or to estimate with any degree of accuracy, how much traffic might be diverted to the Rio Grande if all of the rates sought were to be made applicable over that carrier, nor how much traffic will be diverted to the Rio Grande under the restricted findings herein made. Shippers have a right to route their own traffic, and where traffic is not routed by the shipper, the originating carrier has the right to control the routing within certain limitations.

General Discussion and Ultimate Fact Findings

In support of its contention that the assailed rates over its line are unreasonable, the Rio Grande submitted a large number of comparisons showing the differences in such rates and the competitive joint through rates on various commodities, together with the car-mile and ton-mile revenue under the respective rates and what the revenue would be if the lower joint rates were made applicable over its line. Neither factor of the combination rates is assailed, but the aggregates of such factors are alleged to be unreasonable to the extent that they exceed the competitive joint rates.

Many of the present joint rates on the transcontinental

traffic here affected are commodity rates which were established originally on particular commodities to meet water [fol. 2300] competition. Others, such as those applicable on agricultural commodities, were established from producing areas in the excluded territory to enable growers and shippers to market such commodities in eastern and midwestern territories. For these reasons, and others, the defendants contend that it would be unreasonable to require the application of the joint rates over the Rio Grande, as it would result in depleting their revenues and in wasteful transportation over circuitous routes, as well as in short-hauling the defendants, especially the Union Pacific. For example, the rates on potatoes to Chicago are 96 cents from Monte Vista and Greeley, Colo., and $1.14 from Idaho Falls, Idaho, a difference of 18 cents, although the distance from Idaho Falls to Chicago, 1,597 miles, is 315 miles greater than from Monte Vista and 590 miles greater than from Greeley. Computations were submitted which indicate that on a carload of potatoes weighing 45,120 pounds from Idaho Falls to Chicago the joint rate of $1.14 would yield a net profit of $1.97 per car when moved over the Union Pacific to Omaha and the Chicago & North Western beyond, and a net loss of $62.93 per car if routed over the Union Pacific to Ogden, the Rio Grande to Denver, and the Burlington beyond, 1,809 miles. The computed costs were based on general cost scales compiled by our Bureau of Accounts and Cost Finding and were not based on studies [fol. 2301] of particular movements of traffic over the respective routes. Many other examples of this nature were submitted.

With unimportant exceptions, the only rates of record with which comparison is made by or in behalf of the complainant are the joint rates in effect over routes embracing the lines of the Union Pacific which are sought for application over the lines of the Rio Grande and the Union Pacific via Ogden or Salt Lake City. As above indicated, many of those rates are the result of competition. However, they are the going rates on this traffic and, except for authorized general increases therein, have been in effect for many years. There is no claim that any of those rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within

the zone of reasonableness and must be regarded as reasonable rates.

With respect to the issue under section 15, the facts before us here are in some respects similar to those considered in *United States* v. *Union Pac. R. Co.*, 28 I. C. C. 518, and *Western Pac. R. Co.* v. *Northwestern Pac. R. Co., supra*, in both of which the complaints were dismissed. In the first, the complainant sought through routes and joint rates over the Rio Grande, among others, in connection with the Santa Fe at Pueblo or Denver on the east and the Oregon Short [fol. 2302] Line at Salt Lake City or Ogden on the west, on traffic moving between Chicago and certain Mississippi and Missouri River points, on the one hand, and stations on the Oregon Short Line, on the other. The joint rates sought were the same as those then in effect over generally shorter routes of the Union Pacific and other defendants. The short-hauling provision of the statute was held to be a bar to the establishment of the routes and rates sought.

In the second proceeding, the Western Pacific alleged that the failure of the defendants to join with it in the establishment and maintenance of joint rates between points in California on the Northwestern Pacific Railroad Company, controlled by the Southern Pacific, on the one hand, and eastern defined groups, on the other hand, over routes in which the Western Pacific would be an intermediate participating carrier, was discriminatory and prejudicial, and that the combination rates between such points over such routes were unreasonable. Therein, division 2 said, at pages 136 and 137:

> In requesting the application of the joint rates over its line complainant is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic which, under the act, belongs, in the absence of emergency, to the Northwestern Pacific and Southern Pacific.

The instant complainant likewise is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic on which the Union Pacific refuses to relinquish its long haul. In that proceeding, the distance over the Southern Pacific route to Ogden was about 200

miles shorter than the route sought, which is substantially the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves. Again, the short-hauling provision was held to be a bar to the relief sought.

[fol. 2303] Since the two decisions last above referred to, section 15(4) has been amended (in 1940), so that now the prohibition against short-hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the "through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation." Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in *D. A. Stickell & Sons, Inc.* v. *Alton R. Co., supra*, the Supreme Court said that the expressions "more efficient or more economic" transportation, as used in section 15(4), "may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found." These latter considerations are not determinative, however, unless the existing routes can be found not to provide "adequate" transportation.

[fol. 2304] In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests.

There is no contention here by complainant that the present routes of the defendants are not adequate for the traffic hauled and no finding is sought by complainant to that effect. The absence of such a request may well be due to complainant's contention, not sustained herein except as to sheep and goats to points on the Missouri River and

east thereof, that through routes via Ogden and the Rio Grande already exist within the meaning of section 15(3) of the act. Testimony on behalf of shippers, however, does raise a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities.

In order properly to evaluate the testimony of shippers it is necessary to consider the nature, extent and functioning of our intricate and far-flung commodity marketing system. The growth of our population and the development of the country have required a constantly expanding flow of diverse commodities. Great consuming areas in many instances are far distant from the points of production of the necessities of every-day life, particularly articles of food. Movements of transcontinental proportions are involved in important instances. That is true here. A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible. Adequate transportation facilities and services are required for the proper functioning of the system. Because of their generally perishable nature food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and over as many routes as possible. This requires that many [fol. 2305] routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that as much flexibility as possible in the distribution process be permitted. A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semi-perishable commodities. *Southeastern Vegetable Case*, 200 I. C. C. 273, and *Routing Lumber and Fruits, South to C. F. A.*, 256 I. C. C. 223.

While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effec-

tive participation in the wide-spread system developed for the marketing of such commodities. This conclusion is also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services which are generally accorded such traffic and are necessary for its efficient marketing. For instance, on this traffic reconsigned or accorded transit privileges, such as stop-off for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. On such traffic the defendants' routes are inadequate and less economical than are the Rio Grande routes.

[fol. 2306] In addition to the above-mentioned commodities, we are of the opinion that a special need for joint routes and joint rates on granite and marble monuments, in carloads, from origins in Georgia and Vermont to destinations in the excluded area, has been established.

The situation as to the commodities above named, as to which the defendants' routes are inadequate, is largely similar to that considered in *D. A. Stickell & Sons, Inc.* v. *Alton R. Co., supra.* There is one point of difference. There, the operating conditions, mile for mile, on the respective routes were substantially similar. Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recognized by the Commission in prior proceedings. See *Livestock—Western District* [fol. 2307] *Rates, supra, and W. H. Bintz Co.* v. *Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486. There is before us no data from which the exact differences in the costs over the Union Pacific routes and the Rio Grande routes can be determined. Several estimates were made by witnesses for both the Rio Grande and the defendants, but the estimates vary so widely and are so obviously incomplete as to be practically useless. The record is sufficiently complete, however, to enable us to make a rough approximation of the differences in the operating conditions and to appraise the weight which should be given to those differences, as well as to the differences in the distances over the respective routes, in determining the issues before us.

The differences in the distances between the Union Pacific routes through Wyoming on the one hand, and the Rio Grande routes sought on the other, using Boise, Idaho, as a representative point in the excluded territory, vary approximately from 95 miles or 11 percent to Denver, short-route distance 880 miles; 200 miles or 14 percent to Kansas City, 1,410 miles; 211 miles or 8 percent to New York, N. Y., 2,691 miles; 200 miles or 9 percent to Atlanta, Ga., 2,289 miles, to 33 or 35 miles, or 2 percent, to New Orleans, and to Fort Worth and other points in the Southwest, with short-route distances varying from 1,612 miles at Oklahoma City to 2,282 miles at New Orleans. From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the North-[fol. 2308] ern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and ranging up to more than 50 percent, than the short routes. From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska, except Omaha, the short-route distances are less than 1,000 miles. We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls between the excluded territory on the one hand, and points in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago & North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United States east and south of the points and territory above described, the differences in the transportation conditions are, in general, spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar.

[fol. 2309] As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments westbound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs eastbound, who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3(1) of the act.

As before indicated, on a number of commodities, from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short-haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections here defendant, its long haul, while refusing to apply the same joint rates over routes in connection with the Rio Grande via the Ogden gateway. Such routes by which the Union Pacific and certain of its connections short-haul themselves are generally about as long as, and in many instances substantially longer than, the Rio Grande routes here sought, and the hauls of the Union Pacific, as well as of certain of the other defendants, are shorter over such established routes than over routes in connection with the Rio Grande via Ogden.

[fol. 2310] There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3(4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred. No such a showing has here been made.

The situation is different with respect to traffic between Utah common points on the one hand, and the northwest area on the other. On such traffic the Union Pacific interchanges with the Bamberger Railroad Company at Ogden

at joint through rates to and from points on that line, including Salt Lake City. There is no apparent reason why similar arrangements should not apply on like traffic interchanged with the Rio Grande. The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande.

The evidence is convincing that the joint rates sought, which now apply over the Union Pacific routes, would be reasonable for application also over the Rio Grande routes via the Ogden gateway on the traffic, and from and to the points, embraced within the findings of unlawfulness herein made.

The testimony dealing with the terminal facilities at Ogden has been carefully considered. We are persuaded that the additional traffic over the Rio Grande routes which will result under the findings herein made can be interchanged at that point or at Salt Lake City by the use of the present facilities and without serious detriment to the operating efficiency of the railroads concerned.

[fol. 2311]. CONCLUSIONS

We conclude:

1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pa-

cific and the Chicago & North Western from Omaha to Chicago, including destinations in the lower peninsula of Michigan and in Oklahoma and Texas.

2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

[fol. 2312] 3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act.

4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

An appropriate order will be entered.

ARPAIA, *Commissioner*, concurring:

In my opinion there are through routes over the Rio Grande and the Union Pacific via the Ogden Gateway on traffic between the territories included in this proceeding, and therefore a finding under the provisions of section 15(4) of the Interstate Commerce Act is not required.

The evidence of record shows that these routes presently are open and available to shippers on combination rates. The history of the relationship between these carriers leaves no doubt as to that fact.

When joint rates over these routes, which were in effect from 1897 to 1906 and 1912, were canceled by the Union Pacific, no specific cancelation was made of the through routes over which the joint rates applied. To my mind it would be necessary for the Union Pacific to have shown affirmatively that it refused traffic on through billing over the Ogden Gateway in order to negative the existence of

such through routes. Instead, the record shows information elicited from an official of the Union Pacific to the [fol. 2313] effect that routes via Ogden were available subject to the application of combinations of local rates.

The question then is to what extent should we compel joint rates. Joint rates over the routes through Ogden, I believe, are warranted in the public interest only on the commodities for which relief is included in the majority report.

We should interfere in the management of a railroad only when the reasons for doing so are clear and compelling, as they are here, and only to the extent the public interest actually requires.

LEE, *Commissioner*, concurring in part:

I concur in the conclusions of the majority that joint rates the same as apply over the Union Pacific and its connecting lines should be established via Ogden or Salt Lake City, in connection with the Rio Grande, on the commodities and from and to the origins and destinations specified by the majority; that the rates assailed on such commodities from and to such origins and destinations are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes; and that the maintenance by the Union Pacific and other defendants of joint rates from and to points on the Bamberger Railroad south of Ogden, while refusing to participate in like rates [fol. 2314] from and to the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act. The decision in this case will correct in part, a long-standing, unlawful rate adjustment, an adjustment which has discriminated against the industries and people of Washington, Oregon, Idaho, Montana, and Utah, the area from and to which such unlawful adjustment applies being referred to in the report as the "excluded territory." However, I am of the opinion that the action of the Commission should not be limited to a partial correction of this unlawful rate adjustment. On

the facts shown in the record the act requires that the rates on all commodities, between points in the excluded territory and Colorado common points and points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes. The act contemplates that there shall be no excluded territory with respect to any commodity or persons.

Transcontinental joint rates on freight traffic were established in 1897, from and to the territory here considered, applicable over the Rio Grande routes via Ogden. These joint rates were in effect for many years, until 1906 from and to some points and until 1912 from and to other points, when they were cancelled by the Union Pacific and higher combination rates became effective. However, the through routes were not closed. Numerous shippers testified that these routes are open and available and that they can route traffic over them. This testimony was not challenged or contradicted. On the contrary, a responsible traffic official of the Union Pacific testified that the Rio Grande routes are "actually available today on traffic to or from [fol. 2315] points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon, and Washington." That these routes are open and used is proved by evidence in the record (1) of eastbound shipments of various commodities made in 1948 from points on the Union Pacific in the excluded territory to Colorado common points, and which moved over the Rio Grande routes, including the entire length of the Rio Grande line, on through bills of lading issued by the Union Pacific, (2) of westbound shipments of various commodities made in the same year from various eastern points to points in the so-called excluded territory, and which moved on through bills of lading over carriers east of Colorado junctions to the Rio Grande at such junctions and thence over the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond, and (3) of numerous shipments moved over the Rio Grande routes between eastern points and the excluded territory during World War II and in 1949 when the Union Pacific main line in Wyoming was blocked by snow. The year 1948, the calendar year immediately preceding the hearing, was selected as typical of the situation which

prevailed in the prior years and which continued up to the time of the hearing.

I am unable to agree with the majority that the shipments referred to above must be regarded as of an isolated nature and as falling in the same category as the single shipment considered in the *Beaman Elevator case*, 155 I. C. C. 313, referred to in a footnote to the opinion of the United States Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. In the *Beaman case* a single carload shipment of grain moved over the lines of two connecting railroads from Beaman, Iowa, via Clinton, Iowa, to St. [fol. 2316] Louis, Mo. The evidence plainly showed that the bill of lading covering this shipment was issued and recognized by these railroads through error. There was no evidence "of any like movement before or since." Adequate service was available over nine other routes. A wholly different situation is before us in this proceeding. Numerous shipments of a variety of commodities have been transported in both directions over the Rio Grande routes on through bills of lading deliberately issued and recognized by the Union Pacific and the other participating carriers. The situation here before us is similar to that considered by the Supreme Court in *Virginia Ry.* v. *United States*, 272 U. S. 658, also referred to in a footnote to the decision in *Thompson* v. *United States, supra*, in which, in referring to the route over which the Commission there prescribed reasonable and non-discriminatory rates, the court stated that "that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive." The court held however, that even though the route was closed commercially, open through routes to the West were in existence.

In the *Thompson case* the court pointed out that "there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line" or that the carriers have ever offered through service over the Missouri Pacific-Burlington route. Thus, the facts before the court in that case likewise were wholly different from those be-

fore us in this proceeding. I think that the court's opinion in that case supports the conclusion that through routes on [fol. 2317] freight traffic over the Rio Grande routes have existed for many years and now exist and that the short-hauling provision of section 15(4) is not applicable.

If, however, the Rio Grande routes were actually closed, the short-hauling provision of Section 15(4) of the act would not be a bar to the correction in full of the present discriminatory rate adjustment. The discrimination in violation of Section 3 of the act, shown by the evidence, makes that provision of Section 15(4) inapplicable. In any event, the Rio Grande routes are shown to be needed in order to provide adequate, and more efficient and more economic transportation, and, if they were not already open through routes, we could and should require that they be opened.

As stated in the report of the majority, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments, livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, who reconsign shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific. The evidence is equally impressive with respect to the disadvantage or handicap to shippers or receivers of lumber, building materials, farm machinery, and other commodities. For instance, the lumber company at Military Junction, Colo., referred to in the majority report, is handicapped in its efforts to compete with mills at Denver and Kansas City because it cannot obtain lumber from the excluded territory for milling in transit on the same basis as these competing [fol. 2318] mills. A representative of that company testified that it would purchase several million feet of lumber annually from points in the excluded territory if it had available reasonable and non-prejudicial joint rates over the Rio Grande routes. By reason of the rate situation complained of, the lumber dealer at Grand Junction, Colo., who is also referred to in the majority report, has lost business to competitors who have the benefit of transit at the

joint rates applicable over the Union Pacific routes. This evidence is only typical; it was presented as representative of the prevailing situation.

Shippers and receivers of freight at points in eastern Oregon and southern Idaho, on the line of the Union Pacific, have been, and are, excluded from additional markets that would be available to them if reasonable and non-prejudicial joint rates were in effect over the Rio Grande routes. Some of these shippers express the belief that the establishment of such joint rates would provide them with a better car supply in that the Rio Grande would furnish additional cars to move out shipments routed over its line. It is common knowledge that a better supply of cars is available to shippers who have competitive routes to the consuming markets. The record clearly establishes that the present rate adjustment results in a substantial disadvantage to the industries, shippers, and receivers located in the considered territory, and in undue prejudice to them.

Likewise, the evidence establishes that the defendant railroads discriminate against the Rio Grande in that from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short-haul themselves by maintaining joint rates, [fol. 2319] the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections, its long-haul, while refusing to establish the same joint rates over the Rio Grande routes. The routes by which defendants short-haul themselves are generally as long as, and in many instances substantially longer than, the Rio Grande routes, and the hauls of the Union Pacific and of other defendants are shorter over such established routes than over the Rio Grande. The evidence does not establish that transportation conditions are more favorable over these routes than over the Rio Grande routes which are discriminated against by defendants. On the contrary, the record, in my opinion, warrants finding that the transportation conditions over such routes are, in general, no more favorable than over the Rio Grande routes. The Union Pacific and the other defendants are, and for

the future will be, violating Section 3(4) of the act by failing and refusing to participate in joint rates with the Rio Grande, from and to points in the excluded territory, to and from points in official, southern and southwestern territories, while participating with each other in joint rates from and to the same points, over routes over which the Union Pacific and other defendants short-haul themselves.

The joint rates on freight traffic which are now in effect over the Union Pacific routes are shown by the record to be reasonable for application over the Rio Grande routes. We should require that such rates be established and maintained over such routes.

[fol. 2320] The Union Pacific is a strong and progressive railroad. It is ably managed and efficiently and economically operated. Being the only railroad in southern Idaho, every shipper in that area is dependent on it for rail service. I am persuaded that, instead of being allowed to continue to maintain an "excluded territory", it should be required to provide these shippers with joint rates which will enable them to buy and sell in all markets on an equality with other shippers, and that such joint rates will not result in any substantial diversion of the traffic now moved over its lines. The joint rates now in effect on freight traffic over its routes are shown by the record to be reasonable for application over the Rio Grande routes. We should require that these rates be maintained over the latter routes.

PATTERSON, *Commissioner*, concurring in part:

I concur in the relief granted to the Rio Grande and transit operators thereon who are handicapped by the lack of through routes and joint rates the same as those over the Union Pacific routes. It seems to me, however, that the findings of unlawfulness are inconsistent in that they fail to include lumber and articles taking lumber rates in the relief granted.

The showing made of a need for such through routes and joint rates, in my opinion, is more persuasive as to lumber and articles taking lumber rates than as to any of the commodities included in the foregoing findings, with the possible exception of livestock. The record shows that at least one lumber dealer at Grand Junction, another at Mili-

tary Junction, near Denver, and a wood-treatment plant [fol. 2321] at Salida, all on the Rio Grande, are handicapped in their efforts to compete with like dealers on the Union Pacific routes, and that at least the dealer at Grand Junction has lost business, by reason of the rate situation complained of, to competitors who have the benefit of transit at the joint rates over the Union Pacific routes. I believe this evidence is adequate support for the inclusion of this commodity group in the findings of unlawfulness made.

The order entered in connection with this report requires the establishment on particular commodities, in connection with the Rio Grande, of through routes and joint rates the same as those now in effect over the Union Pacific routes. The formation of those through routes is appropriately left, in large measure, to the carriers. I want to make it clear that in my view, on traffic to or from the area east of the Colorado common points, where the provisions of the order so permit, these new routes should be formed in such a manner as to short-haul the Union Pacific only to the extent necessary to afford the Rio Grande its line haul and avoid unduly circuitous routes.

MAHAFFIE, *Commissioner*, dissenting in part:

I dissent from the majority report insofar as it fails to find that the existing routes to and from the northwest territory, described in the report, via the Rio Grande through the Ogden Gateway are effective through routes and that the failure of the Union Pacific and other defendant railroads to establish joint rates with the Rio Grande via Ogden unjustly discriminates against that carrier. I disagree also because the report does not find that it is [fol. 2322] necessary and desirable in the public interest that joint rates on commodities generally, in addition to those specified, should be established over such through routes.

We are not called upon in this proceeding to exercise our authority, under section 15(4) of the Interstate Commerce Act, to establish new through routes via that gateway. Therefore, the conditions in that paragraph are not applicabl. We are free to exercise our power under section 15(3) to establish joint rates unhampered by those restrictions.

A finding that these routes are open and freely available to shippers today is fully supported by the evidence. It was acknowledged by a freight traffic official of the Union Pacific that a shipper has the right under the Act, (section 15(8)), to specify such routes for the carriage of his shipments. That right, it should be noted, can be availed of only when two or more through routes and through rates are actually established and in existence.

The record shows that some joint through rates, as distinguished from combination rates, are in fact now published in a Union Pacific tariff for application through Ogden over the entire length of the Rio Grande to Denver and the Union Pacific beyond. These apply on shipments of sheep or goats originating on the Union Pacific in southern Idaho and eastern Oregon, billed to destinations on the Missouri and Mississippi rivers and to Chicago and other points. The joint rates are higher than rates on like livestock moved over the direct route of the Union Pacific and, therefore, retard use of the Rio Grand- route. But the publication of such joint rates in connection with transportation over the whole length of the Rio Grande is proof of the consent of the Union Pacific for the use of that rail [fol. 2323] line as part of a through route at joint rates. And it was further stated by the same witness that the Union Pacific has no objection to publishing the same joint rate arrangement on shipments of cattle.

In 1941-1942 mixed military trains with troops in passenger cars and military supplies in freight service were transported over this route on through billing. Four examples of such trains are described in the record. These moved from Fort Still, Okla., and Camp Claiborne, La., to Fort Lewis, Wash., in December 1941 and February 1942. The trains were routed and moved to Colorado junctions of the Rio Grande, thence over that railroad to Ogden and the Union Pacific beyond. Unlike certain other movements to and from the northwest area via Ogden in the war period in connection with these two lines, the military trains were not routed under service orders issued by us or the Office of Defense Transportation. Arrangements for the through movements were made with the railroads and the rates charged were settled on the basis of the joint rates applicable in connection with the Union Pacific routes through Wyoming.

The existence of the route as an established through route was undoubtedly an important consideration for its use in February 1949, when the line of the Union Pacific was blocked by snow. In that emergency, freight cars, passenger cars, express and mail were promptly diverted by the Union Pacific through Denver over the Rio Grande to Salt Lake City and to Ogden for movement beyond. Of the freight cars diverted, 1,493 were for destinations in Idaho on the Union Pacific and in the northwest area.

Actual and continuous use of the Rio Grande route at through rates made by combinations of separate rate factors via Ogden to and from the northwest without opposi- [fol. 2324] tion or objection by the Union Pacific or other participating railroads is amply shown by the evidence of typical movements of numerous commodities. The calendar year 1948 was used by the Rio Grande as a representative year. In that year 16 carloads of various commodities were shipped from the northwest territory over the Union Pacific to Ogden and the Rio Grande beyond to Denver, Louviers, Pueblo and Trinidad, Colo., over the entire length of the Rio Grande. They originated on the Union Pacific and moved on through bills of lading. Some of the cars were partly unloaded at Rio Grande points and then continued through to their destinations. Seventeen carloads of various commodities moved, from late in December 1947, and in the year 1948, from various eastern points on through bills of lading at through combinations of rates over rail lines east of the Colorado junctions to the Rio Grande at such junctions thence over that line to Salt Lake City or Ogden and the Union Pacific beyond. Some of the cars were stopped for partial unloading at stations on the Rio Grande or the Union Pacific.

The same kinds of movements as those exhibited in 1948 prevailed to about the same extent in years prior to 1948 and continued into 1949 at the time of the hearings.

All of this evidence clearly supports a finding that the routes are existing established through routes over which through rates apply and that the railroads participating therein consent to their use as through routes and freely hold themselves out to shippers as ready and willing to perform transportation service over them. They meet completely the requirements necessary as prerequisites for

a finding that they are established through routes announced by the United States Supreme Court in *Thompson v. United States*, 343 U. S. 549. In that case, the court said [fol. 2325] "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." However, as stated by the court, there was no evidence that any through transportation had ever been offered from and to the points involved in the suit, and therefore, no through routes existed between those points.

The situation here is in striking contrast to that in the *Thompson* case. Here there is substantial evidence of a holding out that through transportation will be furnished and of execution of such offers by the issuance of through bills of lading and the performance of through service over many years. We cannot ignore the fact that the joint rates over these routes that were in effect from 1897 to 1906 and 1912 were canceled by the Union Pacific without canceling its participation in the same through routes thereafter at higher through combination rates. That railroad's course of conduct evidenced no more than a desire to discontinue joint rates so as to make the higher combinations applicable. Its action in canceling its participation in joint rates did not, without more, cancel its participation as a carrier in the through routes. The latter were never disestablished but continued to exist. The record taken as a whole inevitably leads to that conclusion. To find under such a state of facts that no through routes exist for commodities generally is directly contrary to the evidence.

Even if a finding that no through routes exist over this line be sustained, there is substantial evidence that the rate situation results in undue prejudice and undue disadvantage to shippers and to districts and localities in Utah and Colorado dependent upon the Rio Grande for rail serv-[fol. 2326] ice, in violation of section 3(1) of the Act. Such violation removes the restrictions imposed in section 15(4) upon our authority to establish through routes. That undue prejudice and undue disadvantage exist is fully supported by the testimony of numerous witnesses. Briefly, the testimony shows that livestock producers in Utah and

Colorado, in areas served by the Rio Grande, are not able, due to the combination through rates via Ogden, to buy on a reasonably competitive basis, cattle and sheep in Idaho, Montana, Oregon and Washington for grazing and feeding in transit on the ranges in Utah and Colorado, in competition with buyers and stock feeders in northern Colorado, Nebraska and northern Kansas. The same undue prejudice and undue disadvantage is experienced by buyers and feeders in southeastern Colorado east of Pueblo, Colo., and in southwestern Kansas served by the Santa Fe and the Missouri Pacific railroads. Their failure to obtain joint through rates from the producing areas in the northwest over the Union Pacific to Ogden, Rio Grande to Pueblo and its connections beyond places them at an undue disadvantage.

The record contains convincing evidence by representatives of large groups of shippers that there is undue prejudice and undue disadvantage to wool producers, as well as to livestock operators in Colorado served by the Rio Grande; also to lumber dealers and processors; dealers in farm machinery and other commodities, and to a cold storage warehouse operator in Pueblo. There is substantial evidence from producers and shippers of agricultural commodities in the northwest, particularly in Idaho, to support findings that the refusal of the defendant railroads to join in joint through rates via Ogden and the Rio Grande to and from points beyond the Colorado gateways of that [fol. 2327] carrier exclude them from additional markets needed for their products. All of that evidence sustains and fully supports the finding that there is a violation of section 3(1) of the Act and justifies a general finding that joint through rates via the Ogden Gateway should be established on commodities generally. The findings should not be limited, as are the findings of the majority, to particular commodities as to which evidence was offered but should be broadened to include all commodities.

We are fully warranted in dealing with this situation broadly, in considering what is necessary and desirable in the public interest, with respect to joint rates over these established through routes. We are not limited to consideration of proof as to every rates on every commodity from every origin to every destination. Such a view of our

authority is too narrow and is not justified by the law or the evidence.

In other types of proceedings where we found it necessary to deal generally with a comprehensive rate situation the Supreme Court has held that we may properly make general findings upon typical evidence representative of the situation as a whole.

In exercising authority under section 13(4) as to the lawfulness of rail rates on intrastate traffic in a State and under section 15(6) as to divisions of joint rates of rail carriers we may make general findings when the evidence is shown in numerous and representative instances that are typical of the rate situation as a whole. Similarly we need not attempt the impracticable, if not impossible, task of examining every rate on every commodity and class of commodities, from every origin to every destination in the large areas and territories under scrutiny here. We can adjust the remedy to the evil and make our order as broad as the discrimination and undue prejudice. See *Illinois Central R. R. Co.* v. *Public Utilities Commission*, 245 U. S. 493, 507. In *Wisconsin R. R. Comm.* v. *Chicago, B. & Q.* [fol. 2328] *R. R. Co.*, 257 U. S. 563, 579, a proceeding dealing with intrastate rates on a state-wide basis, the Court stated that "any rule which would require specific prooof of discrimination as to each fare or rate and its effect would completely block the remedial purpose of the statute." In *Georgia Public Service Commission* v. *United States*, 283 U. S. 765, 774, the Court said that "when an investigation involves shipments from and to many places under varying conditions, typical instances justify general findings." That case also arose under section 13(4) of the Act with respect to intrastate rates. There the order related to a few commodities but the rates prescribed were state-wide in operation and applied to shipments between hundreds of points of origin and destination. Under those circumstances the Court held that "To require specific evidence and separate adjudication in respect of each would be tantamount to denying the possibility of granting relief."

To the same effect is the holding of the Court in *New England Divisions Case*, 261 U. S. 184, 197. There the Court had under consideration contentions with respect to

the nature of the evidence in support of our order as to divisions of joint rates between groups of rail carriers. The Court pointed out that our order was based on evidence which we assumed was "typical in character, and ample in quantity, to justify the finding made in respect to each division of each rate of every carrier." That method of proof was found to be our common practice in adjudicating comprehensively upon substantially all rates in a large territory, and that the actual necessities of procedure and administration had led to the adoption of that method also in passing upon the reasonableness of proposed rate increases. That method was found equally appropriate in [fol. 2329] passing upon multitudes of divisions of joint rates. That it has similar application in a comprehensive case such as we have here where we are called upon to establish joint rates via a gateway through which substantially all joint rates have been refused, is equally clear. In the case cited, the Court said that there was no constitutional obstacle to the adoption of the method pursued and that only in that way could the task be performed.

The same rule should be applied in the instant case, in order to carry out effectively our authority to prescribe, in the public interest, joint rates by way of the Ogden Gateway. The report of the majority finds it necessary in the public interest that joint rates via that gateway be established on particular commodities as specified in the report. The same evidence is, and should be concluded to be, typical of the rate situation as a whole. In accordance with our practice in other types of comprehensive proceedings which has been found lawful and necesary under principles announced in the Supreme Court cases cited, that evidence should be found adequate to support an order that joint rates be established via that gateway on commodities generally.

I am authorized to state that *Commissioners* SPLAWN and CROSS join in this expression.

Commissioner KNUDSON did not participate in the disposition of this proceeding.

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, ET AL.

ORDER—January 12, 1953

This proceeding being at issue upon complaint and answers on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination:

It is ordered, That the defendant named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from

practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately [fol. 2333] west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the

undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

George W. Laird, Acting Secretary.

(Seal)

[fols. 2334-2338] INTERSTATE COMMERCE COMMISSION

No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, ET AL.

ORDER MODIFYING FORMER ORDER—February 13, 1953

In the matter of a letter request on behalf of defendants for (1) postponement of the effective date of the order and (2) extension of time in which to file petitions for reconsideration.

Present: Charles D. Mahaffie, Commissioner, to whom the above-entitled matter has been assigned for action thereon.

The Commission, on January 12, 1953, made and filed its report in the above-entitled proceeding containing its findings of facts and conclusions, and entered its order requiring the defendants to take certain action on or before April 7, 1953.

A letter request, dated February 9, 1953, has been made on behalf of defendants, pursuant to Rule 101(e) of the Commission's General Rules of Practice, for (1) postponement of the effective date of the order of January 12, 1953, and (2) extension of time in which to file petitions for reconsideration. The complainant does not oppose postponement of the effective date. Upon consideration of the matters presented, and for good cause appearing:

It is ordered, That the order entered in this proceeding on January 12, 1953, which required defendants to take

certain action on or before April 7, 1953, on 30-days' notice, be, and it is hereby, modified to become effective June 8, 1953, without change in the notice requirement.

It is further ordered, That the time for filing petitions for reconsideration in said proceeding be, and it is hereby, extended to April 15, 1953.

Dated at Washington, D. C., this 13th day of February, A. D. 1953.

By the Commission, Commissioner Mahaffie.

George W. Laird, Acting Secretary. (Seal.)

[fol. 2339] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD, COMPANY, Complainant,

v.

UNION PACIFIC RAILROAD COMPANY, ET AL., Defendants

PETITION OF COMPLAINANT FOR RECONSIDERATION AND OTHER RELIEF—Filed April 15, 1953

Comes now The Denver and Rio Grande Western Railroad Company, complainant in the above-entitled proceeding, and petitions the Commission to reconsider, expand and modify its findings, conclusions and order of January 12, 1953, released January 26, 1953, in the respects hereinafter stated.

The Decision and Order

The report of the Commission indicates that ten of its members participated in the disposition of the case. The minutes of the Commission show that the entire membership of the Commission were present at the time the case was considered and decided but that Commissioner Knudson did not participate in its disposition.

[fol. 2340] After reciting that exceptions were filed to the report of the examiner and that the case was twice argued

orally, the report states that its conclusions "differ in part" from those recommended by the examiner. That is certainly an understatement since the examiner recommended that the relief sought by complainants be granted and since the report of the Commission grants relief on but a few selected commodities and imposes an intermediate territorial restriction which, as a practical matter, will prevent or minimize the use of the joint rates prescribed for eastbound application on the selected commodities.

For convenience in considering this petition, there follows a reproduction of the "CONCLUSIONS", in which six members of the Commission agreed on certain of the issues and but five members on certain other issues, and which sets out the maximum relief granted the complainant and intervening complainants.

> 1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago; including destinations in the lower peninsula of Michigan and in Oklahoma and Texas.
>
> [fol. 2341] 2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust

and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes, and unduly preferential of shippers and receivers using the Union Pacific routes in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the

4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

General C nments

In dealing with the scope and the authority of the Commission, the Supreme Court said in *Interstate Commerce Com.* v. *Chicago, R. I. & P. R. Co.*, 218 U. S. 88, 30 S. Ct. 651, 656—

> "The outlook of the Commission and its powers must be greater than the interest of the railroads or of that which may affect those interests. It must be as comprehensive as the interest of the whole country. If the problems which are presented to it, therefore, are complex and difficult, the means of solving them are as great and adequate as can be provided."

In the instant case, the majority, who appear to have approved the report and order of the Commission did not take the broad view referred to by the Supreme Court. On the contrary, they adopted a narrow legalistic conception of the powers of the Commission and of the signifi- [fol. 2342] cance of the issues and the facts involved in this case. Nor is there anything in the report of the Commission to indicate that any consideration was given to

the evidence of record by an economist of the University of Utah (230-250) which showed the extraordinary growth and industrial development of the Northwest territory during the past 12 years. Since the Commission must look to the future as well as the present in deciding cases of this character, those facts should have been considered.

The Commission should also have considered that by the provisions of the Interstate Commerce Act and other laws, the policy of Congress is to encourage competition in trade and commerce, and that the restrictive rate policy of the defendants, and especially the Union Pacific, not only discourages competition but actually hampers and restrains it. In *United States* v. *Union Pacific Railroad Company*, 226 U. S. 61 and 226 U. S. 470, the Union Pacific was required to divest itself of the control of the Southern Pacific Company, because that control restrained commerce in violation of the Federal antitrust acts. The Supreme Court has held in recent years that administrative agencies such as this commission, while not charged with the duty of enforcing the anti-trust laws, are charged with the duty of administering their regulatory powers "* * * in the light of the purpose which the Sherman Act was designed to achieve." *National Broadcasting Company* v. *United States*, 319 U. S. 190, 223; *McLean Trucking Company* v. *United States*, 321 U. S. 67, 80. In *Southern Steamship Co.* v. *N. L. R. B.*, 316 U. S. 31, at page 47, the court stated that the National Labor Relations Board should not administer its act "* * * so single mindedly that it may wholly ignore other and equally important congressional objectives."

While the minutes of the Commission indicate that six commissioners approved and adopted the report and order as made, the report itself shows that Commissioner Arpaia does not concur in the view of the other five commissioners [fol. 2343] that through routes do not exist via the Rio Grande and the Union Pacific through Ogden on the traffic and between the territories involved. On the contrary, on page 66 of the report Commissioner Arpaia affirmatively stated that in his opinion through routes as claimed do exist via the Rio Grande the Union Pacific and the Ogden Gateway, etc., and therefore that "a finding under

the provisions of Section 15 (4) of the Interstate Commerce Act is not required." Commissioner Patterson, who concurred in part, said that the findings made are inconsistent and incomplete in that they failed to "include lumber and articles taking lumber rates in the relief granted." Since Commissioners Lee, Mahaffie, Splawn and Cross, by separate opinions, found that through routes exist and that the Rio Grande is entitled to the competitive joint rates sought via its route on all of the traffic and between all of the territories involved, it will be seen that on the question of the existence of through routes and of the inclusion of lumber, there is an even division of views among the ten commissioners who participated in the disposition of the case. These issues should have been resolved by the participation and vote of Commissioner Knudson, who was present at the time the proceeding was considered but, as already stated, did not participate in its disposition.

On sheet 6 of the report, the statement is made that routes via the Rio Grande are available to and from the points involved via the Union Pacific, Ogden, and the eastern connections of the Rio Grande, but that, except as to eastbound shipments of sheep and goats, shippers must pay charges at combination rates when they use that route. Sheet 7 of the report recites that should the route be opened to shippers on a commercial basis on other traffic by establishing the competitive joint rates sought, the existing routes would become effective through routes, a character they do not now possess. On sheet 9 of the report, the finding is made that the existing through routes are not through routes as that phrase is used in the Interstate Commerce Act, except as to the eastbound movement [fol. 2344] of sheep and goats, and therefore that any order which requires the establishment of such through routes and joint rates must be grounded upon findings specified in Section 15 (3) and (4) that the routes sought are necessary or desirable in the public interest and are needed in order to provide adequate and more efficient and more economic transportation.

The reach and scope of the rates and traffic involved in the instant proceeding requires a broader outlook than the majority has adopted. In proceedings of this type, the Supreme Court has held that as a practical matter the

Commission has the right and the duty to make general findings upon typical evidence representative of the situation as a whole. The parties are not required to pin point every factor with specific evidence. The Commission is not required to attempt the impractical, if not impossible, task of examining every rate on every commodity from every origin to every destination in the large territories involved in the instant case. The Commission has the right to enter an order as broad as may be necessary to correct the violations of the law found to exist. The cases cited in the separate opinion of Commissioner Mehaffie, in which Commissioners Splawn and Cross concurred, are apropos. They are *Illinois Central* v. *Public Utilities Commission*; 245 U. S. 493, 507; *Wisconsin R. Comm.* v. *Chicago, B. & Q.*, 257 U. S. 563, 579. The latter proceeding dealt with intrastate rates on a state-wide basis, and the court held that any rule which would require specific proof of discrimination as to each fare or rate and its effect would completely block the remedial purposes of the law. To the same effect is *Georgia Public Service Commission* v. *United States*, 283 U. S. 765, 774; *United States* v. *Abilene and W. Ry. Co.*, 265 U. S. 274, 190-291, and the *New England Divisions case*, 261 U. S. 184, 197.

In the two latter cases, the court dealt with typical evidence as to representative divisions where hundreds of rates and divisions were involved. The claim is made by [fol. 2345] the Union Pacific and appears to be sustained by the views of the majority of the Commission except as to a few commodities that there is not a sufficient basis for a finding of a violation of Section 3 (1) or 3 (4) because the evidence does not show in pin point detail that the transportation conditions over the route of the Rio Grande are substantially similar to the transportation conditions over the numerous routes via which the joint rates sought are applied. We shall deal with this question more comprehensively elsewhere in this petition. It is sufficient to say at this point that if the Union Pacific and the majority are right it would be impossible for any complainant at any time to obtain relief under Section 3 or other sections of the Act in a case of this scope and character.

The Union Pacific says that the burden of proof is upon the complainant. That may be conceded to exist to a

limited extent without conceding that there is no burden upon the defendants. Sections 1, 2, 3, 4, 6 and 7 of the Interstate Commerce Act affirmatively impose statutory duties and prohibitions upon railroads and other carriers which must be met by the carriers independently of the exercise of any authority by the Commission to compel such compliance. Generally speaking, the power of the Commission to compel compliance is as broad as the duties imposed. Since under Section 13 (1) of the Act every complaint is an investigation, it follows that railroads may not in a particular investigation escape the duties imposed upon them to establish and maintain just, reasonable, non-discriminatory and non-prejudicial rates, rules, routes and practices on any such tenuous ground as the burden of proof. In *Burson Knitting Co.* v. *C. M. & G. Ry. Co.*, 42 I. C. C. 739, at page 741, the Commission held that "The burden is on the defendants to justify not only the intrinsic reasonableness of the increased rate, but to show that it is free from the alleged unjust discrimination." To the same general effect is the recent decision of the Commission in *Continental Steel Corp.* v. *N. Y. C. & St. L.*, 256 I. C. C. [fol. 2346] 167. At page 174 of that decision the Commission held that "The burden is not on the shipper to show similarity of carrier competition from the alleged prejudiced and preferred points, but is on defendants to show by satisfactory and convincing evidence that a sufficient dissimilarity exists to justify the different treatment." Moreover, it is well settled that while the burden of proof when it exists does not shift, the burden of evidence in a case does shift to the party who has material facts which are not available to others. In *Warn* v. *Davis Oil Co.*, 61 Fed. 631, 632, the court said:

> "He who has peculiarly within his power the means of producing evidence * * * shall be required to produce it."

And, in the case of *Emma F. Angell*, 217 Fed. 311, the court, in referring to this rule, stated that the defendant there came

> "within the principle that the litigant who has control of the proofs must produce them."

See also *Williams* v. *Casabeer*, 126 Cal. 77; *Barter* v. *Camp*, 71 Conn. 245; and other cases cited in Sec. 190, Chamberlayne on Evidence and 27 Corpus Juris, Sec. 21.

We will presently show in greater detail that in prescribing joint rates and through routes applicable to the eastbound movement of a few selected commodities shown in the CONCLUSIONS, the majority excluded from their application an intermediate territory composed of all Colorado common points and practically all points in Nebraska, Kansas, Northern Iowa, Wisconsin, Northern Michigan, Minnesota and the Dakotas, which also creates numerous fourth section violations and operates to defeat the usefulness of the very rates which were prescribed on the selected commodities to destinations in the territories east and southeast of the excluded intermediate territory. As stated, Colorado common points are embraced within the [fol. 2347] excluded territory, which means that the prescribed joint rates on the selected commodities would not be applicable from points in the closed door territory on the Union Pacific or its connections via Ogden and the Rio Grande, etc., to such Colorado common points as Denver, Colorado Springs, Pueblo and Trinidad, which are served by the Rio Grande. In other words, the restriction imposed in a large sense deprives the shippers of the commodities selected by the majority to the relief and the benefits of transit, etc., which the majority purported to give them.

At pages 44a and 59-60, the report of the Commission affirmatively recognizes the necessity of flexibility of routing and of the wide range of joint rate and transit arrangements which are necessary fully to sound out or exploit the marketing system of the country. Appendix 1 is a map which graphically depicts the excluded intermediate territory. That territory is shown in the cross-hatched section of the map. For instance, no experienced shipper of potatoes or other perishables embraced within the selected list of commodities would consign a car to Denver or Pueblo via the Ogden Gateway if at the time of the consignment he seriously intended to dispose of the car at such points. The same reluctance would exist in connection with shipments initially consigned to Wichita, Topeka, and Lincoln, Nebr., and other points in the excluded intermediate

territory. Most of the selected commodities are the type which need and use transit to a substantial degree. The facts of record reveal that shippers in Idaho and Oregon, etc., in the closed door territory naturally look to such nearby points as Denever, Pueblo and points in Kansas, etc., to feel out the market before deciding whether to reconsign the shipments to more easterly destinations. The territorial restriction imposed in the report of the Commission will deprive the shippers of such necessary experimentation in the sale of their commodities.

[fol. 2348] The transit tariffs generally applicable to the selected commodities contain what is known as the minimum rate rule. A typical rule will be found in Item 162 of Western Trunk Line Tariff I. C. C. No. A-3862. That rule provides that the through rate to be applied shall be the rate:

1. From original point of shipment to the final destination, or

2. From original point of shipment to the stop-off point or points, or

3. From stop-off point or points to the final destination,

whichever is highest, in effect on date of initial shipment from original shipping point, plus the prescribed transit charge.

A few practical examples will show that by virtue of the proscribed territory and the minimum rate rule applicable to shipments accorded transit will, as a practical matter prevent or substantially reduce the use of the joint rates to the very territory to which they are prescribed.

A shipment of dried beans originating on the Union Pacific at Rexburg, Ida., could not be transited at Colorado Springs, Colo., and thence re-shipped to Kansas City or St. Louis, Mo., Chicago, Ill., Minneapolis, Minn., Ft. Worth, Tex., or Oklahoma City, Okla., at the joint thru rate from origin, because the combination rates via the Union Pacific and the Rio Grande through Ogden to Colorado Springs aggregate $1.19 per 100 pounds whereas the prescribed joint through rates on dried beans from Rexburg to the destinations named range from 82 cents per 100 pounds to Kansas City to $1.13 per 100 pounds to Chicago and

are in every instance lower than the aggregate of the combination rates on dried beans from Rexburg to Colorado Springs. Appendix 2 attached hereto gives other examples of the restrictive effect of the proscribed intermediate ter-[fol. 2349] ritory by virtue of the transit rule already referred to in connection with livestock, frozen fruits, apples and potatoes from various points in Idaho, Oregon and Washington to Colorado common points and to Kansas City and other eastern points beyond the proscribed territory.

The Rio Grande and other railroads in the west publish a wide variety of transit arrangements and rules; but such transit arrangements are ineffective and useless unless the transit can be used at joint competitive rates which are applicable through the transit point from the origin of the shipment to its ultimate destination. Under the minimum rate transit rule already referred to, the joint rates approved would not be applicable in many instances to points in the territory beyond the proscribed territory to which the joint rates are intended to apply. We have already shown why this is so. Moreover, it will be difficult, if not impossible, for the Rio Grande or any other railroad to persuade a shipper of any of the selected commodities which need transit to forward the shipment via Ogden and the Rio Grand with the knowledge that if the market at the original destination selected is unfavorable the shipment could not in all instances be reconsigned to a more favorable market at the joint competitive rates from the origin point to the new destination.

The self defeating effect of joint rates which are applicable on certain traffic to an unrestricted territory but not applicable to a restricted territory was pointedly illustrated and recognized by the entire Commission in its decision in *Quanah, Acme & Pacific* v. *A. T. & S. F.*, 226 I. C. C. 201, at page 207. When in 1928 the Quanah, Acme & Pacific extended its line of Floydada, Tex., and made interchange connections with the Santa Fe, the joint rates generally applicable were established via the Quanah on transcontinental and other traffic without restrictions. However, when the transcontinental railroads canceled these joint rates in May and June 1933, they left point rates in [fol. 2350] effect on perishable commodities to a limited territory in Oklahoma, etc., served by the Quanah and the

Frisco railroads. As shown in the report of the Commission at page 207 the need of transit and the inapplicability of joint rates if shipment were reconsigned beyond the nonrestricted area resulted in the movement of but one car of perishable freight via the Quanah to the unrestricted territory during the period from July 1, 1933, to August 1, 1936, despite the fact that competitive rates applied to that territory.

Another objection to the proscribed intermediate territory is that it will create numerous fourth section violations. Take, for example, a shipment of apples from Payette, Ida., to Kansas City, Mo., as to which the joint rate is $1.32 per 100 pounds. If that shipment should be originally consigned to Pueblo via the route of the Rio Grande through Ogden, the combination rate would aggregate $1.68 per 100 pounds, which is greater than the joint rate to Kansas City, a point beyond Pueblo. Appendix 2 attached hereto refers to other examples of similar fourth section violations.

The Issues

The Rio Grande is a common carrier by railroad which is engaged in the transportation of persons and property in intrastate, interstate and foreign commerce, and operates approximately 2,400 miles of railroad in Colorado, New Mexico and Utah. The Rio Grande has interchange track connections and interchanges traffic with the Union Pacific at Denver, Colo., and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and with the Western Pacific at Salt Lake City. The Rio Grande also has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, the Santa Fe and the Colorado and Southern, which is a part of the Burlington System. At Colorado Springs the Rio Grande interchanges traffic with the Santa Fe and the Rock Island. At Pueblo, Colo., it interchanges traffic with the Santa Fe, the Colorado and Southern, and the Missouri Pacific. At [fol. 2351] Walsenburg, Colo., it interchanges traffic with the Colorado and Southern, and at Trinidad, Colo., with the Santa Fe and the Colorado and Southern.

The Rio Grande and the intervening complainants seek an order from the Commission which will require the Union

Pacific and the other defendants to establish competitive joint rates on freight traffic in interstate domestic or foreign commerce between points served by the Union Pacific or its railroad connections in the "closed door" territory northwest of Ogden, in Utah, Idaho, Montana, Oregon and Washington, on the one hand, and Utah common points and Colorado common points and points east thereof, on the other hand, via the existing routes via the Ogden and Salt Lake City, Utah, gateways, the Rio Grande and its eastern rail connections. The complaint of the Rio Grande alleges that the failure and refusal of the Union Pacific and the other defendants to establish via the gateways mentioned and the Rio Grande the joint competitive rates which are applicable via numerous other routes in which the Union Pacific and the other defendants participate result in through rates via the Rio Grande which are excessive, unjust, unreasonable and discriminatory in violation of section 1 and section 3 of the Interstate Commerce Act and are contrary to section 15 and the national transportation policy.

Between 1897 and 1906 and 1912, during a part of which period the Oregon Short Line, the Oregon-Washington Railroad and Navigation Company, and the Union Pacific were in separate receiverships, competitive joint rates with the Rio Grande via Ogden and Salt Lake City on the traffic already described were in effect. In 1906 and 1912 the joint competitive rates via the Rio Grande were cancelled, but no action was taken then or later to cancel the through routes. This was conceded by counsel for the Union Pacific at the second oral argument. (2368, 2369).

[fol. 2352] The Rio Grande now participates in joint competitive rates on traffic which moves between points on the Union Pacific, the Southern Pacific, the Western Pacific, and the Great Northern in California, Western Oregon and Western Washington through Salt Lake City and the Ogden gateways and Colorado common points and points east thereof.

Hearings were held before Chief Examiner Mullen at Salt Lake City, Utah, Boise, Ida., and Cheyenne, Wyo. The findings of the Chief Examiner, if adopted by the Commission, would grant the relief sought by the complainant and the intervening complainants.

The issues in the instant case are substantially similar to the issues decided by the Commission in *Quanah, Acme & Pacific* v. *A. T. & S. F. Ry. Co.*, 226 I .C. C. 201, and *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183. The reach and principles of these decisions were ignored by the majority. They should not have been, since the rates on practically all commodities that move by rail were involved in those cases and since the territorial scope in each case was practically nationwide. The range of the commodities and the territorial reach did not deter the Commission in those cases from condemning the restrictive rate policies which were there assailed. When the line of the Quanah, Acme & Pacific was extended to Floydada, Texas, in 1928 and connected with the Santa Fe at that point, joint transcontinental and other rates on practically all commodities were established eastbound and westbound. In May and June 1933, the joint rates were canceled. However, at page 208 of the *Quanah* case, the Commission held that the cancellation of the joint rates did not cancel the through routes via the Quanah. A similar finding should be made in the instant case.

[fol. 2353] Assignment of Errors and Grounds for Reconsideration

The majority of the Commission erred in the following respects, among others:

I. In failing to grant the joint competitive rates and relief sought by the complainant and intervening complainants;

II. In failing to find through routes exist via the Union Pacific through Ogden and the Rio Grande between Colorado common points and points east thereof, on the one hand, and points in the closed door territory in northern Utah, Idaho, Montana, Oregon and Washington, on the other hand; and in finding that because such routes are not open on a commercial basis at competitive joint rates, they may not be considered through routes under the Interstate Commerce

Act because that would give them "a character which they do not now possess";

III. In failing to find that the refusal of the Union Pacific and the other defendants to establish joint competitive rates on the traffic and between the territories involved in this case via the Ogden Gateway and the Rio Grande on the same level that are now maintained by the defendants via numerous other routes via which the distance is as great, and in some instances substantially greater, than are the distances via the Ogden Gateway and the Rio Grande constitutes a violation of Section 3(4) of the Interstate Commerce Act.

IV. In finding that a violation of Section 3(4) exists by virtue of the maintenance by the defendants of joint rates between points in the closed door territory on the traffic involved and points on the Bamberger Railroad south of Ogden, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, the Commission erred in restricting that finding to and from points between Salt Lake City and Ogden since the Rio Grande serves many other shippers in Utah south of Salt Lake City, at such points as American Fork, Springville and Mid-[fol. 2354] vale, which are vitally interested in the competitive rates sought.

V. In failing to recognize and find that the testimony concerning the need of joint rates on various commodities should be regarded as typical of all commodities and in limiting the number of eastbound commodities selected and the territorial application of the rates approved, as well as in limiting the approval of westbound joint rates to granite and marble monuments from Vermont and Georgia.

VI. In finding on pages 60a-64 of the report that the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants and to support that finding in relying on *Livestock-Western District Rates*, 176 I. C. C. 1, decided in June 1931, and 190 I. C. C. 175, decided in December 1932 and in *W. H. Bintz Co.* v. *A. & S. Ry. Co.*, 216 I. C. C. 481, 486, de-

cided in June 1936, which merely relied on the older cases cited, as the record shows that the operating conditions, including distances of the Rio Grande, have been substantially improved since the date of the decisions cited. In fact, the record shows that the main line of the Rio Grande which would be used in connection with the traffic involved has been practically rebuilt since the period covered by the decisions cited.

VII. In failing to find that the rate situation maintained by defendants results in undue and unreasonable prejudice and disadvantage to shippers, districts and localities dependent upon the Rio Grande for service in violation of Section 3(1) of the Act, thereby removing the restrictions imposed by Section 15(4) upon the Commission's authority to grant the relief requested by complainant.

VIII. In imposing an intermediate territorial restriction which, as a practical matter, will nullify or minimize the limited relief granted by the Commission insofar as eastbound application of the prescribed joint rates is concerned.

[fol. 2355] IX. In failing to find that the through rates based on the combination of intermediate rates via Ogden and the Rio Grande on the traffic and between the territories involved are unjust and unreasonable to the extent they exceed the joint competitive rates of the defendants and the Union Pacific which apply via routes other than the Rio Grande generally on transcontinental traffic and other traffic, and which also apply via the route of the Rio Grande through Salt Lake and Ogden on traffic to and from points in California and certain western Pacific coast points in Oregon and Washington.

Argument

Point I

The majority erred in failing to grant the joint competitive rates and other relief sought by the complainant and intervening complainants.

The majority not only misconceived the underlying policy of the Interstate Commerce Act with respect to joint rates and through routes, but were influenced by a misconception of the recent decision of the Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. That decision should not be given any broader scope than the limited facts, issues and findings of the Commission in the *Omaha Grain Exchange* case, 278 I. C. C. 519, which gave rise to the decision. In that case the complainant alleged and the Commission found that through routes were in effect on grain from Lenora, Kans., and other points west of Concordia, Kans., on the Missouri Pacific to Omaha, Nebr., in connection with the Burlington via Concordia because (a) physical interchange facilities existed at Concordia between the Missouri Pacific and the Burlington, and (b) there were joint rates on grain from Lenora and other points on the Missouri Pacific via Concordia, Kans., to local or non-competitive points on the Burlington intermediate to Omaha.

After pointing out that there was no evidence in that case to show that any through transportation service has [fol. 2356] ever been offered or performed from Lenora to Omaha via the Burlington the court said that the Commission erred in finding that through routes existed. However, the court referred with approval to its decision in *Virginia Ry. Co.* v. *United States*, 272 U. S. 658, and *Atchison, T. & S. F. R. Co.* v. *United States*, 279 U. S. 768, which clearly recognized that a through route is nonetheless a through route, as that phrase is used in the Interstate Commerce Act, even though commercially closed by virtue of excessive through rates based on combination of local rates or otherwise.

The decisions of the Commission will be searched in vain to find any in which it predicated a finding that through routes exist on the limited facts which were before it in

the *Omaha Grain Exchange* case. A proper reading of the decision of the court in the *Thompson* case, which overruled the decision of this Commission in the *Omaha Grain Exchange* case, does not justify the view that it over-ruled or modified the doctrine of the *Virginian Railway* case, the *Atchison, Topeka and Santa Fe* case, or any other decision of the Commission. The power of the Commission to prescribe joint rates and through routes under the Interstate Commerce Act is as broad at least as the duties imposed on carriers by that act to maintain reasonable through routes and non-discriminatory and reasonable through rates. This is so despite the limitations on the power of the Commission to prescribe through routes in Section 15 (4) of the Interstate Commerce Act. The Commission has frequently stated that Section 15 (3) and (4) do not stand alone. They are not in a vacuum. They must be considered in the light of other provisions of the act, including Sections 1 and 3 (4). *Routing via Quanah, Acme & Pacific Ry Co.*, 220 I. C. C. 137, 139, sustained in *Thompson* v. *United States*, 20 F. Supp. 827.

Section 1 (4) of the Interstate Commerce Act imposes upon railroads the duty, *inter alia*, to establish reasonable through routes with other such carriers and just and reasonable rates. That section also imposes upon railroads [fol. 2357] the duty to provide reasonable facilities for operating such through routes and to make reasonable rules and regulations with respect to their operations, and also to provide reasonable compensation to those entitled thereto. In the *Missouri and Illinois Coal* case, 22 I. C. C. 39, at page 46, the policy of the Interstate Commerce Act as it then existed with special reference to Section 1 (4) and Section 3 (4) was cogently stated by former Commissioner Lane in these words:

> "* * *. Our railroads are called upon to so unite themselves that they will constitute one national system; they must establish through routes, keep these routes open and in operation, furnish the necessary facilities for transportation, make reasonable and proper rules of practice as between themselves and the shippers, and as between each other."

The policy of the Interstate Commerce Act, so well stated by Commissioner Lane in November 1911 and the provisions of the act have been greatly expanded since that time. The general aim of the act and its policy is to establish a national system of transportation, so that the commerce of the country may freely move between all points in the United States over available rail routes at rates that are neither unreasonable nor discriminatory as between shippers and railroads, or as between connecting railroads.

The policy of the act, as amended since the decision of the Commission in the *Missouri and Illinois Coal* case, was pointedly stated by the Commission in its recent decision in *Borough of Edgewater, N. J.* v. *Railroads*, 280 I. C. C. 121, sustained in *Baltimore & Ohio* v. *United States*, 100 F. Supp. 1002. At page 134 of its decision, the entire Commission on reconsideration made the following statement as to the present policy of Congress under the existing law:

> "Ever since the Transportation Act, 1920, it has been the purpose or policy of Congress that rates be adjusted and other steps taken to ensure adequate, ef- [fol. 2358] ficient, and economical transportation for the country. That policy has never been regarded as intending that we should accept as the guide transportation service which is just barely adequate, or adequate only if needed or desirable improvements in service are lost sight of. See *McLean Trucking Co.* v. *United States*, 321 U. S. 67, 78, 81. Rather, that policy seeks affirmatively to build up a transportation system prepared to handle promptly all the traffic of the country. *Dayton-Goose Creek Ry. Co.* v. *United States*, 263 U. S. 456, 478."

In the instant case, the majority of the Commission appear to have been governed by the notion that the policy of the Interstate Commerce Act contemplates the maintenance of transportation service "which is just barely adequate," a proposition squarely rejected by the statement of policy in the *Borough of Edgewater* case. The majority appear to have accepted the doctrine that the limitations on the power of the Commission to prescribe routes rather than its broad affirmative power to prescribe joint rates

and through routes should control the category. This is putting the cart before the horse, and is a doctrine not required or justified by the decision of the Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. Moreover, that view is contrary to the well settled canon of construction that exceptions to the general policy of a law such as section 15(4) should be construed strictly, whereas remedial statutes such as section 15(1) and (3) should be construed broadly. *Spokane and Inland Empire* v. *United States*, 241 U. S. 344.

Although the proposed report in this case was by an examiner of long and large experience and of outstanding ability, the majority appears to have given little or no consideration to his findings and recommendations. As this Commission knows, in *Universal Camera Corp.* v. *National Labor Relations Board*, 340 U. S. 474, the Supreme Court had occasion to consider the significance of the reports and findings of examiners of administrative agencies under the Administrative Procedure Act. The court there [fol. 2359] said that by the enactment of the Administrative Procedure Act Congress showed a definite "purpose to increase the importance of the role of examiners in the administrative process." While the Commission is not bound to adopt the conclusions or decisions of an examiner, there is no gainsaying the fact that under the Administrative Procedure Act the Commission is required to give the findings of an examiner who is the only officer of the Commission that saw all witnesses and heard all of the testimony in the case more weight than was given in the instant case.

In *Helix Milling Company* v. *Great Northern*, 287 I. C. C. 77, the Commission, Division 2, was asked to prescribe joint rates on wheat and wheat products, in carloads, from certain origins in Montana to Helix and Portland, Ore., with transit at Helix. In that case the defendants made contentions substantially similar to those made in the instant case. Among others, the contention was made that the interchange between the Great Northern and the Northern Pacific were inadequate. At page 85 of its report, the Division squarely held that the fact that interchange facilities are inadequate for convenient operation is not of itself a defense if through routes are shown to be necessary or

desirable in the public interest, citing *Manufacturers Association of York, Pa.* v. *Pennsylvania R. Co.*, 107 I. C. C. 219, 239.

Division 2 made another finding of more significance as applied to the instant case. At page 87 it held that "The establishment of through routes by way of Helix would not deprive the Great Northern of any greater portion of its haul from the triangle (in Montana) than it now forgoes voluntarily through the maintenance of joint rates with the Union Pacific." That language could be paraphrased to read as applied to the instant case that since the Union Pacific and the other defendants in cooperation and collaboration with each other voluntarily participate in joint rates under which they take less than their respective long hauls the establishment of the joint rates sought [fol. 2369] would not deprive the Union Pacific, in particular, or the other defendants of any greater part of their respective long hauls than they now voluntarily forego through the maintenance of joint rates with each other. On the contrary, it has already been shown that if the joint rates through Ogden in connection with the Rio Grande should be established, the Union Pacific would obtain substantially longer hauls through Ogden and the Rio Grande than it now voluntarily foregoes in connection with the traffic that moves between its line and many of the defendants.

Point II

The majority erred in failing to find that through routes exist via the Union Pacific through Ogden and the Rio Grande between Colorado common points and points east thereof, on the one hand, and points in the closed door territory in northern Utah, Idaho, Montana, Oregon and Washington, on the other hand; and in finding that because such routes are not open on a commercial basis at competitive joint rates, they may not be considered through routes under the Interstate Commerce Act because that would give them "a character which they do not now possess";

The finding by a bare majority as recorded by the minutes of the Commission, but by an equal division of views

as recorded in the report not only adopts a legalistic and narrow conception of what constitutes a through route, but ignores and disregards the historical background and the substantial relevant facts which show that through routes now exist, are used and have existed over the Rio Grande on the traffic and between the territories involved since 1897. The following evidence, *inter alia*, which establishes that through routes exist, is summarized:

1. That joint competitive rates and through routes existed on the traffic and between the territories involved via the Ogden Gateway, the Rio Grande and its eastern connections from 1897 to 1906 and 1912;

[fol. 2361] 2. That the record shows and counsel for the Union Pacific concede that when the joint rates in question were canceled in 1906 and 1912, neither the Union Pacific nor any of the other defendants took any action, then or later, to cancel or close the through routes;

3. That during the period from November 1942 to August 17, 1945, the Rio Grande handled approximately 19,000 carloads of traffic from points on its line and from eastern points destined to points in Oregon and Washington which had been routed via the Rio Grande and the Western Pacific or the Rio Grande and the Southern Pacific, but were diverted to the Union Pacific at Ogden and Salt Lake City. (Hogue—66, 67.) During January and February 1949 when blizzards and snow storms blocked the Union Pacific main line between Cheyenne and Ogden, 4,208 carloads of freight eastbound and westbound were diverted to the Rio Grande for movement via its line between Denver and Utah junction points and thence via the Union Pacific. Of that number about 1,400 carloads originated or were destined to Union Pacific points in the closed door territory at which competitive joint rates were not applicable. During that same blizzard period, the Rio Grande handled 210 carloads of express and 276 carloads of mail between Denver and Salt Lake City for the Union Pacific. In addition, it handled 44 Union Pacific passenger trains, consisting of from 10 to 16 cars each, between Denver and Salt Lake City.

(69) The carload traffic just described was diverted under service orders of this Commission, none of which purported to establish or did establish temporary through routes as authorized in Section 15(4) of the Act. The traffic was diverted by the Commission to the Rio Grande under Section 1(15) on the obvious assumption that through routes and the facilities for operating such routes existed.

In addition to the traffic that was diverted to the route of the Rio Grande on service orders, a large volume of traffic was initially routed via the Rio Grande on bills of lading via Ogden and the Union Pacific between points in the closed door territory and eastern points. For example, there were several special trains, consisting of troops and military supplies [fol. 2362] in freight cars, which were handled on freight billing and which consisted of from 30 to 50 cars per train. One train, consisting of 24 cars of military supplies and six passenger cars, moved from Ft. Sill, Okla., in December 1941 to Ft. Lewis, Wash., via eastern connections, the Rio Grande through Ogden and the Union Pacific. Another special train, consisting of 50 cars of military supplies and some troops, moved from Camp Claiborne, La., to Ft. Lewis, Wash., in February 1942 via different eastern railroads in connection with the Rio Grande through Ogden and the Union Pacific. Another special train, consisting of 50 cars of military supplies, etc., moved from Camp Claiborne, La., to Ft. Lewis, Wash., in February 1942 via different eastern railroads, the Rio Grande through Ogden and the Union Pacific. Still another train, consisting of 50 cars of military supplies, etc., moved from Camp Claiborne, La., in February 1942 to Ft. Lewis, Wash., via the Rio Grande through Ogden and the Union Pacific. Joint rates were applied on this traffic and the through charges among the railroads were divided on a satisfactory basis of interline settlements. (67, 68)

In March, 1942 the Rio Grande handled 524 carloads of war material from eastern points which were originally consigned to Ogden and Clearfield, Utah, for the purpose of being stored. These cars were diverted to

points in the northwest via the route of the Union Pacific and Ogden without ever having been unloaded at the original destinations named. Joint competitive rates were applied on this traffic, and the through charges were divided among the interested railroads on a satisfactory basis of interline settlement. (67, 68)

Thirty-nine carloads of freight moved in 1948 eastbound from points in the closed door territory on bills of lading issued by the Union Pacific or its connections consigned to Colorado common points, some of which may have been diverted to points east thereof. An equal number of carloads of a variety of commodities, such as tractors, canned goods, agricultural implements, furniture, soap, castings, feed, rubber, iron and steel, and other commodities from numerous eastern points, such as Springfield and Chicago, Ill., Menominee, [fol. 2363] Mich., Lewisburg, Pa., Jeffersonville, Ind., Forest City, Ark., Sedalia, Mo., Indianapolis, Inc., Wichita, Kans., and other points on bills of lading issued by eastern railroads routing the traffic via the Rio Grande through Ogden and the Union Pacific to points in the closed door territory; that charges were assessed on the basis of the aggregate of the combination of intermediate rates. (67-70, Ex. 1)

4. A. J. Stilling, the principal traffic witness of the Union Pacific, at page 1160 of the transcript of the hearing at Boise, Ida., unequivocally stated that the route via the Ogden Gateway and the Rio Grande is available and open to shippers as follows:

> "The Interstate Commerce Act gives all shippers the right to specify the lines over which their shipments shall move so the Ogden gateway and route via the Rio Grande is actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington. However, most of that traffic originates or terminates at points on the Union Pacific, and it ordinarily moves via the Union Pacific through Wyoming because the joint through rates to and from that territory are restricted so

that they will not apply when traffic is interchanged with the Rio Grande at junction points in Utah."

5. In addition to the affirmative testimony and concession that through routes exist, by witness Stilling, counsel for the Union Pacific made a like concession at the oral argument of this proceeding before the entire Commission on October 16, 1952, in the following colloquy with Chairman Alldredge at pages 2368 and 2369 of the transcript of the argument:

"Chairman Alldredge: Before you start, Mr. Collins, may I ask you a question? I assume there is no dispute about the fact that from a physical standpoint these routes are open; that is, business physically can be interchanged between the Denver & Rio Grande and the Union Pacific.

[fol. 2364] Mr. Collins: Yes, sir; exactly. As was the case in the Western Pacific case.

Chairman Alldredge: You contend, however, that you have closed this route on the traffic here in question.

Mr. Collins: That is right.

Chairman Alldredge: Now, will you tell this Commission exactly how you closed the routes?

Mr. Collins: We canceled the joint through rate billing. We provided by tariff publication that the joint rates would not apply via Ogden with the D. & R. G. W.

Chairman Alldredge: You provided in the tariff that the joint rates would not apply?

Mr. Collins: A restriction in the route.

Chairman Alldredge: That is the joint rate?

Mr. Collins: Yes, sir.

Chairman Alldredge: Do you think that closes this route for this traffic?

Mr. Collins: No, I don't think so, if they want to pay more, if they want a route via the Rio Grande and pay the price."

With due respect to those Commissioners who concluded otherwise, we submit that judged by previous decisions by

this Commission and applicable court decisions on the subject, the foregoing summary of evidence clearly shows that through routes to and from the territories involved in connection with the Rio Grande are already in existence. We shall presently discuss such errors as the Commission's reliance on the *Beaman Elevator Company case*, 155 I. C. C. 313, the Commission's failure to attach significant weight to the testimony of defendant's witness Stilling on the existence of through routes, the failure of the Commission to discuss and evaluate its issuance of service orders diverting traffic to the routes in question without establishing or purporting to establish temporary through routes, and the Commission's misconception of the Supreme Court's holding in *Thompson* v. *United States*, 343 U. S. 549.

First, it is important to direct attention to a statement in the report which discloses a basic error inherent in the [fol. 2365] conclusion that through routes do not exist. At Sheets 6-7 the report states:

> "As above stated and as testified by numerous shippers in this proceeding, the Ogden Gateway routes are not considered as open or through routes *commercially*, but as routes that are closed to shippers *because of the higher rates applicable*. Plainly, a finding that such routes should be opened to shippers *on a commercial basis* by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess." (Emphasis supplied.)

By this statement the Commission adopts the position that because routes are not open on a commercial basis they cannot be regarded as through routes within the meaning of the Act. Although such a holding finds some support in *Western Pacific R. Co.* v. *Northwestern Pacific R. Co.*, 191 I. C. C. 127, decided by Division 2 in February, 1933, such a position clashes irreconcilably with the ruling of the Supreme Court in *Virginian Ry. Co.* v. *United States*, 272 U. S. 658. In that case the Court rejected as "without legal significance" the contention of a railroad that routes which were "commercially closed" as a result of excessive and prohibitive combination rates are not through routes

within the meaning of the Interstate Commerce Act. In reaching that conclusion, Mr. Justice Brandeis first pointed out (pp. 660-661) that of 99 mines located on the Virginian Railway, 54 were denied the opportunity of reaching the western markets, even though accessibility to such markets was physically possible through a junction of the Virginian and the Chesapeake & Ohio. In this con-ection Mr. Justice Brandeis said (p. 661):

> "But that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these fifty-four mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's [fol. 2366] rates from the junction to the West, results in charges so high as to be prohibitive. The complainants contended before the Commission that the existing rate schedule to the West subjects them to unjust discrimination, and, also, that the combination rates are unreasonable."

Precisely the same situation exists here except that despite the prohibitive character of the combination rates in effect over complainant's through routes, some traffic has moved over such routes as shown by the foregoing summary of evidence.

It was also contended in the *Virginian Railway* case that the routes were commercially closed and, therefore, the Commission erred in finding the combination rates unreasonable and in prescribing reasonable rates. The court rejected that contention.

The holding, in the *Virginian Railway* case, that a through route does not cease to *legally* exist because *through traffic* over it is commercially restricted or precluded because of excessive and uncompetitive combination rates was expressly cited with approval by the Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. At Footnote 18 of its decision in that case, Chief Justice Vinson said this in distinguishing the facts in the *Omaha Grain* case from those in the *Virginian* case:

> "Virginian R. Co. v. United States, 272 U. S. 658, is inapposite since through routes were there found to

> be in existence but commercially closed solely because of the unreasonable and discriminatory rates charged by the Virginian over its portion of the route."

The position we take is that the test of whether or not through routes exist is not dependent upon whether they are open to shippers "on a commercial basis" is not only the express holding in the *Virginian* case but is also the position which the Commission itself took in 1947 when it [fol. 2367] decided *General Mills, Inc.* v. *Great Northern Railway Co.*, 269 I. C. C. 457. In that case Division 3 held that the Great Nothern's failure to establish transit arrangements at Great Falls, Montana, in connection with wheat and wheat products shipped from points on its line in central Montana to points in California and Nevada via routes through Butte constituted an unreasonable and undue prejudice. In answer to a contention by the Great Northern that no through route existed via Butte because the route was "commercially closed" by reason of excessive combination rates in effect for those desiring transit privileges to Great Falls, the Commission said (pp. 466-7):

> "As far as the tariffs of defendant are concerned, the Butte routes are offered to the shippers as available routes but high combination rates on traffic transited at Great Falls keep them closed commercially for such traffic. In *Virginian Ry. Co.* v. *United States*, 272 U. S. 658, the Supreme Court held that existing through rates, although they are combination rates, can be found unlawful under sections 1 and 3 of the act without a special finding of public interest essential to the validity of an order establishing through routes under section 15 (3)."

When the Commission's decision was appealed to the courts, the principal argument by the Great Northern that no through route via Butte existed because the route was "commercially closed" was rejected by the United States District Court for the District of Delaware. *Great Northern Railway Co.* v. *United States*, 81 F. Supp. 921, aff'd. 336 U. S. 933. In dealing with the precise point here relied upon by the majority in support of its conclusion that through routes do not exist, counsel for the Commission in

the *Great Northern* case, after quoting from the Commission's report as above set forth (pp. 466-7), proceeded further to support his argument by reference to the Court's holding in the *Virginian* case. In the reply brief filed for [fol. 2368] the Commission in the District Court, dated October 27, 1948, it is stated (pp. 6-7):

> "From this finding it is evident that today wheat may move from the Triangle to Great Falls, and after milling or storing, reshipped as wheat or wheat products to California or Nevada but only at the high combination on Great Falls. With the ordered transit privilege in effect, the same traffic, physically handled in precisely the same manner, will move at the joint through rate from the Triangle origin to the destination which is much lower than the combination. The fact that the combination is very high keeps the routes through Butte closed commercially, that is to say, the routes have not been and will not be used as long as the present high rates over them are in effect; nevertheless, they are open *legally.* The situation here is similar to that in the *Virginian* case, *supra,* reviewed in our earlier brief, pp. 11-12. There the Supreme Court found that the route from the 54 complaining mines on the Virginian to the western destinations was closed *commercially,* because the applicable combination rate was so high as to be prohibitive, and yet this route was open *legally.* The Court said, p. 661:
>
> 'For most of these 54 mines access to these markets was and is physically possible through a junction of the Virginian and the Chesapeake & Ohio. But that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive.'

The position of the Union Pacific and of five Commissioners in this case when analyzed amounts merely to a claim that because the routes are commercially closed due

to the non-competitive combination rates in effect, they do not constitute through routes within the meaning of the Interstate Commerce Act. That through routes exist is shown not only by the unequivocal testimony of witness [fol. 2369] Stilling of the Union Pacific, which has been previously quoted, but also by the admission by counsel for the Union Pacific at the time of oral argument on October 16, 1952, at pages 2368 and 2369 of the transcript.

It is our contention that the reliance of the Commission and its counsel on the decision of the *Virginian* case to support the order of the Commission in the *General Mills* case was legally correct and that the majority's position that through routes do not here exist is legally incorrect.

In the light of the historical background, the facts of record which have just been summarized, and of the concessions made by Witness Stilling and by the counsel for the Union Pacific, it is inconceivable that the report of the Commission should find that through routes via the Rio Grande on the traffic involved do not exist.

It is equally inconceivable that the report would recite that the substantial volume of traffic which has moved over the route of the Rio Grande during the past 12 years "must be regarded as of an isolated nature and as falling in the same category as the one lone shipment held insufficient to show the existence of a through route in *Beaman Elevator Company* v. *Chicago and North Western Railway Company, supra* (155 I. C. C. 313), cited with approval by the Supreme Court in *Thompson* v. *United States*, 343 U. S. 549." In the first place, it is a distortion of the opinion of the Supreme Court in the *Thompson* case to say, as the majority did, that it cited the *Beaman* case with approval. The *Beaman* case was referred to by the court in a footnote in connection with its statement that, "In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington." In the case at bar there is substantial evidence that a large volume of traffic moved eastbound and westbound via the Rio Grande and the Ogden Gateway under bills of lading issued by the Union Pacific and other defendants [fol. 2370] to shippers which designated the route, and where service orders were issued by this Commission they did not purport to establish temporary through routes, but

simply diverted the traffic upon the assumption that through rates existed.

The footnote which cited the decision of the Commission in the *Beaman* case stated merely that the Commission there held "that proof of one shipment on a through bill of lading over a certain route was not sufficient to establish the existence of a through route because one shipment is not representative of the carriers course of business." In dealing with the *Beaman* case, the five Commissioners disregarded the uncontradicted facts of record which show that when the joint rates were canceled in 1906 and 1912 at the instance of the Union Pacific, no steps were taken then or later to cancel the through routes.

It is too well settled to require argument that the cancellation of a joint rate does not of itself cancel a through route. *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183, 185; *Quanah, A. & P.* v. *Atchison, T. & S. F. Ry. Co.*, 226 I. C. C. 201, 208; *Routing via Quanah, A. & P. Ry. Co.*, 220 I. C. C. 137, 139, sustained in *Thompson* v. *United States*, 20 F. Supp. 827; *Atchison, T. & S. F. Ry. Co.* v. *United States*, 279 U. S. 768, and *Virginian Railway Co.* v. *United States*, 272 U. S. 658. It is equally well settled that whatever other facts or incidents may serve to prove the existence of a through route that "A through bill of lading is, as to the carriers recognizing it, conclusive evidence of the existence of a through route." *Through Routes and Through Rates*, 12 I. C. C. 163, 166. The five Commissioners ignored the testimony of Witness Stilling of the Union Pacific. They also ignored and failed to recognize the obvious fact that there is a striking difference between the movement of a single carload shipment, as in the *Beaman* case, and the large volume of traffic handled via the Rio Grande in recent years. To hold, as the report does, that the single shipment in the *Beaman* case is enough to [fol. 2371] put the large volume of shipments which moved via the Rio Grande in the same isolated category is unsound and irrational.

The report recites that any other view would constitute "an open invitation to any shipper to set aside the provisions of Section 15 (3) and (4) of the Act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not

intended by the Congress, as evidenced by the amendments to Section 15 (4) made in 1940 * * *"

The quoted statement clearly misconceives the conditions under which a shipper may select a route. Section 15 (8) provides that at the time of the delivery of property to a common carrier railroad for transportation, the shipper may designate in writing the route via which the shipment should move where "two or more through routes and through rates shall have been established as in this part provided to which through routes and through rates such carrier is a party * * *." Section 6 (1) provides that every common carrier subject to Part I shall file tariffs with the Commission, etc., which show all rates, fares and charges for transportation

> "between different points on its own route and between points on its own route and points on the route of any other carrier by railroad, by pipeline, or by water when a through route and joint rate have been established. If no joint rate over the through route has been established, the several carriers *in such through route* shall file, print and keep open to public inspection as aforesaid, the separately established rates * * * applied to the through transportation."

It will thus be seen that unless there is a choice of two or more established routes the shipper is not authorized by section 15 (8) to select a particular route since that section plainly says he may do so only when

> "* * * two or more through routes and through rates shall have been established as in this part provided * * *."

[fol. 2372] In the circumstances, the majority clearly erred and misconceived the right of shippers to route traffic. In other words, unless a route is an "established through route", no shipper has the right to use it, and, therefore, the acceptance by a railroad of a shipment, as in the *Beaman* case, could not properly be used as a means of setting aside the provisions of Section 15 (3) and (4).

On the other hand, where as here, the through routes in question have existed without challenge since 1897, have

not been cancelled and have been used in the transportation of a large volume of traffic with the knowledge and acquiescence of defendants and where the principal traffic witness of the Union Pacific unequivocally stated on the witness stand that the routes in question are available and can be used by shippers at combination rates, it follows that the routes in question are established routes as that term is used in the Interstate Commerce Act.

The facts of the *Beaman* case and of the instant case are as different as night is from day. That difference should control the category. Five commissioners found that the through routes via Ogden and the Rio Grande exist. The five Commissioners who adopted a contrary view were certainly hard put to be forced to support their tenuous position by leaning on the footnote reference to the *Beaman* case by the Supreme Court and by shadow boxing with the danger that a shipper could set aside the provisions of Section 15 (3) and (4) by routing a car or two over a particular route and thereby establish a through route.

At page 8a of the report, the extraordinary statement is made that there is no indication that any of the defendants has ever solicited any traffic from and to the areas concerned for routing via the Rio Grande at the higher combination rates, or has ever used such Rio Grande route, except where called upon to do so, by routing specified by the shipper or by a prior connecting carrier. The report reasons from that statement that so far as the record shows, the "carrier's course of business" has been and is [fol. 2373] to use the Union Pacific route, except where called upon to use the Rio Grande route, by force of shippers or connecting line routing. That reasoning certainly rests upon a thin reed. It apparently did not occur to the five Commissioners that even if the joint rates should be established it is unlikely that the Union Pacific would solicit traffic for movement via Ogden and the Rio Grande.

The Rio Grande now participates in joint competitive rates with the Union Pacific on transcontinental and other traffic which moves to and from points in California. The Union Pacific does not solicit the routing of that traffic via the Rio Grande despite the existence of the joint rates and the through route. In these circumstances, are we to

assume that the five Commissioners mean that the fact that the Union Pacific does not solicit traffic via the existing through route of the Rio Grande under the existing competitive joint rates constitutes a justification for the view that that route is not "in the carriers (Union Pacific) course of business?" Certainly not. The presence or absence of solicitation for traffic over a particular route is not a conclusive or necessary test as to whether that route is a through route. Since a large volume of traffic moves via rail routes without solicitation, a better test is whether traffic has been accepted for transportation from time to time over the route. Such a test is especially appropriate if the route in question is sought to be established as a new route.

The facts of record establish beyond peradventure of doubt that an arrangement between the Union Pacific, the Rio Grande, and the other defendants, express or implied, has existed and exists for the through transportation of traffic.

In *St. Louis Southwestern Ry. Co.* v. *United States*, 245 U. S. 136, Mr. Justice Brandeis described a through route as follows:

> "A 'through route' is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point [fol. 2374] on the line of one carrier—to destination on the line of another. Through carriage implies a 'through rate.' This 'through rate' is not necessarily a 'joint rate.' It may be merely an aggregation of separate rates fixed independently by the several carriers forming the 'through route'; as where the 'through rate' is 'the sum of the locals' on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation."

On page 7 of the report of the Commission, the statement is made that a finding by the Commission that the existing routes via the Rio Grande should be open to shippers on a commercial basis at the competitive joint rates sought "would result in the establishment of such routes as ef-

fective through routes, a character which they do not now possess." That statement reasons in a circle. It says in effect that while through routes exist, they are not commercially available because competitive rates are not applicable in connection with them, and that if the Commission prescribed competitive rates which would make the routes commercially available, it would give the routes a character they do not now possess and therefore the Commission should not exercise its power to prescribe rates. With due deference we submit that such reasoning is not valid and is not justified by any provision of the Interstate Commerce Act or by the decided cases.

In *United States* v. *Great Northern*, 343 U. S. 562, the court sustained an order of this Commission in the *Montana Western Railway* case, 275 I. C. C. 512, in which the Commission prescribed joint rates on grain, in carloads, from points on the Montana Western at the same level as the then existing combination rates to points on the Great Northern because such joint rates were necessary and desirable in the public interest for the purpose of fixing divisions. Although a through route and rate existed in that case the prescription of the joint rate and divisions to increase the revenue of the Montana Western certainly gave the route a character it did not theretofore possess, [fol. 2375] but that fact did not deter the Commission from prescribing the joint rate or the Supreme Court from sustaining that action. As we have shown, the *Virginian Railway* case, is clear authority for the proposition that a through route as such does not cease to exist because it is "commercially closed."

In the *Great Northern* case, 343 U. S. 562, a companion case to the *Thompson* case, the court made it cogently clear at page 572 and 573 that through routes may exist whether the through rates applicable thereto are joint rates or combination rates in the following statement:

> "The Interstate Commerce Act contemplates the existence of through routes in the absence of joint rates. And this Court expressly has approved Commission's consistent recognition of the existence of through routes whether the through rates applicable thereto are joint rates or combinations of separately

established rates. As a result, the establishment of joint rates is an act separate and distinct under the statute from the establishment of through routes."

The most extraordinary omission in the report as to the non-existant through routes via Ogden and the Rio Grande is the total disregard of the important affirmative and unequivocal testimony of witness Stilling of the Union Pacific, at page 1160 of the transcript of the hearing, already quoted and the admission by counsel for the Union Pacific that through routes exist. (2368-2369). The fact that the first line of the testimony refers to the Interstate Commerce Act and in that sense might be said to be a conclusion of law does not in any manner impair the legal significance of the facts and concessions made by Stilling for defendants, which have never been disclaimed by the Union Pacific or any of the other defendants.

The Stilling testimony establishes several important points in this case. First, it confirms the other testimony of record that through routes via Ogden and the Rio Grande now exist and have existed since 1897. Second, that the [fol. 2376] Union Pacific and the other defendants hold themselves out to accept all freight traffic, westbound and eastbound, via the route of the Rio Grande through Ogden at less than their respective long hauls, provided the shippers are willing to pay charges based upon the combination rates via that route. That constitutes a "consent" by the Union Pacific and the other defendants to accept less than their respective long hauls, which in and of itself means that the provisions of Section 15 (4) of the Act are inapplicable since the limitations in that section on the power of the Commission to estabilsh through routes do not apply if the interested railroad gives its consent to accept less than its long haul. And thirdly, the testimony proves that routes via the Rio Grande are established through routes within the contemplation of Sections 1 (4), 6 (1) and 15 (8) of the Act.

In *United States* v. *Capital Transit Co.*, 325 U. S. 357, 363, the court sustained an order of this Commission which held that through routes existed between bus companies in Virginia and the Capital Transit Company in the movement of passengers between points in Virginia and points

in the District of Columbia, even though no arrangement of any kind existed for the through transportation of the passengers, such as coordination of bus schedules, the issuance of transfers, the sale of joint tickets, etc. The decision was based on the ground that there was a substantial movement of passengers between Virginia and the District of Columbia.

[fol. 2377] Point III

The majority erred in failing to find that the refusal of the Union Pacific and the other defendants to establish joint competitive rates on the traffic and between the territories involved in this case via the Ogden Gateway and the Rio Grande on the same level that are now maintained by the defendants via numerous other routes via which the distance is as great, and in some instances substantially greater, than are the distances via the Ogden Gateway and the Rio Grande constitutes a violation of Section 3 (4) of the Interstate Commerce Act.

The attitude of the Union Pacific as to the closed door territory in Northern Utah, Idaho, Montana, Oregon and Washington served by the Union Pacific might appropriately be characterized as Custer's last stand. It is the only important territory in the west to and from which the Rio Grande is excluded as a participating railroad at joint competitive rates. The Rio Grande participates in joint competitive rates on the whole range of transcontinental and other traffic which moves between points on the Union Pacific, Southern Pacific, Western Pacific and the great Northern in southern and northern California, western Oregon, western Washington through Salt Lake City and Ogden and Colorado common points and points east thereof. The complaint and the intervening complaints seek from this Commission an order which will require the Union Pacific and the other defendants to maintain with the Rio Grande the same level of rates on the traffic involved that is now generally maintained on the same class of traffic between all other points in the west and Colorado common points and points east thereof. The restrictive and discriminatory rate policy of the Union

Pacific, aided and abetted by the other defendants who are in *pari delicto* with the Union Pacific, is archaic and out of step with the existing needs and requirements of commerce and of the railroads as a whole and should be condemned by the Commission as in violation of Section 3 (4), as well as on the other grounds heretofore urged by complainants.

[fol. 2378] The range of commodities and the territorial scope of the issues raised in the instant proceeding are no broader than were the range of commodities, the territorial scope, and the issues in *Quanah, A. & P.* v. *A. T. & S. F.*, 226 I. C. C. 201, or in *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183. An examination of the decisions in those cases will reveal that the contentions there made by the respondents as to lack of similarity in transportation conditions over the routes alleged to be preferred as compared with the routes alleged to be prejudiced were substantially the same as the contentions made by the Union Pacific and a few of the other defendants in the instant case. In both the *Quanah* case and the *Cancellation of Rates and Routes* case, the principal defense of the respondents was that the complaining parties did not establish by detailed pin point evidence that the transportation conditions via the various routes involved were substantially similar. The Commission rejected those contentions as unsound, and relied upon typical examples as sufficient evidence to justify a finding that Section 3 (4) had been violated. It should do likewise here.

Commencing on page 117, to and including page 128, of our brief in the instant case, we undertook to show, and we feel that we have shown, that the failure and the refusal of the Union Pacific and of the other defendants to participate with the Rio Grande on the same level of joint rates which are generally in effect on the traffic involved on the same basis in which they participate with each other constitutes a violation of Section 3 (4) of the Act against the Rio Grande and a violation of Section 3 (1) of the Act against the intervening complainants.

The provisions of Section 3 (4) here pertinent have remained unchanged since the original enactment of the Act to Regulate Commerce in February 1887. Those provisions were intended to prevent discriminations of all

kinds between connecting carriers. The provisions say that the carriers "shall not discriminate in their rates, [fob 2379] fares and charges between connecting lines."

The meaning and scope of that section was dealt with in a comprehensive manner by the entire Commission at page 80 of its report in *Western Pacific R. Co.* v. *Southern Pacific Co., et al.*, 55 I. C. C. 71. The Commission there stated that Section 3 (4), which was then Section 3 (2), is a connected comprehensive provision of statutory law which imposes on railroads an affirmative duty to interchange and forward traffic between connecting lines without discrimination in their rates and charges. Apropos of this, the Commission said:

> "There is no escape from the plain intent of these enactments. Reasonable, proper, and equal facilities must be afforded for the affirmative duty, and there must be no partiality or injustice in the terms and conditions upon which the duty is performed—in other words, no discrimination in rates and charges. All parts of this provision are of equal authority and obligation. They are the mandate of the same source of power, and it must be assumed that they are intended to have full and complete effect. * * *"

The meaning of Section 3 (4) was cogently stated by Chairman Cooley in *New York and Northern Ry. Co.* v. *New York and N. E. RR. Co.*, 3 I. C. C. R. 542, 550, in the following words:

> "When, therefore, the statute declares that there shall be no discrimination in rates and charges between connecting lines, it can only mean that no difference or distinction shall be made in rates that shall coerce the public to employ one competitor to the exclusion of another, or deprive one competitor of business that under freedom of selection by the public would be given to it, and thus create a monopoly in favor of another competitor. Unless this effect is given to the language of the statute it is only a meaningless enactment, * * *"

[fol. 2380] Section (F) of Exhibit 3, introduced by witness Earley, Freight Traffic Manager of the Rio Grande, as well as his testimony on pages 113 to 128 of the transcript, shows typical examples of existing joint rates and distances via routes which the Union Pacific and other defendants in cooperation with each other take less than their representative long hauls. Appendix 3 attached to the original brief of the Rio Grande dated August 15, 1950, summarizes some of the outstanding examples of this character. To avoid repetition and printing expense, we ask that the Commission examine the appendix to our brief. Although Appendix 3 is self-explanatory, there follows a reference to some of the examples dealt with.

Between the Seattle, Wash., and Chicago, Ill., via the Union Pacific, Council Bluffs, and the Chicago and North Western, the distance is 2,439 miles and the haul of the Union Pacific is 1,954 miles. However, the Union Pacific participates in joint rates through Portland with the Southern Pacific on traffic moving through Arizona and New Mexico, thence Rock Island, where the total distance is 3,541 miles. In that movement, the Union Pacific receives a haul of 184 miles. If the Union Pacific established the rates sought with the Rio Grande through Ogden, it would receive a haul from Seattle to Ogden of 1,027 miles out of a total distance of 2,651 miles instead of 184 miles between Seattle and Portland when the traffic moves either via the Southern Pacific from Portland through Arizona and New Mexico or via the Southern Pacific to Ogden, thence via the Rio Grande to Denver or Pueblo, and via the Burlington or any of the so-called prairie lines.

Between Pendleton, Ore., and St. Louis, Mo., the long haul of the Union Pacific is from Pendleton to Kansas City, a distance of 1,674 miles. The Union Pacific participates in joint rates on transcontinental traffic between Pendleton and St. Louis via the route through Spokane made up of the Spokane International, Canadian Pacific and Soo Line to Minneapolis and the Rock Island and the Wabash to St. Louis. The distance via this route is 2,317 miles, [fol. 2381] and the haul of the Union Pacific is 227 miles. If the joint rates sought via Ogden were established via

the Rio Grande to Denver, the Rock Island and the Wabash to St. Louis, the distance would be 2,149 miles and the Union Pacific haul would be 633 miles.

Between Pendleton, Ore., and Oklahoma City, Okla., the long haul of the Union Pacific would be via Kansas City. However, it participates in joint rates with the Santa Fe through Denver via which route its haul is 1,144 miles, and it participates with the Northern Pacific through Wallula, Wash., and various connections through Kansas City in which the total haul is 2,602 miles, and the haul of the Union Pacific is only 70 miles. If the joint rates sought via Ogden and the Rio Grande and its connections were established, the haul of the Union Pacific would be 633 miles, and the total distance via available routes would be 1,910 miles. The Union Pacific also participates in joint rates between Pendleton and Oklahoma City via the Great Northern through Spokane and eastern connections in which the haul of the Union Pacific is 227 miles.

Between Colfax, Wash., and Chicago, Ill., the long haul of the Union Pacific is 1,756 miles through Council Bluffs, Iowa. But the Union Pacific participates with the Milwaukee Railroad via Plummer, Ida., in which the haul of the Union Pacific is 54 miles and the total distance 1,888 miles. If the joint rates sought through Ogden and the Rio Grande are established, the haul of the Union Pacific to Ogden would be 829 miles.

It should be understood that while the examples shown on Appendix 3 of our brief are representative, that appendix does not include all of the routes via which the Union Pacific and other railroads take less than their long haul. As we have already indicated, a more comprehensive list of examples will be found in Section F of Exhibit No. 3.

In dealing with joint rates and routes on transcontinental traffic from and to points in the Northwest served by the Union Pacific and the other defendants in which the [fol. 2382] Union Pacific and the other defendants respectively take less than their long hauls, witness Stilling, of the Union Pacific, summarizes the interchange arrange-

ments referred to on pages 1185-1187 of the transcript. At page 1186 he stated:

> "All such arrangements have been in effect over a long period of years and were for the most part established at a time when railroad construction in that area was at its peak, and some of the lines were under different management and control than at present.
>
> "Actual movement of traffic via these routes shows that they are in the public interest, and so far as the carriers are concerned, each shares in the long-haul as well as the short-haul. The existence of these routes via Oregon and Washington gateways makes it possible to handle traffic via shorter routes than if the terminal line in the northwest received its long-haul."

The testimony of Stilling as to the history and use of the gateways at Wallula, Spokane, Marengo and Portland is apparently designed to show that "the entire arrangement redounds to the benefit of the Union Pacific and is of benefit to the public." (1171) Despite his statement that "there is no reciprocal arrangement. The arrangement is very unbalanced" (1174), the interchange between the Northern Pacific and the Union Pacific at Wallula during two months of 1948, April and October, shows that the Union Pacific was short hauled on 52 cars and the Northern Pacific on 42 cars. This exchange of traffic does not appear to be much out of balance. During the same two months the Spokane interchange with the Great Northern shows 76 short haul cars for the Union Pacific and 118 for the Great Northern. This is more unbalanced than the Wallula interchange, but the Union Pacific was favored in the balance during those months. At Spokane the Union Pacific was short hauled in connection with Canadian Pacific route on 228 cars and the Canadian Pacific was short hauled on 118 cars. At Marengo the Milwaukee short hauled the Union Pacific on 1,093 cars, [fol. 2383] and the Union Pacific short hauled the Milwaukee on 13 cars.

During the same two months the Union Pacific was short hauled on 252 cars at Portland in connection with the

Southern Pacific, and the Southern Pacific was short hauled on 389 cars.

Stilling selected the car interchange figures for a two month period in connection with the junctions mentioned. This might give the impression that the interchange of carload traffic was comparatively light. However, by expanding the figures into an estimated annual basis, as is shown below, the traffic in which the Union Pacific is short hauled under the joint transcontinental rates is substantial.

Traffic Study of All Trans-Continental Carload Shipments Interchanged by Union Pacific With Northern Pacific, Great Northern, Spokane International, CMStP&P and Southern Pacific Railroads During the Months of April and October, 1948, Showing Number of Cars on Which Union Pacific Took Short-Hauls During the Two Months Named, Also Estimated Annual Basis (2-Month Figures Multiplied by 6). (1176–1185)

Stilling undertakes to justify the participation by the Union Pacific with the Great Northern, Northern Pacific, Milwaukee, Canadian Pacific, Southern Pacific and their connections in joint rates through Wallula, Spokane, Marengo and Portland, in which the Union Pacific and the other defendants take less than their respective long hauls principally upon two grounds: (1) that the arrangements have been in effect over a long period of time, and (2) that the arrangements are mutually beneficial in the sense that the railroads participating in these routes share in the long hauls as well as the short hauls. The fact, if it be a fact, that the arrangements at the time they were established may have been justified by the conditions [fol. 2384] then existing is not sufficient to excuse the Union Pacific and the other defendants from the charge of discrimination in refusing to participate in like manner with the Rio Grande through Ogden. Nor are the defendants excused from discrimination merely because

the arrangements are mutually satisfactory to them and that they share in the long hauls as well as in the short hauls.

In *Pennsylvania Co.* v. *United States*, 236 U. S. 351, where the validity of an order of the Commission was availed, the defendants before the Commission contended that there was no unjust discrimination because of the lack of similar reciprocal interchange arrangements with the complaining railroad. In dealing with this question, the Supreme Court said:

> "We agree with the Commission and the court below that the alleged reciprocal shipping arrangements do not remove the discriminatory character of the treatment of the Rochester road."

The decision of the Supreme Court in *Chicago, I. and L. Ry. Co.* v. *United States*, 270 U. S. 287, is to the same effect and deals with a situation substantially similar to the contentions made by witness Stilling.

In addition to the examples already referred to, Section F of Exhibit No. 3 shows numerous other situations in which the Union Pacific participates with other defendants in which they and the Union Pacific take less than their respective long hauls in connection with particular traffic. On lumber moving from points on the Union Pacific and its connections in Idaho, Washington and Oregon, etc., to points east of Colorado common points, the Union Pacific participates in joint rates and routes through Denver and Cheyenne in which it takes less than its long haul. This situation is shown more comprehensively in Section G of Exhibit No. 3. On the eastbound movement of fruits, vegetables, grain and certain other commodities from Idaho, Washington and Oregon, etc., the Union Pacific participates in joint rates and routes which apply via Denver to destinations in Missouri River terri- [fol. 2385] tory and the Southwest. The long haul of the Union Pacific to most of the destination territory just mentioned would be the entire distance to some of the points, or to junctions on its line in Kansas or Nebraska.

We have already shown that the Chicago Burlington and Quincy, the Rock Island, the Santa Fe and the Mis-

souri Pacific reach with their own rails such Colorado common points as Cheyenne, Denver and Pueblo. Despite that fact, these defendants participate in joint rates on traffic moving from eastern points to points served by the Union Pacific in the closed door territory in which the joint rates apply only in connection with the Union Pacific at such points as Kansas City and Omaha. In this manner the railroads mentioned short haul themselves.

The Union Pacific participates in joint rates on transcontinental traffic from and to points in Southern California in connection with the Rio Grande via Provo and Salt Lake City. The Union Pacific likewise participates in joint rates on transcontinental traffic in connection with the Santa Fe and Southern Pacific via interior California junctions in which the Union Pacific accepts short hauls. The Santa Fe and the Southern Pacific reciprocate with the Union Pacific in this respect by interchanging traffic with the Union Pacific at the same interior California junctions.

In dealing with the volume of interchange with respect to California traffic, Stilling used the months of April and October 1948. The figures for those months show that the Union Pacific was short hauled on 985 cars and that the Santa Fe, Southern Pacific and Pacific Electric were short hauled on 3,033 cars. If these figures be expanded to an annual basis, they would indicate that the Union Pacific would be short hauled on 5,910 cars, and the other railroads would be short hauled on 18,198 cars. These figures indicate that the Union Pacific is in better position to protect its long hauls as compared with the Southern Pacific and Santa Fe on Southern California traffic than it is in competing with other railroads on traffic to [fol. 2386] and from the Northwest. (1190)

The arbitrary and discriminatory policy of the Union Pacific in dealing with the Rio Grande exists in a most pointed manner with respect to the routing on traffic between Colorado common points in Colorado and points on the Union Pacific in the closed door territory. Page 1 of Section E of Exhibit No. 3 is a colored map which shows the points in the so-called Colorado common point territory. It includes such points as Denver, Pueblo, Minnequa, Colorado Springs, Canon City, Walsenburg and

Trinidad. Any shipment to or from points in the closed door territory which originates or terminates at such points as Canon City, Pueblo or any other point in the Colorado common point territory served by the Rio Grande must be interchanged with the Union Pacific at Denver if the joint competitive rates apply. The Rio Grande originates and terminates considerable traffic at the Colorado common points, which moves from and to points via the Union Pacific in the closed door territory. The long haul of the Rio Grande is through Ogden. If such traffic is routed through Ogden, it is subject to combination rates, which are excessive and prohibitive.

In this proceeding the Union Pacific has stressed what it terms as the right of the originating railroad to its long haul; but in dealing with the Rio Grande in respect to the traffic we are here discussing, the Union Pacific insists that the traffic originated or terminated by the Rio Grande at Colorado common points be interchanged with it at Denver, as well as the traffic originated by the Union Pacific in the closed door territory. For example, the traffic originating on the Rio Grande at Canon City, which is about 40 miles west of Pueblo and 160 miles south of Denver, must be interchanged with the Union Pacific at Denver if it is moving to the closed door territory. Not only does such a restrictive policy in connection with the joint rates and routes require a substantial back haul from Canon City, but it also deprives the Rio Grande of a haul of over 600 miles through Ogden. The fact that [fol. 2387] the Santa Fe and Colorado and Southern likewise serve Colorado common point territory south of Denver does not excuse or justify the discriminatory character of the restrictive rate policy imposed by the Union Pacific in so far as the Rio Grande is concerned.

We have already shown that the Denver and Salt Lake Railway was merged with the Rio Grande on April 11, 1947. The territory which was served by that railroad is shown in yellow on the colored map on page 1 of Section E of Exhibit No. 3. It operated between Denver and Craig, Colo., a distance of 232 miles. Before the Dotsero cutoff was established, which connected the Denver and Salt Lake with the Rio Grande, between Orestod and Dotsero, the only outlet the Denver and Salt Lake had was through

Denver. When the Denver and Salt Lake Railway was merged with the Rio Grande in April 1947, competitive through rates via Denver with its connections on transcontinental traffic to or from former Denver and Salt Lake Railway points were not cancelled. In other words, shipments to or from points on the former Denver and Salt Lake Railway to or from points on the Union Pacific in the closed door territory can be interchanged with the Union Pacific at either Ogden or Denver.

Point IV

In finding that a violation of Section 3 (4) exists by virtue of the maintenance by the defendants of joint rates between points in the closed door territory on the traffic involved and points on the Bamberger Railroad south of Ogden while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, the Commission erred in restricting that finding to and from points between Salt Lake City and Ogden since the Rio Grande serves many other points in Utah south of Salt Lake City, such as Provo, American Fork, Springville and Midvale, which are vitally interested in the competitive rates sought.

At page 66 of the report, the finding is made that the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the [fol. 2388] one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates on like traffic from the same points on the Rio Grande south of Ogden subjects the Rio Grande to discrimination in violation of Section 3 (4) of the Act. The Bamberger Railroad operates between Salt Lake City and Ogden. The Rio Grande serves Ogden, Salt Lake City and other points served by the Bamberger Railroad, and also serves Provo, American Fork, Springville and Midvale, Utah, which are south of Salt Lake City. We claim that it also violates Section 3 (4) of the Act for the Union Pacific to maintain joint rates with the Bamberger Railroad between Salt Lake and the points intermediate to Salt Lake and Ogden and the closed door territory, while refusing to maintain similar joint rates with the Rio

Grande at points served by the Rio Grande south of Salt Lake, even though many of those points are also served by the Union Pacific.

Discrimination under Section 3 (4) is not confined to different treatment in rates and charges by one railroad of another at a single interchange point. That question was settled by the Supreme Court in *Atlantic Coast Line v. United States*, 284 U. S. 288, 293, in which it sustained an order of the Commission in *Restrictions in Routing between Greenwood and Augusta*, 165 I. C. C. 3. In that case the Atlantic Coast Line sought by cancelling joint rates to eliminate the Georgia and Florida Railroad in the route there involved because, *inter alia*, it did not connect with the Clinchfield Railroad. The court rejected that view on the ground that there is no warrant for limiting the meaning of "connecting lines" to those having a direct physical connection with the Clinchfield.

Therefore, the Union Pacific is not excused from a violation of Section 3 (4) because the Bamberger Railroad does not serve points south of Salt Lake City which are served by the Rio Grande. In *Quanah, A. & P. v. A. T. & S. F.*, 226 I. C. C. 201, and in *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183, the Commission [fol. 2389] found that the respondent railroads violated Section 3 (4) even though in each case the interchange points of many of the trunk line routes which were unduly preferred by the rate adjustment assailed were substantial distances from the interchange points of the complaining short line railroads involved in those cases.

The evidence of record shows that there is a definite need for the competitive rates sought on the traffic involved between Utah common points on the Rio Grande south of Ogden and Salt Lake City. A brief reference to the testimony of John W. Gerber which appears at pages 655 to and including 662 of the transcript of the hearing shows that need. Gerber is Executive Secretary and General Manager of the Utah Growers Cooperative, which has about 450 members. The Cooperative operates two branches on the Union Pacific and three on the Rio Grande. The branches on the Rio Grande are at American Fork, Springville and Midvale, Utah, all located south of Salt Lake City. Gerber needs box crate material at the Co-

operative sheds at American Fork and Springville. This material is produced in Idaho, but the lowest competitive rate does not apply via the Union Pacific and the Rio Grande. (655, 656) At the Midvale shed the Cooperative absorbs a switching charge on that traffic which arrives by the Union Pacific.

On manufactured fertilizer purchased for Cooperative Growers at Pocatello, Ida., and Anaconda, Mont., involves the payment of combination rates at Ogden or Salt Lake, or the trucking of the fertilizer across town at the two main operations at American Fork and Springville. (656) The same situation exists as to seed potatoes obtained in Idaho and Montana. Gerber testified that on seed potatoes obtained in the Red River Valley of North Dakota he would like to unload part of carload shipments at Springville, American Fork and Midvale served by the Rio Grande and then forward the cars to points north of Ogden. (657) This can not be done under the rates now maintained with-[fol. 2390] out subjecting the traffic to the excessive combination charges.

The markets east of the Mississippi River have been greatly limited because of post-war rate increases and because of increases in estimated weights on celery and carrots. (657, 664) This necessitated going into smaller markets in Idaho, Montana, Wyoming, Nebraska, by truck. (657, 657) Gerber can not at present move his vegetables from American Fork, Springville and Midvale on the Rio Grande to Idaho and Montana at competitive joint rates. (658) He closed his Cofinne operation in 1949 and moved the celery produced in that area to Midvale by truck "so that we would not get into the so-called 'pocket markets' of the Southwest that we would be bound to reach moving via UP to Denver, and transferring on to other lines." (658).

Gerber has 100 members in the district north of Ogden, and they would like to be able to load their onions and potatoes, ungraded, and move them to packing sheds at American Fork and Springville and process in transit and thence move them east which they can not presently do at competitive rates. (658). His outbound business ranges from 600 to 1100 cars per year. (660) In bringing in perishable freight via Union Pacific to Springville

or American Fork he could haul the traffic across town, but because of lack of icing facilities in summer and of the danger of freezing in winter, he does not do so. (660, 661)

The arguments made in connection with Point III apply with equal force to the situation here involved. The finding that the Rio Grande is discriminated against by the Union Pacific in connection with traffic which may move between Salt Lake and points between Salt Lake and Ogden and the closed door territory should be expanded so as to include traffic that moves between points on the Rio Grande in Utah south of Ogden and Salt Lake on the one hand and the closed door territory on the other hand.

[fol. 2391] Point V

The majority erred in failing to recognize that the testimony concerning the need of joint rates on various commodities should be regarded as typical of all commodities and in limiting the number of eastbound commodities selected and the territorial application of the rates approved, as well as in limiting the approval of westbound rates to granite and marble monuments from Vermont and Georgia.

As has already been shown, the report of the Commission limits the joint rates approved on eastbound commodities to ordinary live stock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, and butter and eggs. That action does not include rates on grain and grain products and lumber and other commodities, despite the volume of evidence, typical in character, which shows the need of joint rates between the closed door territory and Colorado common points and points east thereof on all commodities. The joint rates approved on westbound traffic is limited to granite and marble monuments from Vermont and Georgia. The testimony in support of the joint rates sought by the complainant and intervening complainants is typical in character. It is also typical of the eastbound and westbound movement of traffic. The testimony covers the classes and descriptions of commodities used in the statistical statements published by the Commission.

Errors of the Commission in dealing with the point

here under consideration was discussed under General Comments. The decisions cited in that chapter and in particular the *New England Divisions* case, 261 U. S. 184, 197, clearly recognize that Congress intended that a method may be pursued by the Commission in administering the provisions of the Interstate Commerce Act which would enable it as a practical matter to perform its functions in cases of this character. The decisions cited also recognize that where a large number of carriers and a large number of rates and routes and other factual matters are involved, it is entirely proper and appropriate [fol. 2392] that the Commission base its findings and decisions upon evidence of typical rates, routes, and other factors that are relevant in the case. In the *New England Division* case, the court stated that "To require specific evidence, and separate adjudication, in respect to each division of each rate of each carrier, would be tantamount to denying the possibility of granting relief. We must assume that Congress knew this; and that it knew also, that the Commission had been confronted with similar situations in the past and how it had dealt with them."

The organizations representing shippers which intervened and participated in this proceeding have a membership of more than 300,000 persons. In addition to the testimony and evidence of the Rio Grande, the testimony of interveners and witnesses supporting the complaint is summarized on pages 59 to and including 94 of the brief of the Rio Grande. Since the report of the Commission justifies the belief that this evidence was not given the consideration or the weight to which it is entitled, we ask that at least the summary of the evidence be reexamined by the Commission in considering this petition.

We have already shown that the majority not only erred in confining the joint rates approved for eastbound application to a few commodities, but in imposing an intermediate territorial limitation which will prevent or seriously impair the usefulness of these rates, or any other rates if prescribed with the same limitation. Incidentally, the report of the Commission does not reveal why even under the narrow approach assumed grain and lumber were not included among the list of commodities selected.

The action of the majority in limiting the prescription

of joint rates on traffic moving westbound to granite and marble monuments from points in Vermont and Georgia is in the light of the evidence of record astounding and inexplicable. The evidence of record as to the need of joint rates westbound covers a wide range of commodities and illustrates in a pointed manner the injurious effect on the [fol. 2393] Rio Grande and its patrons of the restrictive rate policy maintained by the Union Pacific in cooperation with the other defendants. This evidence shows that the policy has not only prevented the movement of the freight via the Rio Grande to industries served by it at Salt Lake City and other points in Utah, but has operated against the interest of the Union Pacific itself by forcing the movement of some of the traffic by truck that would otherwise move by the Union Pacific.

In this connection, the attention of the Commission is invited to the testimony of J. Arthur Knudsen, which commences at page 271 of the transcript and is summarized at pages 88 and 89 of our brief. This testimony shows that Knudsen Builders Supply Company receives between 400 to 500 carloads of freight per year, and from 150 to 200 of these cars move from eastern points. Some of these cars are pool cars. The testimony of this witness clearly shows the injurious effect of the restrictive rate policy here assailed. The testimony of M. S. Rosenblatt, President of the Structural Steel and Forging Company, Salt Lake City, Utah, which commences at page 298 of the transcript and is summarized on pages 89 and 90 of our brief, the testimony of Kenneth G. Self, Inter-Mountain Tractor Sales Corporation, Salt Lake City, Utah, which commences at page 645 of the transcript and is summarized on pages 91 and 92 of our brief, and the testimony of D. G. Adams, Branch Manager of the branch of the J. I. Case Company, Salt Lake City, Utah, which commences at page 773 of the transcript and is summarized on pages 92-94 of our brief, also show the injurious effect of the restrictive rate policy of the defendants on the business concerns represented by these witnesses, as well as the Rio Grande. The testimony of these and other witnesses covers a wide range of commodities which move from various points in the east to Salt Lake City and other Utah points, a substantial

part of which is re-shipped to points on the Union Pacific and its connections in the closed door territory.

[fol. 2394] That and other testimony also shows that although the Rio Grande is a party to joint rates on all commodities from eastern points to Salt Lake City and other Utah common points, industries such as the J. I. Case Company, which has a plant served by the tracks of the Rio Grande at Salt Lake City, are reluctant to route the traffic from the east via the Rio Grande to Salt Lake City because in the event a part of the shipment or all of it should be re shipped to points on the Union Pacific in the closed door territory, it would be subject to the combination rates from point of origin to the ultimate destination. Testimony shows that on the average about 70 per cent of the traffic consigned to the industries in question at Salt Lake City is re-shipped to points on the Union Pacific in the closed door territory. In these circumstances, there is a natural disposition to play safe and use the route of the Union Pacific on the inbound movement of the shipments from the east to the other Utah common points. It will thus be seen that, for the reasons stated, the restrictive rate policy here assailed actually operates to prevent the Rio Grande from participating in competitive joint rates to Salt Lake City and other Utah common points which it serves.

An examination of the evidence in this proceeding will demonstrate that the recommendations of the examiner should have been sustained and that there is no justification for the limitations which the majority of the Commission appears to have approved, with certain reservations, in prescribing eastbound and westbound joint rates.

[fol. 2395] Point VI

The majority erred in finding on pages 60a-63 of the report that the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants and to support that finding in relying on Livestock-Western District Rates, 176 I. C. C. 1, decided in June 1931, and 190 I. C. C. 175, decided in December 1932, and in W. H. Bintz Co. v. A. & S. Ry. Co., 216 I. C. C. 481, 486, decided

in June 1936, which relied on the older cases cited, as the record shows that the operating conditions, including distances of the Rio Grande, have been substantially improved since the date of the decisions cited. In fact, the record shows that the main line of the Rio Grande which has been and would be used in connection with the traffic involved has been practically rebuilt since the period covered by the decisions cited.

At pages 60a-63 of the report of the Commission, statements are made that the operating conditions on the Rio Grande are more onerous than the operating conditions on the Union Pacific or any of the other transcontinental defendants. There are no facts of record which support that statement. The majority were apparently mindful of the absence of such facts since it cited in support of the statements *Livestock-Western District Rates*, 176 I. C. C. 1, decided in June 1931, and 190 I. C. C. 175, decided in December 1932, as well as *W. H. Bintz Co.* v. *A. & S. Ry. Co.*, 216 I. C. C. 481, 486, decided in June 1936. The finding in the *Bintz* case that operating conditions on the Rio Grande were unusually severe is based not on an original examination or consideration of that question, but upon the older cases cited and other still older cases, such as the *Commercial Club of Salt Lake* case, 19 I. C. C. 218. Included in the statement about comparable operating conditions on the Rio Grande, the Union Pacific and other defendants, the Commission was apparently influenced by the fact that the hauls between certain important points are somewhat longer via the route of the Rio Grande in some instances than via the direct route of the Union Pacific.

[fol. 2396] The majority made an inexcusable and serious mistake in relying on old decisions of the Commission to support a statement to the effect that operating conditions on the Rio Grande are more onerous than they are on the Union Pacific or any other transcontinental railroad. In making that statement, the majority ignored the evidence in this case by the Rio Grande and by the defendants which shows that since the establishment in June 1934 of the new through route of the Rio Grande between Denever, Colo., Salt Lake City and Ogden via Dotsero, Colo., frequently called the Moffat Tunnel route, the main line of the Rio Grande via which the traffic here involved would move

has been practically re-built. The distance between Denver and Ogden via Dotsero is 175 miles shorter than the distance via the Rio Grand- through Pueblo and the Royal Gorge route, and is 43 miles shorter than the route of any other railroad between Denver and Salt Lake City.

Prior to April 11, 1947, the property of the Rio Grande was in the hands of trustees. On that date complainant acquired the property from the trustees under appropriate court order, at which time the Denver and Salt Lake Railway Company was merged with the Rio Grande. During the trusteeship approximately $73,000,000 were expended to improve the property of the complainant. These improvements included large sums for additions and betterments, the acquisition of Diesel power and of other modernization of equipment, as well as the establishment of centralized traffic control, automatic signaling, new rails, ballast and other ph. sical improvements. Large sums of money have been spent for improvements since the property of the Rio Grande was acquired from the trustees on April 11, 1947. As the result of these large expenditures of money and improvements, the Rio Grande has shown proportionately greater gains in recent years than other Class I railroads in the Western district as a group.

[fol. 2397] The Union Pacific not only concedes that operating conditions on the Rio Grande have substantially improved in the last 15 years, but went to considerable pains to prove that fact. At page 190 of the original brief of the Union Pacific, the statement is made that witness Lynch, whos is Vice President in charge of operations on the Union Pacific, called attention to the fact that although the net railway operating income per mile of road from freight train operations of the Union Pacific in 1948 was slightly larger than the Rio Grande, the net railway operating income for total transportation service per mile of road operated was $4,374.36 for the Union Pacific and $4,976.82 for the Rio Grande. At page 191 of the brief of the Union Pacific, the statement is made that Exhibit 28 by witness Webb, an accountant of the Union Pacific, shows that during the period from 1930 to and including 1949, the Rio Grande made greater financial progress than all Class I railroads in the Western district. The exhibit

shows, *inter alia*, the percentage ratio that the respective operating revenues of certain railroads for each of the years 1931 to 1949 bear to the revenues of the same railroads for the year 1930. The railroads dealt with are Class I railroads in the Western district in one group, and the Milwaukee, the Great Northern, the Northern Pacific, the Union Pacific and the Rio Grande in another group. Summarized, Exhibit 28 shows the percentage ratio of operating revenues of the groups of railroads dealt with 1949 compared with 1930 to be as follows:

Class I Railroads in Western District (combined)	178.31
Four transcontinental lines, including U. P. (combined)	191.62
D&RGW (including D&SL for 1949 but not for 1930)	220.82

There follows certain operating and other ratios of the Rio Grande compared with the Union Pacific for the years 1949, 1950 and 1951. These figures are taken from Union [fol. 2398] Pacific Revenue and Expense Report to this Commission and from the income account of the Rio Grande.

	1949	1950	1951
Union Pacific Railroad			
Operating Ratio	79.7	70.3	74.3
Total Maintenance Ratio	34.3	30.1	31.2
Transportation Ratio	37.4	33.4	36.0
Rio Grande Railroad			
Operating Ratio	76.9	71.3	67.3
Total Maintenance Ratio	32.4	30.1	28.5
Transportation Ratio	36.2	34.0	32.0

The testimony of witness Earley and his Exhibit 35 has a bearing on the question here discussed. The exhibit contains a comparison of car-mile and ton-mile earnings on various representative commodities from or to representative points in transcontinental territory via routes over which through competitive rates are now, and for many years have been, applicable via the Rio Grande with car-mile and ton-mile earnings on the same commodities from and to representative points on the Union Pacific in the closed door territory. (1661) The exhibit shows, *inter*

alia, that the per-car mile and per-ton mile earnings on representative shipments of various commodities via the existing routes of the Rio Grande via which joint rates apply compare favorably with the car-mile and ton-mile earnings that would apply on the same commodities under the joint rates sought. In many instances, the per car and per ton mile earnings will be greater on the traffic involved under the rates sought than they are now under existing joint rates in which the Rio Grande participates and under comparable conditions as to distance, etc.

The report of the Commission indicates that its statements concerning operating conditions were influenced substantially by the differences in distances. The Commission has repeatedly held that while distance is a factor to be considered in prescribing rates, it is by no means a controlling factor. Moreover, since most of the traffic involved is long haul traffic, the difference in the distances over the route of the Rio Grande and the route of the [fol. 2399] Union Pacific are relatively small. In addition, it certainly is true that the transportation conditions via the route of the Rio Grande here involved compare favorably with the transportation conditions via the route of the Union Pacific from Seattle through Portland, Southern Pacific through Arizona and New Mexico, and thence the Rock Island to Kansas City, Chicago or other eastern points as well as with numerous other routes. As Appendix 3 attached to our original brief will readily reveal, the distance via many routes of the Rio Grande between many points is substantially the same as the distance via other routes and much shorter than the distance via many routes via which the competitive rates sought apply.

On page 5 of Exhibit 25, introduced by witness Stilling of the Union Pacific, distance comparisons are made from McCammon, Ida., to Denver and Pueblo and 41 additional points east thereof via the route of the Union Pacific through Wyoming and via the route of the Union Pacific through Ogden in connection with the Rio Grande. This exhibit shows that the difference in the distance via the two routes from McCammon, Ida., to the various destinations in favor of the Union Pacific is relatively negligible.

In 11 examples out of 43 destinations selected by Stilling, the excess in the distance via Ogden and the Rio Grande in favor of the Union Pacific is 95 miles or less. In no instance shown does the distance via the Ogden Gateway and the Rio Grande exceed the distance via the Union Pacific through Wyoming by more than 212 miles, and in 27 instances the difference is less than 200 miles.

On pages 161 to 166 of the transcript and in Section K of his Exhibit 3, witness Earley, for the Rio Grande, sets forth numerous comparisons of distances via various routes. Pages 2 to 6 of Section K of Exhibit 3 show the distances from representative points in Utah and Idaho and from Spokane, Wash., to various points in the United States between which points competitive rates ap- [fol. 2400] ply only via the Union Pacific routes through Wyoming. The distances via the Rio Grande route to the representative points shown range from 102 to 116 per cent of the distances via the Union Pacific through Wyoming. Numerous other comparisons will be found in Section K of the Earley Exhibit 3.

On page 62 of the report of the Commission, the following statement is made:

> "From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska except Omaha, the short route distances are less than 1,000 miles."

That statement seems to be true as to distances from McCammon, Ida., to points west of the Missouri River. It is not true as to distances from points located in western Idaho, Oregon or Washington to the same destination points. It is not entirely clear what is meant by the quoted statement. It probably influenced the Commission to establish the proscribed intermediate territory in connection with the joint rates on the few selected east-bound commodities which it approved.

The sub-joined table sets forth a comparison of distances from McCammon and Boise, Ida., and from Portland, Ore., to Grand Island and Lincoln, Nebr., and Salina, Topeka and Wichita, Kans., via the Union Pacific and the

Rio Grande. It will be observed that the distance via the Rio Grande from such points as Boise, Ida., and Portland, Ore., from which points more traffic is originated than at McCammon, exceeds the distance via the route of the Union Pacific to a relatively small degree. The average percentage excess via the Rio Grande route on traffic from Boise to the destinations named is 13.3 per cent, while the average percentage excess on traffic from Portland to the same destinations is only 9.7 per cent.

On pages 22a and 23 of the report of the Commission, there is a discussion of distances via various routes. The report states that many of the routes are longer than the routes via Ogden and the Rio Grande via which joint rates are sought and that this is true to all sections of the country east of the Rocky Mountains, except western trunk

line territory. The report also states that the routes via which the Union Pacific consents to being short hauled are generally of less distance than the routes via which the Union Pacific retains its long haul and considerably shorter, 37½ per cent for example, from Yakima, Washington, to Minneapolis than the routes sought via Ogden and the Rio Grande.

The generalization recited by the Commission in connection with distances from the closed door territory via [fol. 2402] routes to points in western trunk line territory is misleading and, like most generalizations, is likely to result in incorrect conclusions. All of the Colorado common points, such as Pueblo, Denver, Colorado Springs, Trinidad, etc., are included in western trunk line territory as are all points in the States of Nebraska and Kansas. The statement in the report of the Commission that to the western trunk line points "the short hauling routes are generally shorter than the routes by which the Union Pacific retains its long haul" is incorrect insofar as Colorado common points, and points in Nebraska and Kansas are concerned. Appendix 5, attached hereto, portrays the situation much more accurately than do the statements by the Commission. Denver, Minneapolis and Kansas City are selected on that Appendix as representative points in the western, northern and southern areas of western trunk line territory.

From and to Group B points, from and to which the Union Pacific, as a general rule, joins it connections, the Great Northern, Milwaukee and Northern Pacific, in routes which give the U. P. a short haul, the G. N. route is the shortest from and to Minneapolis. Via the route of the U. P. through Wyoming the average circuity is 118 percent—that of the Rio Grande through Colorado is 130 percent. In many of its Fourth Section orders, such as F. S. O. 11135 of January 10, 1933, as amended, the Commission has allowed a maximum circuity of 133⅓ percent where distances involved exceed 1125 miles. It should be borne in mind that this Fourth Section order, which was issued in connection with rates prescribed in *Western District Livestock* rates (176 I. C. C. 1) (and Fourth Section orders of a similar nature), was patterned to fit a scheme

of distance rates, and naturally could be considered as being narrower in its restrictions than it would be if it were fashioned to fit such a widespread and unrestricted adjustment as Trans-Continental rates on all commodities, which give lesser consideration to distance.

[fol. 2403] Only two of the examples shown from and to Minneapolis via the Rio Grande exceed the 133⅓ percent limitation (Milton, Oregon 134 percent; Yakima, Washington 137 percent)—the average distances via the Rio Grande for the seven points in Group B is 130 percent, but the average for the U. P. routes through Wyoming is 118 percent. To Denver, the average circuity of the Rio Grande routes is only 108 percent of the U. P. routes. To and from Kansas City the Union Pacific route is the short route in all instances shown. The average for the Rio Grande is 111 percent longer, but the averages via the northern routes (through Montana) range from 118 percent to 131 percent longer than the Union Pacific. This points up the contention we have made throughout this case, that Trans-Continental and Mountain Pacific traffic generally moves via routes which afford the traffic practically unrestricted freedom of movement, except via the Ogden Gateway. From and to points listed in Group A, Appendix 5, which points are not on the short-haul territory of the Union Pacific, the Rio Grande routes are only longer by an average of 10 percent to and from Denver and 13 percent to and from Minneapolis and Kansas City.

In its general discussion and ultimate fact findings (at Sheet 62) the Commission deals with this phase of the order, and, in expressing a view with respect to differences in transportation conditions due in part to "lengths of hauls" concludes that Colorado Common Points, Eastern Colorado, Kansas and Nebraska (except Missouri River cities) should be excluded from the benefits of the order. While we realize that Kansas City is in "open" territory, the distances involved via the compared routes to and from that point are fairly representative of the situation in Kansas and Nebraska west of the Missouri River, and the conclusion reached is not justified.

We have shown that the Rio Grande now participates in joint rates and through routes on transcontinental traf-

[fol. 2404] fic generally via Ogden and Salt Lake City, between points in California on the Union Pacific and other transcontinental railroads serving California, the western areas of Oregon and Washington, and Colorado common points and points east thereof. The traffic to and from the closed door territory in northern Utah, Idaho, Montana, Oregon and Washington served by the Union Pacific and its connections is not subject to the same basis of joint competitive rates in connection with the Rio Grande. There are no facts of record which show any important dissimilarity of transportation conditions in connection with the movement of traffic via the Rio Grande between the points and territories where joint competitive rates via the Rio Grande now apply, and between the points in the territories where joint rates are sought. Nor is there evidence in this case which shows or justifies the belief that there is any important dissimilarity in the transportation conditions over the Rio Grande in connection with the traffic on which joint rates are sought and the transportation conditions over the Union Pacific and the routes of other railroads with which it now participates in joint rates via routes in which it and the other defendants accept less than their respective long hauls. It is difficult to understand why the Commission ignored the evidence of record, which shows the remarkable change and improvement in the transportation conditions over the Rio Grande which have occurred during the past 15 years. It is more difficult to understand why the Commission sought to supports its unjustified finding about the onerous transportation conditions on the Rio Grande by referring to decisions which were made more than 15 years ago. At all events, there is no justification for the statement made by the Commission as applied to the present transportation conditions on the Rio Grande.

[fol. 2405] Point VII

The majority erred in failing to find that the rate situation maintained by defendants results in undue and unreasonable prejudice and disadvantage to shippers, districts and localities depending upon the Rio Grande for service in violation of Section 3 (1) of the Act, thereby removing the restrictions imposed by Section 15 (4) from the Commission's authority to grant the relief requested by complainant.

The majority report recognizes the existence of an issue in this proceeding arising under Section 3 (1) of the Act. After stating that the paramount issue in the proceeding is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the territories involved, the majority observes that "Evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes." (Sheet 9a). The report then proceeds to dispose of defendants' contention that an allegation of undue prejudice and preference under Section 3 (1) was not properly before the Commission by stating that although it agreed that such an issue could not be raised by the Rio Grande in its own behalf, the intervening shippers did have the right to raise the issue and had introduced evidence in support of their claim of undue prejudice and disadvantage.

Upon analysis of the testimony on this issue the majority report concluded (Sheet 63):

> "As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments westbound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs eastbound, who [fol. 2406] reconsign such shipments or take advantage of transit arrangements at intermediate points

on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3 (1) of the act."

For reasons which have been previously discussed in detail and need not be repeated here, particularly our discussion in Point III, the error in the majority's above-quoted conclusion is its restriction to a few selected commodities. As stated by Commissioner Lee in his separate expression (Sheet 71), in discussing the issue arising under Section 3 (1), "The evidence is equally impressive with respect to the disadvantage or handicap to shippers or receivers of lumber, building materials, farm machinery, and other commodities." Similarly, Commissioners Mahaffie, Splawn, and Cross point out in their separate opinion (Sheets 80-81) that not only does the record contain convincing evidence of undue prejudice and disadvantage to shippers, districts, and localities with respect to the limited commodities specified in the majority's report, but also with respect to wool producers, livestock operators, lumber dealers and processors, dealers in farm machinery, and other commodities. Moreover, the latter opinion emphasizes the extremely important point that in any event the evidence which the majority report regards as sufficient to justify a finding of undue prejudice and disadvantage is merely typical of a generally prevailing prejudicial rate situation with respect to all commodities. In this connection, Commissioner Mahaffie's expression bears repeating that where the Commission has found it necessary "to deal generally with a comprehensive rate situation the Supreme Court has held that we may properly make general findings upon typical evidence representative of the situation as a whole." To do otherwise would present not only an impossible burden to complainants before the Commission but [fol. 2407] an impracticable, if not impossible, burden upon the Commission itself to examine every rate on every date from every origin to every destination in the comprehensive territories under consideration here.

Furthermore, examination of the majority report dis-

closes that its restriction of its finding of undue prejudice and disadvantage to shippers in violation of Section 3 (1) to a limited number of commodities was based entirely upon its previous findings pursuant to Section 15 (4) concerning the adequacy of defendants' routes. This is clearly shown by the two following statements from the majority's report. At Sheet 59 the majority states:

> "Testimony on behalf of shippers, however, does raise a question as to the need for *more adequate and economic service* than afforded by existing routes *with respect to some commodities.*" (Emphasis supplied.)

At Sheet 60 it is also said:

> "While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated."

Thus, it will be seen that the failure of the majority to include all commodities in its finding of undue prejudice and preference as to shippers and receivers appears to be directly attributable to its application of the limitations in Section 15 (4) of the Act. But, as pointed out by Commissioner Lee (Sheet 71) and Commissioners Mahaffie, Splawn and Cross (Sheet 80), and as is obvious from the law itself, the discrimination found to be in violation of Section 3 (1) of the Act makes the limitations in Section 15 (4) inapplicable. There is no recognition of this in the majority report, despite the fact that Section 15 (4) of the Act expressly provides that the limitations therein [fol. 2408] on the power of the Commission to prescribe through routes are inapplicable where Section 3 of the Act is involved. It follows that were the Commisison to resolve the present equal division of views of its members and find that through routes exist, the limitations in Section 15 (4) would also be inapplicable on that account.

For the foregoing reasons, as well as those previously urged in other sections of this petition, the Commission should modify and expand its findings and conclusions un-

der Section 3 (1) of the Act so as to include all commodities, and thereby accord the full relief sought by complainants herein irrespective of what its ultimate findings and conclusions may be on the issue of whether through routes exist or must be established.

In view of the decisions of the Supreme Court in *State of New York* v. *United States*, 331 U. S. 284, 341, 344, 345, and *Ayrshire Collieries Corporation* v. *United States*, 335 U. S. 573, 593, which modify and distinguish the decision in *Texas and Pacific* v. *United States*, 289 U. S. 627, it can no longer be validly claimed that an order by the Commission under Section 3 of the Act must be in the alternative.

Point VIII

The majority erred in imposing an intermediate territorial restriction which, as a practical matter, will nullify or minimize the limited relief granted by the Commission insofar as eastbound application of the prescribed joint rates is concerned.

The subject here dealt with has been discussed at considerable length under General Comments. In these circumstances, it will not be necessary to deal with it here, except in the most sketchy manner. The majority of the Commission, with Commissioner Patterson differing as to lumber, prescribed joint competitive rates from the closed door territory on selected commodities, consisting principally of livestock and perishable freight which move eastbound from the closed door territory. [fol. 2409] For reasons which the report does not make clear, the majority set up an intermediate territory the practical equivalent to the western trunk line territory (see Appendix 4 attached hereto), including Colorado common points such as Denver, Colorado Springs, Pueblo, Trinidad, etc., to which the joint rates on the selected commodities do not apply. In the light of the evidence of record, this was indeed an extraordinary thing to do, since as we have already pointed out, it not only creates Fourth Section violations but is practically self-defeating insofar as the limited relief granted is concerned. The proscribed territory actually prevents shippers of perishable freight in the closed door

territory from forwarding freight at the prescribed joint rates to points served by the Rio Grande itself, such as Pueblo, Colorado Springs, Denver, and other Colorado common points. If any shipper in the closed door territory should route a shipment of perishable freight via Ogden and the Rio Grande destined to the Colorado common points on the Rio Grande or points east thereof in the proscribed territory, the charges would have to be assessed on the basis of the combination rates which, in many instances, are higher to such destinations than are the joint through competitive rates from points in the closed door territory to points east and south of the proscribed territory, such as Chicago and St. Louis, etc. The imposition of the proscribed territory is not justified by the facts or the law, and no such territorial limitation should be applied to any joint competitive rates that may be prescribed in this proceeding.

[fol. 2410] Point IX

The majority erred in failing to find that the through rates based on the combination of intermediate rates via Ogden and the Rio Grande on the traffic and between the territories involved are unjust and unreasonable to the extent they exceed the joint competitive rates of the defendants and the Union Pacific which apply via routes other than the Rio Grande generally on transcontinental traffic and other traffic, and which also apply via the route of the Rio Grande through Salt Lake and Ogden on traffic to and from points in California and certain western Pacific coast points in Oregon and Washington. The report of the Commission indicates that it gave the question of the reasonableness of the rates little or no consideration except as to the selected commodities. Exhibits 3 and 35 of witness Earley and other testimony of record show that the existing rates on transcontinental and other traffic that apply generally in the territories involved is a proper standard for measuring the justness and reasonablenes of the rates assailed in this proceeding. The evidence bearing on this question is summarized on pages 98 to 117, inclusive, of the Rio Grande brief. Examiner

Mullen, who heard the evidence in this case, found, *inter alia*, that the joint competitive rates now in effect over the routes of the Union Pacific and the other defendants from and to the territories involved are just and reasonable rates for application from and to the same origin and destination territories via the Union Pacific, Ogden or Salt Lake and the Rio Grande and the routes of the other defendants.

Appendix 2 attached to our brief shows the average weight, the revenue per car at the competitive rates sought, and at the combination rates which now apply via the Rio Grande on the traffic involved. That appendix is based upon rate comparisons in Section J of Earley Exhibit No. 3. The appendix shows that the per car charges at the combination rate exceed the per car charges at the joint competitive rates by from $62.72 to $867.69 per car.

[fol. 2411] This Commission has on several occasions held that, irrespective of the question whether particular rates may have been established as the result of competitive forces, where such rates have the sanction of time and apply generally to particular traffic or to all traffic in particular territories, such rates may be used as the standard of reasonableness. The position of the Commission with respect to that question is cogently stated in *Hormel and Company* v. *A. T. & S. F. Ry. Co.*, 263 I. C. C. 9, at page 43, where the entire Commission said in answer to the contention that the rates there assailed were depressed.

> "Defendants criticise the mountain-Pacific comparisons of complainants by labeling them depressed rates, usually truck compelled. It is noted, however, that these so-called low mountain-Pacific rates instanced by complainants apply between practically all points between which the traffic moves. They, therefore, represent the normal rate structure in that territory and afford a proper guide for determining a just and reasonable rate level for the future from the Midwest to mountain-Pacific territory."

While the Commission found that the rates on the selected commodities are unjust and unreasonable, as well as unduly prejudicial, it erred in failing to find that the rates

on all of the traffic involved were unjust and unreasonable since the evidence of record is as probative and persuasive on all of the traffic as it is on the selected commodities.

Since, as we have already shown, the evidence which supports the claim that the combination rates are unjust and unreasonable is discussed and analyzed in our brief, we ask that the Commission re-examine that analysis and discussion.

[fol. 2412] Conclusion

For the reasons stated, the Commission should grant this petition for reconsideration and should expand, modify and reverse its report and order of January 12, 1953, in the respects hereinbefore described. The Commission should grant the relief sought.

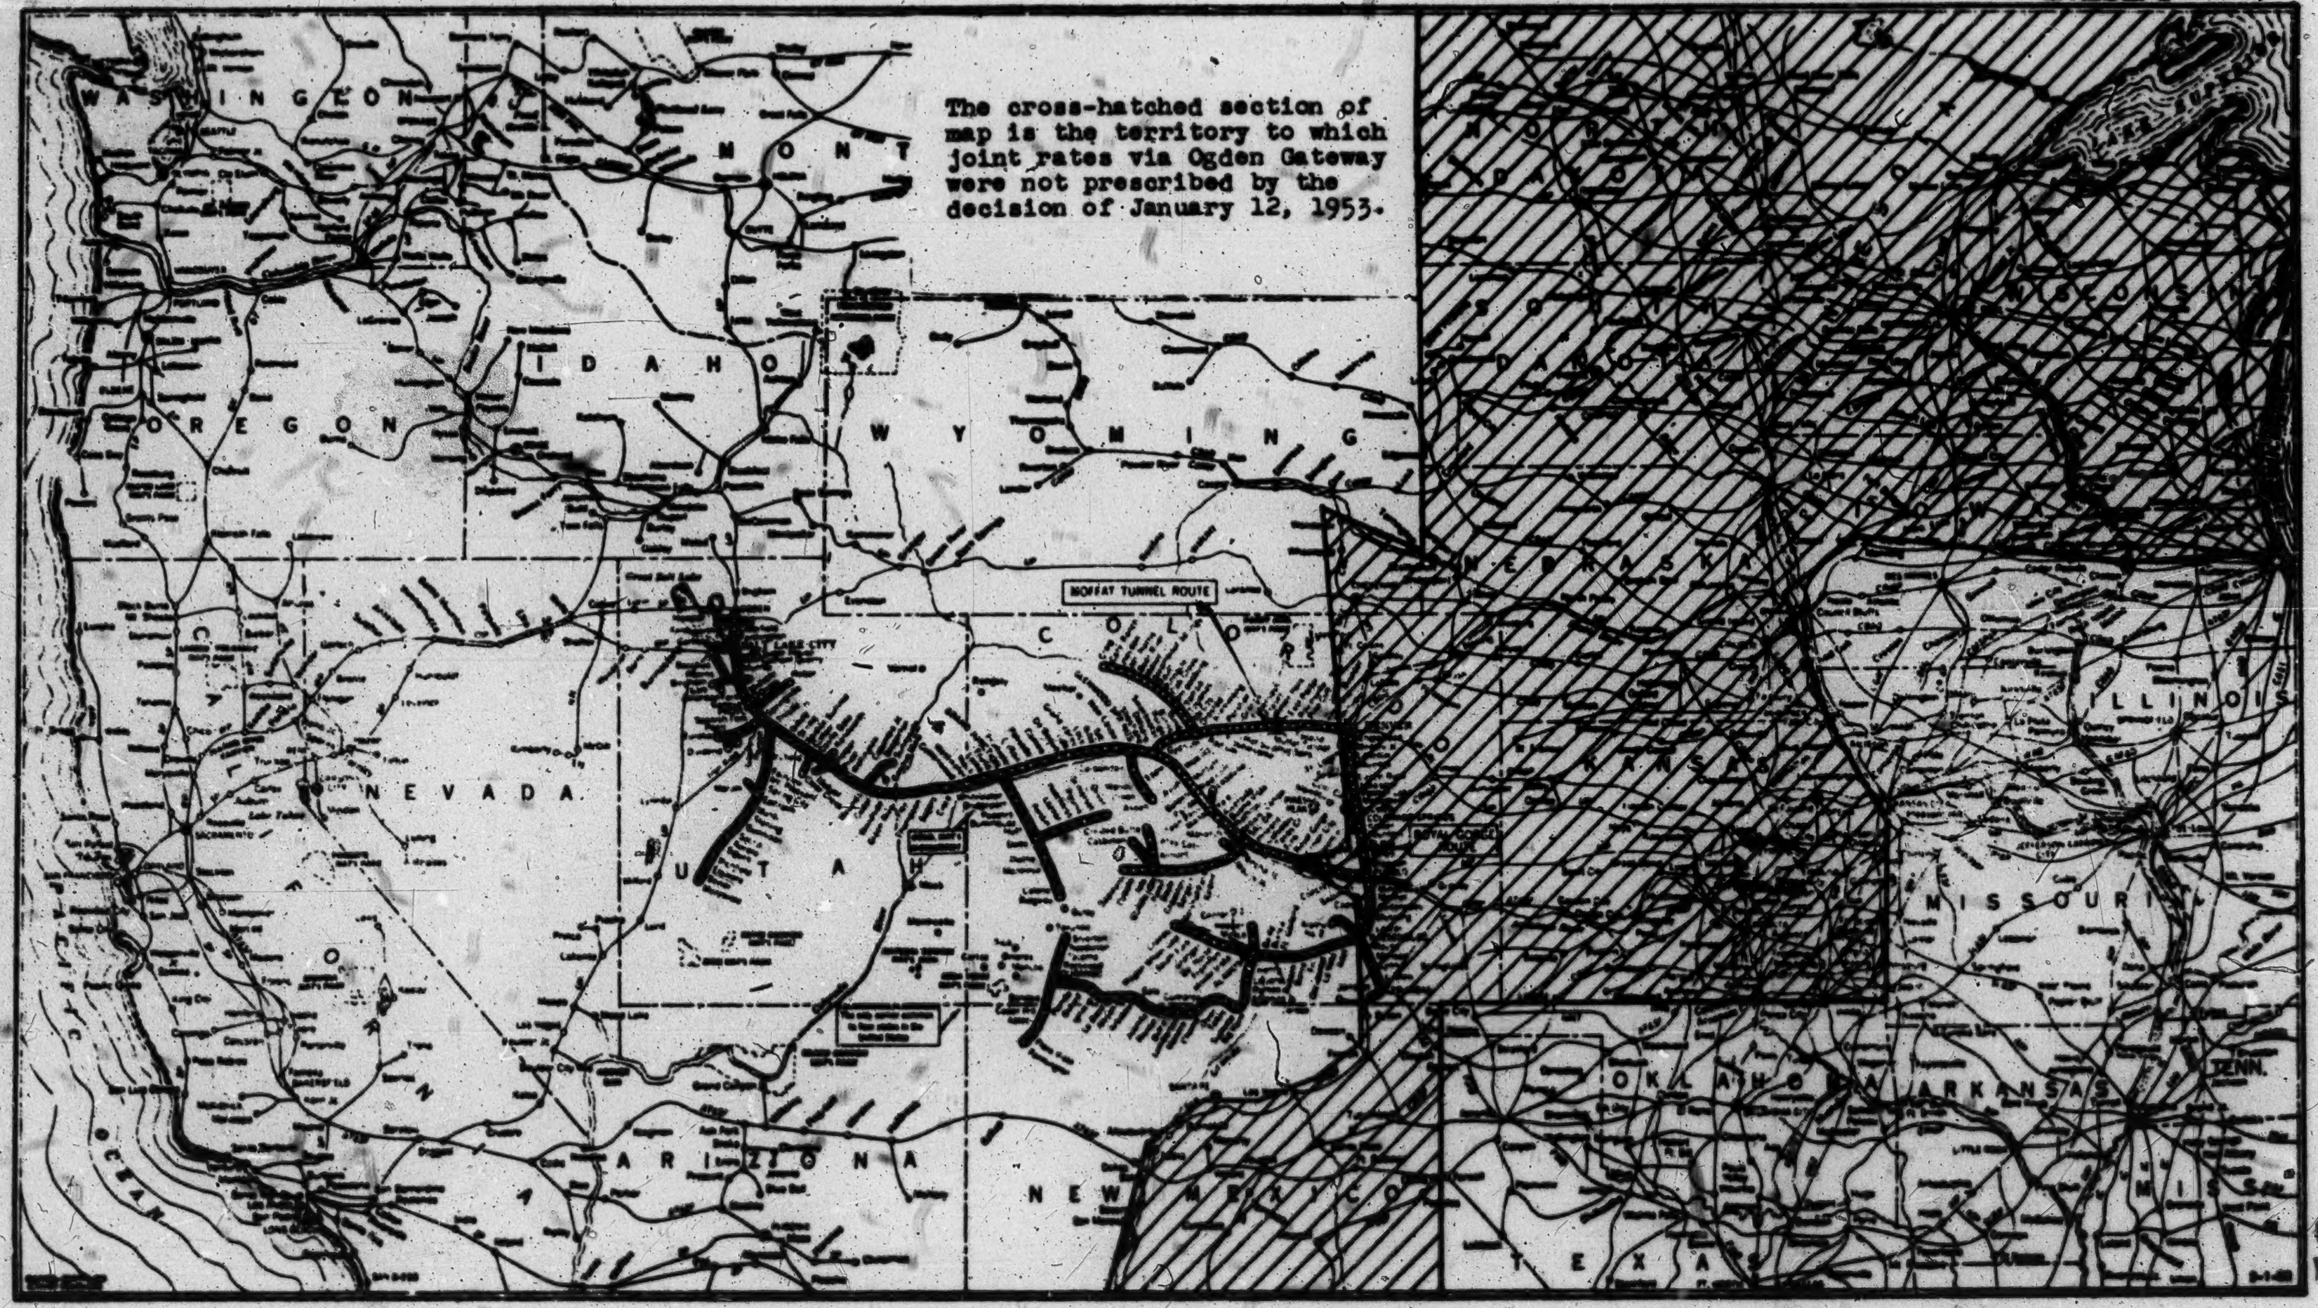
Respectfully submitted, Edward J. Hickey, Jr., 620 Tower Building, Washington, D. C. (s) Robert E. Quirk, 1116 Investment Building, Washington 5, D. C., Attorneys for Complainant.

April 15, 1953

Certificate of Service

I hereby certify that I have this 15th day of April, 1953, served the foregoing document upon all parties of record in this proceeding, by mailing, by first-class mail, a copy thereof, properly addressed, to each party.

(s) Robert E. Quirk.



The cross-hatched section of map is the territory to which joint rates via Ogden Gateway were not prescribed by the decision of January 12, 1953.

APPENDIX 3

Appendix 3 referred to in this Petition for Reconsideration is the Appendix 3 attached to and made a part of the Brief of the Rio Grande of August 15, 1950. That appendix sets forth the distances via various routes in which the Union Pacific and other defendants join with each other in accepting less than their respective long hauls. In the circumstances, it is deemed unnecessary to reprint it here.

[fol. 2430] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY,
Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, ET AL., Defendants.

PETITION OF

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY,
CHICAGO, MILWAUKEE, ST. PAUL AND PACIFIC RAILROAD COMPANY,
WABASH RAILROAD COMPANY,
GREAT NORTHERN RAILWAY COMPANY,
NORTHERN PACIFIC RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY,
UNION PACIFIC RAILROAD COMPANY,

FOR REOPENING, REARGUEMENT, RECONSIDERATION AND POSTPONEMENT OF EFFECTIVE DATE OF ORDER—Filed April 13, 1953.

The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; Wabash Railroad Company; Great Northern Railway Company; Northern Pacific Railway Company; Chicago and North Western Railway Company; Chicago, St. [fol. 2431] Paul, Minneapolis & Omaha Railway Company; and Union Pacific Railroad Company, defendants herein, respectfully petition the Commission for an order reopening for reconsideration, reargument and reversal of the findings and conclusions hereinafter specified and set forth in its report, decision and order dated January 12, 1953, and pending consideration hereof, for postponement of the effective date of the outstanding order. The report and order are dated January 12, 1953, and the order, as modified by the Commission's order of February 13, 1953,

is now required to become effective June 8, 1953, on 30 days' notice.

Statement

The report and order require establishment of through routes and joint rates via Ogden or Salt Lake City, Utah, in connection with the line of the Rio Grande for interstate transportation in carloads—

> "* * * of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern bound-ry of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula [fol. 2432] of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming."

As pointed out in the report, the existing routes over the Union Pacific and its connections are generally shorter than routes that would be established via the Rio Grande, some of which would be as much as 37 per cent longer than some existing routes. Nevertheless, the order requires routes via the Rio Grande which would short haul the Union Pacific approximately 1,000 miles on traffic which it originates and terminates and would deprive the Great Northern, Northern Pacific and Milwaukee railroads of their entire haul on traffic originated by the Union Pacific and interchanged to those lines at northwest junctions.

The routes ordered would require participation by at least one more carrier, necessitating two or more additional interchanges of traffic that would move via the Rio Grande. Between the points where the traffic could be handled by either the Union Pacific or the Rio Grande with its connections at Denver, the route via the Rio Grande is about 200 miles longer than the Union Pacific and would require at least 24 hours longer transit time.

No shipper or receiver has ever filed a complaint demanding the through routes and joint rates required by the order.* No shipper, receiver or ultimate consumer at [fol. 2433] destinations in the southern and eastern part of the country has requested routes via the Rio Grande, and while a few shippers procured by the Rio Grande along its line and in Idaho pretended a desire for through routes and joint rates via that line for transit and reconsignment purposes, an overwhelming number of shippers and representatives of state commissions and commercial and labor organizations testified that the through routes and joint rates sought via the Rio Grande were not necessary or desirable in the public interest nor needed to provide adequate and more efficient or more economic transportation and that existing routes via Union Pacific are adequate, shorter, more efficient, economic and satisfactory.

The report adopts the pattern of the complaint in conglomerating and intermingling the Rio Grande's rights with those of private shippers and the public. It finds that the higher combination rates via the Rio Grande are unreasonable, unduly prejudicial of shippers (including those located on and using the Union Pacific) using or desiring to use the Rio Grande and unduly preferential of shippers and receivers using the Union Pacific routes. That finding is limited to the longer hauls over the greater distances to the southern and eastern part of the United States, thus leaving the combination rates approved as reasonable for the shorter hauls to and from points north and west of the southern Kansas border, the Missouri River and the line of the Chicago and North Western from Omaha to Chicago.

---

* United States vs. U. P. R. Co., et al., 28 I. C. C. 518, was an effort to obtain greater benefit of land-grant deductions on government traffic.

Under the Supreme Court's decision in *Thompson* v. *U. S.*, 343 U. S. 549, neither the finding of unreasonableness [fol. 2434] nor of undue prejudice and preference is relevant, and neither could be made the basis of the order prescribing the through routes and joint rates. Those findings are likewise irrelevant under the Commission's own holding at Sheet 9 of the report—

> "* * * that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation."

Under the *Thompson* decision, a finding of unreasonableness will not sustain an order which "in effect" establishes a new through route; nor may through routes and joint rates be required upon a finding of undue prejudice and preference between shippers, for in such case the carriers must be given an alternative. *Central R. Co. of New Jersey* v. *United States*, 257 U. S. 247, and *Texas & Pacific Ry. Co.* v. *U. S.*, 289 U. S. 627. The Commission has no power to prescribe through routes and joint rates except upon findings required by section 15(3) and (4).

The report is "long and discursive" and lacks "the simplicity and clearness" necessary to enable the reader to grasp the meaning and purpose of much of the discussion or to understand just what purpose or reason the Commission had in making the findings of unreasonableness and undue prejudice and preference, or in fact upon what precise ground the order is based. *U. S.* v. *Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499. However, we will endeavor to specify herein the more important of the particular respects in which we inisist that the Commission has erred [fol. 2435] and which we urge it to reconsider and reverse and thereupon to dismiss the complaint.

I.

The Commission Erred in Rejecting Union Pacific's "Memorandum of Additional Authorities," etc., of October 5, 1951, and in Refusing to Find, Upon Decisions Cited and Quoted Therein, That the Rio Grande's Admitted Solicitation and Procurement of Shipper Testimony to Help It Win Its Case Vitiated and Nullified the Proceeding Requiring Its Dismissal.

At Sheet 5 of its report, the Commission rejects the Union Pacific's "Memorandum of Additional Authorities" etc., saying that its Rules of Practice "do not permit the submission of such a document so late in the proceeding" and that the memorandum was not filed "in time to permit opposing parties to examine it and to make reply thereto prior to the oral argument when the proceeding was finally submitted." No other reason is given for rejecting the memorandum except that complainant and certain interveners objected to its receipt.

The memorandum served October 5, 1951, was filed with the Commission prior to the original oral argument on October 11 and 12, 1951, and *more than a year before the reargument* on October 15 and 16, 1952. Moreover, the Commission's Rules of Practice *do not prohibit* the filing of such a document and it is obvious that its receipt is within the Commission's discretion.

No doubt the Commission wanted to avoid discussion in its report of the principle laid down in the decisions cited in the memorandum and preferred to accomplish this by rejecting the memorandum itself. The fundamental [fol. 2436] point, however, was raised in Exception No. III of Union Pacific's Exceptions and Brief filed March 1, 1951, and we ask the Commission to reconsider its rejection of the memorandum, to receive it and to hold upon the authorities therein cited and quoted, and upon the Rio Grande's admission (R. 52) that it solicited and procured shipper witnesses to testify so as to help it win its case, that such action and activities vitiated and nullified the whole proceeding and requires its dismissal.

In Union Pacific's Exception No. II to the proposed report, it was shown from the record that no shipper had filed any complaint demanding the through routes and joint

rates sought by the Rio Grande in this case, that a review of Union Pacific's files for a 9-year period disclosed no such shipper demand, that in over 4,000,000 personal contacts during that period by 241 Union Pacific traffic representatives throughout the country no shipper had ever requested or demanded the through routes and joint rates sought by the Rio Grande, and that in a canvass of 1,194 shippers only 24 shippers favored the Rio Grande's complaint, but none of them has ever requested or demanded through routes and joint rates via the Rio Grande. Further, it was there shown that no such request or demand has ever been made upon the Montana Commission, the Washington Public Service Commission, the Public Utilities Commissioner of Oregon, the Public Service Commission of Wyoming, or the Nebraska State Railway Commission. Even the state commissions of Colorado and Utah, which favored the complaint, and the Idaho commission which was against the complaint except as to fruit and vegetables and livestock, made no assertion that any [fol. 2437] such request or demand had ever been made upon them.

In these circumstances, coupled with the statement in the Commission's report (Sheet 16) that what the Rio Grande wants in this case is "to participate as a bridge line" in traffic now handled by the Union Pacific and other defendants, "to improve the financial condition of our railroad" as explained by its President, the conduct of the Rio Grande in soliciting and procuring shipper witnesses to testify so as to help it win its case becomes particularly significant and acute in its relationship to the efficacy and easy evasion of the "financial needs" prohibition of section 15(4), to the credibility of such shipper witnesses and to the conduct of litigation before and the administration of justice by the Commission. Upon reconsideration, we believe the Commission will speak out in protection of the conduct of litigation before it by condemning such practices and by dismissing the complaint. The very results of the Commission's decision in this case calls for such condemnation and dismissal for, although the Commission clearly concludes that the Rio Grande has no case of its own, it nevertheless does accomplish what it seeks on the

commodities specified in the findings and order, and this by the indirect resort to section 3(1) and the shipper testimony which the Rio Grande solicited and procured to help it win its case. In other words, the Rio Grande has lost its own case but has succeeded in partly gaining its ultimate purpose to divert traffic from the defendants because it persuaded a few shippers to pretend a desire or need for transit and reconsigning privileges at points on its line. By this method the Rio Grande has "made" a case where [fol. 2438] it had none. A plain perversion of justice has been accomplished by methods which the courts condemn and the Commission should not sanction, condone or tolerate.

II.

The Commission Erred in Overruling Defendants' Motion to Dismiss the Complaint on the Ground That the Granting of Anything Sought by the Complaint Is Prohibited by the "Financial Needs" Prohibition of Section 15(4).

In our Exception No. IV to the proposed report, we pointed out that the sole purpose of this case is to enhance the Rio Grande's financial condition; that for many years the president of the Rio Grande has sought to take an ever increasing quantity of "bridge traffic" from other lines because there is less expense and consequently more money in handling such traffic (R. 35, 43); that the Rio Grande's Vice President of Traffic and its Freight Traffic Manager testified with particular emphasis in support of their president's testimony that its financial needs have forced the Rio Grande to turn its efforts to bridge traffic and that such is the objective of the complaint in this case (R. 64, 84). The report (Sheet 9b) states that complainant has consistently disclaimed any intent to prosecute the complaint with the object of assisting it in meeting its financial needs. The Commission seems content to escape the "financial needs" prohibition of section 15(4) on such disclaimer, and by the simple expedient of saying that in reaching its conclusions "no consideration has been given to the financial needs of the complainant."

[fol. 2439] The insistence that this is not a financial needs case was by Rio Grande counsel and not by any of its

officers or witnesses. Such insistence by counsel can have no force or effect, particularly in the face of the following testimony given under oath by President McCarthy of the Rio Grande (R. 32-33):

> "Q. That is, from the standpoint of what I will say the treasury of the Rio Grande and the stockholders, that would be the purpose?
>
> "A. Yes, we hope to improve our condition if we can get these through rates.
>
> "Q. Insofar as the corporate management and the stockholders of the Rio Grande are concerned, that would really be the only immediate purpose to them, would it not?
>
> "A. Yes—that they would want to improve the financial condition of our railroad."

It is futile to deny that this is a "financial needs" case, and we insist that the Commission cannot respond affirmatively to the complaint by granting through routes and joint rates without colliding head on with the provision in section 15(4) that the Commission shall not establish any through route and joint rates applicable thereto for the purpose of assisting any carrier that would participate therein to meet its financial needs. The Commission cannot, by simply saying that it gave no consideration to the Rio Grande's financial needs, dissever its purpose from that of the Rio Grande or from the allegations and objectives of the complaint.

Moreover, the whole theme of the report is "bridge traffic" regardless of whether or not the traffic is transited [fol. 2440] at points on the Rio Grande. The only possible purpose the Commission or a railroad could have in diverting "bridge traffic" from one railroad to another would be to help the latter financially, especially where, as here, the traffic presently moves over other available shorter and more direct routes. The president of the Rio Grande testified that his reason for seeking to divert more "bridge traffic" from other lines is that "there is more money in it" (R. 35), and its vice president of traffic testified that with loss of other tonnage, the Rio Grande was "forced to turn their thoughts and efforts to main line through freight traffic" and that in no other way could it

have survived (R. 64). Thus, the Commission's denial that it gave any consideration to the Rio Grande's financial needs is the equivalent of saying that in reaching its conclusions and issuing the order it gave no consideration to the case which the complainant called upon it to decide.

There can be no public interest in diverting "bridge traffic" from the Union Pacific to the Rio Grande. *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127. In other words, "bridge traffic" is "financial needs traffic."

The emphasis upon "bridge traffic" throughout the report contradicts the assertion that in reaching its conclusions the Commission gave no consideration to the Rio Grande's financial needs. On sheet 11 it is stated that in 1890 the Rio Grande was opened for "through traffic between Denver and Ogden" but was "handicapped" because it did not have joint through rates with the Oregon Short Line on traffic between the northwest and points or east of its Colorado gateways. On Sheet 16 the report [fol. 2441] states that the Rio Grande wants to participate as a "bridge line" on such traffic via its Colorado gateways and Ogden at joint through rates. At Sheets 20-22a the report speculates on rearrangement of portions of the Union Pacific lines with that of the Rio Grande to enable the latter to obtain its full main-line haul on the involved traffic and yet leave the Union Pacific a "substantial" haul west of Ogden and possibly east of Denver on the involved "bridge traffic." At Sheets 28 and 29 the report says that the amount of traffic the Rio Grande would gain from the Union Pacific cannot be determined but would depend on solicitation and persuasion by the Rio Grande to induce shippers to use its line as "an overhead or bridge route" and to take advantage of transit facilities on that line on traffic "for subsequent reshipment beyond." The growth of traffic "over" the Rio Grande in the period 1934-1948 is there emphasized. On Sheets 30-32 the position of the Rio Grande "as a bridge line" is discussed and emphasized by showing that its "bridge traffic" increased 326 per cent in the period 1934-1948 and that revenue from "bridge traffic" increased from $5,648,981 to $27,654,086 during that period. On Sheet 32a the importance of transit privileges on the Rio Grande to attract "bridge traffic"

to that line is again emphasized. All of the traffic involved in the long and detailed recitals at Sheets 33-45a of the report is "bridge traffic" some of which might either be transited or stopped to partly unload at points on the Rio Grande and subsequent movement beyond Ogden or Denver. The complaint does not involve traffic originated or terminated at intermediate points on the Rio Grande for joint rates now apply to that traffic.

[fol. 2442] The complaint is that of the Rio Grande seeking to divert bridge traffic from the Union Pacific and other defendants to its line in order to improve its financial condition, as stated in the above testimony of its president, and the Commission cannot by mere words transform the complaint into something which it is not, nor may it read into the complaint an issue under section 3(1) which it plainly does not present. *Lasker & Bernstein v. Director General,* 98 I. C. C. 624; *Barschi & Son v. Baltimore & O. R. Co.,* 155 I. C. C. 350.

The attempt to transform the complaint from a case of one carrier seeking to meet its financial needs by diverting traffic and revenues from another, into a complaint or case of undue preference and prejudice among shippers immediately encounters the following forbidding language of the Supreme Court in *Thompson v. U. S.,* 343 U. S. 549, 559-560:

> "The Commission, by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of Section 15(4), before the Court in *United States v. Great Northern R. Co.,* 343 U. S. 562 (decided this day)."

The Commission is without authority, under the guise of prescribing the method for removing alleged undue preference and prejudice between shippers who testified in this case, to accomplish the end sought by the complaint of diverting traffic from the Union Pacific to the Rio Grande. Being prohibited from diverting traffic and revenues directly to the Rio Grande to improve its financial situation,

the Commission may not escape the impact of that prohibi-
[fol. 2443] tion by resorting to an indirect and different "form of regulation." Its order in this case would accomplish such diversion of traffic and revenues to the Rio Grande just as effectively as if it did not mention undue preference and prejudice between shippers, but had instead directly ordered through routes and joint rates on the specified commodities via the Rio Grande to enable that line to enhance its financial position. In *U. S. v. Great Northern R. Co.*, 343 U. S. 562, the Court said at pp. 574-575:

> "It is one form of regulation to redistribute revenues between connecting carriers by determining divisions of revenues received on existing through routes. The economic ramifications are quite different if the Commission establishes through routes which divert traffic to the lines of a financially weak carrier. Such action not only serves to assist that carrier financially but can also at the same time, cause important changes in the movement of traffic, diverting traffic to a new geographic area at the expense of other carriers and other areas. Congress amended Section 15(4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs. But the provisions of Section 15(4)—the restrictions against short hauling, the financial-needs prohibition and emergency route provision—all deal with the Commission's power to establish through routes."

The complaint asked the Commission to indulge in "tinkering" with through routes and "through joint rates" which it alleged to be "necessary and desirable in the public interest," in order that, according to its own president's testimony, the Rio Grande could improve its financial position. In ordering through routes and joint
[fol. 2444] rates on the specified commodities, the Commission has affirmatively responded to the complaint to that extent and in so doing it has "tinkered" with through routes and joint rates inescapably to improve the Rio Grande's financial position. It is clear from the language of the decision just quoted that the prohibition against what the Commission has accomplished by its order in this

case cannot be evaded or defeated by indirection or by the form of the Commission's order. For these reasons the Commission should grant the motion to dismiss.

III.

The Commission Erred in Assuming the Power to Grant Relief to the Rio Grande on the Specified Commodities on the Theory That Because Certain Shippers Intervened and Testified, the Rio Grande's Complaint Became a Shipper Complaint Presenting Issues Under Section 3(1) of the Act.

At Sheet 9a of the report the Commission holds that the Rio Grande could not raise the question of undue preference and prejudice between shippers under section 3(1) in this case, but that this question is properly tendered for decision because of the presence of testimony by intervening shippers who, as we have shown, were solicited and procured by the Rio Grande to help it win its case. The intervention of shippers and others in this case was allowed upon the express condition that such interventions would not broaden the issues raised by the Rio Grande's complaint in violation of Rule 72(c) of the Commission's General Rules of Practice. Therefore, the finding of the Commission on Sheet 65, of undue prejudice and preference between shippers is not only beyond the issues which the Commission holds that the Rio [fol. 2445] Grande could raise against other railroads, but is also clearly beyond the issues which were permitted and to which the interveners were restricted. In other words, the interventions were limited and restricted to the issues which the Rio Grande could raise against the railroad defendants. Having found against the Rio Grande on the issues it could raise (except as to points on the Bamberger Railroad) the Commission's finding of a violation of section 3(1) is clearly a finding upon an issue which could not be raised in this case. In treating the case as involving section 3(1) the Commission has given the Rio Grande at least a part of what it seeks and what the Commission holds it is not entitled to receive within the issues it could raise and the evidence it submitted in support of them.

Moreover, even if the issue of undue preference and prejudice among shippers were properly in the case and if the finding made by the Commission were justified, then the remedy would be an alternative order directing the removal of the undue preference and prejudice, *Texas & Pac. Ry. Co. v. U. S.*, 285 U. S. 627. But instead of prescribing the alternative remedy for removal of the undue preference and prejudice, the Commission abandons the idea that this is a shipper case and resorts to its powers under section 1 by finding that the combination rates of the Rio Grande are unjust and unreasonable, and to its power under section 15(3) by requiring that through rates applicable thereto "the same" as those applicable on defendants' routes. Thus, for the purpose of making a finding under section 3(1) the Commission treats the case as a shippers' complaint, but for the purpose of pre-
[fol. 2446] scribing a remedy the Commission treats the case as a "public interest" case. In the end, by this confusing and intermingling by the Rio Grande of its solicited and procured shipper support, it gains so much of its purpose to divert traffic and revenues from the Union Pacific and other defendants as might result from the routing of the specified commodities via that line. In this devious manner the Union Pacific is severely short-hauled and deprived of the protection which it has under section 15(4) of the Act.

The Commission's effort to limit the impact of the short-hauling restriction "by using the form of order employed in this case" to divert traffic from one route to another is thoroughly condemned by the Supreme Court's decision in *Thompson v. U. S.*, 343 U. S. 549, 559-560. Such "tinkering with through routes" by the Commission is prohibited, *U. S. v. Great Northern R. Co.*, 343 U. S. 562, 575.

IV.

There Is No Evidence to Justify or Support the Findings That Combination Rates Via the Rio Grande Are Unjust and Unreasonable and That Joint Rates Now Applicable Via the Union Pacific Are Reasonable for Application Via the Rio Grande, and, in Fact the Latter Finding Is Contrary to the Evidence.

On Sheets 54 and 56, the Commission correctly admits that *the only evidence* submitted concerning the reasonableness of the combination rates and the joint rates is a showing of differences in the rates and car-mile and ton-mile revenue produced by them. In other words, the evidence on which the Commission finds that the combination rates via the Rio Grande are unjust and unreasonable is the mere fact that they are higher than the joint rates via Union Pacific, and the evidence on which the Commission [fol. 2447] finds the joint rates to be reasonable for application via the Rio Grande is the fact that they are lower than the combination rates, that they are the "going rates," that they have been there many years and the Commission's erroneous assertion that no one claims they are below a minimum reasonable level.

Although the Commission finds the joint rates to be reasonable because they are the "going rates," the report does not suggest any reason why the Commission thinks the combination rates are unreasonable. We are entitled, however, to presume that it is solely because they are higher than the joint rates via Union Pacific's shorter routes. The fact is, the Commission has not "adjudicated" the reasonableness of either of the rates. Admittedly, it has no evidence on which it could determine whether the combination rates are unreasonable, and the only evidence concerning reasonableness of the depressed subnormal joint rates compels a finding that they are less than minimum reasonable rates for application via the Rio Grande's longer route which the report admits to be "less favorably situated," (Sheet 47,) inferior physically and beset by conditions which make its operations "more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein" (Sheet 60a)—facts which the Commission admits it has recognized for many years (Sheet 60a) in granting the Rio Grande higher rates than those of the other lines. But here, the Commission ignores all of these difficulties and says the combination rates via the "onerous" Rio Grande route are unreasonable to the extent they exceed joint rates via Union Pacific's shorter route which is more favorably situated, without [fol. 2448] onerous operating conditions and with at least

a 24-hour shorter time in transit and one or two fewer interchanges.

Thus, the Commission has arbitrarily endeavored to flatten out and level off the admitted dissimilarities in the two routes by requiring the same rates over both.

In finding the combination rates via the Rio Grande unreasonable to the extent they exceed the joint rates applicable to the Union Pacific, the Commission has entirely disregarded the "more onerous" operating conditions on the Rio Grande which, as expressly found in the report (Sheet 62), result in "differences in transportation conditions" that are "substantial." Yet in *Laclede-Christy Co. v. Akron, C. & Y. R. Co.*, 276 I. C. C. 519, wherein the complainant, as in the instant case, sought to equalize aggregate "charges for transit and transportation" with those available via another railroad and paid by its "competitors for transit and for transportation from and to the same points of origin and destination," the Commission held at page 525 that it could not—

> "* * * disregard transportation conditions and require an adjustment of rates and charges merely for the purpose of equalizing or minimizing the advantages and disadvantages of competing shippers growing out of the geographical locations of plants for the manufacture of processing of materials in transit."

The Commission has so often, so long and so consistently held that bare comparison of the earnings of one rate with another does not afford evidence upon which to base a finding under section 1, that it seems hardly [fol. 2449] necessary to cite cases. However, we refer to a few of them, particularly because the Commission in this case seems to have forgotten its own ancient guides and principles. In dismissing a complaint alleging violations of sections 1, 2, 3, the Commission said in *McHenry-Millhouse Mfg. Co. v. N. Y. O. & W. Ry. Co.*, 151 I. C. C. 501, at page 502 that:

> "Value, volume of movement, average loading weights, and other transportation characteristics of the commodities herein considered are not shown of

record. Complainant apparently rests its case on the fact that defendants contemporaneously maintained a 20.5-cent rate on asphalt shingles and prepared roofing from and to points under consideration over shorter routes and also upon the additional circumstance of defendant's expressed willingness to establish the rate sought over the Oswego route. We have repeatedly said that the existence of a lower rate between the same points over a route other than the route of movement does not of itself establish the unreasonableness of the higher rate. There is no other evidence of unreasonableness or unjust discrimination in the rate charged, nor is there any evidence that complainants' competitors have been given any undue preference."

In *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 192 I. C. C. 192, where the sole issue was the reasonableness of combination rates charged, the Commission said at page 195 that:

"A lower rate over other recognized routes and established junctions is not in itself proof that combination rates over the route of movement were unreasonable."

After observing at page 195 of the report that the complainant "did not adduce any evidence, other than the [fol. 2450] rates, distances, and average lading of the shipments embraced in its complaint," to show the unreasonableness of the assailed rates, the Commission said (p. 196):

"The main contention is that it must pay these rates in excess of the joint rates accorded its competitors on similar traffic moving over open, and for the most part more direct, routes at applicable joint through rates, which are not assailed as unreasonable as group rates. We cannot require the establishment of these joint rates to destinations on the Erie over the Hagerstown-Greycourt route; neither can we condemn on the evidence of record the combination rates or either factor as unreasonable when applied to the shipments."

In *El Paso Chamber of Commerce v. A., T. & S. F. Ry. Co.*, 92 I. C. C. 75, 78, wherein revenue results of combination rates were compared with those of joint rates via other routes was the only evidence submitted on the question of unreasonableness, and in fact the comparison was made for the same purpose that the Rio Grande makes a similar comparison here, namely, to show that "present joint rates would not be unduly low" if applied by the Rio Grande, the Commission conceded that the combination rates there assailed "are on a high level, but the record affords no basis for a finding as to what level should be if, in fact, it demands the establishment of joint rates." In that case the Commission observed that dissimilarity in transportation conditions affecting the respective rates made the rate testimony of little value, while here the Commission has recognized (Sheet 60a) that transportation conditions on the Rio Grande are so much more onerous than and dissimilar from those on other western lines as to require and justify higher rates for its line than [fol. 2451] would be justified for other western lines, but, nevertheless, holds that combination rates via the Rio Grande should be no higher than the joint rates via the defendants' routes.

The Commission's consistent dismissal of cases alleging, as does the Rio Grande here, that combination rates via one route are unreasonable to the extent that they exceed joint rates via another route and seeking establishment of such joint rates via the first route, is sharply illustrated in *W. H. Mouser & Co. v. New York Central R. Co.* 211 I. C. C. 123, in which the Commission pointed to the fact that it had on such scant testimony refused to condemn a combination rate as unreasonable even though it was 49 per cent higher than the joint rate used for comparison.

The fact that the joint rates via the Union Pacific are somewhat lower than the combination of rates via the longer Rio Grande line with its dissimilar and costly transportation conditions, conforms to the rule rather than

presenting an exception. In *Coal to Minnesota Points*, 88 I. C. C. 631, the Commission said at page 639:

> "We have several times taken the position that a through rate, particularly for such long hauls as those here involved from the mines to the Twin Cities, might well be somewhat lower than the aggregate of the intermediate rates."

That view was reiterated in *Fargo Commercial Club v. A. & W. Ry. Co.*, 98 I. C. C. 691, in which the Commission said at pages 723-724:

> "We have consistently adhered to the view in recent years that joint rates should be somewhat lower than the aggregates of the intermediate rates because of [fol. 2452] the facts that ton-mile earnings should decrease as distance increases and that, as a general rule, a through movement entails less terminal expense than two local movements to and from the intermediate points."

In *Quanah, A. & P. Ry. Co., v. Atchison, T. & S. F. Ry. Co.*, 205 I. C. C. 253, upon the bare comparison of "various joint rates over the direct routes with higher combinations resulting if the traffic moved through the Floydada gateway," the Commission held at page 260:

> "Usually the combination is higher than the joint rate, and the mere showing of the difference in amount between them is not sufficient to condemn the combination as unreasonable."

The decision was affirmed on reargument and reconsideration, 211 I. C. C. 389. Later the case was reheard and additional evidence taken, as shown by the Commission's report on rehearing, 226 I. C. C. 201, but the holding just quoted with respect to the insufficiency of testimony offered in condemnation of the combination rates was affirmed in the following language on page 218:

> "However, the evidence with respect to the allegation of unreasonableness of the existing combination rates via the Floydada gateway is still limited to a

comparison of those rates with joint through single-factor rates maintained over other routes. In the circumstances it must be concluded that the extent to which the combination rates assailed in this proceeding may be unreasonable is not susceptible of accurate determination on the present record."

In *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183, at page 187, the Commission said:

[fol. 2453] " * * * the combination rates over a route that short-hauls a carrier may justifiably be higher than the joint rates remaining in effect over other routes. *Routing Grain and Grain Products via Chicago, R. I. & P. Ry., supra; Routing via Quanah, A. & P. Ry. Co., supra; Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127; *Routing of Ores via Southwest Missouri R.*, 220 I. C. C. 110."

See also *Routing Livestock to and From Oregon Points*, 209 I. C. C. 349, 351.

In *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127, a case identical to the Rio Grande's case here, the Western Pacific contended that the aggregate of separately established rates was unreasonable to the extent that it exceeded joint rates maintained by the defendants and because of the difference in the two sets of rates, the aggregate of locals was relatively unreasonable. It sought establishment of rates via its line equal to the joint rates maintained by the defendant. Rejecting the mere rate comparisons as insufficient to prove unreasonableness and dismissing the complaint, the Commission held at page 137:

"There is no proof of the unreasonableness of either factor of the combination rates, nor has it been established that the aggregate of those rates results in an unreasonable through charge. If we establish the joint rates demanded or accomplish the same result by establishing proportional or local rates to and from San Francisco, the aggregates of which would equal the present joint rates over the Southern Pacific's Ogden route, the result would be that the latter would be

short hauled, in disregard of its rights under the statute as construed by the Supreme Court."

[fol. 2454] In *Lehigh Portland Cement Co. v. Lehigh Valley R. Co.*, 238 I. C. C. 199, the Commission held at page 201:

> "Defendants also assert that an award of reparation herein would be, in effect, a retroactive establishment of joint through rates for which there is no public need and that section 15 (4) of the Interstate Commerce Act would be nullified. The statute makes it the duty of common carriers subject to the act to establish through routes and just and reasonable rates applicable thereto. Where this duty has been fully met and discharged and there exists both such reasonable through routes and joint rates, and other routes by combination over which no joint through rates apply, the carriers in our opinion are not required to maintain a parity of rates over both such routes, but may properly maintain through joint rates over joint through routes that are somewhat less than the combination of locals used to make the through rates applicable over the combination through routes, provided that neither rate, under all the facts and circumstances, is more than just and reasonable for the service performed. In this connection the fact that there are several available through routes, with reasonable joint through rates, and the fact that the effect of establishing a parity of rates over all routes would deprive a carrier of its legitimate claim to the long haul are matters which must be considered and given weight in determining whether the assailed rates are reasonable. See *Blue Grass Flooring Co. v. Louisiana & R. Ry. Co.*, 161 I. C. C. 574."

As Union Pacific's routes are some 200 miles shorter and are more direct and efficient than the longer routes via the Rio Grande, and shippers procured by the Rio Grande would use its route for transit only, the following language [fol. 2455] from the Commission's decision in *Kansas City Hay Dealers Asso. v. C., G. W. R. R. Co.*, 49 I. C. C. 372, should govern here:

"To compel the application of short-line rate over indirect and longer routes, merely as a means of providing a channel of doubtful benefit to comparatively few shippers, would lay an unnecessary expense upon the railroads against the interest of the public as a whole. When joint rates that are neither unreasonable nor unduly prejudicial are maintained over direct routes adequate response is made to the reasonable requirements of the public, and carriers should not be required to perform wasteful transportation by maintaining the same rates over indirect and more circuitous routes."

If, as found by the Commission, the combination rates via the Rio Grande are unreasonable merely because they exceed the single-factor through rates applying via the route of the Union Pacific through Wyoming, then the many hundreds of thousands of other combination rates applying elsewhere in the United States by reason of specific routes or individual lines' exceptions in any tariff are also unreasonable. If a combination rate via one route becomes unreasonable and unlawful simply because it is higher than a joint rate between the same points via some other and in this instance a much shorter route, the only remedy lies in wide-open interchange between all lines via every available junction point, regardless of carriers' rights under section 15(4) not to be short-hauled, regardless of the Commission's consistent holdings that joint through rates should generally be somewhat lower than the combination of rates between the same points, re-[fol. 2456] gardless of increased terminal and interchange costs by including additional carriers, and regardless of the fact that the result would be to wipe out many basic rate-making principles on which the rate structure has been built.

Despite its admission (Sheets 54-55) that the joint rates are depressed and subnormal, the Commission uses them merely because they are the "going rates" as the measure by which to condemn the combination rates and to determine reasonable rates for application via the longer Rio Grande line through Ogden. This is "not a full discharge

by the Commission" of its duty to adjudicate and determine the reasonableness of rates, *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, 510. It is not an adjudication or determination at all. It is simply an arbitrary requirement that the lowest rates charged by carriers shall be the maximum rates they may charge over routes they are forced to establish, regardless of whether the rates are subnormal and depressed or even confiscatory.

This cannot be justified in the face of the fact that the Commission has always condemned the use of depressed rates as a standard of reasonableness for maximum rates, and for measuring the reasonableness of other rates. *Merchants' Exc. of St. Louis v. Missouri Pac. R. Co.*, 248 I. C. C. 683, 689; *Mississippi Vegetable Shippers Bureau v. A. & R. R. Co.*, 248 I. C. C. 365, 366; *Patten-Blinn Lbr. Co. v. Tucson, C. & G. B. R. Co.*, 255 I. C. C. 757, 762; *Foye v. Atchison, T. & S. F. Ry. Co.*, 255 I. C. C. 466, 468.

In *Geo. A. Hormel & Co. v. Atchison T. & S. F. Ry. Co.*, 263 I. C. C. 9, 43, the Commission said that rates apply-[fol. 2457] ing between practically all points between which the traffic moved even though competitively compelled, afforded a "guide for determining" the reasonable level of rates for the future. The Commission did not hold in that case that the truck-compelled rates would be the reasonable rates for application in the future, but merely that their existence was a factor in "determining" reasonable rates. Here, the Commission holds that the exact present subnormal and depressed joint rates via the Union Pacific are reasonable for application via the Rio Grande for the sole reason that they are the "going" rates.

In the *Hormel case, supra,* there was, as shown in the 54-page decision, a huge volume of evidence of all types before the Commission relating to the history of rates, volume of traffic, competitive conditions, transportation characteristics, a cost study and every other conceivable type of testimony. Moreover, in that case the Commission did not prescribe the "going" truck-compelled rates, but instead prescribed other and different rates.

The Commission well knows that the rates on the commodities specified in the order, like rates on agricultural

products throughout the country, are generally on a subnormal and depressed level and have been held down by the Commission itself through allowing smaller increases in rates than allowed on other commodities in the various general rate increases. Potato rates from Idaho to the east have always been on a very low basis for the express purpose of assisting the growers in marketing their crops in the large consuming areas in competition with production in Maine, New York, Michigan, Wisconsin, Minne-
[fol. 2458] sota, the Dakotas, Nebraska and Colorado (R. 1201). The Commission has recognized the low level of those rates but at the same time holding that the potato traffic could not bear normal, full, reasonable rates because of conditions in the industry and the great distance of Idaho from the eastern consuming markets. *Commercial Club of Greeley v. C. & S. Ry. Co.*, 53 I. C. C. 66; *Potatoes and Vegetables From West and Northwest*, 210 I. C. C. 753; *Idaho Public Utilities Comm.* v. *Alton R. Co.*, 251 I. C. C. 93. In the latter case, the Commission said at page 105 that the Idaho potato rates were even "upon relatively lower levels than rates in effect generally on similar agricultural products" which, as we have just observed, are and have been on a depressed and subnormal level for many decades.

Rates on dry onions are similarly depressed and subnormal as are the rates on potatoes and for the same reasons, as recognized by the Commission in the cases just cited (R. 1207).

In *Lettuce from Idaho, Montana, Nevada, and Oregon*, 229 I. C. C. 572, the Commission said at page 577 that the rates from the Idaho-Oregon district to eastern destinations "are considerably less than reasonable maximum," but the Commission, nevertheless, after reciting the then poor financial condition of producers, the great distances from consuming markets and the relationship of the rates to the depressed rates on potatoes and other commodities, refused to permit the carriers to increase the subnormal lettuce rates. For the same reasons again in *Fresh Green Vegetables from Idaho and Oregon*, 253 I. C. C. 143, the Commission refused to permit the carriers to increase the
[fol. 2459] depressed and subnormal rates on lettuce and

other fresh green vegetables from Idaho and Oregon producing points, stressing particularly the poor conditions of the industry and, at page 158, the assertion by producers that any increase in the vegetable rates would "probably put an end to the commercial production of lettuce in this territory" and concluded that "the proposed rates are higher than the traffic will bear."

We ask the Commission to reconsider and give weight and effect to the following table (Ex. 26) which shows that while the revenues produced by rates on some of the commodities are insufficient to show a net profit even when the traffic moves via the shorter Union Pacific route, on other commodities it leaves a small net profit which would be turned into a considerable loss when spread over the longer mileage of the Rio Grande:

[fol. 2460]

Commodity	From	To	Mileage Via UP	Mileage Via D&RGW	Net Profit or Loss — Per Car — Via UP	Net Profit or Loss — Per Car — Via D&RGW	Net Profit or Loss — Per Car Mile (Cents) — Via UP	Net Profit or Loss — Per Car Mile (Cents) — Via D&RGW

(L) Denotes loss.

[fol. 2461] Not only would the meager revenue from these abnormally low rates be diluted by the cost of transporting the involved traffic over the 200-mile longer Rio Grande route, but also by $20.44 or $40.88 per car because of the necessity of one and sometimes two additional interchanges when moved via the Rio Grande (R. 1269). Since there is no evidence on which the reasonableness of the rates could be determined, the Commission's order would compel application of the joint rates via the Rio Grande irrespective of whether those rates would be reasonable, compensatory or even confiscatory when spread out over the additional 200 miles of transportation via that line.

V.

Refusal of the Union Pacific to Equalize Shippers in the Matter of Transit Privileges Offered by the Rio Grande Is Not, in Law, a Violation of Section 3(1) of the Act, Regardless of Whether Such Equalization Is Sought Through Establishment of Transit Privileges or Reduction in Rates.

The findings in the report make it definite and certain that the undue prejudice found therein against shippers and receivers using the Rio Grande results wholly and solely from the fact that they cannot take advantage of transit privileges on that line at rates as low as those available on the Union Pacific under which similar transit privileges are available. Also, that the asserted undue preference of shippers using the Union Pacific is due solely to the fact that they have the same transit privileges that shippers have on the Rio Grande, but at lower rates. This is made clear at Sheet 60, and by the following language on Sheet 63 of the report:

> [fol. 2462] "As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments westbound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs eastbound, *who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and tran-*

sit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3(1) of the act." (Emphasis supplied.)

Thus, the order is that defendants establish through routes and joint rates with the Rio Grande so as to equalize shippers on that line with shippers on Union Pacific routes in the matter of transit privileges.

Present Rio Grande combination rates *with* transit privileges, its shippers, and the Rio Grande say, are useless, for shippers have lower rates with transit via the Union Pacific. Joint rates *without* transit privileges via the Rio Grande would also be useless, since the use of transit privileges is found by the Commission to be the only purpose the joint rates would serve on that line. It would not satisfy the Rio Grande's purpose or the shippers' pretended desire if the Union Pacific and other defendants withdraw transit privileges on their lines.

The Rio Grande could give its shipper witnesses what they say they want by merely reducing its local rates so as to off-set the difference between them and the rates of the defendants, and since it declines in that manner to [fol. 2463] satisfy the desire of its shipper witnesses, it becomes even clearer that all the Rio Grande seeks is a division of the revenues earned by the defendants. The Rio Grande says it is in competition with the Union Pacific, and it is here asking the Commission to compel joint rates forcing the Union Pacific to meet its own competition with the Rio Grande.

In *Adrian Grain Co. v. Ann Arbor R. R. Co.,* 276 I. C. C. 331, the Commission *refused to require the establishment of joint rates for transit privileges* via through routes that would short haul the Ann Arbor Railroad. All of the new routes sought in that case were longer than those in effect, which is the identical situation in this case. The Commission there expressed the view that the publication of the sought routes would encourage wasteful and uneconomic transportation and would not give reasonable preference to the originating carrier as required by section 15(4) of the Act. Granting the Rio Grande's de-

mands in this case would likewise encourage 200 extra miles of wasteful and uneconomic transportation in addition to short hauling the Union Pacific 1,000 miles on traffic it originates.

The situation of shippers supporting the Rio Grande in the instant case is identical to that of the complainant in *Laclede-Christy Co. v. Akron, C. & Y. R. Co.*, 276 I. C. C. 519, in which the Commission dismissed a complaint seeking—

> "* * * the *same through charge* on the clay in and the brick out with transit at St. Louis as its competitors pay with transit at Mexico, East Mexico, Farber, and Vandalia." (p. 525) (Emphasis supplied)

[fol. 2464] The complainant's disadvantage in transportation costs in that case ranged from $47 to $83 per carload more than those of its competitors who had transit privileges at lower rates published by the Gulf, Mobile & Ohio in order "to attract and hold traffic" (p. 524). Finding that longer mileage and greater operating costs—both of which are involved on the Rio Grande—created dissimilarity in transportation conditions with respect to complainant's shipments compared to those of its competitors, the Commission held at page 525:

> "It is not within the province of the Commission to disregard transportation conditions and require an adjustment of rates and charges merely for the purpose of equalizing or minimizing the advantages and disadvantages of competing shippers growing out of the geographical locations of plants for the manufacture of processing of materials in transit. *Magor Car Corp. v. Delaware, L. & W. R. Co.*, 144 I. C. C. 135, 138. There is no indication that the through charges on shipments to and from the competing transit points are lower than reasonable minimum charges, nor that the differences between such charges and the through charges on shipments to and from St. Louis are greater than warranted by the differences in the transportation conditions. In the circumstances here shown, we can find no basis for a finding of unlawful-

ness as alleged under the first three sections of the act."

The ultimate finding of the Commission was—

> "We find that the assailed rates and transit arrangements are not shown to have been or to be unreasonable, unjustly discriminatory, unduly prejudicial, or in violation of section 4 of the act. The complaint will be dismissed." (p. 526)

The Commission holds that transit privileges are purely local to the railroad on which the transit point is located, [fol. 2465] *Concentration of Cotton at New Orleans,* 83 I. C. C. 18, 20, and it held in *Transit Arrangement on Lumber,* 129 I. C. C. 518, at page 520, that:

> "Connecting lines can not dictate to the road that alone serves the transit point the manner in which joint rates through that point shall be applied in conjunction with the transit arrangements, so long as they are not deprived of their long haul. *Concentration of Cotton at New Orleans,* 83 I. C. C. 18; *Transit Privileges on Cotton,* 83 I. C. C. 60."

In *Grain From Mobile and New Orleans Transited in South,* 218 I. C. C. 437, at page 440, the Commission said:

> "It is a well-settled principle, however, that the granting or withholding of transit is a matter which may be determined solely by the carrier that serves the transit point. *Transit Privileges on Cotton,* 83 I. C. C. 60; *Transit Privileges on Lumber,* 132 I. C. C. 53; and *Sugar Stored in Transit,* 146 I. C. C. 382. It is clear also that a carrier may not be found guilty of undue prejudice for failing to maintain a transit privilege at points on its line merely because like privileges are in effect at points on the lines of other carriers. *Central R. Co. of New Jersey v. United States,* 257 U. S. 247. In such instances an order requiring the removal of undue prejudice would not permit the carrier an alternative in the method of such removal."

As neither the Rio Grande nor the Union Pacific may dictate to the other with respect to transit privileges, it is clear that the Union Pacific would have the right to refuse to join in the rates if in connection with them the transit privileges were established by the Rio Grande on its line. Certainly, Union Pacific would have that right [fol. 2466] in this case where it would be so thoroughly short hauled.

As the Union Pacific and other defendants do not and cannot control either the establishment or cancellation of transit privileges on the Rio Grande or the manner in which rates shall be applied to such privileges, we confidently assert that the Union Pacific and other defendants have no such legal responsibility or connection with the alleged disadvantage of shippers using the Rio Grande and its transit privileges as could make out a case of undue prejudice to those shippers or of undue preference of shippers on the Union Pacific within the meaning of section 3(1).

The situation of the Rio Grande's shipper witnesses is like that of the shipper on whose behalf the Commission issued a section 3 order which was enjoined and annulled by the Supreme Court in *Central R. Co. of New Jersey v. United States*, 257 U. S. 247. In that case, the Commission ordered 23 railroads to remove undue prejudice caused by the refusal of the Central of New Jersey and the Pennsylvania to establish a creosoting in transit privilege on their lines at Newark, New Jersey, for American Creosoting Company while at the same time participating in through routes and joint rates with other carriers in the middlewest and south which other carriers had established that transit privilege on their lines. The Court pointed out that the shipper's plant at Newark was not reached by any of the 23 railroads except the Central and the Pennsylvania, neither of which accorded the transit privilege at points on their lines and no competitor of the shipper had a plant on the lines of either of those two roads.

[fol. 2467] The purpose of the complaint and of the order there, as here, was to *equalize* shippers on *different* railroads in the matter of transit privileges. There the

railroads had equal rates but the Central and Pennsylvania refused to grant transit privileges available on the other railroads. Here, the defendants have the same transit privileges offered by the Rio Grande, but refuse to join in equal rates to equalize transit opportunities of Rio Grande shippers.

At pages 255-256, the Court said:

> "The appellants did not participate in any way in establishing the transit privileges enjoyed by competitors of the Newark concern on lines of the Southern and Midwestern carriers; and none of those carriers is controlled by any of the appellants. But appellants did join with those Southern and Midwest railroads in establishing joint rates on forest products over routes which pass through the points at which this privilege prevails and also through Newark."

At pages 259-260, the Court further said:

> "It is urged that, while the undue prejudice found results directly from the individual acts of Southern and Midwestern carriers in granting the privilege locally, the appellants, as their partners, make the prejudice possible by becoming the instruments through which it is applied. * * * If that rule should prevail, only uniformity in local privileges and practices or the cancellation of all joint rates could afford to carriers the assurance that they were not in some way violating the provisions of section 3. What Congress sought to prevent by that section as originally enacted was not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them *by the same car-*
> [fol. 2468] *rier or carriers.* Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose or scope of section 3." (Emphasis supplied)

In *H. H. Robertson Co. v. Pennsylvania R. Co.*, 268 I. C. C. 37, the Commission dismissed the complaint, saying at pages 42 and 43:

> "* * * a carrier is not guilty of undue prejudice for failing to maintain a transit arrangement at points on its line merely because like arrangements are in effect at points on the lines of other carriers. *Central R. Co. of New Jersey v. United States*, 257 U. S. 247 (1921).
>
> * * * * *
>
> "Complainant's argument that the decision in *Central R. Co. of New Jersey v. United States, supra,* is vitiated is untenable. The Commission has adhered to the principles enunciated therein in such recent proceedings as *Allowances on Cottonseed at C. & G. Ry. Points*, 238 I. C. C. 309 (1940); *Livestock—Western District Rates*, 238 I. C. C. 425, 472 (1940), and *Traffic Bureau, Lynchburg C. of C. v. Norfolk & W. Ry. Co.*, 237 I. C. C. 408, 410 (1940)."

In *Wool Rates Investigation, 1923*, 91 I. C. C. 235, the Commission rejected the contention that eastern lines unduly prejudiced Boston shippers in refusing to equalize them in the matter of transit privileges with shippers on western lines. At pages 284-285, the Commission held:

> "It is shown that the eastern lines participate with the western carriers in joint rates on the eastbound wool, which include transit if authorized by the tariffs of the individual carriers, but transit is [fol. 2469] accorded only on the rails of the western and midwestern lines, and it does not appear that the carriers serving Boston grant transit on wool at any point on their lines. The Boston Wool Trade Association, however, contends that the transportation act, 1920, contemplates that the railroads of the country should be considered as one national system of transportation, and that the eastern carriers, forming a part of such national system and participating in joint rates, are unduly discriminating against Boston in refusing to grant transit at that point while permitting

it at Portland and the Middle West points. It will suffice to say that a finding to that effect would be contrary to the conclusion of the Supreme Court of the United States in *Central R. R. Co. v. United States*, 257 U.S. 247."

The Commission did find, page 288, that the Pennsylvania and the Baltimore & Ohio unduly prejudiced Philadelphia shippers in refusing them transit privileges while according them to other shippers at other points *on their own lines.*

We submit that refusal of the Union Pacific and other defendants to join in rates with the Rio Grande for the purpose of equalizing shippers on their lines with those on the Rio Grande in the matter of transit may not be made the basis of an order under section 3(1), regardless of whether such equalization is sought through establishment of transit or reduction in rates.

[fol. 2470]

VI.

Even if a Lack of Equality With Respect to Transit Privileges of Shippers Served by the Rio Grande and Shippers Served by Union Pacific Could Amount to Undue Prejudice and Preference Under Section 3(1), the Facts and Evidence of Record Do Not Support or Justify the Finding That the Combination Rates Via the Rio Grande Are Unduly Prejudicial of Shippers and Receivers of Monuments, Westbound, Livestock, Fresh Fruits and Vegetables, Dried Beans, Frozen Poultry, Frozen Foods, Butter and Eggs, Eastbound, Who Desire to Reconsign or Transit Shipments at Intermediate Points on the Rio Grande, and Unduly Preferential of Shippers and Receivers Using the Union Pacific.

It is clear from statements and findings in the report and from the ultimate conclusions that although granting part of the Rio Grande's demands to improve its financial position, the order purports to be essentially for the benefit of shippers and receivers located in the so-called "excluded territory in the Northwest Area." The traffic sought by the Rio Grande is either originated or received by shippers in that area. For example, on Sheet 44 of

the report it is stated that shippers and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, "from the excluded territory" are at a serious disadvantage in marketing their products compared with "competing shippers and dealers located on the Union Pacific," and on Sheet 60 the report says "The shippers in the originating area" are debarred from effective participation in the marketing system developed for the specified commodities. Again, under "Conclusions" on Sheet 65 the westbound monuments are from shippers in Vermont and Georgia to receivers at "destinations in the excluded territory in the Northwest area" and the eastbound commodities specified are from shippers at "origins in the excluded territory to destinations" in eastern and [fol. 2471] southern United States. The undue prejudice and undue preference of shippers found in the second conclusion is with respect to the specified commodities "from and to the points described in the foregoing finding," that is, the first finding or conclusion.

The shippers and receivers in the "excluded territory" include the few who supported the complaint and the far greater number who opposed it. They are *all located on the Union Pacific* or its connections in the Northwest and all of them have available *the same* Union Pacific routes with *the same* joint rates and *the same* transit privileges.

We submit that the situation thus presented cannot serve as a basis for a lawful finding of undue prejudice and preference within the meaning of section 3(1) because the same identical shippers and receivers are claimed by the report to be unduly prejudiced when they route their traffic over the Rio Grande and unduly preferred when they route their traffic over Union Pacific routes. Those shippers have the choice, under the Commission's finding, of unduly prejudicing themselves by routing over the Rio Grande or unduly preferring themselves by routing over the Union Pacific. The undue prejudice found against them in the report when they ship over the Rio Grande is due to the claimed undue preference they receive when they ship via Union Pacific routes at lower joint rates. In other words, those shippers and receivers

may alternatively prejudice or prefer themselves as and when they choose. Where shippers have such choice of becoming at once the prejudiced and the preferred, we sub- [fol. 2472] mit that their election to become "prejudiced" shippers by routing over the Rio Grande when they have the choice of being the "preferred" shippers by routing over the Union Pacific, does not present a case within the meaning of section 3(1). It requires two different shippers to make a case under section 3(1)—one who is prejudiced and another who is preferred. The same shipper cannot be prejudiced by his own preference. In short, the Commission cannot make a case of undue prejudice against these shippers when they route via the Rio Grande by pointing to their own preferred status when they route over the Union Pacific.

In *Routing Cottonseed to Kansas and Missouri*, 231 I. C. C. 775, the Commission approved routing restrictions giving certain carriers their long haul in connection with "lower cut-back rates in lieu of the higher gross local rates" and rejected the contention that a discriminatory situation would result if one mill shipped out over a route which entitled it to the cutback rates while another did not. At page 779, the Commission said:

> "Protestants also state that the effect of the suspended schedules would be to create a discriminatory situation, because mills located upon other lines would not be subject to the same restrictions as those located upon the lines of respondents. However, *a carrier cannot be charged with unlawful prejudice against a community which it does not serve.* Protestants further contend that when there are two mills located at the same point on respondents' lines an unlawful situation would be created if one mill shipped out over a route which entitled it to the cut-back rates while the other did not. Apparently the same situation prevails today. *This is simply a matter of a mill availing itself of the cut-back rates, with their limita-* [fol. 2473] *tions, or not doing so.* Differing circumstances and conditions may justify differences in charges. In the present situation the fact that respondents are accorded their long haul on the out-

bound-products movement is a sufficient difference in circumstances and conditions to justify assessing, in connection with such movements, the lower cut-back rates in lieu of the higher gross local rates." (Emphasis supplied)

We have been unable to find, and in fact we have never heard of any case until the instant decision by the Commission, in which a shipper has been permitted to make out a case of undue prejudice against himself by pointing to his own undue preference, nor have we heard of a case, except the instant one, where a carrier has been held guilty of undue prejudice against shippers located on its line because it offered lower rates over its route than the *same shippers* had over another route. We repeat that these shippers and receivers in the Northwest area cannot make out a case of undue prejudice against themselves when routing over the Rio Grande by pointing to their own preferential status when routing over the Union Pacific.

Moreover, the finding of undue prejudice and preference is contrary to the evidence and to the fact correctly found by the Commission on Sheet 62 that there are substantial differences in transportation conditions over the Union Pacific routes and over the Rio Grande routes via Ogden. These substantial differences in operating and transportation conditions cannot be eliminated, erased or ignored, as the Commission attempts to do, by "spreading" them over longer hauls. The substantial differences in transportation conditions are due, as the report correctly finds, [fol. 2474] to the less favorable location of and the onerous operating conditions on the Rio Grande between Ogden and Denver, and they exist regardless of the distance the traffic moves beyond the termini of the Rio Grande. The only tenable comparison of transportation conditions is of conditions on the Rio Grande route between Ogden and Denver and those on the Union Pacific route between McCammon, Idaho, and Cheyenne and Denver. The only evidence of record concerning transportation conditions is confined to the comparison of the two railroads between those points. There is not a word of evidence concerning transportation conditions on routes south of the southern

Kansas border and east of the Missouri River and south of the line of the Chicago and North Western between Omaha and Chicago.

The complaint does not allege or bring in issue the question whether any shippers are unduly prejudiced, and the Commission has held that it is not at liberty to read into a complaint an issue which it plainly does not present. *Lasker & Bernstein v. Director General*, 98 I. C. C. 624; *Barschi & Son v. Baltimore & O. R. Co.*, 155 I. C. C. 350.

The Commission agrees (Sheet 9a) that the Rio Grande may not plead an issue of preference and prejudice between shippers under section 3(1), but it erroneously says that the issue is raised by intervening shippers and is "fairly tendered here for decision." All of the shipper interventions were permitted on the specific condition that they would not unduly broaden the issues properly raised by the Rio Grande's complaint. The Commission's ruling now that a section 3(1) issue is properly here for decision [fol. 2475] sanctions a clear violation of or departure from Rule 72 of its own General Rules of Practice, and reads into the complaint an issue which the Commission holds, the Rio Grande could not plead. The finding under section 3(1) and whatever recitals that relate to it should therefore be stricken from the report.

Moreover, even if an issue under section 3(1) has been tendered by shipper testimony, it must, under the Commission's own settled practice and precedents, be treated as withdrawn and no finding should be made on it because the complaint and the shippers supporting it do not seek an alternative order but instead demand exact parity only, by reduction of the combination rates via the Rio Grande.

In *Boise Payette Lumber Co. v. Abilene & S. R. Co.*, 146 I. C. C. 457, 462, it held:

> "Moreover, complainant states that it does not seek an alternative order which could be complied with by increasing the rates from the Truckee-Hawley group. It asks only that we require the desired parity by reductions. In the previous case we regarded a similar statement as practically a withdrawal of the allegation of undue prejudice and made no finding with

respect to that issue. The same course should be followed here."

And in *Sewerage Commission of Milwaukee v. Aberdeen & R. R. Co.*, 190 I. C. C. 601, 604-605, it stated:

"Fundamentally, undue prejudice cannot exist unless the resulting injury will cease upon removal of the prejudice regardless of the manner of its removal. *Duluth Chamber of Commerce v. Chicago, St. P., M. & O. Ry. Co.*, 122 I. C. C. 739, 742. In cases where [fol. 2476] parity has been sought only by reductions, we have regarded the allegation of undue prejudice as withdrawn. *Boise Payette Lumber Co. v. Abilene & S. Ry. Co.*, 146 I. C. C. 457, 462. No finding will be made on the allegation of prejudice and preference."

See also *Lone Star Asphalt & Petroleum Corp. v. A. & S. R. R. Co.*, 196 I. C. C. 65, 68, and *Brown v. Union Pac. R. Co.*, 225 I. C. C. 309, 312.

The record contains no evidence whatever to conform to the Commission's repeated holding that prejudice to be undue and unlawful must ordinarily be such that the prejudice suffered by one is a source of positive advantage to another and that a competitive relationship must exist between the persons or commodities affected. *Hayes Pump & Planter Co. v. Atchison, T. & S. F. Ry. Co.*, 171 I. C. C. 13; *Archer-Daniels-Midland Co. v. Great Northern Ry. Co.*, 171 I. C. C. 192; *Dewey Portland Cement Co. v. Alton & E. R. Co.*, 176 I. C. C. 671, 685; *Evansville Cham. of Com. v. Atchison, T. & S. F. Ry. Co.*, 196 I. C. C. 349.

There is no evidence of specific shipments, damage or actual injury, or concerning the particular shippers who have the advantage that must be shown to establish undue prejudice. *Kistler Leather Co. v. Baltimore & O. R. Co.*, 171 I. C. C. 669, 673; *Alpena Leather Corp. v Pennsylvania R. Co.*, 185 I. C. C. 106; *Alpha Lux Co. v. Reading Co.*, 178 I. C. C. 16; *City of Moorhead v. Gt. Nor. Ry.*, 172 I. C. C. 38, 43; and *Knoxville Freight Bureau v. Southern Ry. Co.*, 156 I. C. C. 315, 319.

The mere fact that the Union Pacific accords transit on its lines and joins in rates with other lines that accord

[fol. 2477] it, while refusing to make joint rates with the Rio Grande so shippers via its line may avail themselves of that line's transit privileges at rates lower than the Rio Grande's combination rates will not support a finding against the Union Pacific of undue prejudice against shippers, particularly in the absence of probative evidence relating to competitive conditions or relative disadvantage due to the lack of such joint rates via the Rio Grande and the record contains no such evidence. *Nutrena Feed Mills v. Missouri Pac. R. Co.*, 169 I. C. C. 673. A general declaration as to competition or injury not supported by evidentiary facts, and a mere showing of disparity in rates are not sufficient to support a finding of undue preference and prejudice. *Barrett Co. v. A., T. & S. F. Ry. Co.*, 172 I. C. C. 319, 333; *Anson, Gilkey & Hurd Co. v. Gt. Nor. Ry.*, 182 I. C. C. 102, 116; *Corporation Comm. of N. C. v. Aberdeen & R. R. Co.*, 200 I. C. C. 571, 589; and *E. Cohn & Son v. Cedar Rapids & I. C. Ry.*, 209 I. C. C. 417, 419.

A showing of origins and distances of actual shipments in addition to other facts concerning both the preferred and the prejudiced competitors is essential to a finding of undue prejudice and the record here makes no such showing. *Abrasive Co. v. Erie R. Co.*, 183 I. C. C. 103.

Granting or withholding transit is a matter to be determined "solely by the carrier that serves the transit point," and since a carrier is not guilty of undue prejudice for failing to maintain transit privileges at points on its line merely because like privileges are available on lines of other carriers, it necessarily follows that the Union Pa-[fol. 2478] cific and other defendants could not be guilty of undue prejudice for failing to join with the Rio Grande in rates that would induce shippers to use existing transit privileges on that line. *Grain from Mobile and New Orleans Transited in South*, 218 I. C. C. 437, 440; *Wool Rates Investigation, 1923*, 91 I. C. C. 235, 284.

Even if there were evidence, which there is not, of the necessary elements and probative force to support a finding of undue prejudice against shippers with respect to the commodities discussed in the report "the carriers should be required to go no further than may be necessary in order to remove that discrimination," *Anderson*

Lumber Co. v. N. P. Ry. Co., 87 I. C. C. 425, 436. Certainly, a finding of undue prejudice against shippers in violation of section 3(1) could not be a lawful basis for an order to relieve the Rio Grande from alleged violations of sections 1(4) and 3(4), or for compelling through routes and joint rates for the financial benefit of the Rio Grande.

While the report strives to make it appear that shippers and receivers in the "excluded territory" may not have made sales of their products at some points in the southwest because of so-called "pocket" markets claimed to result from routing restrictions the report does not even attempt to suggest that any shipper located either in the "excluded territory" or on the Rio Grande has ever lost a sale or any business to any alleged competitor located on the Union Pacific. There is not one word of evidence in the record to prove that shippers located on the Rio Grande or in the "excluded territory" have ever suffered the slightest injury inflicted upon them by com- [fol. 2479] petitors located on the Union Pacific, and in fact shippers and receivers in the "excluded territory," being themselves located on the Union Pacific, could not make such contention, for their rates and privileges are the identical rates and privileges available to whatever competitors, if any, they may have on the Union Pacific.

There is no evidence to show that the lower joint rates available to shippers and receivers located on the Union Pacific have been in any instance the source of undue prejudice or disadvantage to any shipper or receiver located on the Rio Grande, and in fact, while there is testimony to the effect that some shippers and receivers located on the two railroads are engaged in the same business, there is no evidence to prove actual competition between shippers or receivers on the Rio Grande and those located on the Union Pacific. At most the alleged competitive relationship rests upon mere general self-serving declarations by shippers who support the Rio Grande's complaint. All that is proved by the evidence of record is that shippers on the Union Pacific have lower rates than shippers located on the Rio Grande, but as shown above, the Commission has always held that a mere disparity in rates will not justify a finding of undue prejudice and preference.

Neither can the Commission's finding that through routes and joint rates via the Rio Grande are necessary and desirable in the public interest, lend any support to a finding of undue preference and prejudice between shippers for it is settled that to constitute a violation of section 3(1) a competitive relationship must exist in which it must be shown that prejudice suffered by one shipper is a source of positive advantage to another, and in such case [fol. 2480] the carrier or carriers must be left an alternative in removing the prejudice. *Texas & Pacific Ry. Co. v. U. S.*, 289 U. S. 627, 650. Therefore, the remedy for undue prejudice cannot be found in the prescription of through routes and joint rates under section 15(3).

We will now discuss the testimony concerning the specified commodities with respect to which the report erroneously states on Sheet 63 a finding of undue prejudice and preference under section 3(1) of the Act is justified:

Monuments Westbound: The report states on Sheets 36a and 60a that a "fabricator and wholesaler" of monuments at Brigham City, Utah, *on the Union Pacific*, 21 miles north of Ogden, has "a special need" for through routes and joint rates on granite and marble monuments from Georgia and Vermont "to destinations in the excluded area" and that the need is "urgent" to enable the Brigham City dealer to fabricate stone at that point and ship in less-than-carload quantities to a retailer at Grand Junction on the Rio Grande and to stop to partly unload at intermediate points on the Rio Grande. On such fabricated stone the shipments would move from Vermont or Georgia to Brigham City and under the Commission's order would move in less-than-carload quantities, presumably at the balance of joint through rates, in a *back-haul* of 332 miles from Brigham City to Grand Junction.

The fabricator and wholesaler at Brigham City stated that his entire business which he distributes to retailers in various states would not exceed *four carloads a year* (R. 549) and the business of the retailers is so small that [fol. 2481] they cannot deal in carload lots. (Sheet 36a)

The Brigham City dealer has "keen" competition at Salt Lake City. Since both of these dealers are located at points served by the Union Pacific they have identical

rates and transit privileges. The Brigham City dealer testified that he has complete transit privileges on all shipments that move via Union Pacific to destinations on its line (R. 549) and as Salt Lake City is on the line of the Union Pacific apparently both the dealer at that point and the dealer at Brigham City may fabricate or transit stone and move it on into Idaho at equal joint rates to points on the Union Pacific. Since the joint rates do not apply via the Rio Grande, neither of these dealers can ship via that line at joint rates and transit privileges. In other words, they are on exactly the same basis with respect to shipments moving over the Rio Grande and those moving over the Union Pacific. There could not possibly be either preference or prejudice as between them. As to the less-than-carload retailers at points on the Rio Grande, their situation is simply that of hauling less-than-carload shipments at carload rates. It is not the duty of the Union Pacific or any other railroad to equalize a retailer with a wholesaler for the Supreme Court has held that "The law does not attempt to equalize fortune, opportunities or abilities," *Interstate Com. Comm. v. Diffenbaugh*, 222 U. S. 42, 46. If this were not the law, then every less-than-carload shipper would be entitled to rates and privileges that would equalize him with carload shippers.

The report states on Sheet 36a that "A substantial portion of this traffic has been lost to the trucks." While [fol. 2482] the witness said that the business was going to the trucks, he made it plain that from the railroads "we don't get the service that the truck people give us" (R. 545); that his competitor trucks stone from the West Coast and from Wisconsin and Minnesota in "duplex trucks" and that he cannot compete with those conditions (R. 546). Since the total business of this Brigham City wholesaler would not exceed four carloads per year and his retailers can handle only less-than-carloads, it seems the height of frivolity for the Commission to assert that there is an "urgent" and "special" need for through routes and joint rates via the Rio Grande on this commodity, especially since nothing will be accomplished except to furnish distribution service by rail of less-than-

carload lots at carload rates. Regardless of the desire of these dealers to increase their profits to that extent, the fact remains that the Brigham City dealer is at no disadvantage whatever compared to his alleged competitor at Salt Lake City and it results that there is no possible evidential basis for a finding of undue prejudice and preference between the shippers of this commodity.

In *Salt from Louisiana Mines to Chicago*, 69 I. C. C. 312, the report of the full Commission on further argument holds at page 316:

> "The economic problem should not be confused with the transportation problem. Primarily it is not our concern to equalize market competition. *Western Cement Rates*, 48 I. C. C. 201, 234."

In *Magor Car Corp. v. D., L. & W. R. R. Co.*, 144 I. C. C. 135, the Commission said at page 138:

> "The advantage enjoyed by the fabricators in the Pittsburgh district lies in the close proximity of their [fol. 2483] plants to the steel-producing district. In *Vinegar Rates from Pacific Coast*, 81 I. C. C. 666, we said:
>
> > "'We have repeatedly held, however, that we can not regulate rates for the purpose of equalizing cost of production or manufacture and that "primarily it is not our concern to equalize market competition." *Salt from Louisiana Mines to Chicago*, 69 I. C. C. 312, 316.'"

All of the commodities in connection with which the report says there is a basis for a finding of undue prejudice and undue preference are eastbound except westbound monuments just discussed.

Livestock: The inclusion of livestock in the finding of undue prejudice and undue preference is a complete repudiation by the Commission of rates prescribed by it in *Livestock Western District Rates*, 176 I. C. C. 1, credit at Sheet 39a of the report where it is correctly said that the rates prescribed in that case were predicated on the shortest routes but that carriers were not required to

maintain the rates over such routes where it would result in short hauling within the meaning of section 15(4) of the Act. The rates thus prescribed in that case were found to be reasonable and are set forth in the miles scale in Appendix H to the report.

It is the rates so prescribed by the Commission itself in that case which resulted in the 13-cent rate advantage pointed out on Sheet 41 which operators and feeders in the Arkansas Valley on the lines of other carriers have on cattle from the southwest over feeders located on the Union Pacific; and it is the same Commission prescribed rates which give the operators and feeders on the Union [fol. 2484] Pacific the 8.5-cent advantage on cattle from the northwest over feeders and operators at points on the Rio Grande whose advantage is greater by 4.5 cents on cattle from the southwest than shippers on the Union Pacific have on cattle from the northwest.

The report offers no explanation whatever for its destruction of the rate structure the Commission created in the *Livestock* case. It merely observes that operators in the Arkansas Valley have to absorb 8.5 cents on livestock from the northwest (Sheet 40), and it shows on Sheet 41 that operators on the Union Pacific have to absorb 13 cents on cattle from the southwest, but suggests no reason why the Arkansas Valley operators should be permitted to retain their 13-cent advantage while the operators on the Union Pacific must give up their 8.5-cent advantage. Plainly, the Commission's order would create undue prejudice against some 30 operators, producers and feeders on the Union Pacific and undue preference of operators and feeders located on the Rio Grande.

Moreover, as pointed out in the report, the Commission in prescribing rates in the *Livestock* case, definitely protected railroads against short hauling, but as shown on Sheet 41a of the report in the instant case, the Commission now proposes to short haul the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City, to enable livestock to move from the northwest over the 219-mile longer route of the Rio Grande. In no other case since its decision in the *Livestock* case has the Commission departed from the rates and short-haul protection prescribed

in that case, and the two decisions cited on Sheet 41a [fol. 2485] demonstrate the Commission's consistent adherence to the rates and formula prescribed by it in that case. The record contains no facts and the report refers to none which could possibly justify the finding of undue prejudice and undue preference with respect to shippers of livestock. The only apparent justification is that the Commission now seems to think that its decision in the *Livestock* case should be forgotten so that the Rio Grande may move cattle from northwest over its longer circuitous route at the same rates such cattle now move over the shorter more direct line of the Union Pacific.

It is incomprehensible that the Commission would resort to such drastic action in this case in the face of its decision in the *Livestock* case, and in view of the following finding in *Los Angeles Union Stock Yards Co. v. C., M., St. P. & P. R. Co.*, 222 I. C. C. 23, at page 28:

> "The Commission said in *Investigation of Alleged Unreasonable Rates on Meats*, 23 I. C. C. 656, at page 662:
>
> > "'The transportation of livestock demands, above almost any other kind of freight, expedition in service. Cattle or other live animals should be gotten to the market at the earliest possible moment and with the least possible railroad haul. Considering, therefore, the nature of the transportation, almost any additional length of haul would render the route unduly circuitous and would justify us in establishing a joint rate over the direct line even when a two-line haul was involved. We can not, however, make any general order which will meet this situation, but must apply our mandatory process to particular cases, which must be presented and [fol. 2486] considered upon their individual merits."
>
> "Considering the character of this traffic, we are of the opinion that the shortest established routes through Oregon from points in Montana to points in California are unreasonably long within the meaning of Section 15(4) of the act in instances where they are more than 150 miles longer than the routes of the

Union Pacific through Silver Bow or Butte from and to the same points."

At page 83 of the decision in the *Livestock* case the Commission held that livestock could not be expected to do more than "pay its own way", that it could not sustain rates which would produce more than cost of service plus a minimum of profit, that under rates therein prescribed there was room for doubt whether livestock moving more than 1,000 miles would produce more than a small margin above actual cost of transportation. The Commission now ignores all of these circumstances and would require these depressed and subnormal rates to be applied over the Rio Grande's longer route while short hauling the Union Pacific over 1,000 miles.

The Commission also ignores the fact that, of the total eastbound movement of 6,453 carloads of animals and animal products in 1948 from Idaho, Montana, Oregon and Washington via the Union Pacific, practically all of which terminated in the northern half of the eastern half of the United States, 5,094 carloads originated on the Union Pacific in Idaho and Montana and that line would receive an extremely short haul and very little revenue if the movement was via Ogden with the Rio Grande; nor to the fact that 61 per cent of all traffic originating on the [fol. 2487] Union Pacific in Idaho is loaded at branch line stations and incurs very high gathering costs ranging from $18.99 to $106.12 per car (R. 1236, Ex. 27).

These facts require that the Union Pacific be given reasonable preference in accordance with the mandate of section 15(4), which the report and order also erroneously ignore.

We urge the Commission in the light of the foregoing, and the more extended discussion at pages 413-430 of Union Pacific's exceptions and brief, to reverse its finding of undue preference and undue prejudice with respect to livestock.

Agricultural Commodities: At Sheet 42 of the Report the Commission states that producers of and dealers in several agricultural products in Idaho "market such products throughout the United States" and then inconsistently

states that they "need as many markets and outlets as possible," thus implying that markets "throughout the United States" are not sufficient outlets for those products. The report states that because carloads of these products routed over the Union Pacific and connections through Denver to points in the southwest, and after trying markets in that area, cannot be diverted to markets east of New Orleans at joint through rates "The southwestern markets are pocket markets in that respect." This means nothing short of "wide-open routing," complete elimination of any routing restruction on these products, nullification of the short haul prohibition in section 15(4). The Commission is not at liberty to nullify or to eliminate by construction [fol. 2488] or application the impact of the protection given carriers by the short-haul prohibition. *Thompson v. U. S.*, 343 U. S. 549.

The "pocket market" theory is not only contrary to the short haul provision of section 15(4), but is in fact an illusory and mythical invention by the Rio Grande in the hope of improving its own financial condition. The utter unreasonableness of the theory and contention based on it is demonstrated by the fact that an actual count of cities and towns having populations of 1,000 and more in the southwestern states of New Mexico, Texas, Louisiana, Arkansas and Oklahoma shows that there are 1,060 such markets which these shippers under present joint rates and routing, may "try" in those states, 45 of which have populations of 25,000 or over (Rand McNally Commercial Atlas and Marketing Guide, 1952). We submit that it is wholly unreasonable to demand that after trying all these markets at the joint rates available, shippers of potatoes and other agricultural commodities be permitted to go on into six or eight southeastern states at the joint rates and continue to "try" markets in that area. As the routing restrictions apply to all shippers alike, there can be no basis for a finding of undue prejudice and preference.

Moreover, as shown in the testimony of witness Stilling, discussed at pages 435-437 of Union Pacific's exceptions and brief the so-called "pocket market" situation discussed by a few shippers supporting the Rio Grande does not actually exist and no attempt to deny or rebut his

testimony was made by either the Rio Grande or its supporting shipper witnesses. In demonstrating that the [fol. 2489] "pocket market" theory is essentially a camouflage, Mr. Stilling said (R. 1239-1240):

"If movement into Wichita is via Denver and the AT&SF Ry., shipments may be diverted to any point on the Santa Fe System lines in Kansas, Oklahoma or Texas and to destinations on many other lines in Texas with which the Santa Fe makes connection. If movement into Wichita is via Denver, Colorado, and the CRI&P Railroad, shipments may be diverted to points on that line in Kansas, Oklahoma and Texas and to Little Rock, Arkansas, and Memphis, Tennessee, also to destinations on many other lines in Texas with which the Rock Island makes connection.

"If movement into Wichita is via Kanopolis, Kansas, and the Missouri Pacific Railroad, shipments may be diverted to stations on Missouri Pacific System lines in Kansas, Oklahoma, and Texas, also to destinations on many other lines serving Texas, Arkansas, Tennessee and Alabama, including such points as Shreveport and New Orleans, Louisiana, Mobile, Alabama, and Memphis, Tennessee.

"If movement into Wichita is via Ellsworth, Kansas, and the StL-SF Railway, shipments may be diverted to all stations on that line and to stations on many connecting lines in Oklahoma, Texas, Arkansas, Louisiana, also to St. Louis, Missouri, and via St. Louis to the entire southeast or to Chicago and quite generally to other points in Illinois and to Iowa and other points in Western Truck Line Territory. Routing via Ogden with the Rio Grande to Denver or Pueblo and its connections beyond would not give the shippers any greater outlet beyond Wichita, Kansas, than they have via routes presently in effect unless [fol. 2490] some of the prairie lines permitted expensive out-of-line hauls via Wichita.

"During the year 1948, 5,295 carloads of potatoes moved out of Idaho into Oklahoma and Texas. The movement of dry onions amounted to 145 carloads. Many of these carloads undoubtedly did move through

Wichita; and, if sufficient time was available to determine the actual Oklahoma or Texas destination of each car, it could be shown that most of them could have tried the Wichita market and then have been diverted to its actual destination at the through one-factor rate.

"Many additional cars terminating in the southeast and in Western Trunk Line territory could also have tried the Wichita market via the route through Ellsworth with the StL-SF Railway.

"The preceding remarks about routing on potatoes and onions to Wichita, Kansas, and points beyond also applies to lettuce and any other vegetable shipped out of Idaho."

Fresh Fruits: No shipper located within the "excluded territory" could possibly be unduly prejudiced by lack of joint rates via the Rio Grande in shipping fresh fruits to markets south and east of Denver, for all such markets are "wide open" to fruit from the "excluded area" under joint rates with transit via the Union Pacific and its Denver and other connections (R. 423, 579; Ex. 25, p. 15).

Thirteen shippers of fruits from the northwest area testified that in shipping many thousands of carloads of various kinds of fresh and frozen fruits annually, they [fol. 2491] had never experienced any need or desire for joint rates via that line and that the lack of such rates presented no handicap or disadvantage in their reaching all markets for their products (V. S. 48, 26, 30, 24, 19, 27, 23, 25, 22 and R. 1638, 1372 and 1353). One witness located on or near the Union Pacific at North Ogden, Utah, professed a desire for joint rates via the Rio Grande (R. 259), but the orchards from which the fruit is obtained are located in the vicinity of or nearby Ogden and trucked to that place for movement by rail (R. 261). A portion of his fruits are shipped to a receiver and processor at Delta, Colorado, on the Rio Grande and his claim is that joint rates with the Rio Grande are desirable for such movement despite the fact that the greatest distance required for the truck movement to Ogden is only 18 miles

and the buyer at Delta instructs him to truck the fruit to Ogden for loading on the Rio Grande (R. 262). This grower makes no claim or pretence that he has lost business or has been injured in any way because of competitors located on the Union Pacific and it is certain from his testimony that the fruit he ships to Delta would continue to move from the orchards by truck to Ogden for loading on the Rio Grande because, the fruit must be trucked from the orchards to a rail loading point and the distance is obviously so short that it is certainly more economical to truck the fruit on into Ogden. That he is not handicapped is clearly shown by his statement that he ships to markets at Topeka, Omaha, Wichita, Kansas City, Dallas, New Orleans and sometimes to Chicago (R. 264).

The receiver and processor of fruit at Delta (R. 175) is located in an area that grows an abundant supply of the [fol. 2492] fresh fruits which he processes (R. 1248-1249) and it is plain from the testimony that the Delta processor has no need or desire to purchase fruit in Idaho except when he finds an over production there which enables him to buy the fruit at distressed or salvage prices. He said, "I don't want a lower rate, I want a freezing in transit privilege" (R. 183). The Rio Grande can satisfy that shipper by broadening the scope of its transit tariff.

We submit that the testimony concerning fresh fruits is without substance or probative force to afford any basis whatever for the finding of undue prejudice and undue preference. Certainly, that testimony proves no legal injury or disadvantage inflicted by the Union Pacific upon the North Ogden producer or upon the Delta processor and it establishes no "need" sufficient to justify short hauling the Union Pacific on fruit that now reaches markets south and east of Denver via the Union Pacific's direct and shorter line.

Potatoes and Other Vegetables: The producers and shippers of potatoes and other vegetables from the "excluded territory" are all located on the Union Pacific and all of them have the choice of joint rates and transit privileges via the Union Pacific or they may ship via the Rio Grande with transit privileges at the higher combination rates. Apparently, those who support the Rio Grande's com-

plaint are regarded by the Commission as unduly prejudiced by lack of equal rates via the Rio Grande, but as we have previously pointed out, since they also have advantage of lower rates via the Union Pacific they fall within the class of preferred shippers on the Union Pacific and it [fol. 2493] results that their preferential status on the Union Pacific becomes the cause of their claimed prejudice in connection with the Rio Grande route.

No shipper or receiver of potatoes or other vegetables located at points on the Rio Grande, testified in support of the complaint, hence there is no claim by shippers located on that line of any disadvantage or prejudice caused by lack of joint rates via that line on these products. It results that the basis for the finding of undue prejudice to shippers of fruits and vegetables using or desiring to use the Rio Grande route is the fact that they have lower rates available to them via the Union Pacific, on which line they are located, and that the only way in which they could be prejudiced would be to elect to route over the Rio Grande instead of the Union Pacific. Thus, the alleged prejudice claimed by shippers who elect to route via the Rio Grande becomes the source of their own positive advantage when they elect to ship over the Union Pacific. This could not be a basis for a finding under section 3(1). It may not be said that a shipper is *in competition with himself* over the routes of these two railroads.

The Commission's rejection at Sheets 44-44a of the suggestion that if the record shows that any relief is needed it could, as admitted in the report, be given by lifting restrictions in connection with routes of the Union Pacific to Denver and connecting lines beyond, finds no justification in the assertion on Sheet 44a that the only effective remedy is the establishment of the same rates over the Rio Grande as those over the Union Pacific. The mere desire [fol. 2494] of such shippers for an additional longer and more onerous route via the Rio Grande does not constitute the "need" which could justify short hauling the shorter, direct and more efficient line of the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City (Sheet 41a), or to any other point.

That the Idaho shippers of potatoes and other vegetables have not been handicapped in their distribution and mar-

keting by the lack of through routes and joint rates via the Rio Grande and have no need for them in the future, has already been shown by many facts, one of its shipper witnesses declaring that *he sells his product in every state in the United States and in several foreign countries* (R. 334). Particular emphasis is given to this fact by shippers who testified for the Union Pacific and by data on pages 96 and 97 of the Commission's decision in *Idaho Public Utilities Comm.* v. *Alton R. Co., supra.* It is there shown that in 1939 Maine shipped 40,462 carloads of potatoes and Idaho, 34,522 carloads, but in markets "far more distant from Idaho than from Maine" the Idaho shippers sold very substantial quantities where Maine sold small or insignificant quantities. At page 96 the report states:

> "At Chicago, where in 1938 and 1939 the totals were 15,863 and 16,506, respectively, there were 5,323 carlot unloads of potatoes from Idaho in 1938 and 5,374 in 1939, and there was but 1 carlot unload of Maine potatoes in 1938 and none from that State in 1939."

The following table and comment at page 97 of that report shows the freedom of movement and effectiveness of competition of Idaho potatoes and onions:

[fol. 2495] "Carlot unloads of potatoes, year 1939

At	From Idaho	From Maine
Atlanta, Ga.	218	197
Detroit, Mich.	651	435
Indianapolis, Ind.	294	66
Louisville, Ky.	102	13
Nashville, Tenn.	279	4

> "For several years, the Idaho potato traffic has increased at most, if not all, of the principal markets. At several cities in the East, South and West, carlot unloads of onions from Idaho exceeded unloads from points in most other States."

In the face of these facts it is difficult to understand how, in fairness and good conscience, the conclusion could be

reached that "Idaho producers * * * find it difficult to compete" (Sheets 42-42a); and that:

> "The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities." (Sheet 60)

Idaho potato shippers having practically taken over many important markets throughout the United States and selling also in foreign markets, we wonder what the Commission really thinks "effective participation" could mean. Moreover, equal rates via the Rio Grande could not enable them to sell in any market in which they can not now sell. They do not claim that they are unable to reach all the markets. Instead, their claim is that they can not "try" all of the markets in the country at joint through rates. Since all shippers of fruits and vegetables in the "excluded territory" have exactly the same rates with the same reconsigning and transit privileges, and the same routing [fol. 2496] restrictions, there can not possibly be undue prejudice or preference among them.

Dried Beans: The undue prejudice finding includes dried beans handled by two Colorado bean dealers discussed on Sheet 43 of the report. One of these is Fred Simpson, Jr., who said he wants to purchase red beans in Idaho for mixing in transit at Colorado Springs with other beans he purchases from California, Idaho, Colorado, New Mexico, Nebraska and Wyoming, and sell the mixed beans mostly in the southeastern section of the United States east of the Missouri River. He now has rates under which he can transit Idaho beans at Colorado Springs and ship to all markets west of the Missouri River (R. 567-568).

The other bean mixer is Max Osborn, Fruita, Colo. He wants Idaho beans for packaging at his Fruita plant and selling to local customers. His sources of supply are the same as those of Witness Simpson (R. 572, 576). He said he had a "customer" at Gering, Nebraska, but apparently meant a competitor, who is located on the Union Pacific and has the benefit of transit at that point on dried beans originating in Idaho (R. 575). These two Colorado bean

dealers can, of course, ship Idaho beans via the Rio Grande for transit at their respective places of business, but at higher rates than they would have if the joint rates sought by the Rio Grande are required to be established. They apparently have transit privileges at satisfactory joint through rates on beans that they buy from all other states than Idaho and therefore they merely want a rate reduction on the Idaho beans.

[fol. 2497] The claim of these witnesses that Idaho beans are needed in some of their mixtures is quite likely a screen to hide the fact that what they really want is the benefit of the 15-cent per 100 pounds lower Government price support on Idaho beans than the price support in other states (R. 570). In fact Osborn said he handles "pinto" beans and Idaho red beans (R. 573), but he handles Idaho beans only "for local consumption" and that—

> "We don't mix them, we bring them in for packaging in cellophane for local trade only." (R. 574)

Osborn further said his "local trade consumes Idaho varieties * * * which constituted a major part of our bean operation" (R. 576), and it is therefore plain enough that he is not shipping mixtures containing Idaho beans, that he disposes of such Idaho beans as he handles to his local trade, and that he has no need for transit on those beans.

Their "customer" at Gering, Nebraska, is Chester B. Brown Company, for whom witness Snyder filed Verified Statement 52.

The company's plant at Gering is located on the Union Pacific and it has another plant at Morrill, Nebraska, on the Chicago, Burlington & Quincy Railroad. That company purchases beans in Colorado, Utah, Oregon, Washington, Wyoming, Montana and Nebraska, and after processing them at its Morrill or Gering plant ships them to customers generally east of Colorado and Wyoming and as far as the Atlantic Seaboard, and Oklahoma and Texas. Witness Snyder testified that his company often finds it necessary to purchase certain varieties of beans at origin [fol. 2498] points from which through rates do not apply to the ultimate destination. In such cases his company pays the higher combination rates and charges for out-of-

line hauls which must be absorbed in meeting competition. He also purchases beans from origins on which no transit privilege is available and on which the combination of rates into their Morrill and Gering plants and from those points to final destination is the only rate applicable. For example, he purchases Pinto beans from Colorado largely along the Rio Grande on which the pays an out-of-line haul of 7 cents per 100 pounds over the direct through rate when processed at Gering on the Union Pacific and final destination is at the Missouri River or beyond. He cannot obtain Colorado beans for processing at his Gering plant and movement beyond to points west of the Missouri River except at higher combination rates into and out of Gering, but he stated that this was not an unusual situation among bean dealers in western territory and many of them either absorb the higher transportation costs or avoid such sources of supply. His company established the one plant at Gering on the Union Pacific and the other at Morrill on the CB&Q in order to obtain beans from as large an area as possible with the least possible absorption of costs for out-of-line hauls "recognizing that a railroad granting the transit privilege and performing the terminal service, is entitled to its long haul into and out of the transit station from its origin territory" (page 4).

It is clear that this company would be unduly prejudiced in violation of section 3 of the Act with respect to shipments of beans from Colorado if the sought rates are re- [fol. 2499] quirred on Idaho beans with transit at the plants of Osborn and Simpson at Fruita and Colorado Springs who can and do presently obtain Colorado beans at no cost above the through rate on which beans witness Snyder's company must pay an out-of-line charge of 7 cents per 100 pounds when final destination is at the Missouri River or beyond, and must pay a straight combination of local rates when destination is west of the Missouri River. In addition, Snyder states that his Colorado competitors would be added competition for beans in the Idaho market, and he points out that they already have "free" access to producing areas in Utah and California and would have added "free" access to Idaho, Oregon and Washington on the Union Pacific for shipment to the Missouri River

and beyond. Snyder testified that granting the Rio Grande's demands in this case would have a detrimental effect on his company's business because it would open up additional territory to his Colorado competitors both for supply and market, leaving them with advantages in addition to those they already have and leaving his company with the disadvantage it has in the rates on beans from Colorado and certain other origins. He said that beans from all the involved origins can move "free" to any consuming territory and that there is no need for routing via the Rio Grande so far as distribution of the bean crop in the territory under discussion is concerned. He said that the addition of that route would not give any rate reduction to growers, processors or the consuming public and that the only advantage would accrue to his Colorado competitors at the expense of others, including his company, and that the additional traffic that the Rio Grande might obtain would be at the expense of the Union Pacific.

[fol. 2500] It is obvious from this testimony that the Commission's order would create undue prejudice against the Nebraska dealers and undue preference of the Colorado dealers.

Frozen Poultry, Frozen Foods, Butter and Eggs: The testimony on which the Commission finds undue prejudice and undue preference with respect to these products is that of two cold storage plant operators located at Pueblo, Colorado. No producer or shipper of these products located in the "excluded territory" testified about these products or expressed any need or desire to store these products in transit at Pueblo. Witness Stanger (R. 342) said he shipped "processed" turkeys from Idaho Falls to Philadelphia, New York and Chicago, but neither he nor any other shipper located in the "excluded territory" even hinted that they needed or desired joint rates via the Rio Grande for storage in transit of frozen poultry, frozen foods, butter or eggs at Pueblo. W. G. Miller (R. 768) supported the Rio Grande's complaint. His company ships canned fruits and vegetables from Milton, Oregon, but he expressed no need or desire for storage in transit at Pueblo. His only reason for Rio Grande routes was to have them available in times of emergency—which he already has under section

15(4). Marion Olsen, President, Cache Valley Turkey Growers Association (V. S. 6) ships turkeys to eastern points from Paradise, Utah, but he opposed the complaint and has no need or desire for the Rio Grande route or storage at Pueblo.

The testimony of the two cold storage plant operators at Pueblo affords no basis whatever for the Commission's finding of undue prejudice and undue preference with re- [fol. 2501] spect to these products. While they claim they have two competitors at Denver (Sheet 42a) it is not shown whether such competitors are actually located on the Union Pacific or that they have inflicted any injury upon or caused any damage or loss of business whatever to the Pueblo cold storage operators.

It is correctly shown at Sheet 42a of the report that what the Pueblo storage operators want is to apply the joint rates via the long route of the Rio Grande making Pueblo "intermediate" to Denver, which, as shown on Sheet 13, adds 175 additional miles via the Rio Grande. Pueblo is 119 miles south of Denver. It is obvious that the geographical locations and operating and transportation conditions of the Denver and Pueblo storage plants are too dissimilar to afford any basis or justification for the Commission's finding of undue preference of the former or undue prejudice to the latter. Moreover, to require 175 miles' additional transportation merely to reduce freight charges of the Pueblo operators would clearly be a flagrant example of "wasteful" transportation.

The fact is that no shipper submitted any testimony about storage in transit at Pueblo. The two witnesses who testified about storage conduct storage plants at Pueblo and their only purpose is to increase their storage business. Both of these plants store fruit among other products and both witnesses admitted the fact that they already have joint through rates on fruit from Idaho via the Union Pacific and Denver and connecting lines beyond under which they can store or process in transit at Pueblo and ship the fruit at the balance of the joint through rates to all destinations (R. 423, 579).

[fol. 2502] The first of these two witnesses was Belcher (R. 417), and although his location has the advantage of

a four-way railroad center, north, south, east and west, and has joint through rates via the Union Pacific, the fact that he is located 119 miles south of Denver necessitates a back haul from Pueblo to Denver on products from the Northwest via the Union Pacific to Pueblo if he takes any business from the two storage operators at Denver. What he wants is that the same joint rates that he now has via the Union Pacific and connections be made applicable via the Rio Grande in order to make Pueblo an intermediate point to Denver so he can take business from the two storage plants at Denver. If this justifies short hauling the Union Pacific then every shipper in the United States would have a right to compel routes and joint rates through the point where he is located so as to make his location intermediate at joint through rates with transit privileges to all destinations over all routes. The proposal is absurd and is contrary to the repeated decisions of the Commission cited elsewhere in this petition holding that carriers may restrict routing in protection of their long hauls except in cases where actual discrimination results. "There is no express requirement of law that routes *must* pass through particular intermediate points," *Pennsylvania R. Co. v. United States*, 54 F. Supp. 381, 392, and having deliberately located his plant at a four-way railroad center where he could have the services of several railroads, this witness is not in position to claim a right to be precisely equalized with the situation of the two storage plants in Denver who likewise have no through routes and joint rates via the Rio Grande and who are entitled to the benefits of their geographical location, regardless of the purposes of [fol. 2503] the Rio Grande in this case. Belcher's plant is not on Rio Grande trackage, but is served by the Santa Fe and C&S and any shipments received via the Rio Grande would necessitate an interchange with those carriers and a switch movement by them to his plant (R. 422).

The second of the two storage plant operators at Pueblo is the American Stores Company, Inc. (R. 577). That company did not wish "to take sides in the matter, and expressed a desire to be neutral" (R. 583) in this case, but witness Heidel, who is the manager of the Pueblo plant, was subpoenaed by the Rio Grande, and he claimed he

was appearing "in the interests" of his company, but it is obvious that the management of his company did not feel sufficiently interested in the Rio Grande's case or in joint rates via that line to make any such representations as Heidel made. Like the plant of witness Belcher, the plant of American Stores handles fruits among other things and, as stated, already has joint through rates via the Union Pacific with storage and other transit privileges at Pueblo, and to all destinations beyond.

American Stores buys Idaho lambs at Ogden for slaughter and packing at its Pueblo plant (R. 580). Of course, it has joint through rates via the Union Pacific with transit privileges at Pueblo, but Heidel stated that for the past year the lambs were shipped via the Rio Grande from Ogden to Pueblo at the higher combination rate in order to avoid one feeding en route which would be necessary if they moved via the Union Pacific. He also said the lambs suffered less "shrink" when moved via the Rio Grande because they were delivered "more rapidly" (R. 581).

[fol. 2504] We submit that the desire of Belcher and the lack of desire by American Stores, but the thought of its Pueblo manager that joint rates via the Rio Grande would expand the operations at these Pueblo plants, afford no ground for compelling the Union Pacific to short haul itself nearly 600 miles merely to divert the traffic from its own direct single line to Denver, to the line of the Rio Grande, nor for a finding that these Pueblo operators are unduly prejudiced.

VII.

The Finding That the Substantial Differences in Transportation Conditions Found in the Report to Exist in Hauls Over the Union Pacific and Over the Rio Grande Via Ogden Between the "Excluded Territory" and Points North and West of the Southern and Eastern Boundaries of Kansas, the Missouri River and the Lines of the Union Pacific and Chicago and North Western Railroads From Omaha to Chicago "Become Relatively Insignificant" and that "Transportation Conditions Are Substantially Similar" for Hauls Between Points in the "Excluded Territory" and Points South and East of the Described Territory, Is Arbi-

trary, Erroneous, Contrary to and Without Support of Evidence.

The evidence which proves the substantial differences found at Sheet 62 between transportation conditions over the Rio Grande and those over the Union Pacific is the evidence to which reference is made at Sheets 46-47 and 60a of the report showing that the Union Pacific routes are shorter, more favorably situated, is efficiently operated and furnish good service; that comparison of physical characteristics shows that the Rio Grande is less favorably situated, is longer and that its operating conditions are "more onerous" than those on the Union Pacific or any other transcontinental defendant. These dissimilarities in transportation conditions on the Rio Grande compared to those on the Union Pacific have always been recognized by the [fol. 2505] Commission, as shown in *Commercial Club, Salt Lake City v. A., T. & S. F. Ry. Co.*, 19 I. C. C. 218, 221-222, and in the cases cited on Sheets 60a-61 of the report.

The dissimilarities in transportation conditions affecting the traffic in question are due entirely to conditions on the Rio Grande between Ogden and Denver compared to operating conditions on the Union Pacific between McCammon, Idaho, and Cheyenne and Denver. Excepting this comparison between the points mentioned of the Rio Grande and the Union Pacific, there is no evidence whatever in the record concerning or comparing transportation conditions on other parts of the Union Pacific or routes in which it participates with routes in which the Rio Grande participates or with routes that could be made via its line. Therefore, there is not a scintilla of evidence to justify the conclusions on Sheet 62 that the proved dissimilarity of conditions on the Rio Grande and those on the comparable portion of the Union Pacific "become relatively insignificant" and that "transportation conditions are substantially similar" between points in the "excluded territory" and points south and east of Kansas, the Missouri River and the Chicago and North Western to Chicago. The conditions on the Union Pacific and the Rio Grande which give rise to the substantial differences in transportation conditions are local to the Rio Grande and the Union Pacific between McCammon and Cheyenne and Denver, and those

conditions cannot be avoided, eliminated, diluted or be made to disappear by the arbitrary and erroneous statement that they "become relatively insignificant" for long hauls to the southern and eastern part of the country. The dissimilar conditions are fixed by nature and are per- [fol. 2506] manent. There is no escape from them in either long hauls or short hauls, for the traffic sought by the Rio Grande must encounter its disadvantageous conditions when moving over that line. The Commission is without authority to ignore or eliminate these dissimilarities by "spreading" them over long hauls, and the attempt to do so is plainly contrary to the evidence which proves that the dissimilarities exist because of unfavorable conditions on the Rio Grande between Ogden and Denver.

If the Commission were correct in this method of eliminating differences in transportation conditions then any difference in conditions no matter how great could be disregarded if the hauls which encountered the differences were long enough. In other words, by this erroneous and arbitrary process the Commission would make the question whether transportation conditions are dissimilar depend entirely upon distance and would disregard the physical and other characteristics which create the differences. These dissimilarities are physically fixed and located in Idaho, Wyoming, Utah and Colorado and they are encountered just as effectively on hauls to the southern and eastern part of the country as on hauls to Western Trunk Line territory.

We submit that the process, method or reasoning by which the Commission concludes that transportation conditions are substantially similar for hauls between the "excluded territory" and the southern and eastern part of the country is arbitrary and erroneous and contrary to the evidence which proves the existence, presence and geographical location of the dissimilar conditions which the [fol. 2507] report finds to exist with respect to shorter hauls.

VIII.

The Conclusion That Through Routes and Joint Rates on the Specified Commodities Via the Rio Grande Are "Necessary and Desirable in the Public Interest, in Order to Pro-

vide Adequate and More Economic Transportation" Is Contrary to the Overwhelming Preponderance of the Evidence, Contrary to and Inconsistent With Facts Clearly Found and Stated in the Report and Is Based Upon an Erroneous Interpretation and Application of the Words "Needed in Order to Provide Adequate and More Efficient or More Economic, Transportation."

On Sheet 59 the report correctly states that the complaint does not allege that defendants' routes are not adequate for the traffic hauled and that complainant requests no finding to that effect. The report then incorrectly suggests that the lack of such request may be due to the Rio Grande's contention that through routes via Ogden and its line already exist. The real reason that the Rio Grande made no such allegation or request is explained by facts found in the report and by testimony of its Vice President Bradford who said (R. 1694):

> "In regard to the testimony of Mr. Hanson, may we again state that at no time have we in any way questioned the capacity of the Union Pacific Railroad physically to handle the business it now handles, nor have we at any time in this case brought up for discussion the relative efficiency of the Union Pacific-Rio Grande."

While the complaint alleges (p. 7) that the sought through routes already "exist," and that complainant and "the public" are deprived of the use of available and reasonable through routes at reasonable and non-discrim- [fol. 2508] inatory "through joint rates which are necessary and desirable in the public interest" (pp. 12-13), it does not allege that the through routes with joint rates are "needed in order to provide adequate, and more efficient or more economic, transportation." In fact, the complaint alleges no reason or circumstance which, if proved, could under section 15(4) justify short hauling the Union Pacific.

The Commission concludes, however, that no through routes within the meaning of the Act now exist by way of the Rio Grande on the traffic concerned and that any order requiring establishment of such routes and joint

rates over them must be grounded upon findings that such routes "are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation" (Sheets 9-9a). Thus, since the Commission cannot short haul a railroad except under one or more of the conditions specified in section 15(4), its conclusion is that its order must rest upon an issue not presented by the complaint. Despite its own rulings that "we are not at liberty to read into a complaint an issue which it plainly does not present," *Lasker & Bernstein v. Director General*, 98 I. C. C. 624, 626, and *Barschi & Son v. Baltimore & O. R. Co.*, 155 I. C. C. 350, the Commission attempts to supply the missing allegation by saying (Sheet 59) that testimony of shippers raises a "question" as to the "need for more adequate and economic service than afforded by existing routes with respect to some commodities." But, even this "question" does not present an *issue* of the circumstances on which the Commission says the short-hauling order must be grounded.

[fol. 2509] On Sheet 58, the Commission concludes that "more efficient or more economic" transportation are not determinative considerations "unless the existing routes can be found *not* to provide 'adequate' transportation."

Hence, the first and determinative consideration is not, as the report and order imply, whether there is need for "*more* adequate and economic service than afforded by existing routes," but whether Union Pacific routes provide "adequate" transportation. Keeping in mind that through routes and joint rates are already available to and from all intermediate points on the Rio Grande, and that all of the traffic involved in this proceeding is "bridge" traffic, whether or not it is reconsigned or transited on the Rio Grande, and would simply move over rails of the Rio Grande between the same origins and destinations that it now moves over Union Pacific routes, we ask the Commission to reconsider the prerequisite question whether, in the light of the following facts correctly found in the report, it can in fairness and good conscience, hold that Union Pacific routes do not provide adequate transportation for the traffic the Rio Grande seeks to divert to its line.

1. Transcontinental traffic to or from the "excluded territory" moves over the Union Pacific from or to Colorado

or Missouri River gateways, rather than over the Rio Grande because the Union Pacific routes are shorter (Sheet 15)..

2. Union Pacific routes are from 1 per cent to 37½ per cent shorter than Rio Grande routes (Sheets 17, 20).

[fol. 2510] 3. Present Union Pacific facilities are *adequate* to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future (Sheet 46).

4. Union Pacific has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line (Sheet 46).

5. Physical characteristics of the two lines show that the Rio Grande is less favorably situated than the line of the Union Pacific (Sheet 47).

6. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours' additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services (Sheet 47).

7. Operating conditions on the Rio Grande are more onerous than those on the line of the Union Pacific or any of the other transcontinental defendants herein (Sheet 60a).

8. Through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande (except with respect to commodities enumerated on Sheet 59) (Sheet 60).

Those findings obviously compel the conclusion that the Union Pacific routes provide "adequate" transportation for the traffic between the points it moves and that no "more adequate and economic service" can possibly be [fol. 2511] rendered by the Rio Grande. In the face of the facts the Commission has found, it is incredible that it could reach the conclusion on Sheet 60 that on the specified commodities, reconsigned or accorded transit privileges "at points on the Rio Grande" the defendants' routes are "inadequate and less economical than are the Rio Grande routes." The report does not particularize as to the inadequacies of defendants' routes for traffic to be reconsigned or transited at points on the Rio Grande

except to say that for such purposes at such points "the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply." Since the Union Pacific and other defendants do not serve shippers located at points on the Rio Grande except at Ogden, Salt Lake City, Provo and Denver, it is obvious that their lines are not and could not be "available" at any intermediate points on the Rio Grande because those points are served exclusively by the tracks of that line. The report points to no legal obligation of the Union Pacific to furnish service at points along the Rio Grande and it seems indisputable that there is no such obligation. In sustaining routing restrictions which gave the Illinois Central System its long haul, *Routing Cottonseed to Kansas and Missouri*, 231 I. C. C. 775, the Commission said, "A carrier cannot be charged with unlawful prejudice against a community which it does not serve."

The conclusion that Union Pacific routes are "less economical" than Rio Grande routes is likewise incomprehensible, first because "higher rates apply" via the Rio Grande and even under the order no lower rates would be applicable via the Rio Grande than via the Union Pacific; and second, the facts found in the report and mentioned [fol. 2512] above plainly compel the conclusion that the expense necessarily entailed by the "onerous" operating conditions over the Rio Grande necessarily make that route less economical than Union Pacific routes. Even with the same rates that apply via Union Pacific routes, we submit that it is impossible that the onerous Rio Grande route could provide "more" adequate and "more" economic service than could the Union Pacific in moving the traffic between the Northwest and points in the eastern and southern part of the United States.

An apparent attempt is made on Sheets 59-60 to bolster and support the ultimate conclusion that through routes and joint rates via the Rio Grande are necessary "to provide adequate and more economic transportation." There the report attempts to place the necessity upon the "marketing system" which has been developed with respect to perishable commodities, and the conclusion is reached that such commodities, including those specified, "must be

moved to market with expedition and care, and over as many routes as possible." The findings already cited contradict the suggestion that the commodities can move over the Rio Grande as expeditiously as they now move over the Union Pacific and there is no testimony that they would move with greater "care" via the Rio Grande. The statement that such commodities must move "over as many routes as possible" cannot possibly be legally correct. There is no such requirement in the Act or elsewhere in law. The statement could not be correct so long as there is any protection against short hauling left in section 15(4). The Commission's attempt to nullify the restriction against short hauling by pointing to the marketing system [fol. 2513] which has developed for perishable commodities is wholly untenable, for the protection against short hauling is not concerned with nor does it exempt particular commodities. The nature of a commodity has no bearing upon the right of a carrier not to be short hauled.

Moreover, the cases cited on Sheet 60 do not support but instead contradict the theory that the perishable nature of the specified commodities affords justification for short hauling. The first case, *Southeastern Vegetable Case*, 200 I. C. C. 273, describes the expensive extra service required in transporting vegetables, and the desire of shippers in that case for less restrictive reconsignment rules, to which the railroads apparently objected only because of the possibility of indirect hauls in some cases. At page 279 the decision shows that the Commission left the matter in the hands of the carriers. The second case, *Routing Lumber and Fruits, South to C. F. A. Territory*, 256 I. C. C. 223, involved proposed tariff provisions "to eliminate unnecessary and circuitous routing resulting in wasteful transportation" (p. 234), leaving in effect combination rates higher than the joint rates (p. 225). The Commission vacated its suspension order and let the tariff provision become effective, finding at page 234 that the railroads' effort to comply with tariff Circular 20 and "to eliminate wasteful transportation is praise-worthy and in the public interest." The situation condemned by the Commission in that case was exactly that which its order would compel in the instant case.

In a further effort to justify its conclusion that defendants' routes are inadequate, the report on Sheet 60a cites *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 255 I. C. C. 333, [fol. 2514] saying that there is one point of difference between that case and the instant case, namely, that operating conditions on the respective routes in that case were substantially similar while here "operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein." Why the Commission should overlook or refrain from mentioning other essential differences which entirely distinguish that case from the instant case, and in fact make the *Stickell* case authority for refusing to do what the Commission here requires is not understandable. The report in the *Stickell* case shows that the Pennsylvania Railroad had its own line to Hagerstown, the transit point, while here none of the defendants have lines reaching points on the Rio Grande except terminal points. The through routes required in that case eliminated four extra days of time in transit; a 149-mile out-of-line haul costing 90 cents per ton, and two switching interchanges at Hagerstown and would *not* result in wasteful transportation. In the instant case, the Commission would require an out-of-line haul via the Rio Grande adding 200 miles additional of wasteful transportation over the most "onerous" operating conditions of any western railroad, requiring two additional interchanges and at least two days' more transit time. The routes sought up to Hagerstown were "well established and generally accepted as reasonable by shippers and carriers" and were not shown to be less economical as parts of the sought through routes then as parts of existing routes; while here the Commission finds, correctly, that through routes via the Rio Grande have not been established for the traffic it seeks, and its findings which make operating conditions "more onerous" [fol. 2515] on the Rio Grande, including its longer route, compel the conclusion that routes which include the Rio Grande would necessarily be less economical for the involved traffic than Union Pacific routes. The facts which were held to justify the order in that case were the reverse of the facts on which the Commission attempts to base its order in the instant case.

The Commission has repeatedly held that carriers are not legally obligated to establish through routes and joint rates over *all possible* routes, but that only a reasonable number of such routes between the same points are required by law, and that higher combination rates over other possible routes may properly be maintained without violating the Act. *Lehigh Portland Cement Co.* v. *Lehigh Valley R. Co.*, 238 I. C. C. 199, 201; *Kansas City Hay Dealers Asso.* v. *C., G. W. R. R. Co.*, 49 I. C. C. 372, 377. Not only does this new theory and interpretation of the Commission that commodities of perishable nature must move over "as many routes as possible" contradict its previous holdings, but it is squarely contrary to the short hauling prohibition in section 15(4).

In short, the interpretation and application which the Commission here gives to the words "adequate, and more efficient or more economic, transportation" means that the transportation furnished by no railroad in the country is adequate and economic unless such railroad makes through routes and joint rates with all other railroads so that shippers at points served by such other railroads will have *the same* rates and transit privileges as are available on the first railroad. In other words, the holding is that the [fol. 2516] Union Pacific and its connections have not discharged their duty by furnishing shippers located on their lines adequate transportation over their own routes for the traffic in question, but that they have a further duty to furnish the same transportation service to shippers located on the Rio Grande at points not served by their lines. It is obvious that shippers located on the Rio Grande would not, under the order, have any new or additional transit privileges nor would they have any new or additional carrier serving them, nor would they have any more expeditious or careful service than they now have, for they would still be "stuck" with and wholly dependent upon the Rio Grande. In fact, such shippers on the Rio Grande would gain nothing except a rate reduction to the extent of the difference between present combination rates via the Rio Grande and joint rates applicable on Union Pacific routes. Their service would not be more adequate or more efficient; it would simply be cheaper and in no otherwise affected.

Therefore, the Commission's interpretation is that the exceptions to the short-hauling provision in section 15(4) permit it to require through routes and joint rates that short haul the Union Pacific to enable shippers located on the Rio Grande to obtain a rate reduction. This is plainly contrary to the purpose of Congress in the enactment of section 15(3) and (4) for long prior thereto it had empowered the Commission upon proper factual showing to reduce rates that shippers pay, and that power has since been fortified. Sections 1 and 15(1).

The Supreme Court of the United States has twice told this Commission that it cannot by its own interpretation [fol. 2517] limit "the impact of the short haul restriction on its power to establish through routes," to say nothing of completely nullifying that restriction. *United States* v. *Mo. Pac. R. Co.*, 278 U. S. 269 (1929), and *Thompson* v. *United States*, 343 U. S. 549 and 555 (1952). In the latter case, the Court further warned the Commission that it could not, by resorting to particular formalities, evade the prohibition of section 15(4) against "tinkering with through routes" for the purpose of assisting a carrier to meet its financial needs, citing *United States* v. *Gr. Nor. R. Co.*, 343 U. S. 562, 575 (1952).

Another error is indulged by the Commission in its misuse of its power to short haul the Union Pacific routes. On Sheet 9 it correctly says that any order requiring the sought routes and joint rates must be grounded upon findings that the routes "are necessary or desirable in the public interest, and are needed in order to provide adequate and more efficient or more economic transportation," but when it comes to its ultimate finding or conclusion it departs from that requirement and finds merely that the sought routes and joint rates are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation." Thus, the Commission has "jumbled" the provision of section 15(3) under which it may prescribe through routes and joint rates *which do not short haul* a carrier, with the provision of section 15(4) which enables it to short haul a carrier if a proposed route is "needed in order to provide adequate, and more efficient or more economic, transportation." The Commission has

not found that routes via the Rio Grande are "needed" nor [fol. 2518] that they will provide more "efficient" service, whereas the power to short haul may be used only when a proposed route is needed to provide adequate *and* more efficient, *or* more economic transportation. It is not enough to find that a proposed route will provide "adequate and more economic" service. In addition to finding that the proposed route is necessary to provide adequate service, the Commission must find that it is also needed to provide "more efficient" service for the word "adequate" is conjoined with "more efficient" by the word "and". The requirement of the provision is that the proposed route is needed to provide "adequate and more efficient" service or that it is needed to provide "more economic" service than that provided by existing routes. The Commission finds that service via Union Pacific is adequate except to points it does not serve located on the Rio Grande, and that Union Pacific's service is efficient, but it does not find that "more efficient" service will be provided by the Rio Grande. The ultimate finding and conclusion clearly is not that which is required before the Union Pacific may be short hauled on the theory that the Rio Grande route is "needed" to provide "adequate, and more efficient or more economic, transportation," and we submit that the facts found in the report and in the testimony of record will not support a finding necessary to meet the statutory requirements, but, instead, compel dismissal of the complaint.

In finding that the through routes and joint rates via the Rio Grande "are necessary and desirable in the public interest", we submit that the Commission has misappraised, improperly weighed and considered, or not considered, the evidence; that the finding here challenged rests [fol. 2519] upon other findings which are not "in accordance with the facts proved" and are "contray to the 'indisputable character of the evidence' ". *Int. Com. Comm.* v. *Louis. & Nash. R. R.*, 227 U. S. 88, 91. In its treatment of the evidence, the Commission has reversed the elementary rule that "the substance, and not the shadow, determines the validity of the exercise of the power", and has erroneously based its order upon "a mere scintilla" of evidence and not upon the overwhelming preponderance and indis-

putable character of the evidence of record. *Int. Com. Comm.* v. *Union Pac. R. R.*, 222 U. S. 541, 547, 548.

A determination of public interest, like a determination of public convenience and necessity, "is made upon a balancing of the respective interests—the effort being to decide what fairness to all concerned demands," *Colorado* vs. *U. S.*, 271 U. S. 153, 169. In exercising the power granted by section 15(3), the interests of carriers and the public as well as the interests of shippers and prospective shippers "should be considered and a fair balance found." *Pennsylvania R. Co.* v. *U. S.*, 323 U. S. 588, 593.

In a case of this kind "public interest" embraces elements and interests, in addition to but far removed from the direct monetary effect on the Union Pacific of the Rio Grande's revenue raiding proposal. It reaches out and includes not only shippers who are dependent upon the Union Pacific's ability to provide adequate service, but also the general economic welfare of Union Pacific communities including employment, general commercial activity, present and future security and progress of those communities.

[fol. 2520] In *United States* v. *Lowden*, 308 U. S. 225, 240, the Supreme Court said that under a permissible power to regulate commerce—

> "* * * the exercise of that power to foster, protect and control the commerce with proper regard for the welfare of those who are immediately concerned in it, *as well as the public at large, is undoubted.*". (Emphasis supplied.)

Actually, the Commission weaves its report and order around a half-dozen shippers whose desires, at most, are to improve their competitive and financial positions through a rate reduction. Yet, in *Public-Convenience Application of Utah Terminal Ry.*, 72 I. C. C. 89, the Commission said at page 93:

> "A public need can hardly be predicated upon the demand of three shippers who may desire to introduce the element of competition in order to improve their position in their own competitive field."

The desire of a few disgruntled shippers, succumbing to the Rio Grand's sinister indoctrination, for an opportunity to route away from the Union Pacific the traffic it must originate and deliver and to short haul it in "retaliation" or to hold a "competitive weapon" over the Union Pacific in the routing of traffic, even when combined with the Rio Grande's "financial needs," is far from enough to constitute "public interest" within the meaning of section 15(3) of the Act. The Commission may not console itself with the thought that shippers supporting the Union Pacific would still have available the services of that line. In *Jamestown, N. Y., C. of C.* v. *Jamestown W. & N. W. R. Co.*, 195 I. C. C. 289, the Commission said at page 292:

> [fol. 2521] "The expression 'in the public interest' means more than a mere desire on the part of shippers or other interested parties for something that would be convenient or desirable to them. Where something substantial is to be taken away from a carrier for the sole benefit of such parties, and with no corresponding benefit to the carrier, as in this case, we are inclined to the view that some actual necessity or some compelling reason must first be shown before we can find such action in the public interest. In determining what is 'in the public interest' we must take into consideration not only the interests of the particular shippers at or near the terminal considered, but also the interests of the carriers and of the general public."

Here, the Commission apparently gives no weight to testimony of witnesses supporting the Union Pacific who are not only pleading for retention of present conditions under which they have adequate and efficient rail service but who are also telling the Commission *that in their own experience as shippers and members of the public there is no transportation need or commercial reason* for the Rio Grande's proposal to jeopardize them and their communities and the general public by diverting traffic and revenues away from the Union Pacific. In *Worm Extension—Ainsworth and Johnstown, Nebr.*, 32 M. C. C. 641, at page 644:

> "The prime element in determining the public interest is the maintenance of adequate transportation

facilities for handling general traffic. It may be that some individual shipper may find it more convenient or more economical to have a contract carrier handle for him a particular kind of traffic. This, however, does not constitute a conclusive test. If taking that traffic from the established transportation agencies [fol. 2522] may so reduce their earnings that they will be unable to maintain adequate and efficient common-carrier service for the public, including that individual, then it is not in the public interest. Beyond resulting in the curtailment of service, the diversion of selected traffic may even cause losses so heavy as to necessitate abandonment of the facilities which are depended on for community life. Here petroleum traffic is an important factor in supporting railroad operations. If those operations are to be continued, the diversion of available traffic by authorizing such operations as are proposed by this application must not be encouraged."

In *Smith-Wilson & Co. v. A., T. & S. F. Ry. Co.*, 129 I. C. C. 65, a shipper wanted joint rates applicable via the Santa Fe's routes to be made applicable via his route in lieu of higher combination rates. Violations of sections 1 and 15 were alleged. At pages 67-68 the Commission stated:

"The primary purpose in filing this complaint was to obtain any advantage which might accrue by reason of having the rate now maintained over the Sante Fe system available also via Pecos and the T. & T., with option of concentration at Pecos. Under section 15, paragraph (3), of the act the commission has the power to establish through routes and joint rates, 'whenever deemed by it necessary or desirable in the public interest,' subject to the limitation in paragraph (4) that a carrier may not be required to short haul itself unless its route is unreasonably long as compared with another practicable route."

Testimony of opposing shippers in that case that diversion of traffic away from the Santa Fe might result in poor

train service and equipment, and in losses to and hardship [fol. 2523] upon the shippers, clearly weighed heavily with the Commission while in this case similar testimony is ignored. At page 71 it said:

> "Resolutions passed by the chambers of commerce of Carlsbad, Artesia, Roswell, and Hope, all in the Pecos Valley, and by the Associated Chambers of Commerce of the Pecos Valley, were introduced by officers of those bodies. They all ask that complainant's prayer be denied. Witnesses residing at those points testified substantially to the same effect as the witnesses mentioned in the foregoing paragraph. Some express apprehension that the diversion of cotton through the Pecos gateway will seriously affect the Santa Fe and will thus bring about the curtailment of train service, poor equipment, hardship upon patrons of the Santa Fe, and losses in revenues to all parties concerned. In their opinion the application of the Santa Fe's single-system rate as a joint rate via Pecos, and concentration there, will not result in higher prices to the cotton planters for their products."

Finding that mere comparison of assailed combinations rates with the lower sought joint rates afforded no basis for condemning the former, and that establishment of sought joint rates was not in the public interest, the Commission said at page 73:

> "Although there is some division among the shippers of the Pecos Valley as to the necessity, desirability, and advantage of joint rates via Pecos and the T. & P., the evidence indicates that the weight of opinion is opposed to the establishment of such rates because of the probable effect it would have upon the industries and the carrier service in the valley. The Santa Fe's branch through the valley is the only rail line in southeastern New Mexico. Shippers along its entire length from Clovis to Pecos would be affected [fol. 2524] by the logical consequences of the change here sought. Industries in the valley are dependent upon that line for their progress and perhaps for their existence. Anything tending to bring about a reduc-

tion in the service over it, such as lessening the already light traffic density, would be detrimental to the best interests of the people of the valley."

In denying the application in *Chicago, B. & Q. R. Co., Control,* 271 I. C. C. 63, the Commission quite apparently gave very meticulous consideration and great weight to the same possible consequences about which so many witnesses for defendants in this case are voicing their interest. In that case, beginning at page 132, the Commission devoted over 7 pages to discussion of "Effect of diversions on protesting railroads," two pages, 140-141, to discussion of "Possible abandonments," two pages, 142-143, to "Possible effects on railway employees," and nearly two pages, 144-145, to discussion of possible resulting "Unsound Economic Conditions Et Cetera."

The circumstances in that case, from a "public interest" standpoint, were the same in principle as those in this case, except that, in that case the applicants proposed to spend considerable money in "rehabilitating" and "improving" an existing line, while here, the Rio Grande expects to gain traffic and revenue without spending one dime to contribute additional transportation facilities or service or for anything else other than solicitation of the traffic.

The following conclusions of the Commission in that case, pages 164-165, should guide and control in this case:

[fol. 2525] "If instead of its application for authority to extend its service to St. Louis as here proposed, the Sante Fe had presented an application under section 1 (18) of the act to build a new line at a cost no greater than that of rehabilitating and improving the Kansas City-St. Louis line, or if prior to transfer of our jurisdiction over operation under trackage rights from section 1 (18) to section 5(2) of the act, the Santa Fe had presented its application to extend this service to St. Louis by operation under trackage rights, the fact that such construction or operation would result in the diversion of most of the anticipated traffic from other railroads would, on this record and in accordance with well-established principles in such cases, have required denial of the application. The same

principles should apply to the proposals here presented by the Santa Fe. Furthermore, in applying to the proposed transactions the test of public interest as defined in *New York Central Securities Corp. v. United States, supra,* we must consider the adequacy of transportation service, its essential conditions of economy and efficiency, and the appropriate provision and best use of transportation facilities not only for Santa Fe territory and St. Louis, but for the entire southwestern section of the country. Any proposal for the extension of Santa Fe service to St. Louis should be coupled with other proposals looking to the preservation of adequate transportation service, the establishment of essential conditions of economy and efficiency, and the appropriate provision and the best use of transportation facilities in the southwestern territory as a whole."

The report suggests no reason for the Commission's plain departure in this case from the guides and principles [fol. 2526] laid down and applied by it and the Courts in the cases cited. It has arbitrarily ignored the broad "public interest" in this case and based its order on transit and reconsignment privileges for a few individuals.

Since public interest is to be determined by weighing and appraising the interests, circumstances and activities of all of those for whom testimony was submitted, it is appropriate to point to the fact that the state commissions supporting the defendants represent the interests of all citizens in those respective states and must be considered as having spoken in behalf of the entire populations of those states, with the exception, of course, of those few individuals who appeared in support of the Rio Grande. Attention is called to the fact that the total population of the six intervening states supporting defendants was nearly 7,000,000 people as of 1940 and we think the Commission must treat the interventions and testimony of these supporting states as expressing the interests and desires of this great number of people. The interests of many of them were voiced again through commercial or other organizations of which they are members and many others

personally testified with respect to their own individual interests. From the State of Idaho, where the Rio Grande seemed to concentrate its propaganda campaign and sought more desperately to gain supporting shipper testimony, it succeeded in procuring only some 10 witnesses, while 38 witnesses from Idaho testified in support of the defendants and particularly the Union Pacific. Their testimony for themselves and for groups and organizations for whom they had been authorized to testify may be said to embrace [fol. 2527] substantially all of the general business activities and public interests and welfare of Idaho with the exception of two Idaho organizations representing farmers and ranchers, but many of whose members testified in their own behalf in support of the defendants. The Idaho Public Service Commission is of the view that the complaint should be dismissed except as to fruits, vegetables and livestock, but suggests the feasibility of accomplishing this by removal of routing restrictions at Denver, leaving the Union Pacific its haul to that point and excluding the Rio Grande.

It is not possible to discern from the report by what method or process the Commission weighed or undertook to balance the "bridge" traffic needs of the Rio Grande and pretended desires of its procured shipper witnesses for transit and reconsigning privileges against the interests of the Union Pacific, its employees and other defendants, and the interests of shippers, the communities and the general public served by defendants. Indeed, the report on its face justifies the conclusion that the Commission used no process of balancing respective interests and, in fact, did no "balancing." Instead it apparently was so impressed with the Rio Grande's "interest" in "bridge" traffic to be diverted from the Union Pacific, the rate reduction benefits that might accrue to a few "small dealers" who are less-than-carload receivers located on that line, and with the pretended desire of a few shippers located on the Union Pacific for the same rates via the Rio Grande they have via the Union Pacific so they could use the Rio Grande in "retaliation" and as a "competitive weapon" against the Union Pacific when they may feel so disposed, that it lost sight of all others concerned in the "public in-[fol. 2528] terest" aspects of the case.

The record shows that a total of 60 witnesses testified for the Rio Grande, including 50 witnesses of whom some are shippers and others are commission men who merely buy and sell, but who do not own the commodities or bear freight charges or concern themselves with routes over which the traffic moves. The record shows that a total of 134 witnesses testified for the Union Pacific and other defendants, including 85 actual shippers and some 35 additional witnesses who testified for the defendants on behalf of intervening state commissions, chambers of commerce and other organizations representing very large groups of individual shippers and others interested generally in transportation services and for the economic welfare of the communities served by the Union Pacific. Appendix A to Union Pacific's Exceptions and Brief is a complete list, with record references of the 134 witnesses who testified in behalf of defendants.

Among other points to be mentioned later, the testimony of these witnesses shows that the *present routes are adequate to reach all markets* and that *service over those routes is efficient and satisfactory;* that as shippers *they have had no occasion to request or suggest through routes and joint rates via the Rio Grande;* that the Rio Grande route is not and would not be used by them because *it would require longer time and additional interchanges in transit;* that the Rio Grande tried to persuade them to support its case; and that diversion of any substantial volume of traffic from the Union Pacific would jeopardize and deteriorate the service they receive.

[fol. 2529] There is no reason why the testimony of the large number of witnesses who testified for the Union Pacific and other defendants should not be accepted at full face value equally as the Commission has accepted the testimony of witnesses supporting the Rio Grande. The contrast in treatment of the Rio Grande's testimony and that of the Union Pacific and other defendants, as reflected in the report itself, is shocking. The report shows that in dealing with the Rio Grande's shipper testimony, the Commission selected individual shippers and devoted paragraphs of emphasis to their particular situations as individuals or as groups shipping similar commodities (Sheets

34-45a). However, in disposing of testimony of shipper and other witnesses for the Union Pacific and other defendants, the report says on Sheet 51, "It is not practicable to deal with all of this evidence in detail, but the testimony and position of the parties have been considered," apparently intending to leave those who may read the report with the conclusion that defendants' shipper and public testimony was so lacking in substance, merit or credibility as to justify no place, space or discussion in the text of the report and that only the Rio Grande's testimony deserved full exposure and discussion in the report.

Such inequality of treatment of Union Pacific testimony and facts ignores entirely the fact that shipper witnesses who testified for the Union Pacific actually ship or receive a total of approximately 136,000 carloads of commodities annually, whereas the record indicates that witnesses who testified for the Rio Grande ship or receive approximately 28,000 carloads annually. The tenuous, vague and speculative possible prospective use that the witnesses selected [fol. 2530] from the Rio Grande's procured witnesses would make of the joint rates via that line resolves into simple monetary benefits such shippers might derive from the difference between the combination rates and the joint rates, but the Commission nevertheless gives such testimony full weight and credibility while it gives no weight or effect to the testimony of Union Pacific shippers and receivers of 136,000 carloads annually of the same kind and types of traffic handled by the Rio Grande's shipper witnesses, to and from the same producing and marketing areas, whose testimony shows beyond question that the shippers and receivers of that far greater volume of traffic have experienced throughout the years none of the alleged handicaps claimed by Rio Grande's witnesses because of the lack of joint rates via that line with the Union Pacific to and from the Northwest, and that the absence of such joint rates has presented no restriction or difficulty in the distribution of their commodities or in reaching adequate market areas freely. The statement on Sheet 51 that the opposition of this large number of Union Pacific witnesses arises from their fear of "assumed effects of the diversion from the Union Pacific of the full amount, or a very large

portion, of the traffic estimated by the Rio Grande as the potential traffic" that it seeks in this case is wholly erroneous and indicates a thoroughly unrealistic conception of the facts and circumstances that should govern the decision in the case.

We submit that it is entirely incredible that in their years of transactions the 85 Union Pacific shippers and receivers of approximately 186,000 carloads of traffic annually of the same general type and character of traffic [fol. 2531] shipped and received by the Rio Grande's shipper witnesses handling some 28,000 carloads annually, could have escaped experiencing or realizing any handicaps or inadequacies in the Union Pacific's routes or experiencing and realizing any desire or need for routes and joint rates via the Rio Grande that might have been experienced or realized by the Rio Grande's shipper witnesses.

Many statements and findings in the report would lead the judges of a Court or any other reader of the report having no knowledge of the testimony, to a wholly erroneous and incorrect impression of the preponderance of the evidence of record. For example, the statement on Sheets 42-42a that "Idaho producers" of fruits and vegetables "find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City" obviously is intended to have readers of the report believe that *all* "Idaho producers" testified to that effect.

The truth is that about 10 "Idaho producers" and shippers who testified for the Rio Grande ship and receive approximately 10,000 carloads annually of fruits and vegetables and their shipments go to all markets in the 48 states and to Canada, South Pacific, South America, Cuba, South Africa and other points (R. 334).

The record further shows that the 37 "Idaho producers" and shippers of fruits and vegetables who testified for the Union Pacific ship and receive annually over 60,000 carloads of these products and all of them stated that the lack of joint rates between the Union Pacific and the Rio Grande had never handicapped or interfered with free and wide dis- [fol. 2532] tribution of their fruits and vegetables.

Another example of such misleading, improper and in-

correct statement is the following on Sheet 60 of the report:

> "The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities."

By that statement, the Commission would have a Court and other readers of the report believe that *all shippers* in the originating area testified to that effect. The facts are that no shipper from that area made such statement; that no shipper of butter, eggs, frozen poultry, frozen foods and dried beans from that area submitted any testimony; that only two livestock shippers and about 10 fruit and vegetable shippers from that area testified—*not* that they were "debarred from effective competition" but that (regardless of section 15(4)), they desired all routing restrictions and "gateways" removed, including Ogden via the Rio Grande.

The further and controlling facts are that 5 witnesses from the State Commissions of Montana, Oregon and Washington, some 37 shippers of fruits and vegetables and 29 shippers of livestock, most of them were from the originating area, and numerous shippers of other commodities testified most emphatically that the lack of through routes and joint rates via the Rio Grande presented no handicap, obstruction to or disadvantage in their distribution to markets throughout the United States (see Union Pacific [fol. 2533] Exceptions and Brief, pp. 320-472, and Appendix A thereto).

The report further is misleading and erroneous in making it appear that Rio Grande shipper testimony is not only of substance and unquestionable credibility, but also that it is far more voluminous than it is in reality. For example, in speaking of livestock on Sheet 87, the report refers to needs of "A number of producers in the northwest area," but it then shows that the Rio Grande witnesses from the "northwest" who testified about livestock were from a small locality in southeastern Idaho, and the record shows there were not "a number" but *only two* (R. 686 and

719). Not one livestock witness from the vast area of the Northwest except those two, testified for the Rio Grande. In fact, even with its propaganda campaign, the Rio Grande was able to procure only two shipper witnesses out of all the multitudes in Oregon, Washington and Montana. These were W. S. Miller representing a canning factory at Milton, Oregon (R. 754), who said that "the strongest argument" he has for the joint rates is that "it would give us another route in the event storm areas would develop along the Union Pacific" (R. 767), and R. E. Titus who actually was not a shipper but was an executive of a forest products association who stated that no one could tell whether the members of that association would use the Rio Grande's route, but that he favored the joint rates via that line because he thought such action "necessary to carry out the national transportation policy" (R. 286, 292).

The Commission quite apparently gave no weight whatever to the fact that the Rio Grande's shipper testimony [fol. 2534] was admittedly procured by agitation, persuasion and other methods, nor to the fact that none of those shippers have filed complaints or otherwise made any efforts to have the joint rates established, nor to the fact that the only "need" in this case is the Rio Grande's need for additional revenues from traffic it expects to obtain if it succeeds in compelling a reduction in the rates to the level of the joint rates, nor to the fact that the only use any shipper indicated he might possibly make of the joint rates would be to exercise reconsigning and transit privileges or stop to partially unload less-than-carload shipments moving at carload rates on the Rio Grande.

The implication (Sheets 33, 42-43) that there are substantial markets at points on the Rio Grande to be "tried" or for the actual sale of substantial quantities of carloads of any commodities, is negatived by the very clear demonstration that the "small dealers" along the Rio Grande are able to handle only less-than-carload quantities (Sheets 34, 36a). It is further negatived by the fact that, excepting Denver, Salt Lake City, Provo and Ogden, all of which are served by the Union Pacific, of the 52 stations or points on the main line of the Rio Grande between Ogden and Den-

ver, according to the official 1940 census, four points had no population, one point had 1; 14 points had less than 50; 20 points had less than 100; 31 points had less than 500; 37 points had less than 1,000; 11 points had more than 2,000 and only 3 points had a population of more than 5,000. The record shows no need for joint rates to enable a car from Chicago to partly unload at Pueblo, Colorado Springs, Grand Junction or Price and further movement via the Rio Grande to Boise. The illustration (Sheet 33) is purely hypothetical.

[fol. 2535] In appraising the shipper testimony procured by the Rio Grande, the Commission ignored the fact established of record and discussed elsewhere in this petition, that no shipper has felt sufficient need or desire for the through routes and joint rates sought by the Rio Grande in this case to complain to the Commission, to state commissions or to the Union Pacific. Since this is the Rio Grande's complaint and even though it procured some shippers to testify, the situation in reality is like that in *El Paso Chamber of Commerce* v. *A., T. & S. F. Ry. Co.*, 92 I. C. C. 75, wherein joint rates were sought, and the Commission observed at page 78 that "The Pecos Valley shippers, who pay the freight charges, are not here complaining * * *."

The Commission should have given weight to the obvious fact that the very nature of its shipper testimony, such reasons as they stated, and even their language are but a reflection of the Rio Grande's campaign of agitation and accusation. Each of those shipper witnesses has been misled by the Rio Grande to believe that in this case he, like the Rio Grande, has some possibility of financial gain. But these shippers located on the Union Pacific, fail to realize that, unlike the Rio Grande, which has everything to gain and nothing to lose in this case, they have nothing to gain but additional longer and less efficient routes, and could in the future lose a great deal, because with substantially decreased revenues, the inevitable result would be curtailment of their service, higher rates and abandonment of many of the branch lines that Union Pacific now operates.

[fol. 2536] On Sheets 28-29, in its discussion of the

amount of traffic that might be diverted to the Rio Grande, the Commission concludes as follows:

> "Whatever the amount, it would be the result mainly of (a) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (b) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it."

This conclusion squarely contradicts and refutes the ultimate finding that the through routes and joint rates are "necessary or desirable in the public interest," and calls for dismissal of the complaint. Certainly the routes and rates are not "necessary" or "needed" to provide adequate, and more efficient, or more economic transportation if shippers who have pretended such need must be induced by solicitation and persuasion to use the Rio Grande as a "bridge route" or to use transit privileges on that line in connection with bridge traffic. The statement that growth of traffic "over" that line in the 1934-1948 period indicates the interest of shippers and receivers on the Rio Grande [fol. 2537] in development of transit activities on that line refutes any "necessity" for the joint rates to increase "bridge" traffic via the Rio Grande, for the "growth of traffic" has taken place in the absence of the sought through routes and joint rates. The growth of traffic "over" that line without the joint rates also demonstrates that the report is misleading and erroneous in placing the emphasis it does on the importance of transit activities on that line. Transit activities on that line is an obvious

"smoke-screen" of the Rio Grande and its supporting shippers to disguise the Rio Grande's real purpose to enhance its financial position by diverting bridge traffic from the Union Pacific.

In view of the Commission's definite and positive assurance, indicated in the finding last quoted, that very little traffic, if any, will be diverted to the Rio Grande* unless it

---

*The assurance of the Commission and of witnesses and counsel for the Rio Grande sounds a note of pessimism in exact reverse of the enthusiastic optimism of President McCarthy as to what he expects to gain under the Commission's order. The following is from the San Francisco Examiner, March 10, 1953:

"Through Traffic

RIO GRANDE RAILROAD 1953 OUTLOOK BRIGHTER

By Charles St. Peter

Financial Editor

"President Wilson McCarthy of the Denver, Rio Grande & Western Railroad, a distant relative of the Western Pacific Railroad, was in town yesterday feeling very pleased with the way things are going on his line.

"For one thing, the Rio Grande had one of the lowest transportation ratios in the business in the month of January. That is the ratio of operating expenses to operating revenues. It stood at 61.56 per cent for January, an enviable figure. He estimates it was 65 per cent in February.

"With revenues running slightly ahead of last year, and operating expenses well under control, 1953 has the makings of a good year for the pioneer western road.

PROFITS FATTENED.

"The large amount of through traffic hauled by the DRG&W helps fatten the profit column, McCarthy ex-

can succeed in soliciting, persuading and inducing shippers [fol. 2538] to use its line as a bridge route and for transit purposes, it necessarily follows that there is no actual, genuine or real "public interest" in having the through routes and joint rates established. If, as the Commission has found, a substantial amount of the traffic will not flow naturally to the Rio Grande because of recognition by shippers of "some actual necessity or some compelling reason" for using that line for the traffic involved, then the routes and joint rates are not in the "public interest" [fol. 2539] *Jamestown, N. Y., C. of C.* v. *Jamestown W. & N. W. R. Co.*, 195 I. C. C. 289, 292

Despite its effort to minimize the amount of traffic that may be diverted to the Rio Grande, the validity of the Commission's order must depend on "necessity" and

---

plained in an exclusive interview at the Clift Hotel. This is traffic originating at a connecting line at one end of the system and delivered to another connecting line at the other end. It requires no sorting, switching and short hauls so it is very profitable. Over half of the freight moved on the system is through traffic.

"The line stands to increase its traffic volume considerably if an Interstate Commerce Commission order on rates through the Ogden Gateway (Utah) stands.

"This would give Denver & Rio Grande an entree into the Pacific Northwest. For several years they have sought to get Union Pacific Railroad to grant them through rates on commodities moving over UP lines to and from the Pacific Northwest via the gateway. Union Pacific has posted a combination rate which is considerably higher than a through rate and has kept DRG&W pretty much out of the territory.

OPENED GATEWAY.

"The ICC order partially opened the gateway. It gave the road through rates on vegetables, fruits and livestock, said McCarthy. Among other things, it would get them into the big Idaho potato shipping market. Union Pacific is expected to contest the order, and the Rio Grande in turn will contest the contest. * * *"

"need" for the routes and joint rates which is the equivalent of a finding that the amount of such diversion will be "substantial"; otherwise, the order is frivolous and capricious.

We urge the Commission to reconsider and reverse its finding that through routes and joint rates via the Rio Grande on the commodities specified in the order are necessary and desirable in the public interest, in order to provide adequate and more economic transportation. In reappraising and reconsidering the evidence, we urge the Commission to take a fresh and realistic view of the question whether such vague, tenuous and speculative interest as it finds that Rio Grande shippers profess outweighs and overbalances the public interest evidence we have discussed above and justifies:

1. Taking substantial traffic and revenues amounting to several million dollars annually from the Union Pacific, the Chicago and North Western and the Wabash railroads.

2. Requiring over 200 miles of additional wasteful transportation at an estimated cost of $125.00 per car to move the same traffic between the same points it now moves over other railroads.

3. Subjecting employees of the Union Pacific, Chicago and North Western, Wabash railroads, and Union Pacific [fol. 2540] Coal Company to substantial losses in wages.

4. Subjecting cities, towns and communities served by the Union Pacific to substantial economic loss through reduction in its employees and payrolls.

5. Requiring loss of one or two days in transit and the addition of two more interchanges at an expense of some $10.00 or $20.00 per car per interchange.

6. Forcing traffic through the overtaxed Ogden terminal facilities, adding $9.26 per car to Union Pacific's share of expense in operating and maintaining those facilities, and delaying and substantially interfering with those terminal operations.

7. Short-hauling the 200-mile shorter, faster and direct route of Union Pacific by 1,000 miles.

8. Wasting at least two car days on every car routed via the Rio Grande.

9. Economic and transportation waste resulting from in-

creased idle and surplus transportation capacity which the Union Pacific now has to extent of 50 to 100 percent.

10. Economic loss and waste to shippers defendent on Union Pacific resulting from curtailments and retrenchments in train service and operations following loss of a substantial volume of traffic.

In its reconsideration of this point, we urge that the Commission keep in mind the principles laid down in de-
[fol. 2541] cisions of the Supreme Court and of this Commission.

In *Texas* v. *United States,* 292 U. S. 522, decided in 1934, the Court said at page 530 that the Act of 1920 "introduced into the federal legislation a new railroad policy, seeking to insure an adequate transportation service" and that—

> "It is a primary aim of that policy to secure the avoidance of waste. That avoidance, as well as the maintenance of service, is viewed as a direct concern of the public."

In *N. Y. Central Securities Co.* v. *U. S.,* 287 U. S. 12, the Court, in discussing the purposes of the 1920 Act, said at page 23: "The public interest is served by economy and efficiency in operation" and at page 25 that the purpose of Congress in granting by that Act power to the Commission to do specified things in the public interest with the ultimate aim of insuring adequate transportation service, was directly related "to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities, * * *." In *United States* v. *Louisiana,* 290 U. S. 70, the Court said at page 74 that one of the purposes of the Transportation Act of 1920 was to prevent "cut-throat" competition. In one of its earlier interpretations of the 1920 Act, *Texas & Pac. Ry.* v. *Gulf, etc., Ry.,* 270 U. S. 266, at page 277, the Court said:

> "By that measure, Congress undertook to develop and maintain, for the people of the United States, an adequate railway system. It recognized that *preservation of the earning capacity; and conservation of the financial resources, of individual carriers is a matter* [fol. 2542] *of national concern;* that the property em-

ployed must be permitted to earn a reasonable return; that the building of unnecessary lines involves a waste of resources and that the burden of this waste may fall upon the public; *that competition between carriers may result in harm to the public as well as in benefit; and that when a railroad inflicts injury upon its rival, it may be the public which ultimately bears the loss.* See *Railroad Commission v. Chicago, Burlington & Quincy R. R. Co.*, 257 U. S. 563; *The New England Divisions Case*, 261 U. S. 184; *The Chicago Junction Case*, 264 U. S. 258; *Railroad Commission* v. *Southern Pacific Co.*, 264 U. S. 331. *The Act sought, among other things, to avert such losses.*" (Emphasis supplied.)

Recent decisions of the Commission, summarized in *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I. C. C. 331, emphasize the avoidance of wasteful and uneconomic transportation in authorizing short hauling:

"Section 15(4) of the act has been in its present form since September 18, 1940. In several proceedings since then, reasonable through routes which short haul one or more carriers have been prescribed. See *D. A. Stickell & Sons, Inc.* v. *Alton R. Co.*, 255 I. C. C. 333 (sustained in *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588); *Allied Mills, Inc., of Virginia* v. *Alton R. Co.*, 272 I. C. C. 49; *California Milling Corp.* v. *Atchison, T. & S. F. Ry. Co.*, 269 I. C. C. 725 and 274 I. C. C. 120. In the first two of those proceedings it appeared that the routes required to be established eliminated expensive out-of-line hauls, and in the latter proceeding the routes required were shown to be shorter in many instances than those which had existed. In all of those proceedings the routes required were at least as economical, from the standpoint of the [fol. 2543] carriers as well as of the shippers, as were most of the existing routes.

"The instant situation differs. All of the routes sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic transportation. In addition,

> because of the circumstances here present, we believe a requirement that the routes sought be established would not 'give reasonable preference' to the originating carrier." (pp. 333-334.)

In that case the Commission said on page 332 that from origin to ultimate destination the circuity of the proposed routes was only 8 per cent, but it nevertheless held their establishment would "encourage wasteful and uneconomic transportation" and refused to require the sought routes.

In *Mine Timbers from Missouri to Illinois*, 191 I. C. C. 41, the Commission said at page 43:

> "We have heretofore pointed out that the unnecessary hauling of traffic over unduly circuitous routes at the same rates that are applicable over direct routes results in wasteful transportation. See *Brick and Clay Products in the South*, 113 I. C. C. 380."

IX.

The Order Violates the Requirement in Section 15(4) That Reasonable Preference Be Given the Originating Carrier.

One of the mandates in section 15(4) to the Commission in compelling through routes that short haul a carrier is—

> "That in prescribing through routes the Commission shall, so far as is consistent with the public in-
> [fol. 2544] terest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic."

We find nothing in the report to indicate that the Commission gave the slightest recognition to this statutory mandate. Yet on Sheet 27 the report shows that 101,476 carloads originated in 1948 on the Union Pacific in the "excluded territory." Of the total traffic, 157,762 carloads, originated and terminated on the Union Pacific that year, 46 per cent originated or terminated on 2,913 miles of Union Pacific branch lines in that territory. Of the eastbound tonnage for that year, 50,349 carloads or 43

per cent of the total were products of agriculture, including those specified in the order (R. 1161). The report shows on Sheets 46 and 47 that the 2,913 miles of branch lines constitutes more than 50 per cent of the total of 5,606 miles of line of the Union Pacific in that territory and that Union Pacific has invested over $600,000,000 in the routes that would be affected by the diversion of the traffic to the Rio Grande. The unusual proportion of branch line mileage was obviously constructed for the purpose of developing and originating traffic in this essentially agricultural area for the purpose of obtaining a long main-line haul. The eastbound commodities which would be diverted to the Rio Grande under the Commission's order are agricultural products moving under sub-normal and depressed rates (R. 1238), and it is inescapable that the effect of such diversion will necessarily tend toward curtailment of service generally and abandonment of the feeder branch lines on which 46 per cent of the total traffic originates and terminates.

[fol. 2545] These facts demonstrate the reasons for and the fairness of the legislative mandate requiring the Commission in compelling through routes that short haul a carrier to give reasonable preference to the carrier that originates the traffic. The necessity of revenues from main-line movement of such branch-line traffic is too plain for argument unless the Commission is sympathetic to a policy that potentially forces branch line abandonments and weakening of the Union Pacific financially. Such necessity for revenues and continued maintenance of branch lines clearly must be weighed and balanced against the pretended desire of a few shippers for routes which would divert the traffic to the Rio Grande so they may reconsign or take advantage of transit privileges while the traffic is on that line. The Commission has clearly ignored the mandate to give reasonable preference to the Union Pacific in these circumstances, but instead has based its order entirely upon the pretended desire of the few shippers who supported the Rio Grande. It has departed from the rule laid down by the Supreme Court that "both interests should be considered and a fair balance found," *Pennsylvania R. Co.* v. *U. S.*, 323 U. S. 588, 593.

X.

The Commission Misconstrues and Misapplies Section 15(4) by Finding That the Shorter Union Pacific Route Should Be Short Hauled Because Routes Not More Than 37 Per Cent Longer Could Be Made Via the Rio Grande and Because the Union Pacific Would Still Obtain a Substantial Haul After Being Short Hauled 925 Miles.

Although as shown by the map on page 3 of Exhibit 25, any route that could be made over the Rio Grande for the traffic it seeks would be from 33 to 219 miles longer than [fol. 2546] Union Pacific routes and the Commission admits on Sheet 15 that "the Union Pacific routes are shorter," the report nevertheless places great emphasis on the fact that other routes embracing the Rio Grande could be made for movement of the traffic which would be longer than Union Pacific routes but would leave the Union Pacific a "substantial haul" even though it would be short hauled by 925 miles by diverting the traffic to the Rio Grande routes (Sheets 19-21). Such routes via the Rio Grande to numerous destinations are set forth in the table on Sheet 20 of the report which compares respective distances and circuities with Union Pacific routes.

It is apparent that the Commission is of the erroneous view that, although it is without power to compel routes that short haul the Union Pacific when its route is shorter and not unreasonably long, it may short haul the Union Pacific if it is able to find routes via the Rio Grande that it considers to be not unreasonably long or unduly circuitous, and would leave the Union Pacific a "substantial" haul after short hauling it 925 miles. If this is not the Commission's view, then it is impossible to see any purpose in the long and detailed discussions of the numerous possible routes, and speculation as to length of hauls the Union Pacific would have even though short hauled (Sheets 19-22a).

This is exactly the reverse of the condition under which section 15(4)(a) permits short hauling. A carrier may be short hauled if routes via *its own line* are unreasonably long but it may not be short hauled merely because, as in this case, the Commission is able to find routes it [fol. 2547] considers not unreasonably long that could be

established via another line. In other words, the statute permits short hauling the unreasonably long route, but it most certainly does not permit short hauling the shorter route by using another which is considered not unreasonably long. Nor does section 15(4) permit short hauling a carrier because it would still have a substantial haul left.

The report also erroneously places great emphasis on the fact that the Union Pacific participates in through routes and joint rates with certain other carriers in the Northwest which short haul the Union Pacific, some of which routes are longer than some of the routes that could be made via the Rio Grande through Ogden. But such participation with other lines by the Union Pacific in through routes and joint rates is not one of the conditions specified in section 15(4) under which the Commission may compel routes that short haul the Union Pacific. The Union Pacific is entitled to its long haul in every instance except those specified in section 15(4).

The Commission has no authority to chop up the line of the Union Pacific and piece the portions together with the Rio Grande line in an attempt to establish routes via the latter line which may not be unduly long. This is exactly what the Supreme Court has told the Commission it cannot do. *United States* v. *Mo. Pac. R. Co.*, 278 U. S. 269.

[fol. 2548]

XI.

The Commission Erred in Finding That the Additional Traffic That Will Be Diverted to the Rio Grande Under the Order Can Be Interchanged Through Present Facilities at Ogden or Salt Lake City Without Serious Detriment to Operating Efficiency, and in Ignoring Obstacles of Present Interchange at Denver.

The Commission devotes two paragraphs on Sheets 48-49 to this subject, contents itself by stating that the interchange facilities at Ogden were able to handle 892,058 more cars in the peak war year 1945 than were handled in 1949, and proceeds to the conclusion on Sheet 64 that the facilities can handle the additional traffic that would be diverted to the Rio Grande "without serious detriment to the operating efficiency of the railroads concerned."

The report fails completely to portray any real concep-

tion of the physical difficulties and circumstances shown of record concerning those facilities. For example, the report says "several instances of delays to trains" and "considerable congestion and delay to trains" are shown. Such minimization of the difficulties at the Ogden interchange is clearly unwarranted, arbitrary and erroneous in the light of uncontradicted testimony of record.

Witness Bradford of the Rio Grande admitted that there was "the handicap of slow service through the Ogden terminal" (R. 1685) and suggested that interchange through that terminal between the Union Pacific and the Rio Grande could be improved if Union Pacific would "block" trains properly at Pocatello and "with some change in the present methods of handling at Ogden" (R. 1686). Mr. Bradford further admitted that the operation [fol. 2549] of the Rio Grande over its track which crosses the Depot Company's tracks at the point marked "A" on the map, Exhibit 14, "presents a problem" (R. 16[illegible]) which he said was not insurmountable and then went on to describe efforts that were made in 1942 "in trying to solve some of the problems that have vexed us at Ogden for some time." He further described suggested plans discussed in 1943 and thereafter to relieve conditions in the Ogden terminal, which plans necessitated consolidation of facilities, a new entrance via a new track and an expenditure by the Depot Company of large sums to readjust its facilities to accommodate the Rio Grande, which, of course, would bear no part of the expense (R. 1692-1693). He concluded that if the business the Rio Grande might get as a result of this case proved more than the present Ogden terminal facilities could handle "then it is apparent that the necessary improvements could be made in the present yard plan" (R. 1694). In other words, Mr. Bradford admits the inadequacy of the Ogden terminal facilities, but would solve the difficulty by having the Depot Company, Southern Pacific and Union Pacific spend prohibitive sums of money to accommodate the interchange of traffic which the Rio Grande wishes to divert from the Union Pacific.

The error of the finding concerning the adequacy of the Ogden terminal facilities is fully demonstrated by witness Edens, Superintendent of the Depot Company (R.

861), and by witness Lynch, who discussed the conditions in that terminal and (R. 826) introduced an aerial photograph of the Ogden yard (page 10, Ex. 12).

[fol. 2550] The Rio Grande is not a party to the contract covering the ownership, maintenance and operation of the Ogden terminal facilities and makes no use of those facilities for freight trains. Rio Grande does not bear in any manner any part of the expense of operating the freight yard zone which it is necessary to use in interchanging traffic with it (R. 865).

Because the limited facilities of the terminal freight yards had become so congested with war traffic as to practically paralyze operations, the Depot Company constructed the East Yard (left end of the map, Exhibit 14) at a cost of $864,000 during the period 1942-1945. This yard is more than 2 miles from the main freight yard facilities and it was constructed to handle overflow traffic from the main freight yards. The East Yard was constructed that distance from the main yards "because it was found that, due to the industrial development around the Ogden terminal facilities, there was no room for expansion in a location adjoining the main freight yards" (R. 868-869 and 1081-1082).

The Rio Grande train yard is just west of the north end of the Depot Company's yard and the main line tracks of the Southern Pacific (point marked "X", Ex. 14); Rio Grande's roundhouse, car shops, freight house tracks for interchange with Bamberger Electric and a number of industries served by the Rio Grande are located east of the Depot Company's yard. Connecting its train yard on the west with the facilities to the east, the Rio Grande has a track which crosses at right angles, at point marked "A" on Exhibit 14, four combination switching and freight yard lead tracks in the north end of the Depot Company's yard [fol. 2551] which are used by the Southern Pacific and Union Pacific freight trains for entrance and exit, also the main line tracks used by the Southern Pacific for all of its eastbound and westbound passenger trains.

At the Rio Grande's crossing at point "A" there is a crossing protection with signals normally set clear for Depot Company's switch movements. The Rio Grande con-

trols this device and when its crews want to cross Depot Company's tracks they unlock the control box and set the signals at stop against all Depot Company's switching and Union Pacific's freight trains from and to the north and all Southern Pacific's freight and passenger trains arriving and departing (R. 869-870). This Rio Grande crossing is "a bottleneck within a bottleneck" (R. 875-878).

Instead of "several instances of delays to trains" as stated in the report, the undisputed evidence is that interruptions from Rio Grande movements over this crossing averaged 17 per day, blocking terminal and main track operations an average of 7 minutes per movement. These interferences are "frequent" and cause "serious delays" to both terminal and main-line train operation of the Union Pacific and Southern Pacific, some of which are from 30 to 60 minutes, causing 100-car freight trains to make emergency stops and to stand by while the Rio Grande performs its switching (R. 875-878).

The Ogden terminal facilities having been designed and constructed for the purpose of interchanging eastbound and westbound traffic between the Union Pacific and Southern Pacific, a fact which the report ignores, it requires no [fol. 2552] fertility of imagination to comprehend the awkwardness and the complications involved in interchanging the northbound and southbound traffic which the Rio Grande seeks in this case. The Rio Grande traffic could not escape passing through these terminal facilities as the Union Pacific's tracks do not directly connect with those of the Rio Grande at Ogden (R. 870).

Both witnesses Lynch and Edens testified without contradiction that the Ogden yard facilities are inadequate for expeditious and efficient handling any more traffic than they now handle, and even now they frequently incur serious delays (R. 826, 880).

Their testimony was confirmed by that of witness W. F. Kirk, who, as Agent appointed by this Commission, had the duty of directing the movement of traffic over the western lines during World War II. He said the Ogden and Salt Lake terminals gave him his "greatest headaches" while acting in that capacity (R. 1294).

The Commission recognizes that the additional traffic

that would be diverted under its order to the Rio Grande could not be handled through the Ogden terminal without "detriment to the operating efficiency" of the Union Pacific and Southern Pacific, but consoles itself with the thought that the detriment would not be "serious".

In the face of the undisputed testimony of Vice President Lynch and of the Superintendent of the Ogden terminal, and even the admissions of Rio Grande Vice President [fol. 2553] Bradford, we submit that the Commission's conclusions are not supported by, but are contrary to the evidence concerning the inability of those facilities reasonably to handle additional traffic that would be diverted to the Rio Grande under the Commission's order.

For reasons not disclosed in the report and not warranted in the record, the Commission injects Salt Lake City as, presumably, a sort of "alternative" interchange point for the traffic the Rio Grande wants from the Union Pacific. This goes beyond the complaint which demands the traffic at Ogden and Denver and not at Salt Lake City. Witness Bradford of the Rio Grande stated definitely and positively that the traffic sought by that line would be interchanged through the Ogden facilities (R. 196), and all of the testimony concerning interchange at the west end of the Rio Grande related solely to Ogden. There is no testimony directed toward the adequacy and capacity of facilities for interchanging at Salt Lake City the traffic the Rio Grande seeks, and the suggestion by the Commission of that point for alternative interchange is unwarranted and without basis in the record.

Concerning the unsatisfactory interchange at Denver, Mr. Lynch of the Union Pacific testified (R. 828):

> "Our experience in the interchange of traffic with the D&RGW at Denver is not all satisfactory. Serious delays are encountered, because the Rio Grande is either unable to handle the traffic promptly or employs inefficient methods of handling it. As will be shown by another witness, cars we have interchanged to the Rio Grande at Denver have been delayed by that line as long as 117 hours."

[fol. 2554] Witness Hanson showed that intolerable delays were incurred by westbound Union Pacific traffic rerouted during the 1949 blizzards via the Rio Grande at Denver, where Union Pacific held a large number of carloads waiting until the Rio Grande was able to handle them (R. 990). He illustrated these delays at Denver by showing that some 200 of the 1,092 westbound carloads that were rerouted via the Rio Grande at Denver were delayed from a minimum of 19 hours and 20 minutes to a maximum of 116 hours and 10 minutes because of the Rio Grande's inability to accept the cars and move them out of Denver (R. 991).

Similar demonstrations of the Rio Grande's inability to handle any considerably heavier volume of traffic were shown by witness Hanson at times other than the storm period. For example, on October 17, 1948, the Rio Grande's interchange tracks at Denver had been blocked for 48 hours and the Union Pacific was holding empty refrigerator cars for delivery to the Rio Grande. Another example of the limited capacity of the Rio Grande to accept traffic at Denver is indicated in the following wire from its Superintendent of Transportation to the Union Pacific on September 1, 1949 (R. 992):

> "Due to yard conditions at Denver account heavy movement of peach crop will be unable to accept any empties at Denver for 48 hours, except will take delivery of refrigerators from Union Pacific over Northwestern terminal and refrigerators from CB&Q at North Yard. Cannot accept any over Denver interchanges. Appreciate your holding up all other empties until we can get perishables cleaned up."

[fol. 2555] Witness Hanson pointed out that these were instances where the Rio Grande was handling their normal flow of traffic (R. 992) and while the 1949 congestion was during the movement of the Colorado peach crop, it nevertheless demonstrates conclusively that the Rio Grande has not equipped itself to handle efficiently even its own annual and recurring peak load of traffic to say nothing of any sizeable portion of the traffic it seeks in this case.

The Commission should find that there is no evidence

of record concerning interchange facilities at Salt Lake City and that such facilities at Ogden and Denver are shown to be inadequate for handling the traffic that its order would divert to the Rio Grande.

XII.

The Commission Erred in Failing to Hold That It Has Power to Consider the Probable Effect Any Substantial Diversion of Traffic and Revenues From the Union Pacific to the Rio Grande Would Have on Union Pacific, Its Employees and Its Service on Cities, Towns and Communities Served by It, and in Failing to Find That the Probable Diversion Under Its Order Would Impair and Deteriorate Service Required by Shippers and a Large Segment of the Commerce of the Country and the National Defense.

The Commission apparently dismisses from consideration the probable detrimental effects of a substantial diversion of traffic and revenues to the Rio Grande on Union Pacific employees and on the main line and branch line service of that line and upon numerous cities, towns and communities served by and largely dependent upon it. At Sheet 53, it seems content to say that there is no specific provision in section 15(3) or (4) requiring that conditions for protection of Union Pacific employees be imposed in connection with the requirement of through routes and [fol. 2556] joint rates via the Rio Grande and at Sheet 54 it disposes of the detrimental effects of diversion of traffic and revenues to the Rio Grande by simply saying it is impossible to say definitely how much traffic might be so diverted.

Such summary disposition of these significant and closely related matters is clearly erroneous. That the "public interest" includes probable detrimental effects of the order upon railroad employees, regardless of the absence of a specific provision in section 15(3) for that purpose, was settled in *United States v. Lowden*, 308 U. S. 225, and the following quotation from page 240 of the decision in that case makes it plain that all of the probable detrimental consequences urged in our Exception No. XII, sub-topic 10, beginning at page 268 of our Exceptions to the Proposed

Report, are to be considered in connection with and as a part of "public interest":

> "If we are right in our conclusion that the statute is a permissible regulation of interstate commerce, the exercise of that power to foster, protect and control the commerce with proper regard for the welfare of those who are immediately concerned in it, as well as the public at large, is undoubted."

The data we have laid before the Commission clearly shows that every carload of freight diverted to the Rio Grande will deprive the Union Pacific of an average estimated revenue loss of about $315.00 per car and the fact that no one can determine "definitely" the amount of such diversion is no excuse for the Commission to dismiss the probable detrimental effects from consideration or to de-
[fol. 2557] part from its own decisions and others in which public detriment from infliction of potential injury by competing carriers by Commission action was decisive. *Chicago, B. & Q. R. Co., Control*, 271 I. C. C. 63, 165; *Texas & Pac. Ry. Co.* v. *Gulf, C. & S. F. Ry. Co.*, 270 U. S. 266; *Western Pac. R. Co.*, v *Northwestern Pac. R. Co.*, 191 I. C. C. 127; and *Pacific Intermountain Exp. Co.—Control and Purchase*, 57 M. C. C. 341.

It is now estimated by Union Pacific officers that, based on 1951 tonnage of the commodities on which the order would require through routes and joint rates, the estimated possible revenue loss would amount to more than $12,000,000 per year or nearly one-fourth of the total possible loss of $49,880,000 annually if the Commission had given the Rio Grande its full demands. In that proportion to total possible losses the order would result in possible annual losses of about $1,000,000 to the Chicago and North Western and $400,000 to the Wabash (Sheets 50, 52). If only 15% or 20% of this possible loss resulted from diversion of traffic to the Rio Grande, the financial loss to those three defendants would approximate $3,000,000 per year which they would suffer solely to satisfy the Rio Grande's desire to improve its financial condition by taking "bridge" traffic from the Union Pacific and other defendants. If the required through routes and joint rates are needed and are

"in the public interest" as the Commission has found, then under the decisions cited above, the same "public interest" requires that the Commission give consideration to the probable detrimental effects as well as alleged benefits and determine "whether the probable benefits overbalance the probable injuries," *Chicago, B. & Q. R. Co. Control*, 27[1] [fol. 2558] I. C. C. 63, 146. In *Chicago, R. I. & G. Ry. Co. Trustees Lease*, 233 I. C. C. 21, 25, the Commission itself emphatically held that:

> "* * * the welfare of the employees affected is one of the matters of public interest which we must consider in proceedings under section 5(4), * * *"

before there was any specific requirement in that section that the welfare of employees be considered, and this holding was sustained by the Supreme Court in *U. S. v. Lowden*, 308 U. S. 225.

XIII.

There Is No Evidence to Support or Justify the Finding That Maintenance by the Union Pacific of Joint Rates With the Bamberger Railroad South of Ogden While Refusing to Participate in Like Rates With the Rio Grande Discriminates Against the Latter in Violation of Section 3(4) of the Act.

On Sheet 64 the report correctly states that to support a finding of discrimination under section 3(4) it must be shown that transportation conditions over the route alleged to be discriminated against are no less favorable than over the route said to be preferred, and proceeds to find that the Union Pacific discriminates against the Rio Grande by refusing joint rates with it while maintaining them with the Bamberger Railroad. There is no evidence concerning or comparing transportation conditions on the Bamberger's electric line between Ogden and Salt Lake City with conditions on the Rio Grande. In the absence of such testimony, the Commission attempts to support its finding by saying "there is no apparent reason" why similar arrangements should not apply with the Rio Grande and that "it appears that there is no important dissimilarity" between transportation conditions on the two roads.

[fol. 2559] The burden was on the Rio Grande to submit evidence proving similarity of transportation conditions. Its failure to do so cannot be overcome by what is *not shown* or what might *appear* to the Commission outside the record. The Commission is without power to make a finding without evidence, and an order based on such finding is void. *Int. Com. Comm.* v. *Louis. & Nash. R. R.*, 227 U. S. 88; *Int. Com. Comm.* v. *Union Pacific R. R.*, 222 U. S. 541.

The Bamberger Railroad operates between Ogden and Salt Lake City, Utah, and serves intermediate points, most of which are also served by both the Rio Grande and Union Pacific. Union Pacific's joint rates and through routes with the Bamberger have been in effect many years, and its relations with that line are the same as those between the Bamberger and the Rio Grande. While the Union Pacific does have through single-factor rates between stations in the Northwest and stations in Utah south of Ogden to and including Salt Lake City, which will apply via Ogden with the Bamberger but not with the Rio Grande, *the Rio Grande also has through single-factor rates between local stations on its line in Colorado and stations in Utah, Salt Lake City and north to and including Ogden, which apply via Salt Lake City with the Bamberger but not with the Union Pacific.* To grant the Rio Grande's demand for joint rates via Ogden with the Union Pacific would be to give it the opportunity to take traffic that Union Pacific adequately and efficiently handles while the Rio Grande refuses to be as liberal with the Union Pacific to and from its local territory in Colorado. The Bamberger now handles some business with the Union Pacific that the Rio [fol. 2560] Grande could handle, and it probably also handles some business with the Rio Grande that the Union Pacific could handle. Publication of this new route via the Union Pacific with the Rio Grande is not necessary so far as the public is concerned, but it would establish a new route that could and probably would deprive the Bamberger of some business it now handles.

XIV

The Commission Is Requested to Reconsider and Reverse Its Refusal to Receive in Evidence Defendants' Offer of

Proof Concern- the Rio Grande's Propaganda Campaign to Procure Shipper Witnesses, the Radio Broadcasts and the So-Called Editorial by Senator Edwin C. Johnson.

By its orders of June 5 and October 2, 1950, the Commission has refused to receive our offer of proof portraying the activities indulged in by the Rio Grande in its propaganda campaign to solicit and procure shipper witnesses to help it win its case (R. 1116). The Commission has denied the Union Pacific's petition dated February 20, 1951, to reopen the record and receive in evidence the speech of Senator Edwin C. Johnson brodcast January 27, and February 2, 1951, over Radio Station KFEL at Denver, Colorado, and it has also denied our petition dated November 20, 1952, to reopen the record and receive a so-called editorial by Senator Edwin C. Johnson published in the Wichita Beacon, October 28, 1952, and to dismiss the complaint for reasons cited in that petition.

Without restating the reasons previously presented, we request that the Commission reconsider its refusal to receive the described offers of evidence and that for the reasons set forth in our respective petitions and upon au- [fol. 2561] thority of decisions cited in the Union Pacific's Memorandum of Additional Authorities, etc., October 5, 1951, that it reverse its previous rulings and receive the proffered material in evidence and give it the weight to which our citations show it is entitled in connection with the decision that should be made in this case.

Conclusion

For the foregoing reasons, it is requested that this proceeding be reopened for reargument and reconsideration and that the Commission's findings and conclusions hereinabove discussed be reversed and the complaint dismissed. It is further requested that the effective date of the order be postponed pending such reargument and reconsideration.

Rspectfully submitted, Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, L. E. Torinus, Jr., Conrad Olson, F. O. Steadry, Elmer B. Collins, (s) Elmer B. Collins, Attorneys for Above-named Defendants.

Due Date:

April 15, 1953

1416 Dodge Street
Omaha 2, Nebraska

[fol. 2562] Certificate of Service

I hereby certify that I have this day served the foregoing document upon all parties of record in this proceeding by mailing by first-class mail a copy thereof properly addressed to each other party.

Dated at Omaha, Nebraska, this 13th day of April, 1953.

(s) Elmer B. Collins, Elmer B. Collins, Of Counsel.

[fol. 2563] At a General Session of the Interstate Commerce Commission, Held at Its Office in Washington, D. C., on the 10th Day of June, A. D. 1953.

No. 30297

The Denver and Rio Grande Western Railroad Company

v.

Union Pacific Railroad Company et al.

Order Denying Petitions for Reconsideration and Modification of Findings and Order—June 15, 1953

Upon further consideration of the record in the above-entitled proceeding, and upon consideration of petitions for reconsideration, and for modification of the findings and order filed by complainant, defendants and various interveners, and the several replies to the petitions, and it appearing that none of the petitions presents matters that are materially different from those of record in the proceeding, or offers new or additional contentions or arguments that

vary substantially from those previously advanced and considered by the Commission in disposing of the issues:

It is ordered, That said petitions be, and they are hereby, denied.

By the Commission.

George W. Laird, Acting Secretary.

THE DENVER & RIO GRANDE WESTERN RAILROAD COMPANY,
Appellant,

v.

UNION PACIFIC RAILROAD COMPANY, ET AL., *Appellees.*

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

STATEMENT AS TO JURISDICTION

In compliance with Rule 13 of the Rules of the Supreme Court of the United States, as revised, The Denver & Rio Grande Western Railroad Company submits herewith its statement particularly disclosing the basis on which the Supreme Court of the United States has jurisdiction on appeal to review the judgment of the District Court entered in this cause December 20, 1954. Notice of appeal was filed in the District Court February 3, 1955. As the

result of a motion duly filed in the District Court by appellant, the time within which the appellant may docket the cause and file the record thereof with the Clerk of the Supreme Court of the United States was by order of the District Court entered March 22, 1955, enlarged from April 4, 1955 to June 1, 1955.

OPINIONS BELOW

The opinion of the District Court for the District of Nebraska, Omaha Division, is not yet reported. A copy is attached hereto as Appendix A. A copy of the Final Judgment of the District Court entered December 20, 1954 is also attached as Appendix B. The decision of the Interstate Commerce Commission is reported as *Denver and R. G. W. R. Co.* v. *Union Pac. R. Co.*, 287 I.C.C. 611.

JURISDICTION

The jurisdiction of the Supreme Court to review the decision in this case is conferred by 28 U.S.C. 1253 and 2101 (b). The following decisions sustain the jurisdiction of this court to review the judgment on direct appeal. *Pennsylvania R. Co.* v. *United States*, 323 U.S. 588, *U. S.* v. *Capital Transit Co.*, 325 U.S. 357, *New York* v. *United States*, 331 U.S. 284 and *United States* v. *Great Northern Railway*, 343 U.S. 562.

QUESTIONS PRESENTED

The questions presented arise out of the decision and order of the Interstate Commerce Commission of January 12, 1953, which on the complaint of the appellant, herein called the Rio Grande, and others prescribed joint through rates and competitive through routes applicable to certain commodities (287 I.C.C. 611 at p. 659) via the Ogden, Utah gateway and the Rio Grande between points on the Union Pacific Railroad Company in Washington, Oregon, Idaho, Northern Utah and Montana and points such as Denver, Colorado Springs and Pueblo,

Colo., and points east thereof on the lines of the defendant railroads. The Commission found that joint competitive through rates and through routes on the traffic covered by its order are necessary and desirable in the public interest to provide adequate and more economic transportation and that the existing rates and charges on the same traffic are and for the future will be unjust and unreasonable and unduly prejudicial to shippers and receivers using or desiring to use the routes of the Rio Grande and unduly preferential of shippers and receivers using the routes of the Union Pacific Railroad Company and other defendants. The Commission also found that in the maintenance by the Union Pacific Railroad and other rail defendants of joint rates between the northwest area described, on the one hand, and points on the Bamberger Railroad Company south of Ogden, on the other hand, while refusing to maintain like rates to and from the same points on the line of the appellant south of Ogden subjects the appellant to discrimination in violation of Section 3(4) of the Interstate Commerce Act.

Upon the suit of the Union Pacific Railroad Company and certain other railroads filed in the District Court, the validity of the order of the Commission was assailed on various grounds. That court sustained the order of the Commission in part and overruled it in part. All of the principal parties have filed notices of appeal.

The questions presented on this appeal are:

1. Whether the District Court erred in overruling certain findings of fact and conclusions of law of the Interstate Commerce Commission.

2. Whether the court erred in holding in paragraph III of its Conclusions of Law that there is no substantial evidence to support the findings and order of the Commission which requires the establishment of through joint rates and competitive through routes between the Union Pacific Railroad Company, the Rio Grande and other railroads with respect to the commodities and the areas spec-

ified in the order, and in substituting its own judgment and findings by which it modified the scope of the relief granted by the Commission by restricting the application of the rates prescribed by the Commission to shipments consigned in the first instance to points on the Rio Grande, accorded in-transit privileges at such points, and are later reshipped to points beyond the Rio Grande.

3. Whether the court erred in interpreting and in applying to the evidence of the case, the provisions of Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act. (49 U.S.C. §§ 3(1), 15(3) and 15(4))

4. Whether the court erred in setting aside, in part, the order of the Commission, which requires the Union Pacific Railroad Company and the other defendants before the Commission to participate with the Rio Grande in the maintenance of through competitive routes and joint rates on the commodities described by the Commission to and from the involved northwest area and the designated area east of Denver, Pueblo and Trinidad, Colorado, whether or not transit privileges are used on the Rio Grande.

5. Whether the court erred in ruling, contrary to the findings of the Commission and the evidence, that on the commodities specified by the Commission the through competitive routes and joint rates required by its order via the Rio Grande to and from the northwest area and a designated area east of Denver, Pueblo and Trinidad, Colorado, are not needed in order to provide adequate and more economic transportation.

6. Whether the court erred in overruling the findings and conclusions of the Commission that as to the commodities specified by the Commission the existing transportation services and facilities via the Union Pacific routes were inadequate and uneconomical between the northwest area and points of destination in a designated area east of Denver, Pueblo and Trinidad, and in substituting its own

finding that the existing transportation services and facilities via the Union Pacific routes are adequate.

7. Whether the court erred in overruling the findings and conclusions of the Commission that the existing rates assailed are and will be unjust and unreasonable, and unduly prejudicial to shippers and receivers using or desiring to use the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes in and to the extent that such rates exceed, or may exceed, the joint rates maintained on the specified commodities from and to the same points over the Union Pacific routes.

STATUTES INVOLVED

The pertinent provisions of the Interstate Commerce Act, 24 Stat. 379, as amended 49 U.S.C. § 1, *et seq.*, are attached hereto as Appendix C.

STATEMENT

The Questions Presented are Substantial

Both the appellant and the appellees claim, *inter alia*, that the District Court misinterpreted three important provisions of the Interstate Commerce Act, namely, paragraphs (1), (3) and (4) of Section 15 and paragraph (1) of Section 3, and the appellees have filed a notice of appeal.

Section 3(1) prohibits and makes unlawful for any carrier to make, give or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory or any particular description of traffic in any respect whatsoever; or to subject any of the persons, localities, districts, territories or traffic described to any undue or unreasonable prejudice or disadvantage.

Section 15(1) gives the Commission the power to prescribe just, reasonable, fair and non-discriminatory through rates, including joint rates, when existing rates are found

by it to be unjust, unfair, unreasonable, unduly prejudicial or otherwise in violation of the Act. Section 15(3) provides that the Commission may and shall whenever deemed by it to be necessary or desirable in the public interest prescribe joint through rates and through routes. Section 15(4) provides that in establishing a through route the Commission shall not require any railroad, without its consent, to take less than the entire length of its railroad, except (a) as provided in Section 3 of the Act, (b) where the Commission finds that a through route is needed in order to provide adequate, and more efficient or more economic transportation, and (c) under four other exceptions not here pertinent.

In *Pennsylvania R. Co.* v. *United States,* 323 U.S. 588, 593, the court sustained the decision of the Commission in *Stickell* v. *Alton R. Co.,* 255 I.C.C. 333, 343, where the Commission held that the exception in clause (b) of Section 15(4) means adequate and more efficient and more economic transportation from the public or the shippers' standpoint as well as from that of the carriers. The existence of any of the exceptions nullifies the limitation on the power of the Commission to prescribe through routes.

The questions presented are substantial and important and should be resolved by this court. The opinion of the court below is in certain respects novel and unprecedented since that court not only misconceived the law and the evidence, but acted upon the erroneous assumption that it had the right to prescribe, and did prescribe, its own conception of the appropriate remedy to be applied as a substitute for the remedy the Commission prescribed to cure the wrongs the Commission found to exist.

The District Court Erred in Applying the Pertinent Statutes and in Substituting Its Judgment for That of the Commission on Factual Questions

In weighing the evidence the District Court allowed the incidental question of stopping cars in transit for various purposes, a common commercial practice among shippers and railroads, to control the category and in doing so be-

came confused as to the main issue in the case, which is the need in the public interest for joint through rates and competitive through routes in connection with the traffic and between the areas involved. The testimony before the Commission, as set forth at pages 132-146 of the transcript of the hearing and in Section H of Exhibit 3, shows 22 types of in-transit privileges provided by the Rio Grande in its published tariffs and by other railroads. These privileges permit the reconsignment and the stopping of freight in transit for the purpose of loading or partly unloading, for feeding and grazing of livestock and for merchandising and milling grain, etc. The evidence shows that these and other transit arrangements are commercially ineffective unless they can be used under joint competitive through rates applicable to the commodity from the point of its origin to its ultimate destination.

More than 27 shippers and organizations of shippers, representing over 300,000 persons, intervened as complainants in the complaint of the Rio Grande before the Commission. The testimony of numerous witnesses convinced the Commission of the public need for the joint rates and competitive through routes, the existence of which would not only enable these shippers to reach markets not now available to them, but to enjoy the benefit of competitive transit privileges in route when needed.

The Rio Grande is a common carrier by railroad engaged in the transportation of persons and property in intrastate, interstate and foreign commerce and operates approximately 2,400 miles of railroad in Colorado, New Mexico and Utah. It has interchange track connections and interchanges traffic with the Union Pacific Railroad at Denver, Colo., and at Ogden, Salt Lake City and Provo, Utah, with the Southern Pacific at Ogden and with the Western Pacific at Salt Lake City. It also has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, the Santa Fe and the Colorado and Southern; at Colorado Springs with the Santa Fe and the Rock Island; at Pueblo, Colo., with the Santa Fe, the Colorado and Southern, and the Missouri Pacific

Railroad; at Walsenburg, Colo., with the Colorado and Southern, and at Trinidad, Colo., with the Santa Fe and the Colorado and Southern.

In August 1949 the Rio Grande filed a complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroad defendants. The complaint alleged, *inter alia*, that the failure and the refusal of the Union Pacific Railroad and some 216 other defendant railroads to establish joint competitive through rates and routes via the Ogden gateway and the Rio Grande on interstate and foreign freight traffic in carload or trainload quantities in any quantity lots, or in less-than-carload lots, resulted in through rates which are excessive, unjust, unreasonable and discriminatory in violation of Section 1, Section 3 and Section 15 of the Interstate Commerce Act, and was and is contrary to the national transportation policy since it deprives the public, shippers, and the Rio Grande of the use of available and reasonable through routes and rail facilities at just, reasonable and non-discriminatory through joint rates which were and are necessary and desirable in the public interest.

At Ogden, Utah, looking west, the Union Pacific has two diverging lines of railroad which are in the shape of a large "Y". One line extends in a southwesterly direction through Salt Lake City and Provo, Utah, and Las Vegas, Nev., to Los Angeles, Calif. Between points on that line and Colorado common points and points east thereof, the Union Pacific maintains competitive joint through rates and through routes on all freight traffic in connection with the Rio Grande via Salt Lake City and Ogden. The other line of the Union Pacific extends in a northwesterly direction from Ogden through Utah, Idaho, Oregon, Washington and Montana. This is the territory to and from which the Union Pacific and its connections refuse to maintain joint rates on freight traffic via the routes of the Rio Grande through Ogden or Salt Lake City, except on sheep and goats from that territory to a few points and except on lumber to Canon City, Colo.

The Rio Grande intervened in the court below as a defendant and filed an answer in which it stated that it waived no rights but reserved the right to assail in a court of competent jurisdiction the validity of that part of the order of the Interstate Commerce Commission which imposed territorial and other restrictions in respect to the joint competitive rates prescribed and failed and refused to prescribe the joint rates and competitive routes on all of the traffic and between all of the points involved in the complaint of the Rio Grande before the Commission. Such a suit was later filed by the Rio Grande in the District Court of the United States for the District of Colorado, Civil Action No. 4492, and was decided by that court of three judges on January 13, 1955, not yet reported. That court held that the part of the order of the Commission which denied the relief sought by the Rio Grande is contrary to the evidence, arbitrary and contrary to the applicable statutes. It remanded the case to the Commission. On April 22, 1955, the District Court of Colorado denied the motions of the Union Pacific and others for a new trial or for reconsideration. No notice of appeal has as yet been filed by any of the parties to that suit.

In paragraph I of the Conclusions of Law in the opinion of the Court below, it held that the evidence supports the finding of the Commission that the establishment of through routes and joint rates between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the designated commodities, in carloads, originating in the northwest area

> "consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad. As to such commodities, the order of the Commission is valid under Sections 1, 15(3) and 15(4) of the Act and does not violate the direction of Section 15(4) that reasonable preferences be given the carrier which originates the traffic."

A similar finding was made by the Court below in paragraph II of its Conclusions of Law as to shipments of marble and granite monuments, in carloads, from points in Vermont and Georgia to points of final destination in the Northwest territory, which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest area.

In paragraph III of the Conclusions of Law the District Court held that:—

> "To the extent that the order of the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, which are incident to in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo or Trinidad, said order is not valid, because Sec. 15(4) constitutes a limitation on the power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary in order to provide, inter alia, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destination specified in this paragraph, that factual premise, essential to the validity of the order, is lacking."

As shown, the District Court found that the order of the Commission is invalid as applied to the traffic not originally consigned to points on the Rio Grande west of Denver, Pueblo and Trinidad, accorded transit privileges at such points, and then reshipped to points east of Denver, Pueblo and Trinidad. While the Commission was rightly influenced by the evidence which showed a wide spread demand for the existing transit privileges pro-

vided by the Rio Grande and its rail connections, it understood, what the court below did not, that what the shippers needed to make the existing transit privileges commercially available is the establishment of joint competitive rates via the routes of the Rio Grande. It is obvious that the District Court in attempting to weigh the significance of the evidence, came to the erroneous conclusion that the joint rates prescribed by the Commission are necessary only as to traffic accorded transit privileges at points on the Rio Grande.

The court not only erred in weighing the evidence as against the finding of the Commission, but misconceived the issues and the evidence. To illustrate: The evidence shows that a shipment of a carload of vegetables from a point on the Union Pacific in Idaho or Oregon might be initially consigned to Wichita, Kans., or to other points beyond the line of the Rio Grande and the shipper might find while the car is rolling or after it reached its billed destination that a better price could be obtained for the vegetables at say, Kansas City or Tulsa, Okla., or at Pueblo or Denver. Under the decision of the District Court the joint rates, the need of which is the pivotal issue, would not apply to shipments handled as described in the example.

The District Court appears to have been influenced in its conclusion by a misconception of *Central R. Co. of New Jersey* v. *United States*, 257 U.S. 247. In that case joint rail rates on lumber were maintained by southern and northern railroads from points in the south to points in the north, including points in New Jersey. Railroads in the south provided creosoting in transit privileges at points on their lines, but the Central Railroad of New Jersey and other northern railroads did not provide for creosoting in transit at Newark, N. J., or at other northern points. Upon the complaint of the American Creosoting Company, 61 I.C.C. 145, the Commission found that the refusal of the northern railroads to provide creosoting in

transit at Newark was unduly prejudicial to the complainant. This court reversed the Commission on the premise that transit at particular points is a local matter to be determined by the interested railroads and that the Commission misconstrued Section 3(1) of the Interstate Commerce Act in finding that the refusal of the northern railroads to provide for creosoting in transit at Newark was unduly prejudicial. But this court did not hold that the undue prejudice and undue preference prohibited by Section 3(1) of the Interstate Commerce Act is a local matter as the District Court seems to have assumed. See in this connection *New York* v. *United States*, 331 U.S. 284, 342. The Supreme Court merely held that the granting or the withholding of transit at a particular point is a local matter to be determined by the railroad. This court also held that under the provisions of Section 1 of the Interstate Commerce Act, which require railroads to maintain just and reasonable rates, charges, regulations and practices, the Commission has the power to decide under that section whether a particular transit privilege should be granted. (257 U.S., at p. 257)

The District Court also erred in holding in paragraph III of its Conclusions of Law that the evidence does not justify the finding by the Commission that the establishment of the joint rates and through routes prescribed are necessary and desirable in the public interest to provide adequate and more economic transportation on the traffic involved and therefore that the order is invalid under the limitation on the Commission's power to prescribe through routes in Section 15(4) of the Interstate Commerce Act. In that conclusion the court disregarded the fact that the limitation on the power to prescribe through routes is subject to six exceptions which provide that the limitation does not apply:—

1. Where the defendant railroad or railroads consent to take less than their long haul,

2. Where discrimination and undue prejudice is found under Section 3 of the Interstate Commerce Act,

3. Where one of the carriers in the route is a water carrier,

4. Where the route or routes sought to be protected by railroads are unreasonably long compared with another practical through route which could otherwise be established,

5. Where the Commission finds that the through route proposed or sought "is needed in order to provide adequate, and more efficient or more economic transportation,"

6. Where the Commission requires the establishment of temporary through routes as necessary and desirable in the public interest because of a shortage of equipment, congestion of traffic or other emergency found by the Commission to exist.

Since the Commission found that the rates assailed by the Rio Grande were unduly prejudicial and preferential in violation of Section 3 of the Interstate Commerce Act and that through routes and joint rates are necessary and desirable in the public interest to provide adequate and more economic transportation, it is clear that if either of these findings are supported by evidence the limitation on its power to prescribe through routes does not apply. They are supported by the evidence. The District Court did not give any real consideration to the exceptions to the limitation on the power of the Commission to prescribe through routes. This court should keep in mind that the limitation in Section 15(4) relates to the power of the Commission to prescribe through routes and not to its power to prescribe reasonable and non-discriminatory through rates. This is clearly indicated by the decisions of this court in *Virginian Railway Company* v. *United States*, 272 U.S. 658, 667, and *Atchison, T. & S. F. Ry. Co.* v. *United States*, 279 U.S. 768, 776. Since these decisions are to the same effect, it will be sufficient to quote from the decision in the *Virginian Rail-*

way case in which, at page 667, this court said apropos of this question:

> "Section 15(3) does not require that the Commission must make a special finding of public interest, before it can prescribe how an existing through rate found to be unreasonable and discriminatory shall be made conformable to law."

In dealing with the question of undue prejudice and preference prohibited by Section 3(1) of the Interstate Commerce Act, the District Court misconceived the facts on which the Commission based its findings, as well as the scope and purpose of that section and of the issues before the Commission for decision. The District Court said in part apropos of Section 3(1) that: (p. 11a)

> "If the prejudice and preference shown by the evidence falls within the prohibition of Sec. 3(1) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15 (3) and 15(4) heretofore considered. But the prejudice and preference prohibited by Sec. 3(1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3(1) which are served by the one carrier or the combination acting as one. The prohibition of Sec. 3(1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion."

The District Court failed to grasp that while the Union Pacific was the principal defendant in the complaint before the Commission there were over 200 other rail defendants with which the Union Pacific participated in joint competitive rates and through routes and that the joint rates sought by the Rio Grande are the same in amount as the rates generally maintained by the railroad defendants

on transcontinental and other traffic eastbound and westbound. Although the Union Pacific is the principal source and cause of the unjust discrimination claimed and found to exist by the Commission, it is not the only source. On the contrary, the other railroad defendants before the Commission act and acted in conjunction with the Union Pacific and are in *pari delicto* since the undue prejudice and preference found by the Commission could not exist unless they participated with the Union Pacific in maintaining the preferential joint competitive rates via various junction points with each other, while refusing to maintain similar joint competitive rates in connection with the considered traffic between the areas involved via Ogden or Salt Lake City and the Rio Grande.

The language of Section 3(1) and the numerous decisions of this Commission and of the courts make it clear that a finding of undue prejudice and preference as between two or more origin or destination groups or as to territories or regions may be validly made if the defendants serve both groups either directly or indirectly through connecting lines. This doctrine was pointedly recognized by this court in *St. Louis Southwestern Ry. Co.* v. *United States*, 245 U.S. 136, 38 S. Ct. 49, 52, where the court stated that localities and shippers require protection as much from combination of connecting carriers as from a single carrier whose rails reach them. See also *Texas & P. Ry. Co.* v. *United States*, 289 U.S. 627, 650; *Chicago, I. & L. Ry. Co.* v. *United States*, 270 U.S. 287; *State of New York* v. *United States*, 331 U.S. 284, 345, and *Ayrshire Collieries Corporation* v. *United States*, 335 U.S. 573, 593. In the *State of New York* case, 331 U.S., at page 341, this court said: "A proper finding of unlawful discrimination under Section 3(1) thus enables the Commission not only to direct the carriers to eliminate the practice but also, pursuant to Section 15(1) to prescribe the alternative," and at page 342 this court also said:

> "Once the Commission has found rates to be 'unjust or unreasonable or unjustly discriminatory or unduly

preferential or prejudicial,' it is empowered to prescribe rates which are 'just and reasonable' or 'the maximum or minimum, or maximum and minimum, to be charged * * *.' § 15(1)"

The Commission made such findings in this case.

CONCLUSION

For the reasons stated, we urge that jurisdiction be noted and that the judgment of the court below be reversed in respect to the issues and questions raised by this appeal.

Respectfully submitted,

Washington 5, D. C.
Attorneys for Appellant.

PROOF OF SERVICE

I, ROBERT E. QUIRK, one of the attorneys for the appellant, The Denver & Rio Grande Western Railroad Company, and a member of the bar of the Supreme Court of the United States, hereby certify that on May 31, 1955, I served copies of the foregoing Statement As To Jurisdiction on the several parties as follows:

1. On the United States by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

E. Riggs McConnell, Esq.
Special Assistant to the Attorney General
Department of Justice
Washington 25, D. C.

and with air-mail postage prepaid to:

Donald R. Ross, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Henry B. Cockrum, Esq.
Acting Associate Solicitor
United States Department of Agriculture
Washington 25, D. C.

Charles W. Bucy, Esq.
Associate Solicitor
United States Department of Agriculture
Washington 25, D. C.

3. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Edward M. Reidy, Esq.
General Counsel
Interstate Commerce Commission
Washington 25, D. C.

4. On the Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis and Omaha Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Wabash Railroad Company; Northern Pacific Railway Company; Great Northern Railway Company, plaintiffs; and employee organization of Union Pacific Railroad Company, intervening

plaintiffs; by mailing a copy in a duly addressed envelope with air-mail postage prepaid to their respective attorneys of record, as follows:

Elmer B. Collins, Esq.
Assistant Western General Counsel
Union Pacific Railroad
1416 Dodge Street
Omaha 2, Nebraska

F. O. Steadry, Esq.
Attorney for Chicago and North Western Ry. Co.
400 West Madison Street
Chicago, Illinois

Eugene S. Davis, Esq.
Attorney for Wabash Railroad Company
Railway Exchange Building
St. Louis 1, Missouri

Roland J. Lehman, Esq.
Attorney for The Atchison, Topeka and Santa Fe Railway Company
80 E. Jackson Boulevard
Chicago 4, Illinois

M. L. Countryman, Jr., Esq.
Attorney for Northern Pacific Railway Company
5th & Jackson Streets
St. Paul 1, Minnesota

L. E. Torinus, Jr., Esq.
Attorney for Great Northern Railway Company
175 East 4th Street
St. Paul 1, Minn.

M. P. Caveny, Esq.
Chairman, Union Pacific General Chairman's Asso.
Omaha, Nebraska

J. D. Cranny, Esq.
412 Farnam Building
Omaha, Nebraska

and first-class postage prepaid to:

Justus R. Moll, Esq.
1001 Connecticut Ave., N.W.
Washington, D. C.

5. On the State of Nebraska and the Nebraska State Railroad Commission; Washington Public Service Commission; Public Utilities Commission of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization of Wyoming; Public Service Commission of Wyoming; Public Service Commission of Utah; National Livestock Producers Association, by mailing a copy in a duly addressed envelope with air-mail postage prepaid to their respective attorneys of record, as follows:

Clarence S. Beck, Esq.
Attorney General of Nebraska
Lincoln, Nebraska

Bert L. Overcash, Esq.
Assistant Attorney General of Nebraska
Lincoln, Nebraska

Don Eastvold, Esq.
Attorney General of Washington
Olympia, Washington

John H. Carkin, Esq.
Counsel, Public Utilities Commission
State of Oregon
Salem, Oregon

John H. Riskin, Esq.
Secretary,
Board of Railroad Commissioners of Montana
Helena, Montana

Howard B. Black, Esq.
Attorney General of Wyoming
Cheyenne, Wyoming

ROBERT E. QUIRK
Attorney for Appellant,
The Denver & Rio Grande
Western Railroad Company.

APPENDIX A

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

Civil Action No. 76-53

UNION PACIFIC RAILROAD COMPANY, ET AL., *Plaintiffs*,

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, *Defendants*.

Before JOHNSEN and COLLET, Circuit Judges, and DELEHANT, District Judge.

Opinion

COLLET, *Circuit Judge*.

The Denver and Rio Grande Western Railroad Company, hereafter referred to as the Rio Grande, filed a complaint with the Interstate Commerce Commission requesting the Commission to order the Union Pacific Railroad Company (and other lines comprising the Union Pacific System, together with connecting carriers comprising, in all, 221 railroads, which will be referred to as the Union Pacific) to file joint rates over through routes with the Rio Grande for the transportation of freight from and to certain areas. The Commission granted the request as to certain types of freight with substantial territorial limitations. The [Union Pacific] Union Pacific brings this action to enjoin and set aside the order. A reference to a map of the United States will be helpful in understanding the following summarization of the facts.

The northern terminus of the Rio Grande is Ogden, Utah. From Ogden it runs south through Salt Lake City and Provo, Utah, then southeasterly and east, entering Colorado at about the south central part of that state, thence east and somewhat north through the central part of Colorado to Dotsero, west of Denver, where it divides, one branch going on east to Denver, the other swinging south and east to

Pueblo, Colorado. From Denver the Rio Grande line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serve territory in southern Utah, northwestern New Mexico, and southern Colorado. These latter lines are not of special importance in this action. At Denver, Colorado Springs, Pueblo, and Trinidad the Rio Grande maintains joint rates and through routes with lines other than the Union Pacific to destinations east and south of those points.

The Union Pacific (including connecting lines which were defendants in the I.C.C. proceedings) serves the greater part of the east, south and midwestern sections of the United States. Traffic involved in this action from those sections flowing westward over the Union Pacific and connecting lines converges at Denver and Cheyenne, Wyoming, then moves westwardly across the southern part of Wyoming to Ogden and Salt Lake City. One of its lines runs from Salt Lake City south to Provo, Utah, thence southwest to Los Angeles, California.

The Union Pacific also serves the northwestern part of the United States, including that part of Utah north of Ogden, Idaho, Montana, Oregon, and Washington. It is traffic from and to this latter territory, referred to herein as the northwest territory or area, which is the principal subject of the pesent controversy.

The Union Pacific maintains joint rates and through routes over its lines and with many connecting carriers from and to the northwest territory through Ogden and Salt Lake City, Cheyenne, Denver, and points east and south to the Atlantic Seaboard and the Gulf of Mexico. For a comparatively short distance, from Ogden through Salt Lake City to Provo, where the Los Angeles line swings southwest, the Union Pacific and the Rio Grande parallel and serve some common points. To and from these points, joint rates and through routes are maintained by the Union Pacific over its lines with the northwest territory and the area east of Cheyenne and Denver served by the Union Pacific. The Union Pacific does not maintain joint through rates with the Rio Grande, with certain exceptions not material in this proceeding. Freight moving from the north-

west territory to points in southern Utah and Colorado on the Rio Grande, finally destined to points east of the eastern termini of the Rio Grande, moves on the combination rate, consisting of the total of the Union Pacific rate to Ogden via Union Pacific and the Rio Grande rate from Ogden via Rio Grande to points on the Rio Grande. The same is true of the rates on shipments from points east of Denver to those points on the Rio Grande finally destined to the northwest territory. This combination of rates, or combination rate, as it is called, is considerably higher than a joint through rate. Freight moving from and to the northwest territory from and to all points east of Denver[1] served by the Union Pacific and connecting carriers has the benefit of joint through rates via Union Pacific, with accompanying in-transit privileges en route, while freight originating on the Union Pacific in the northwest territory and moving to the area east of Denver, which is routed

---

[1] "All points east of Denver" will be used as the designation of all points included in the Commission's order to or from which through routes and joint rates were ordered established by the Union Pacific with the Rio Grande. The Commission's order in this respect was: (287 I.C.C. 611, 659)

"We conclude:

"1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, then immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

over the Rio Grande, pays the combination rate without in-transit privileges at points on the Rio Grande. The result is that practically all of the long-haul traffic originating in the northwest area and destined to the area east of Denver goes over the Union Pacific all the way on the lower joint and through rates. Since the formal record before the Commission consists of 1,957 pages of testimony, 57 exhibits and 74 verified statements, the foregoing statement is obviously only a salient outline of the basis for the Rio Grande's complaint. For a complete understanding of the intricacies of the case by one unfamiliar with the record, it will be necessary to refer to the extensive report and order of the Commission reported in 287 I.C.C. 611.

The Commission ordered the establishment of through routes and joint rates via Ogden or Salt Lake City by the Union Pacific with the Rio Grande for the transportation of granite and marble monuments in carloads from points of origin in Vermont and Georgia to destinations in the northwest area, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, in carloads, from points of origin in the northwest territory to destinations "east of Denver". The order is based upon three primary basic findings. First, that the through routes and joint rates are necessary and desirable in the public interest, in order to provide *adequate and more economic transportation;* second, that the existing joint rates maintained by the Union Pacific are and will be *unjust and unreasonable and unduly prejudicial* to shippers and receivers of freight using or desiring to use the Rio Grande and *unduly preferential to shippers and receivers of freight using the Union Pacific;* third, that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad between the northwest area and points on the Bamberger line between Ogden and Salt Lake City, while refusing to establish joint rates with the Rio Grande to and from the same points on the Rio Grande between Ogden and Salt Lake City, subjects the Rio Grande to discrimination in violation of Sect. 3(4) of the Interstate Commerce Commission Act. Finding No. 1 has heretofore been quoted in footnote

1. Findings 2 and 3 are set out below.[2] To understand the import of these findings it is necessary to explain the factual theory upon which they are based.

First as to the finding that the rates ordered are necessary and desirable to provide adequate and more economic transportation. Located along the route of the Rio Grande, between Ogden on the west and Denver, Pueblo and Trinidad on the eastern termini, are a number of livestock feeders. Some of these are ranchers who graze and feed cattle and sheep. Others are operators of beet sugar plants which produce livestock feed as a by-product and feed the by-product to livestock. These livestock feeders buy cattle and sheep in the northwest area, which are ultimately destined for the market, and ship them to points on the Rio Grande for feeding. Many of the principal livestock markets of the United States are located east of Denver. Without joint through rates with in-transit privileges which would permit these livestock feeders to ship from the northwest area to the feeding points on the Rio Grande and then reship on joint through rates to points east of Denver, Pueblo, and Trinidad, they are at a substantial rate disadvantage with similar livestock feeders following the same practice who are located on the Union Pacific lines between Ogden and Provo, and between Ogden and Salt Lake City and Denver, located on the Union Pacific, who reship to points east of Denver. They are also at a sub-

---

[2] "2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act."

287 I.C.C. 611, 659-660.

stantial rate disadvantage in purchasing livestock in the northwest area in competition with buyers located on the Union Pacific lines west of Denver and Cheyenne who have the benefit of joint through rates and in-transit privileges over the Union Pacific.

Also located on the Rio Grande are a number of industries which clean, package, process, freeze, and store fresh fruits, vegetables, poultry, food products, butter, eggs, and beans, and ship them on east to points beyond Denver, Pueblo, and Trinidad. These industries are at a comparable rate disadvantage, without in-transit privileges, as livestock feeders, and for the same reasons.

Monument dealers obtaining or shipping granite and marble from Vermont and Georgia are unable to ship full carloads to the northwest territory and have the rate advantage of partially unloading cars at intermediate points on the Rio Grande under in-transit privileges of through routes and joint rates which are available at points located on the Union Pacific.

This finding, which is finding No. 1 quoted in the footnote, is held by the Commission to justify ordering the establishment of through routes and joint rates under Secs. 15 (3) and 15 (4). Title 49 U.S.C.A. Secs. 15 (3) and 15 (4). Sec. 15 (3) empowers the Commission to establish through routes and joint rates when necessary or desirable in the public interest,[3] but Sec. 15 (4) prohibits the Commission from ordering the establishment of through routes by a carrier under Sec. 15 (3) without the carrier's consent if the result would be to short-haul that carrier unless, as provided by Sec. 15 (4), the Commission finds that the through route is needed in order to provide (1) *adequate*, and (2) *more efficient* or *more economic* transportation.[4]

---

[3] "Sec. 15 (3) The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, * * * establish through routes, * * * and joint rates, * * * applicable to the transportation of * * * property by carriers subject to this part, * * *."

[4] "Sec. 15 (4) In establishing any such through route the Commission shall not * * * require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire

The Commission accurately states the legal effect of Sec. 15 (4) in its report (Denver & R.G.W. R. Co. v. Union Pac. R. Co., 287 I.C.C. 611) at page 655 as follows:

> "Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the 'through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation.' Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In Pennsylvania R. Co. v. United States, 323 U.S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in D. A. Stickell & Sons, Inc., v. Alton R. Co., supra, the supreme court said that the expressions 'more efficient or more economic' transportation, as used in section 15 (4), 'may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found.' These latter considerations are not determinative, however, unless the existing routes can be found not to provide 'adequate' transportation.

'length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, * * * (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. * * *"

"In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests."

Was there evidence to support the finding of inadequacy? Only in the event there was inadequacy of transportation can the question of efficiency or economy be reached. It is clear from the report and the evidence that the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande as to the commodities embraced in the order. There is no evidence to support a finding that the physical transportation facilities furnished by the Union Pacific between the northwest area, on the one hand, and points east of Denver are inadequate. There is abundant support, however, for the finding that the service is inadequate to patrons of the Rio Grande, located on the Rio Grande between Ogden on the west and Denver, Pueblo, and Trinidad on the east (not served by the Union Pacific between Ogden and Provo), who do not have in-transit privileges with respect to freight moving from the northwest area which is to be reshipped to points east of Denver, if under the law the lack of in-transit privileges may constitute "inadequacy." That is also true as to the service to shippers of marble and granite from Vermont and Georgia to initial points on the Rio Grande who need the in-transit privileges of partial unloading or processing en route, incident to reshipment to final destination points between Ogden in the northwest area. The foregoing inadequacies are based upon the premise that the lack of in-transit privileges constitutes inadequacy of service within the meaning of clause (b) of Sec. 15 (4). The Union Pacific vigorously contends that it does not. This question presents the crux of this case. If, as the Union Pacific contends in-transit rights and privileges are matters over which the Commission under the law has no control, the existence or granting of which is subject only to managerial discretion of the carrier, and relate only to economy or efficiency of transportation to the exclusion of considerations of ade-

quacy of transportation, then the lack of in-transit privileges will not suffice as a proper basis for ordering "adequate" transportation. The argument is made in effect that since the transportation facilities are now available over the Union Pacific and the Rio Grande on the higher combination rates, the present nonexistence of in-transit privileges relates only to the cost or economy of transportation. Reference is made to excerpts from opinions which it is said support the conclusion that the Commission may not under its general regulatory power force a carrier to provide or establish in-transit privileges. The question has many ramifications. We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. Pennsylvania R. Co., et al. v. United States, et al., 323 U.S. 588, 54 F. Supp. 381.

But the inadequacy established by the evidence does not extend to shipments from the northwest area to initial destinations east of Denver. The same is true of shipments of monuments from Vermont and Georgia to points of initial destination in the northwest territory. Transportation service is now adequate between those points. There is ample evidence to support the finding that the establishment of the through routes and joint rates between the northwest area and points on the Rio Grande (not also served by the Union Pacific between Ogden and Provo), as to shipments which require in-transit privileges at points on the Rio Grande for reshipment to points east of Denver, will result in more economical transportation. Differences in mileage and other comparative factors are for the Commission to weigh, evaluate and determine. Its ultimate factual conclusion may not be overturned when supported by the evidence. But, again, there is no evidence that the service is inadequate or that more economical transportation service will result with respect to ship-

ments from the northwest area to points between Ogden and Provo served by both the Union Pacific and the Rio Grande and to be reshipped to final points of destination east of Denver. The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific. And that service is as economical via the Union Pacific as it would be over the Union Pacific and the Rio Grande if the through route and joint rates were established. The evidence therefore sustains the finding of inadequacy and the need for more economical transportation only as to (1) carload shipments of commodities embraced in the Commission's order from points in the northwest territory destined to points of final destination east of Denver which require in-transit privileges at points on the Rio Grande; (2) shipments of granite and marble monuments from Vermont and Georgia to final destinations in the northwest territory which require in-transit privileges at points on the Rio Grande not also served by the Union Pacific. If the order had been so limited to the evidence, it would eliminate short-hauling the Union Pacific except as to shipments requiring service which is now inadequate and which service the Union Pacific cannot now give. It would eliminate the charge made by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its financial needs, and, more important, it would have rested squarely within the authority of clause (b) of Sec. 15 (4).

The second finding, that the combination rates maintained by the Union Pacific and the Rio Grande are unduly prejudicial to shippers using or desiring to use the Rio Grande and unduly preferential to shippers and receivers using the Union Pacific to the extent they exceed the joint and through rates available to shippers located on the Union Pacific, is made for the purpose of bringing the order within the authorization of Sec. 3 (1). Title 49 U.S.C.A. Sec. 3 (1). That section is as follows:

> "Sec. 3 (1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference

> or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

The situation which this finding seeks to correct, simply stated, is that the shippers and receivers of the designated commodities located on the Rio Grande who do not have in-transit privileges and joint and through rates are at an economic disadvantage compared to shippers and receivers located on the route of the Union Pacific who do have joint and through rates and in-transit privileges.

If the prejudice and preference shown by the evidence falls within the prohibition of Section 3 (1) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15 (3) and 15 (4) heretofore considered. But the prejudice and preference prohibited by Sec. 3 (1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3 (1) which are served by the one carrier or the combination acting as one. The prohibition of Sec. 3 (1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion. Although the factual situation in Central R. Co. of New Jersey v. United States, 257 U.S. 247, was different, the purpose of Sec. 3 (1) was there stated as follows: (loc. cit. 259-260)

"What Congress sought to prevent by that section, as originally enacted, was not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them by the same carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose of scope of section 3."

If the Commission could order through routes and joint rates between two or more competing railroads under Sec. 3 (1) merely because a shipper entity described in Sec. 3 (1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15 (4) would be practically emasculated. The evidence of preference, advantage, prejudice or disadvantage, under these circumstances, furnishes no basis for the order under Sec. 3 (1).

The third finding, heretofore quoted, to the effect that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad to and from points in the northwest area and points on the Bamberger line from Ogden to Salt Lake City, inclusive, while refusing to maintain joint rates with the Rio Grande on shipments from the northwest area to the points served by both the Rio Grande and the Bamberger Railroad from Ogden to Salt Lake City, inclusive, discriminates against the Rio Grande, is based on Sec. 3 (4), which is as follows:

"Sec. 3(4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting lines in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier

subject to the provisions of this part or any common carrier by water subject to part III."

The Bamberger Railroad is an electric line operating only from Ogden to Salt Lake City, serving those cities and intermediate points. The Rio Grande serves all points served by the Bamberger. The criterion for determining unlawful discrimination under Sec. 3 (4) is stated by the Commission at page 658 of its order as follows:

> "A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred."

The Commission found there was no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande. Upon this record that factual conclusion may not be disturbed. Section 3 (4) clearly prohibits such discrimination. The Commission's order in this respect is valid under Sec. 3 (4).

Considerable attention has been given by the Union Pacific in its brief to the action of the Commission in rejecting a portion of evidence offered by it in an attempt to show improper conduct in the preparation and presentation of the Rio Grande's case before the Commission. We do not find justification for serious consideration of that question.

Findings of Fact

I.

The findings of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points

of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points.

II.

The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver.

III.

The record supports the Commission's finding that present transportation service for granite and marble monuments, in carloads, originating in Vermont and Georgia, consigned to initial destination points on the Rio Grande, requiring unloading and in-transit privileges for continued movement to points in the northwest territory, is inadequate and uneconomical and that the establishment of joint rates and through service is necessary in order to provide adequate and more economic transportation for such shipments.

IV.

The evidence supports the finding that as to designated items of traffic moving from the northwest area, shippers and receivers of freight located on the Rio Grande are at an economic disadvantage compared with shippers and receivers of freight from the northwest area who are located on the Union Pacific. But there is no community of interest between the Union Pacific and the Rio Grande and hence there is no discrimination by the Union Pacific within the prohibition of Sec. 3 (1).

V.

The evidence supports the finding of the Commission, referred to and quoted herein as Finding 3, that unlawful discrimination prohibited by Sec. 3(4) is being practiced by the Union Pacific in refusing to establish through routes and joint rates with the Rio Grande comparable to those existing between the Union Pacific and the Bamberger Line on traffic moving from the northwest area to points served by both the Bamberger Line and the Rio Grande between Ogden and Salt Lake City.

Conclusions of Law

I.

The absence of in-transit and other privileges involved herein, incident to through joint rates will, under the law, support a finding that transportation service without such services and privileges is inadequate within the meaning of Sec. 15 (4). The evidence therefore supports the finding of the Commission that the establishment of through routes and joint rates between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the designated commodities in carloads originating in the northwest area, consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad. As to such commodities the order of the Commission is valid under Sees. 1, 15 (3), and 15 (4) of the Act and does not violate the direction of Sec. 15 (4) that reasonable preference be given the carrier which originates the traffic.

II.

The evidence supports the finding of the Commission that it is necessary, in order to provide adequate and more economic transportation of shipments of marble and granite monuments in carloads from points in Vermont and Georgia to points of final destination in the northwest territory, which require unloading and in-transit privileges at points

on the Rio Grande incident to the continuation of the shipment to the northwest area, that through routes and joint rates be established between the Union Pacific and the Rio Grande as to such shipments.

III.

To the extent that the order of the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, which are incident to in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo or Trinidad said order is not valid, because Sec. 15 (4) constitutes a limitation on the power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary in order to provide, inter alia, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations specified in this paragraph, that factual premise, essential to the validity of the order, is lacking.

IV.

To the extent the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande at Ogden on carload traffic moving from the northwest area to points between Ogden and Salt Lake City, inclusive, served by both the Rio Grande and the Bamberger line, the order is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3 (4) of the Act.

To the extent stated in the foregoing opinion, findings of fact, and conclusions of law, the order of the Commission will be enjoined. The cause is remanded to the Interstate

Commerce Commission for such further proceedings as it may deem appropriate, consistent herewith.

Mary A. Mullen Clerk

JOHNSEN, *Circuit Judge*, dissenting.

The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute. The majority opinion upholds in part the result which the Commission has so reached.

What the Commission purports to make the primary basis for its establishing of through routes and joint rates over the Rio Grande is "perishable food articles". Here, as taken from its Report, are the manner and perspective of its approach to the question.

"Growers [of perishable food articles in Idaho, located on the Union Pacific] * * * market such products throughout the United States. In order to get as wide a distribution as possible, those growers and other growers in the northwestern area [that part of Utah lying north of Ogden, and the States of Idaho, Montana, Oregon and Washington] need as many markets and outlets as possible."[1] 287 I.C.C. at page 642. To comprehend or evaluate that need, says the Commission, "it is necessary to consider the nature, extent and functioning of our intricate and far-flung commodity marketing system." P. 655.

---

[1] It should be noted that the situation covered by the Commission's order does not involve the matter of joint rates to intermediate points on the Rio Grande as final destinations. Joint rates already apply to such traffic. The question is one of through routes and joint rates for traffic having a billing origin and destination outside of Rio Grande territory, and for which the Rio Grande therefore would merely be serving as a "bridge" line only, while the Union Pacific, on whose branch lines most of the traffic originates, would be caused to lose a line-haul thereon of 975 miles.

The importance, in our condition of growing population and national development, of having "a constantly expanding flow of diverse commodities" and "particularly articles of food" is emphasized. The comment is made that "A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible," and the truism is expressed that "Adequate transportation facilities and services are required for the proper functioning of the system." P. 656.

Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

1. "Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible.* This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities maybe avoided and that *as much flexibility as possible in the distribution process* be permitted." (Emphasis mine.) P. 656.

2. "A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities." In-transit privileges, "such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit," are available at various points on the Union Pacific to through-shipper on the basis of the joint rates applicable over that route, and similar privileges exercisable on the Rio Grande could be made available to such shippers, at a lower cost than under the present combination rates by establishing competitive through routes and joint rates over that road, so that those desiring to have the benefit of these additional facilities would be able to enjoy them on the same basis as those on the Union Pacific. Because the use of such transit facilities on the Rio Grande are not available in the same manner as those on the Union Pacific, "The shippers in the originating area involved in this complaint with respect

to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities." P. 656.

3. The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them "from effective participation in the widespread system developed for the marketing of such commodities." In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given "as many routes as possible" and "as much flexibility as possible in the distribution process", because otherwise they will be "debarred from effective participation in * * * the marketing of such commodities."

In other words, whenever it is possible physically and practicably to open up a new or an additional through route for such commodities, the Commission apparently feels entitled to exercise its power to do so, in order to make available any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use, and on the basis of further holding that the other prerequisite of section 15 (4) of the Act, 49 U.S.C.A. § 15 (a), where the element of short-hauling another carrier is involved, as it is here, that such an added through-route must also provide "more efficient or more economic transportation" than that existing on the present through routes, can sufficiently be satisfied by merely resorting to the Commission's power under section 15 (3) to prescribe joint rates and pointing out that

joint rates necessarily in the situation will provide "more economic transportation", since they obviously are lower than the previous combination rates.

I have grave legal doubt whether the Commission's power to establish joint rates under section 15 (3) has any relationship to the term "more economic transportation" in section 15 (4), dealing with the Commission's right to open up through routes. Rather, it seems to me that the term "more economic transportation" in section 15 (4) is intended to have reference to the elements of distance, time, equipment, cost of operation, territorial reach, and all those other quantitative and qualitative factors which are inherent in a transportational comparison from the standpoint of the interests of both the public and the carriers—and that the Commission's power to establish joint rates under section 15 (3) is one which has application only after through routes exist or are established, without the right to use it as a factor under section 15 (4) for satisfying the requirements of opening up a long-haul-depriving, additional through route.

But however this may be, I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term "more economic transportation" under section 15 (4), in the addition of another carrier's route as a mere "bridge" line for such traffic. If that be not so, then there is not any situation in which the Commission can not make a finding of "more economic transportation" for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination rates otherwise applying.

Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to "as many routes as possible" and "as much flexibility as possible in the distribution process," so that on this basis, and without regard to any other factor, any existing through route can be called inadequate,

because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad, serving as a bridge line, and further such new route can be declared to provide "more economic transportation", because by placing joint rates in effect the cost of using such new through route for its transit facilities will be less than under the general combination rates previously existing, then the railroads of the country may as well forget section 15 (4) entirely, as affording them any protection whatsoever against deprivation of their long hauls.

Here the opening up of a through route over the Rio Grande as a bridge carrier for the transcontinental freight involved will deprive the Union Pacific of a long haul of 975 miles upon such traffic as the Rio Grande is able to solicit away from it. But this is not the sole purport or effect of the Commission's order. If the order is upheld either in whole or in part, on the basis on which the Commission's result has been reached, the Commission can hereafter exercise its power to require through routes and joint rates from every connecting point in the country against every existing carrier, since every new through route necessarily will afford additional transit privileges and every joint rate necessary will reduce the cost of using the new through route as against the combination rate previously applicable.

Nor should one allow oneself to be blinded to what the real scope and significance of the Commission's reach here is. What it has purported to paint the picture of, in relation to its standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" is, as previously indicated, "perishable food articles". But it has, by means of some artificial classification, included ordinary livestock as a perishable food article (P. 656), saying merely, before doing so, that "We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway." And it has further held that a little monument dealer, located

on the Union Pacific in Utah, is entitled to have established for him a through route and joint rates on the Rio Grande, in order to have the transit privilege available to him of unloading locally, here and therein Colorado, on a through rate basis, some individual monuments out of an estimated four-carload lot of monuments per year.[2]

All of this to me is but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advisable, without being required to give consideration to the question of short hauling another carrier. It has repeatedly asserted that viewpoint and sought to gain that end. But Congress has never been willing to accede to that philosophy and position, and the courts have on a number of occasions had to strike down the Commission's efforts in that direction. All this is familiar history in the railroad world, and I shall not bother to go into it further here.

It is on the basis of the unqualified use of that standard here in relation to perishable commodities, and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which

[2] I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one of "urgent need" (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to his extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of "as many routes as possible" and "as much flexibility as possible in the distribution process" for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country.

the Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out.

I do not mean to make any implication, nor do I here assume to pass judgment, on whether the Ogden gateway is in other manner or to other extent subject to being opened up. All I say is that the philosophy and standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" can not be made the basis for overriding the short-haul provisions of section 15 (4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term "more economic transportation" to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing.

The philosophy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the country has never yet been relegated by Congress to the full impact of marketing principles alone. There is not a distributor of any commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did.

I have previously referred to the fact that most of the traffic that is here involved originates on the branch lines of the Union Pacific, and that on such of this traffic as the Rio Grande is able to solicit to use its route, the Union Pacific will lose a line haul of 975 miles. The Report of the Commission admits that "the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves" is about 200 miles. Page 654. It also recognizes that the Rio Grande is a mountainous route, of higher grades, more circuity, and

greater operational costs than the Union Pacific. "The total rise and fall in feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific. Other data as to physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services." Page 648.

All of these matters, however, the Commission lightly brushes aside, as not having relationship to the question of "more economic transportation" in the situation, and so leaving it free to hold, as above indicated, that the new through route provides "more economic transportation", because its joint rates necessarily are lower than the previously applicable combination rates. All that the Commission says, in brushing aside the transportational differences which I have set out, as not requiring consideration on the question of "more economic transportation" in the situation, is that, when they are spread over hauls of such great lengths as are here involved, "they become relatively insignificant." Page 658.

The Report does not undertake to show what amount of traffic goes where. It merely says that "About 90 per cent of the traffic upon which joint rates are sought via Ogden and the Rio Grande moves to (Missouri River crossings and points east and southeast) and about 10 per cent to the Southwest." Page 626. How much terminates at the Missouri River crossing-points or at other midwestern destinations, the Report does not state. As to livestock, however, it certainly is a matter of common knowledge that the primary markets are Chicago, Omaha, Kansas City and some other Missouri River points. To each of these points, as well as to the Minneapolis and St. Louis markets, the record shows that a haul of 200 miles more, and a transportation time of at least 24 hours longer, as well as at least one or two more terminal-yard services, are involved over the Rio Grande route. I do not believe that without rational demonstration the Com-

mission can say, except arbitrarily, that in relation to hauling distances of 1036 miles (Omaha) or 1153 miles (Kansas City) or 1524 miles (Chicago), the elements of difference which I have set out are so "relatively insignificant" as to be entitled to be ignored on the question of whether "more economic transportation" is being provided. And in the absence also of some demonstration or analysis of quantities and destinations as to the various other commodities involved, I do not believe that the Commission can be said to have any less arbitrarily brushed off the facts of the transportational and service differences existing, as related to the question of "more economic transportation" under the statute, than in the case of livestock, when it merely attempts to push all of the facts abstractly to a far-distant horizon, without establishment of the reality of that horizon for lumping purposes.

Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock, Western District Rates*, 176 I.C.C. 1, 190 I.C.C. 175, 190 I.C.C. 611, 200 I.C.C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the statute. In establishing the prescribed rates, the carriers limited their application, as the Commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the

livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations.

This dissent is being written hastily, in order not to delay the filing of the majority opinion, and I shall accordingly not take the time to go into detail on other matters. I agree with the majority that the Commission had no right here to find a violation of section 3 (1) of the Act against the Union Pacific and its connecting through-route carriers, but the basis for my view is not that adopted by the majority, that a discrimination under this section cannot at all exist, unless the complaining person or entity is located upon the lines of the carrier or combination of carriers claimed to have committed the discrimination. I do not believe that this viewpoint is tenable on the language of section 3 (1), nor on the expressions contained in St. Louis Southwestern Ry. Co. v. United States, 245 U.S. 136, 144, as well as on the plain, contrary assumptions made in Texas & Pacific Ry. Co. v. United States, 289 U.S. 627. But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3 (1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3 (1). If the Commission had attempted to predicate the relief which it here granted upon the existence of a violation of section 3 (1), I am certain that its action resting on this basis alone could not on these facial realities be up-

held. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15 (4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the prescribing of through routes and joint rates in relation to the existing conditions.

In the pattern of the Commission's apparent attempt to strike at as much in the present situation as possible, the Commission further, as noted in the majority opinion, required the Union Pacific to establish joint rates with the Rio Grande to and from the same points where it maintained joint rates with the Bamberger Railroad. The Report says: "The Bamberger, operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande." P. 659. The brief of the Union Pacific argues pointedly that "No evidence was submitted concerning or comparing transportation conditions on the Bamberger's electric line between Ogden and Salt Lake City with conditions on the Rio Grande." The brief of the Commission makes no denial of the fact that no such evidence is contained in the record. The most that the Commission could properly have said, I think was that it had not been made to appear by the evidence that there was any important dissimilarity in the conditions on the two roads. But the lack of any such evidence of dissimilarity could hardly afford a basis for a finding of similarity on the part of the Commission. This segment of the Commission's order is perhaps of relatively small importance in the present controversy. I refer to it simply as being characteristic or in the pattern of the loose and improper basis and manner in which it seems to me that the Commission has dealt with the entire situation.

I would strike down the Commission's order generally, on the basis and manner in which its result has been reached. In taking that position, however, I would again emphasize that I intend no implication that there may not

exist some proper basis and some proper manner of reach as to some parts of the Ogden gateway situation. I have not allowed my mind to look at that avenue, in either one direction or the other. The pervading infirmities on which the Commission's present order seems to me to rest make it sufficient and compel me to halt my judicial consideration right here.

APPENDIX B

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA OMAHA DIVISION

Civil Action No. 76-53

UNION PACIFIC RAILROAD COMPANY, ET AL., *Plaintiffs*,

v.

UNITED STATES OF AMERICA and INTERSTATE COMMERCE COMMISSION, *Defendants*.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, ET AL., *Intervening Defendants*.

Final Judgment and Decree

The above-entitled action having come on for final hearing on November 23 and 24, 1953, before Circuit Judges Johnsen and Collet and District Judge Delehant, constituting a District Court of three judges, convened pursuant to Title 28 U.S.C., Sections 2284 and 2325, and all parties being represented by counsel and the Court having received the evidence offered by the parties and heard the arguments of counsel and having considered the pleadings, the evidence and the arguments and briefs of counsel, and the Court being fully advised in the premises and having filed its opinions, findings of fact and conclusions of law herein on October 22, 1954, and the majority of the Court being of opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297, is a valid and lawful order and should be sustained, except to the extent and in the particulars set forth in the opinion of the majority of the court:

Now, therefore, upon the basis of such findings of fact and conclusions of law, and for the reasons set forth in the majority opinion of the Court, heretofore filed, it is ordered adjudged and decreed that the injunction and other relief prayed for in the complaint be denied insofar as it is inconsistent with said findings of fact, conclusions of law and the majority opinion of the Court filed herein, and is granted insofar as it is consistent with said findings

of fact, conclusions of law and the majority opinion of the Court, and that the suit be dismissed.

Dated this 20th day of December, 1954.

JOHN C. COLLET
Judge, United States Circuit Court of Appeals

JOHN W. DELEHANT
Judge, United States District Court

HARVEY M. JOHNSEN, *Judge*, United States Circuit Court of Appeals dissenting insofar as the foregoing final judgment and decree fails to enjoin and annul said order in its entirety.

APPENDIX C

Section 1 (4) of the Interstate Commerce Act (49 U.S.C. § I, par. (4)) reads as follows:

"(4) It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3(1) of the Interstate Commerce Act (49 U.S.C. § 3, par. (1)) reads as follows:

"(1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prej-

udice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3 (4) of the Interstate Commerce Act (49 U.S.C. § 3, par. (4)) reads as follows:

"(4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 13(1) of the Interstate Commerce Act here pertinent reads as follows:

"That any person, firm, corporation, company, or association, or any mercantile, agricultural, or manufacturing society or other organization, or any body politic or municipal organization, or any common carrier, complaining of anything done or omitted to be done by any common carrier subject to the provisions of this part, in contravention of the provisions thereof, may apply to said Commission by petition, which shall briefly state the facts; whereupon a statement of the complaint thus made shall be forwarded by the Commission to such common carrier, who shall be called upon to satisfy the complaint, or to answer the same in writing, within a reasonable time, to be specified by the Commission."

Section 15(1) of the Interstate Commerce Act reads as follows:

"(1) That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15 (3) of the Interstate Commerce Act (49 U.S.C. § 15, par. (3)) reads as follows:

"(3) The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public

interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and minima, to be charged, and the divisons of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. The Commission shall not, however, establish any through route, classification, or practice, or any rate, fare, or charge, between street electric passenger railways not engaged in the general business of transporting freight in addition to their passenger and express business, and railroads of a different character. If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancelation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section."

Section 15 (4) of the Interstate Commerce Act (49 U.S.C. § 15, par. (4)) reads as follows:

"(4) In establishing any such through route the Commission shall not (Except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or

(b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

BRIEF OF APPELLANT, THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, IN OPPOSITION TO MOTION TO AFFIRM IN NOS. 117 AND 119 AND TO REVERSE IN NO. 118

STATEMENT

As authorized in Rule 16 of the Revised Rules of this Court, this brief is filed for The Denver and Rio Grande Western Railroad Company, herein called the Rio Grande, appellant in No. 117 of the cases shown in the above title, in opposition to the motion of the Union Pacific Railroad

Company, et al, to affirm the judgment of the court below in Nos. 117 and 119 and to reverse the judgment of the court below in No. 118. The motion was filed with the Supreme Court and served upon the interested parties on June 29, 1955. Upon the request of the Interstate Commerce Commission and the United States of America, the time for filing briefs in opposition to the motion was enlarged to August 4, 1955.

Since the decision of the Interstate Commerce Commission, which is reported in 287 I.C.C. 611, and is assailed as invalid by the movants, and the opinion of the court below for the District of Nebraska, Omaha Division, copy of which is attached to the jurisdictional statements, clearly reveal that the questions presented by the appeals are substantial and are of general public importance, little or no argument is necessary or will be made to show that the motion should be denied and that the court should consider the appeals on their respective merits.

The movants devoted 36 printed pages in their jurisdictional statement to show that the questions involved are substantial and important. This is also demonstrated by the 28 printed pages in the motion to affirm and to reverse. While thus tacitly conceding that the questions involved are substantial and important, the movants nevertheless urge that the judgment of the court below in Nos. 117 and 119, in which the Rio Grande, the United States and the Interstate Commerce Commission are appellants, should be affirmed but that the judgment of the court below in No. 118, in which the Union Pacific Railroad Company and others are appellants, should be reversed. This is indeed an extraordinary treatment of the questions. The movants apparently desire to have their cake and eat it too.

The jurisdictional statements filed by the movants, the United States, the Interstate Commerce Commission, and the Rio Grande are enough, without more, to show that

the questions presented by the appeals are substantial and of public importance and should not be resolved by this court until the interested parties have been permitted to file briefs and accorded the privilege of oral argument on the merits of the questions involved in the appeals.

The contentions and arguments made by movants in their motion to affirm and to reverse are largely a reiteration of the contentions and arguments made by them in their jurisdictional statement. In the circumstances, it is not considered necessary to deal *seriatim* with these contentions and arguments in this reply. Instead and to avoid unnecessary reiteration and repetition we ask the court to consider as a part of this reply the joint jurisdictional statement of the United States and the Interstate Commerce Commission and the jurisdictional statement of the Rio Grande. It is sufficient to say that none of the contentions and arguments made in the motion warrant the granting of the motion.

The motion should be denied.

Respectfully submitted,

DENNIS MCCARTHY,
Walker Bank Building,
Salt Lake City 1, Utah.

ROBERT E. QUIRK,
1116 Investment Building,
Washington 5, D. C.

Counsel for The Denver and Rio Grande Western Railroad.

July 28, 1955

PROOF OF SERVICE

I, ROBERT E. QUIRK, one of the attorneys for the appellant, The Denver & Rio Grande Western Railroad Company, and a member of the bar of the Supreme Court of the United States, hereby certify that on July 28, 1955, I

served copies of the foregoing Brief In Opposition To Motion To Affirm on the several parties as follows:

APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

CONSOLIDATED OPENING BRIEF OF THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

OPINIONS BELOW

This Brief is filed on behalf of The Denver and Rio Grande Western Railroad Company (hereinafter called "the Rio Grande"), as the appellant in Case No. 117, being an appeal from the United States District Court for the District of Nebraska, Omaha Division (hereinafter sometimes called "the Nebraska court"); as an appellee in Cases Nos. 118 and 119, being other appeals from the same decision of the Nebraska court, and as appellee in Cases Nos. 332, 333 and 334, being appeals from the United States District Court for the District of Colorado (hereinafter sometimes called "the Colorado court"). All of the foregoing appeals were consolidated by order of this Court dated October 24, 1955.

The opinions and judgments of the courts below are reported as *Union Pacific R. R. v. United States,* 132 F.Supp. 72 (D.C. Neb.) (Neb. R. 151-179, 210, 211),* and *The Denver & Rio Grande Western R. R. v. United*

---

*There are four volumes of Transcript of Record in these appeals, two small unnumbered volumes, and two large volumes designated Vol. I and Vol. II. The pages of one of the small volumes relating to the formal proceedings in the Nebraska case (which will be referred to in this brief as "Neb. R.") are consecutively numbered 1 to 245. The pages of the other small volume relating to the formal proceedings in the Colorado case (which will be referred to in this brief as "Colo. R.") are consecutively numbered 1 to 374. The pages of the two large volumes designated Vol. I and Vol. II constituting the consolidated portion of the Transcript of Record on these appeals are consecutively numbered beginning with Vol. I (pp. 1-912) and continuing to the end of Vol. II (pp. 913-1779). References in this brief to matters contained in the consolidated portion of the Transcript of Record will be designated "Consol. R.," I or II, as the case may be, followed by the appropriate page.

States, 131 F.Supp. 372 (D.C. Colo.) (Colo. R. 279-302, 361). In both of these decisions the three-judge district courts dealt with the validity of an order of the Interstate Commerce Commission dated January 12, 1953 (Consol. R., II, 1595), which was based upon the Report and conclusions of the Commission in *Denver & Rio Grande Western R. R. v. Union Pacific R. R.,* 287 I.C.C. 611 (Consol. R., II, 1518-1594). The formal Order of the Interstate Commerce Commission (Consol. R., II, 1595) is not reported, but for convenience is set forth and printed as Appendix A hereto.

JURISDICTION

The jurisdiction of the Supreme Court to review (by direct appeal) the decisions in the cases above referred to is conferred by 62 Stat. 928, 28 U.S.C. 1253, and by 62 Stat. 961 and 63 Stat. 104, 28 U.S.C. 2101 (b). The following decisions sustain the jurisdiction of this Court: *Pennsylvania R. R. v. United States,* 323 U.S. 588; *United States v. Capital Transit Co.,* 325 U.S. 357; *New York v. United States,* 331 U.S. 284, and *United States v. Great Northern Ry.,* 343 U.S. 562.

The judgment of the United States District Court for the District of Nebraska was entered December 20, 1954 (Neb. R. 210, 211). The Rio Grande filed its Notice of Appeal therefrom in the said District Court February 3, 1955 (Neb. R. 226-228). In compliance with Rule 13 of the Rules of the Supreme Court, the Rio Grande duly served and filed its Statement as to Jurisdiction and caused the record to be filed, and the appeal was duly docketed, being Case No. 117.

Separate notices of appeal from the United States

District Court for the District of Nebraska were duly filed by the Union Pacific Railroad Company, et al. (hereinafter called "the Union Pacific"), being Case No. 118 (Neb. R. 230-237), and by the United States of America (Neb. R. 229-230), the Interstate Commerce Commission (Neb. R. 239-241) and the Secretary of Agriculture (Neb. R. 242-244), being Case No. 119.

The judgment of the United States District Court for the District of Colorado was entered February 1, 1955 (Colo. R. 361, 362). Separate notices of appeal were duly filed by the Washington Public Service Commission, *et al.* (being Case No. 332) (Colo. R. 369-372), by the Union Pacific Railroad Company, *et al.* (being Case No. 333) (Colo. R. 365-369), and by the United States of America and the Interstate Commerce Commission (being Case No. 334) (Colo. R. 364). These appeals were docketed on August 20, 1955.

On October 24, 1955, this Court issued an order noting probable jurisdiction and consolidating the several appeals.

On the 4th day of November, 1955, the parties filed their stipulation, designating the portions of the record to be printed.

QUESTIONS PRESENTED

I. The Nebraska Case

1. Whether the Nebraska court erred in overruling certain findings of fact and conclusions of law of the Interstate Commerce Commission where such findings and conclusions were within the administrative function of the Commission.

2. Whether the Nebraska court erred in holding

in paragraph III of its Conclusions of Law (Neb. R. 167, 168) that there is no substantial evidence to support the findings and order of the Commission which require the establishment of competitive joint rates and through routes between the Union Pacific, the Rio Grande and other railroads with respect to the commodities and the areas specified in the order, thus substituting its own judgment and findings which modified the scope of the relief granted by the Commission, by restricting the application of the rates prescribed by the Commission to shipments consigned in the first instance to points on the Rio Grande requiring in-transit privileges at such points, and to be later reshipped to points beyond the Rio Grande.

3. Whether the Nebraska court erred in setting aside, in part, the order of the Commission, which requires the Union Pacific and other defendants before the Commission to participate with the Rio Grande in the maintenance of through routes and competitive joint rates on the commodities described by the Commission between the involved northwest area and points south and east of a designated area which extends northerly and to some extent southerly from Colorado common points such as Denver, Pueblo and Trinidad, regardless of whether or not transit privileges are used on the Rio Grande.

4. Whether the Nebraska court erred in ruling, contrary to the findings of the Commission and the evidence, that on the commodities specified by the Commission, the through routes and competitive joint rates required by its order via the Rio Grande between the northwest area and points south and east of a designated area which extends northerly and to some extent southerly from Colo-

rado common points, such as Denver, Pueblo and Trinidad, are not needed in order to provide adequate and more economic transportation.

5. Whether the Nebraska court erred in overruling the findings and conclusions of the Commission that as to the commodities specified by the Commission, the existing transportation services and the facilities via the Union Pacific routes were inadequate and uneconomic between the involved northwest area and points south and east of a designated area which extends northerly and to some extent southerly from Colorado common points such as Denver, Pueblo and Trinidad, and in substituting its own finding that the existing transportation services and facilities via the Union Pacific routes are adequate.

6. Whether the Nebraska court erred in overruling the findings and conclusions of the Commission that the existing rates assailed are and will be unjust and unreasonable, and unduly prejudicial to shippers and receivers using or desiring to use the Rio Grande routes and unduly preferential to shippers and receivers using the Union Pacific routes, in and to the extent that such rates exceed, or may exceed, the joint rates maintained on the specified commodities from and to the same points over the Union Pacific routes.

II. The Colorado Case

1. Whether the Colorado court erred in setting aside the order of the Commission and holding that through routes once in existence continue in existence despite the mere cancellation of joint rates over such routes, if the connecting railroads involved continue to offer continuous carriage of goods on through bills of lading from originating

points on the line of one to destinations on the line of the other.

2. Whether the Colorado court erred in holding that in a proceeding to obtain reasonable and nondiscriminatory rates over through routes already in existence, the Interstate Commerce Commission erred in considering itself bound by the limitations of Section 15(4) of the Interstate Commerce Act (which do not apply if through routes are already in existence or if the provisions of Section 3 of that Act are applicable), and thereby prejudiced its approach to the entire case and its consideration of the issues.

3. Whether the Colorado court erred in remanding the case to the Interstate Commerce Commission, to enable the Commission under Sections 1(4), 3(1), 15(1) and 15(3) of the Interstate Commerce Act to correct the discrimination and prejudice practiced by the Union Pacific and the other defendant railroads against the Rio Grande, and to enable the Commission to prescribe future just, reasonable and nondiscriminatory competitive joint rates over the Rio Grande in connection with the Union Pacific and its presently preferred connections, free of the limitations of Section 15(4) of the Act.

STATUTES INVOLVED

These appeals involve the following statutes:

The Interstate Commerce Act, Title 49 U.S.C., particularly the declaration of National Transportation Policy (preceding Section 1), and Sections 1(4), 1(5), 1(15), 3(1), 3(4), 6(1), 13(1), 15(1), 15(3), 15(4), and 15(8); all of which are set forth verbatim in Appendix B hereto.

STATEMENT

The Rio Grande is a common carrier by railroad engaged in the transportation of persons and property in intrastate, interstate and foreign commerce. It operates 2,400 miles of railroad in Colorado, New Mexico and Utah (Consol. R., I, 80). It has interchange track connections and interchanges traffic with the Union Pacific at Denver, Colo., and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and with the Western Pacific at Salt Lake City. It also has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, the Santa Fe and the Colorado and Southern Railroads; at Colorado Springs with the Santa Fe and the Rock Island; at Pueblo with the Santa Fe, the Colorado and Southern and the Missouri Pacific; at Walsenburg, Colorado, with the Colorado and Southern, and at Trinidad, Colorado, with the Santa Fe and the Colorado and Southern (Consol. R., I, 83-92; see also Map, App. C hereto).

The Union Pacific Railroad with Omaha (Council Bluffs) and Kansas City as its eastern termini extends westward in two lines. The Omaha line runs directly to Wyoming. One line from Kansas City runs northwesterly and connects with the Omaha line east of Kearney, Nebraska, and the other runs from Kansas City, first to Denver, Colorado, and then northerly into Wyoming; and thence both lines through Wyoming westerly to Ogden, Utah (Consol. R., I, 797-799; see also App. C hereto).

At Ogden, Utah, the Union Pacific has two

diverging lines of railroad which are in the shape of a large "Y." One arm of the "Y" extends in a southwesterly direction through Salt Lake City and Provo, Utah, and Las Vegas, Nevada, to Los Angeles, California. Between points on that line and Colorado common points and points east thereof, the Union Pacific and other defendant railroads maintain competitive joint rates and through routes on all freight traffic in connection with the Rio Grande via Salt Lake City and Provo (Consol. R., I, 91). The other arm of the "Y" of the Union Pacific extends in a northwesterly direction from Ogden through Utah to points in Idaho, Oregon, Washington and Montana. This is the "closed door" territory (sometimes called "the northwest area" or "the excluded territory") directly to and from which the Union Pacific and the other defendant railroads herein refuse to maintain competitive joint rates on freight traffic via the Rio Grande through Ogden or Salt Lake City to and from Colorado common points and points east thereof (Consol. R., I, 91, 92, 94; see also Map, App. C hereto), except on sheep and goats from that territory to Missouri River points and east thereof (Consol. R., I, 118, 119) and on lumber to Canon City, Colorado, and east of Canon City to the first station west of Pueblo as shown in published tariff ICC No. 1474 by Agent Kipp (Consol. R., I, 112; Earley Exhibit 3, Sec. G, p. 2).

Except as to freight traffic moving via the Union Pacific to and from the "closed door" territory above described, the Rio Grande participates generally in the transportation of transcontinental traffic at competitive joint rates on equal terms with the Union Pacific

and other railroads (Consol. R., I, 92). While the Union Pacific is the principal defendant, it is not the only source or the sole cause of the situation sought to be corrected. The other railroad defendants cooperate with the Union Pacific in maintaining the existing restrictions on freight traffic moving to and from the "closed door" territory. Without their cooperation and joint participation, the restrictions would not be effective. The situation sought to be corrected is illustrated by the "closed door" territory shown on the Map, Appendix D hereto, and by the lines of railroads shown on the Map annexed hereto as Appendix C.

Prior to January, 1936, the Union Pacific controlled the Oregon Short Line Railroad Company, the Oregon-Washington Railroad and Navigation Company,* the Los Angeles and Salt Lake Railroad Company and the St. Joseph and Grand Island Railway Company, but at that time these several railroad companies were operated as separate legal entities. In 1932 the Union Pacific applied to the Interstate Commerce Commission for authority to lease and operate the above-named railroads. That application was approved by the Commission in *Union Pacific Railroad Company Unification*, 189 I.C.C. 357 and 207 I.C.C. 543. As a result of that ap-

*The lines of these two railroad companies substantially serve the "closed door" territory. The Oregon Short Line Railroad Company extends from Salt Lake City through Ogden into Idaho, northwest to Huntington, Ore., north to Butte, Mont., and east to Granger, Wyo.; the lines of the Oregon-Washington Railroad and Navigation Company extend from Huntington, Ore., to Portland, Ore., into Seattle, Wash. When in 1906 the Union Pacific reacquired control of these railroads, their lines became and have since remained a part of the present Union Pacific system. (Consol. R., I, 798, 799).

proval, the properties of the railroads named have been operated as a single system under lease by the Union Pacific since January, 1936 (Consol. R., I, 90, 799).

In 1897 competitive joint rates and through routes were established in connection with the Rio Grande via Ogden and Salt Lake City between the territories above described, on the traffic from and to points on the Oregon Short Line Railroad Company and the Oregon-Washington Railroad and Navigation Company. This situation continued during the time that these two companies and the Union Pacific were in separate receiverships (Consol. R., I, 84-87). By August, 1906, the Union Pacific had re-acquired control over the Oregon Short Line Railroad Company and the Oregon-Washington Railroad and Navigation Company, and between August, 1906, and December, 1912, it caused the joint rates in effect via the Rio Grande through the Ogden gateway to be cancelled; but no action was taken then or later by the Union Pacific or the other interested railroads to cancel the through routes (Consol. R., I, 87, 88).

Mr. A. J. Stilling, the principal traffic witness for the Union Pacific, unequivocally admitted that through routes via the Ogden gateway and the Rio Grande are now open and available to shippers who are willing to pay through rates based on the aggregate of the intermediate local rates of the various carriers in the routes. Mr. Stilling stated:

> "The Interstate Commerce Act gives all shippers the right to specify the lines over which their shipments shall move so the Ogden gateway and route via the Rio Grande is actually available

today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington. However, most of that traffic originates or terminates at points on the Union Pacific, and it ordinarily moves via the Union Pacific through Wyoming because the joint through rates to and from that territory are restricted so that they will not apply when traffic is interchanged with the Rio Grande at junction points in Utah." (Consol. R., I, 799, 800).

Mr. Elmer B. Collins, counsel for the Union Pacific, made a like admission before the Commission during a colloquy between himself and Chairman Alldredge on the question whether the tariffs which cancelled the joint rates in 1906-12 closed the through routes via the Rio Grande through Ogden (Consol. R., II, 1621). This colloquy was as follows:

"CHAIRMAN ALLDREDGE: Before you start, Mr. Collins, may I ask you a question?

I assume there is no dispute about the fact that from a physical standpoint these routes are open; that is, business physically can be interchanged between the Denver & Rio Grande and the Union Pacific.

MR. COLLINS: Yes, sir; exactly. As was the case in the Western Pacific case.

CHAIRMAN ALLDREDGE: You contend, however, that you have closed this route on the traffic here in question.

MR. COLLINS: That is right.

CHAIRMAN ALLDREDGE: Now, will you tell this Commission exactly how you closed the routes?

MR. COLLINS: We cancelled the joint through rate billing. We provided by tariff publication that

the joint rates would not apply via Ogden with the D.&R.G.W.

CHAIRMAN ALLDREDGE: You provided in the tariff that the joint rates would not apply?

MR. COLLINS: A restriction in the route.

CHAIRMAN ALLDREDGE: That is the joint rate?

MR. COLLINS: Yes, sir.

CHAIRMAN ALLDREDGE: Do you think that closes this route for this traffic?

MR. COLLINS: No, I don't think so, if they want to pay more, if they want a route via the Rio Grande and pay the price."

The undisputed evidence before the Commission shows that many shippers have paid the higher rates where they wanted to use the Rio Grande and that the Union Pacific has never refused to issue a through bill of lading on such shipments. The evidence with respect to through shipments moving over the Rio Grande via the Ogden gateway from and to the "closed door" territory in connection with the Union Pacific may be summarized as follows:

During the period from November 2, 1942 to August 17, 1945, approximately 19,000 carloads of traffic were moved via the Union Pacific and Rio Grande through route into the "closed door" territory from points on the Rio Grande line and from eastern points destined to points in Oregon and Washington which carloads originally had been routed via the Rio Grande and the Western Pacific or the Rio Grande and the Southern Pacific, but which were diverted to the Union Pacific at Ogden or Salt Lake City and were accepted and carried by the Union Pacific as through shipments (Consol. R., I, 70, 71).

During January and February, 1949, when blizzards and snow storms blocked the Union Pacific main line between Cheyenne and Ogden, 4,208 carloads of freight both eastbound and westbound were diverted to the Rio Grande for movement via its line between Denver and Utah junction points and thence via the Union Pacific. Of that number 1,394 carloads originated or were destined to Union Pacific points in the "closed door" territory at which competitive joint rates* were not applicable. During that same blizzard period, the Rio Grande handled 210 carloads of express and 276 carloads of mail between Denver and Salt Lake City for the Union Pacific. (Consol. R., I, 72).

The carload traffic just described was diverted under service orders of the Commission, none of which, however, purported to establish or did establish temporary through routes as specified in Section 15(4) of the Act (Consol. R., I, 72). The traffic was diverted by the Commission to the Rio Grande under Section 1(15) on the apparent assumption that through routes and the facilities for operating such routes already existed and that, therefore, there was no need to establish temporary through routes.

In addition to the traffic that was diverted to the route of the Rio Grande on service orders, a large volume of traffic was initially routed via the Rio Grande on bills of lading via Ogden and the Union Pacific between points in the "closed

*"Competitive joint rates," sought by the Rio Grande herein, mean such joint rates to and from the "closed door" territory (shown on the Map, Appendix D hereto) as apply via the Union Pacific or via the Union Pacific and its preferred connections, but which the Union Pacific and its preferred connections decline to accord to the Rio Grande.

door'' territory and eastern points. For example, during World War II there were several special trains, consisting of troops and military supplies in freight cars, which were handled on freight billing and which consisted of from 30 to 50 cars per train (Consol. R., I, 71).

One train, consisting of 24 cars of military supplies and six passenger cars, moved from Ft. Sill, Okla., in December, 1941, to Ft. Lewis, Wash., via eastern connections, over the Rio Grande through Ogden and the Union Pacific (Consol. R., I, 71).

Another special train, consisting of 50 cars of military supplies and some troops, moved from Camp Claiborne, La., to Ft. Lewis, Wash., in February, 1942, via different eastern railroads in connection with the Rio Grande through Ogden and the Union Pacific. Another special train, consisting of 50 cars of military supplies, etc., moved from Camp Claiborne, La., to Ft. Lewis, Wash., in February, 1942, via different eastern railroads, the Rio Grande through Ogden and the Union Pacific (Consol. R., I, 71).

Still another train, consisting of 50 cars of military supplies, etc., moved from Camp Claiborne, La., in February, 1942, to Ft. Lewis, Wash., via the Rio Grande through Ogden and the Union Pacific. Competitive joint rates were applied on all of this traffic and the through charges among the railroads were divided on a satisfactory basis of interline settlements (Consol. R., I, 71).

During the period March, 1942, to May, 1945, the Rio Grande handled 524 carloads of war material from eastern points which were originally consigned to Ogden and Clearfield, Utah, for the purpose of being stored. These cars were diverted to points in the northwest area via the route of the

Union Pacific through Ogden without ever having been unloaded at the original destinations named. Joint competitive rates were applied on this traffic, and the through charges were divided among the interested railroads on a satisfactory basis of interline settlement (Consol. R., I, 71; 72).

In 1948 (a "typical year," as testified by Mr. Hogue, Vice-President of the Rio Grande (Consol. R., I, 76)), 39 carloads of freight moved eastbound from points in the "closed door" territory on through bills of lading issued by the Union Pacific or its connections consigned to Colorado common points, some of which may have been diverted to points east thereof. These cars contained canned goods, machinery, contractors' equipment, paper bags, lumber, wallboard, flour, sheet, roofing, acid, newsprint and canned salmon (Consol. R., I, 74).

The Rio Grande transported 19 carloads of a variety of commodities, such as tractors, canned goods, agricultural implements, furniture, soap, castings, feed, rubber, iron and steel, on through bills of lading issued by eastern railroads which routed the traffic via the Rio Grande to Ogden and thence via the Union Pacific to points in the "closed door" territory. The freight charges were assessed on the basis of the aggregate of the combination of intermediate rates (Consol. R., I, 75).

In addition during 1948, 22 other westbound carloads of various commodities from points east and south of Colorado common points consigned to points in the "closed door" territory were routed on through bills of lading via the Rio Grande and the Union Pacific. Such routings on these cars were detected by the Rio Grande and, because competitive joint rates did not apply via the Ogden gateway in connection with the Union Pacific,

the cars were held temporarily at Denver and Pueblo, Colo., until disposition or rerouting instructions could be obtained from the shippers or from the originating lines (Consol. R., I, 75, 76). Some of the cars were later sent on via routes over which competitive joint rates apply, while the others went forward subject to charges based upon the aggregate of combination rates.

At the Commission hearing in December, 1949, Vice-President Hogue, of the Rio Grande, testified that he used the year 1948 because it was the last calendar year prior to the hearing and that the same situation prevailed to about the same extent in prior years, and had continued to the time of his testifying in 1949 (Consol. R., I, 76).

The Union Pacific maintains through routes and competitive joint rates in connection with the Rio Grande on all transcontinental traffic from and to points in southern California, Nevada and southern Utah via Provo or Salt Lake City — thereby giving shippers in those areas, as against shippers in the "closed door" territory, the opportunity of shipping via the Rio Grande without suffering the penalty of paying a higher combination rate (Consol. R., I, 91, 92).

The map (App. C hereto) pointedly discloses the extent to which the Union Pacific joins with its preferred railroad connections in routes which short-haul it, while refusing to join with the Rio Grande in routes via the Ogden gateway. As will be noted, routes and distances on the map are shown thereon between North Portland, Ore., and St. Louis, Mo. These points have been selected as representative because North Portland is a point on the Union Pacific from

and to which the Union Pacific will short-haul itself via its various northwest connections, and because St. Louis is more or less centrally located in the territory from and to which the Rio Grande is seeking the establishment of competitive joint rates in connection with the Union Pacific through Ogden. Illustrative routes, which include the route of the Rio Grande, may be summarized, in the order of their respective distances, as follows: (Consol. R., I, 101-110; Earley Exhibit 3, Sec. F; Consol. R., I, 844-846, and Consol. R., II, 1046).

It will be noted (App. C hereto) that the short route (Route (1)) between North Portland and St. Louis is via the Union Pacific from McCammon through Kemmerer, Wyo., to Kansas City, Mo., thence Wabash, via which route the distance is 2,167 miles, and that the distance via the Union Pacific route through Ogden, Utah, via which point many shipments move for transit either at Ogden proper or at other stations on the Union Pacific south of Ogden without charge for the out-of-line haul, is 2,232 miles, or 65 miles longer than the route of the Union Pacific through Kemmerer, Wyo.

The next route in order of distance (App. C hereto, Route (2)) is the Rio Grande route, *i.e.*, via the Union Pacific to Ogden, Utah, the Rio Grande to Denver, Colo., CRI&P to Kansas City, Mo., and Wabash to St. Louis, the distance over which route between North Portland and St. Louis is 2,367 miles, or but 9% longer than the short route of the Union Pacific through Kemmerer, Wyo., and only 6% longer than the Union Pacific route through Ogden.

Taking as examples two of the routes in which the Union Pacific presently participates with its connections at competitive joint rates that accord it only a short haul (App. C hereto, Routes (3) and (9)), we find that these two routes range from 2,495 miles via Spokane and the Great Northern to 3,134 miles via Portland and the Southern Pacific through California, Arizona and New Mexico, and that they are 11% and 45% longer than the short route (Route (1)) via the Union Pacific through Kemmerer, Wyo. In the case of the route via UP-Portland, Ore.; then SP-Santa Rosa, N. M.; then CRI&P-Kansas City, Mo.; then Wabash to St. Louis, Mo.—the circuity is 32% greater than via the Rio Grande route and 45% greater than the short route of the Union Pacific (Route (1)); whereas, as previously pointed out, the Rio Grande route through Ogden would be but 9% longer than Union Pacific Route (1) via Kemmerer, Wyoming.

The Union Pacific accepts a haul of but 8 miles from North Portland to Portland, Ore., in connection with the Southern Pacific; 215 miles to Wallula, Wash., in connection with the Northern Pacific; 311 miles to Marengo, Wash., and 385 miles to Plummer, Idaho, in connection with the Milwaukee Road; and 372 miles to Spokane in connection with the Great Northern and Spokane International; whereas, if the Union Pacific joined in competitive joint rates and through routes via the Rio Grande, it would receive a haul of 851 miles from North Portland to Ogden. If the Union Pacific insisted on its long haul and treated the Great Northern, Milwaukee Road, Northern Pacific, Spokane International and Southern Pacific as it treats the Rio Grande,

it would receive a haul of 1,893 miles to Kansas City via Kemmerer, Wyoming.

Appendix G to this brief based on Section F of Exhibit 3, by Witness Earley of the Rio Grande, and his testimony (Consol. R., I, 101-111), shows typical examples of existing joint rates and distances via routes which the Union Pacific and other defendants in cooperation with each other take less than their respective long hauls.

The foregoing illustrations, based on the testimony, disclose that the Union Pacific freely joins its preferred railroad connections in through routes at competitive joint rates that traverse the northern and southern portions of the United States, as well as in routes which involve hauls of hundreds of miles through Canada, all of which routes may be considered as constituting the circumference of a great circle, but refuses to join in a direct, central route at such rates with the Rio Grande through Ogden, which route may be regarded as the diameter of the circle formed by the longer routes.

From and to points in the "closed door" territory north of Ogden in Utah and south of McCammon in Idaho, as well as from and to points in southern Idaho and northern Utah on the Union Pacific's Malad, Idaho and Cache Valley branches, traffic generally moves through Ogden, Utah, via the Union Pacific. Furthermore, shipments move via Ogden for transit from and to points west of McCammon, Idaho (Consol. R., I, 644, 645, 844-846). The distance between Logan, Utah, just north of Ogden, and Denver, Colo., is 649 miles via the Union Pacific and 679 miles via the Rio Grande (Consol. R., I, 132-135; Earley Exhibit 3, Sec.

K, p. 4, line 1). Therefore, on traffic from, to or via Denver, moving through Ogden, there would be a difference of but 30 miles between the two routes, which difference is insignificant when compared with the total through mileages involved.

The Union Pacific makes particular point of the fact that the mileage over the Union Pacific's short route through Kemmerer, Wyo., between Denver, Colo., and McCammon, Idaho, and points west and north thereof, is 95 miles shorter than the route via the Rio Grande through Ogden; and, in addition, claims that the distances via the Union Pacific route from and to various eastern and southern points in the areas east and south of Denver, as compared with the Rio Grande route, are generally shorter, ranging from a minimum of 33 miles to a maximum of 219 miles (Consol. R., I, 802-805; Stilling Exhibit 25, pp. 3, 5). These advantages in mileage claimed by the Union Pacific are in connection with routes, the total mileages of which range from 623 to 2,537 miles from McCammon, Idaho, and from 1,538 to 3,452 miles from Seattle, Wash.

The Union Pacific throughout the proceedings has undertaken to graphically indicate the above differences in mileage by a map showing the claimed differentials in oblongs thereon. It should be pointed out that neither these mileage differentials nor the map fully represent the facts with respect to the comparative distances.

Actually, the differences in mileage as claimed by the Union Pacific, ranging from a minimum of 33 miles to a maximum of 219 miles, are based upon routes which in several instances are not the "long-haul" routes cus-

tomarily used by the Union Pacific and required by the tariffs. For example, at New Orleans, where the claimed differential in mileage in favor of the Union Pacific route is shown as 33 miles, traffic from and to the "closed door" territory customarily moves and is required to move in most instances over the Union Pacific via its "long-haul" route through Kansas City, thence connections, such as the L&A to Shreveport, La., and KCS to New Orleans, which "long-haul" route via the Union Pacific is 35 miles longer than the route over the Rio Grande and its connections (UP-Ogden, Utah; Rio Grande-Pubelo, Colo.; C&S-Sixela, N.M.; FW&D-Ft. Worth, Tex.; T&P) to New Orleans (Consol. R., I, 132-135; Earley Exhibit 3, Sec. K, pp. 2, 3, 5-15, line 12). In other instances at points east of the eastern boundary lines of the states of Kansas, Oklahoma and Texas, where the Union Pacific under the tariffs customarily requires its "long-haul" route via Missouri River junctions (Consol. R., I, 101-111; Earley Exhibit 3, Sec. F, pp. 1-5), the differences in distance would also be in favor of the Rio Grande route.

Another example of where the differential in mileage does not favor the Union Pacific is on shipments between New Orleans, La., and Logan, Utah (just north of Ogden) from and to which point Union Pacific traffic moves via Ogden, Utah. On such traffic the difference in distance in favor of the Rio Grande route (UP-Ogden, Utah; Rio Grande-Pueblo, Colo.; C&S-Sixela, N.M.; FW&D-Ft. Worth, Tex.; T&P) (1,951 miles), as compared with the customary "long-haul" route of the Union Pacific (UP-Kansas City, Mo.; L&A-Shreveport, La.; KCS-New Orleans) (2,051

miles), is 100 miles (Consol. R., I, 132; Earley Exhibit 3, Sec. K, p. 4, line 12). This difference of 100 miles in favor of the Rio Grande route prevails between New Orleans and all other points in the "closed door" territory on traffic moving via the Union Pacific route through Ogden, Utah.

There are many other instances where the Rio Grande route would be the short route. As an illustration, between Malad, Idaho, and Ft. Worth, Tex., the distance via the Union Pacific route (UP-Denver, Colo.; C&S-Sixela, N.M.; FW&D) is 1,449 miles, and via the Rio Grande route (UP-Ogden, Utah; Rio Grande-Pueblo, Colo.; C&S-Sixela, N.M.; FW&D) is 1,418 miles, or a distance advantage in favor of the Rio Grande route of 31 miles (Consol. R., I, 123; Earley Exhibit 3, Sec. I, p. 14, line 27). This same difference in favor of the Rio Grande route would also exist between Ft. Worth and all other points in the "closed door" territory on traffic moving via the Union Pacific through Ogden, Utah.

Another illustration of where the Rio Grande route is the short route is between Preston, Idaho, and Oklahoma City, Okla. The distance via the Union Pacific route (UP-Denver, Colo.; AT&SF) is 1,408 miles, and 1,377 miles via the Rio Grande route (UP-Ogden, Utah; Rio Grande-Pueblo, Colo; AT&SF), resulting in a differential of 31 miles in favor of the Rio Grande route (Consol. R., I, 123; Earley Exhibit 3, Sec. I, p. 10, line 7). Here again this difference would exist in favor of the Rio Grande route from and to all points in the "closed door" territory on traffic moving via the Union Pacific through Ogden, Utah.

Other instances could be cited where the Rio Grande route is the short route, but the above illustrations suffice to show the fallacy of the allegation of the Union Pacific that its route constitutes the short route in all cases.

On August 1, 1949, the Rio Grande filed its complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroads. The complaint (Consol. R., I, 1-25), alleged *inter alia*, that the failure and refusal of the defendant railroads to establish competitive joint rates and to maintain the existing through routes via Ogden, Utah, over the Rio Grande on interstate and foreign freight traffic, in carloads and in other quantities, resulted in through rates which were and are excessive, unjust, unreasonable and discriminatory, in violation of Section 1, Section 3 and Section 15 of the Interstate Commerce Act and that such action was and is contrary to the national transportation policy since it deprives the public and the Rio Grande of the use of available and reasonable through routes and rail facilities at just, reasonable and nondiscriminatory joint through rates which are necessary and desirable in the public interest.

In its complaint (Consol. R., I, 1-25), the Rio Grande requested the Commission to enter an order requiring the Union Pacific and other railroad defendants to establish and maintain for the future, just, reasonable, and nondiscriminatory competitive joint rates and to maintain through routes on freight traffic via the route of the Rio Grande through its Colorado and Utah gateways between (a) points on the Union Pacific and its connections in Utah north of Ogden, and in

Idaho, Montana, Oregon and Washington, herein called the "closed door" territory, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, and points east thereof; and between Utah common points and the "closed door" territory served by the Union Pacific and its connections already described.

The complaint also alleged that the through rates and charges applicable to such traffic between the points described via such through routes were and are based upon the combination of the intermediate, local or other rates, which rates and charges in the aggregate were and are substantially higher than the joint through rates maintained by defendant railroads on similar freight traffic between the same origin and destination places and territories which moves via through routes maintained by the Union Pacific in connection with the other defendant railroads; that the combination rates applicable on the traffic and between the territories described via said through routes over the Rio Grande and defendant railroads were and are unjust, unreasonable and discriminatory and unduly prejudicial as compared with the competitive joint rates maintained by the Union Pacific or via the Union Pacific and the other defendant railroads on like freight traffic over other competitive routes.

Various individual shippers, shipping organizations, flour milling companies, chambers of commerce, lumber and grain shippers, including associations interested in the production of fruits and vegetables, butter and eggs, dried beans, frozen poultry, livestock and other commodities, intervened before the Commission

or testified in support of the complaint of the Rio Grande. Among such interveners and witnesses were the following:

American National Live Stock Association
Colorado Cattlemen's Association
Idaho Cattlemen's Association
National Live Stock Producers Association
Utah Cattle and Horse Growers Association
The Arkansas Valley Stock Feeders Association
The Arnold Milling Company
The Buhler Mill & Elevator Company
The Consolidated Flour Mills Company
Dixie Portland Flour Company
The Arkansas City Flour Mill
The Kansas Milling Company
The William Kelly Milling Company
Lawrence Milling Company, Inc., d/b/a Moundridge Mill & Elevator Company
Light Grain and Milling Company
The New Era Milling Company
The Wall Rogalsky Milling Company
The Walnut Creek Milling Company
Colorado Wool Growers' Association
Executive Committee Utah State Farm Bureau Federation
The Grand Junction Chamber of Commerce
Holly Sugar Corporation
Idaho State Farm Bureau
Producers Live Stock Marketing Association
Idaho Wool Growers Association
The Pueblo Chamber of Commerce
Western Forest Industries Association

Herbert P. Heidel, Manager, American Stores, Inc., Lincoln Packing Division, Pueblo, Colo.

Reginald T. Titus, Vice-President, Western Forest Industries Association, Portland, Ore.

J. A. Hayley, Manager, Monarch Lumber Company, Military Junction, Colo.

Floyde H. Hughes, Purchasing Agent of Independent Lumber Company, Grand Junction, Colo.

Robert C. Johnson, District Manager, Wood Preserving Division, Koppers Company, which treats lumber at Salida, Colo., and at Denver

J. Arthur Knudsen, General Manager, Knudsen Builders Supply Company, Salt Lake City, Utah

M. S. Rosenblatt, President and General Manager, Structural Steel and Forging Company, Salt Lake City, Utah

Lorenzo J. Bott, Brigham, Utah, fabricator and wholesaler of granite and marble

W. H. Snyder, Grand Junction, Colo., retail dealer in monuments

Kenneth G. Self, holder of a large interest in Inter-Mountain Tractor Sales Corporation, Salt Lake City, Utah. Engaged in distributing tractors and other agricultural implements.

D. G. Adams, Branch Manager, J. I. Case Company, Salt Lake City, Utah, which is among largest producers of agricultural implements and farm machinery in the United States. (Consol. R., I, 26 *et seq.*)

A summary of the testimony of typical witnesses appears in Appendix F attached hereto, with appropriate citations to the Transcript of Record.

The Secretary of Agriculture, the Public Utility Commission of Colorado, the Public Service Commission of Utah, and the American Short Line Railroad Association also intervened in support of the Rio Grande (Consol. R., I, 26 *et seq.*).

The Union Pacific and the other defendant railroads denied the material allegations of the complaint and opposed the granting of any relief thereunder.

Among the interveners in support of the Union Pacific were the Public Utilities Commissions of Washington, Oregon, Montana, Wyoming, Nebraska and Kansas, as well as numerous chambers of commerce, shippers, cities, towns and other public agencies (Consol. R., I, 26 *et seq.*).

The major defenses which the Union Pacific sought to establish may be summarized as follows:

1. That through routes on freight traffic to and from the "closed door" territory over the Rio Grande via the Ogden gateway ceased to exist when the Union Pacific cancelled the joint rates covering said routes (Consol. R., II, 1621).

2. That the Union Pacific offers adequate, efficient and economic transportation on all freight traffic to and from the "closed door" territory, and that there is no public need for the establishment of new through routes for the competitive joint rates sought by the Rio Grande, because the Rio Grande route is not needed to provide adequate, and more efficient or more economic, transportation (Consol. R., I, 899 *et seq.*).

3. That the Rio Grande route is in all instances longer than the route of the Union Pacific to and from the "closed door" territory (Consol. R., I, 802-805).

4. That through routes and competitive joint rates over the Rio Grande via the Ogden gateway in connection with the Union Pacific would result in depriving the Union Pacific of such a large volume of traffic as to seriously impair the Union Pacific's financial ability to continue to properly serve the shippers and the public interest in the "closed door" territory (Consol. R., I, 587, 588).

5. That the existing arrangements between the Union Pacific and its preferred connections with respect to through routes and competitive joint rates (from which the Rio Grande is excluded) are justified because they are mutually beneficial in the sense that the railroads participating in such through routes and competitive joint rates all share in long hauls and short hauls with each other; also that these arrangements are of long standing and therefore should not be a ground for complaint by the Rio Grande (Consol. R., I, 816, 817).

These appeals and the district court decisions below arise out of the Report and Order of the Interstate Commerce Commission of January 12, 1953, which, on the aforesaid complaint of the Rio Grande prescribed competitive joint rates and through routes applicable to certain commodities via the Ogden gateway in Utah over the Rio Grande between points on the Union Pacific and its connections in Washington, Oregon, Idaho, Montana and northern Utah and points south and east of a designated area which extends northerly and to some extent southerly from Colorado common points such as Denver, Pueblo and Trinidad (Neb. R. 22, 23 and Colo. R. 2; see Map, App. E hereto).

The conclusions of the Commission, made a part of its Order of January 12, 1953, are based upon Sections 15(3) and 15(4) and Sections 1 and 3 of the Interstate Commerce Act. The conclusions appear in the Commission's Report, 287 I.C.C. 611, 659 (Consol. R., II, 1578, 1579), but for convenience, are here reproduced:

"1. That it is necessary and desirable in the public interest, in order to provide adequate and

more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas.

"2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points

in the northwest area, on the one hand, and points on the Bamberger railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act.

"4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

The Union Pacific and certain of the other railroad defendants assailed the validity of the Commission's order by filing suit in the United States District Court for the District of Nebraska (Neb. R. 3-24).

The Rio Grande intervened as a defendant in the Nebraska case, and as a defendant it supported the validity of the order challenged in the Nebraska court; but in its answer the Rio Grande reserved the right to assail, by suit in a court of competent jurisdiction, the validity of that part of the Commission's order, not assailed in the Nebraska court, which failed and refused to find through routes in existence and to prescribe the competitive joint rates sought by the Rio Grande on all traffic and on all commodities between the points involved in its complaint before the Commission, as well as that part of the Order of the Commission which imposed territorial and other restrictions in the application of said competitive joint rates and through routes prescribed. Such a suit, as hereinafter set forth, was filed shortly thereafter by the Rio Grande in the United States District Court for the District of Colorado.

The Nebraska court sustained the order of the Com-

mission in part, and over-ruled it in part by restricting the application of the rates prescribed by the Commission to shipments via the Rio Grande to be accorded in-transit privileges at points west of such Colorado common points as Denver, Pueblo and Trinidad, and to be later shipped to points east thereof (Neb. R. 167, 168).

The appeal of the Union Pacific (No. 118) (Neb. R. 230 *et seq.*) is based upon the theory that the Nebraska court erred in not reversing *in toto* the order of the Commission of January 12, 1953, instead of merely modifying it.

The appeal of the Rio Grande (No. 117) (Neb. R. 226 *et seq.*) and the appeals (No. 119) of the United States (Neb. R. 229), of the Interstate Commerce Commission (Neb. R. 239) and of the Secretary of Agriculture (Neb. R. 242) are predicated on the contention that the Nebraska court erred in modifying the Commission order of January 12, 1953, by limiting the prescribed rates to shipments requiring in-transit privileges at points on the Rio Grande west of such Colorado common points as Denver, Pueblo and Trinidad.

The Rio Grande, as already indicated, attacked the validity of the Commission's order by filing suit in the United States District Court for the District of Colorado, upon the ground *inter alia* that the refusal of the Commission to consider the case free of the limitations of Section 15(4) and to grant relief as to all commodities and shipments on the basis of the existence of through routes via the Ogden gateway was arbitrary and capricious, contrary to the evidence, and contrary

to law, particularly the provisions of Section 1, Section 3 and Section 15 of the Interstate Commerce Act.

The Rio Grande took no appeal in the Colorado case because the decision was favorable to the Rio Grande, in that it held that through routes are in existence and that the Commission should have so found and should have proceeded to determine the issues, without restricting itself to a consideration of the limitations imposed by Section 15(4) with respect to the establishment of through routes where none exist. The Colorado court remanded the case to enable the Commission to determine the issues involved and the relief requested on the basis that through routes as a matter of fact and as a matter of law are already in existence.

The gist of the Colorado decision is represented by the following pertinent statement in the unanimous opinion of that three-judge court (Colo. R. 294):

> "The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defendants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act, free of any of the limitations imposed by Section 15(4) with respect to establishing through routes."

The final judgment and decree of the Colorado court annulled and set aside the Commission order of January 12, 1953, insofar as it denied relief to the Rio Grande and its intervenors and remanded the cause to the Interstate Commerce Commission for further pro-

ceedings in conformity with the opinion and judgment of the Colorado court (Colo. R. 361, 362).

The appeals of the Union Pacific and others in Nos. 332, 333 and 334 (disregarding the procedural points raised by various motions of the Union Pacific, *et al.*, which inferentially were denied when the Supreme Court noted probable jurisdiction) involve the primary question, whether the Colorado court erred in setting aside the order of the Commission and in holding as a matter of law that through routes exist over the Rio Grande in connection with the Union Pacific via Ogden, Utah, on the traffic and between the origin and destination territories involved in the litigation. If any of the procedural points above referred to are again raised in the opening briefs of the other parties to these particular appeals, they will be dealt with in such reply brief as the Rio Grande may file under the reservation so to do, set forth at p. 35 hereof.

As a result of the foregoing sequence of proceedings, the positions of the parties in this Court may be summarized as follows:

(1) The Union Pacific and its interveners contend that the Colorado court should be reversed; that the Nebraska court should be reversed; that the Commission order should be reversed, and that the Rio Grande should be accorded no relief whatever.

(2) The United States, the Secretary of Agriculture and the Interstate Commerce Commission contend that the Colorado court should be reversed; that the Nebraska court insofar as it modified the Interstate Commerce Commission order should be reversed; and that the Commission order

of January 12, 1953, should be restored and affirmed, leaving the Rio Grande with the relief therein granted.

(3) The Rio Grande and its interveners contend that the Colorado decision should be affirmed and the case remanded to the Commission on the basis that through routes via the Ogden gateway are in existence and that the Rio Grande is entitled to have the case considered and decided by the Commission, free of the limitations of Section 15(4); that the Nebraska court should be reversed and the Commission's order reversed insofar as it denies the relief prayed for by Rio Grande; that in the alternative, in the event that the Colorado court is not affirmed, this Court should reverse the Nebraska decision and affirm the Commission Order.

SEQUENCE OF ARGUMENT IN THIS BRIEF

With a view to carrying out the spirit of the order of consolidation of this Court, entered October 24, 1955, and in accordance with the suggestion made to Rio Grande counsel by the Clerk of this Court in a letter dated November 15, 1955, the Rio Grande, as already indicated, is filing this brief as a consolidated opening brief covering both series of appeals, reserving the right to file a reply brief insofar as necessary to meet contentions advanced in the briefs of the other parties to these appeals, which may not be sufficiently covered in this Consolidated Opening Brief.

The United States in its Jurisdictional Statement in the Colorado case (footnote 6, p. 10 thereof) takes the position that the two series of appeals are interdependent and that this Court will not need to reach the issues

involved in the Nebraska appeals (Nos. 117-119) if it affirms the judgment in the Colorado case. Such a result does not necessarily follow an affirmance of the Colorado case, because the Colorado court in remanding that case to the Commission (131 F.Supp. 372 at 387) annulled and set aside the Commission's order only "insofar as it *denied* and *withheld* relief to the plaintiff and intervening plaintiffs" (Emphasis supplied) (Colo. R. 361). The Colorado court did not annul or set aside the *affirmative* relief which the Commission order accorded the Rio Grande and which was the sole matter under review in the Nebraska case.

The jurisdiction of the Nebraska court was only invoked to deal with that part of the Commission's order which granted affirmative relief to the Rio Grande. This relief was limited to the prescription of through routes and competitive joint rates on certain named commodities, and was also restricted territorially (Consol. R., II, 1595-1597; see also Map, App. E hereto). The Nebraska court imposed further limitations upon the relief granted by the Commission, by limiting the joint rates prescribed on the named commodities to shipments requiring in-transit privileges at points on the Rio Grande (Neb. R. 167, 168).

However, the Colorado court held that through routes are in existence as a matter of law, as claimed by the Rio Grande, and that the failure of the Commission to so hold had prejudiced its approach to the entire case and improperly caused it to treat itself, in granting relief, as restricted by the limitations of Section 15(4) (Colo. R. 279 *et seq.*).

On this basis, an affirmance by this Court of the Colo-

rado decision could properly involve sending the entire matter back to the Commission in a remand broad enough to require the Commission to reapproach the entire case upon the basis that through routes are in existence. Such a remand by this Court would carry with it the issues dealt with by the Nebraska court to such extent that this Court would not reach or need to deal with those particular issues. In the absence of such a broad remand by this Court, the issues involved in the appeals in the Nebraska case would need to be disposed of independently.

Because of the foregoing unusual situation, and because an affirmance of the Colorado decision as indicated could avoid the necessity of having to deal with the issues in the Nebraska case, it is logical and may better serve this Court, so far as this Consolidated Opening Brief is concerned, to argue the questions presented on the appeals from the Colorado decision prior to the questions arising in connection with the Nebraska case. Accordingly, the Rio Grande argument on the merits will be directed first to the issues involved in the Colorado case. The argument on the issues raised by the Nebraska case appears *infra*, pp. 86-116.

SUMMARY OF ARGUMENT

Colorado Decision

In *Missouri & Illinois Coal Co. v. Illinois Cent. R.R.*, 22 I.C.C. 39, the inherent purpose and policy of the Interstate Commerce Act, with special reference to Sections 1(4) and 3(4) of the Act, was cogently stated by the Commission as follows:

"Reading these provisions together, there can

be no doubt as to the intent of Congress. Our railroads are called upon to so unite themselves that they will constitute one national system; they must establish through routes, keep these routes open and in operation, furnish the necessary facilities for transportation, make reasonable and proper rules of practice as between themselves and the shippers, and as between each other."

The Commission's view of the inherent purpose and policy of the Interstate Commerce Act was confirmed by Congress and extended to all of the provisions of the Act in its statutory declaration of National Transportation Policy as set forth as a preamble to the Interstate Commerce Act, United States Code, Title 49 (App. B. hereto, 1).

In 1897 when the Oregon Short Line Railroad Company and the Oregon-Washington Railroad and Navigation Company were not under the control of the Union Pacific, they published competitive joint rates via the Rio Grande through Ogden on all freight traffic which moved between points on those railroads, now operated under lease by the Union Pacific Railroad, and Colorado common points and the territory east thereof. That action was in accord with the underlying policy of the Interstate Commerce Act.

By 1906 the Union Pacific had reacquired control of the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company, and between 1906 and December, 1912, the Union Pacific caused the competitive joint rates via Ogden and the Rio Grande which had been established in 1897 to be canceled; but no action was taken then or later by the Union Pacific or

its preferred railroad connections to cancel or close the through routes via the Rio Grande.

In spite of the higher rates, a substantial amount of freight traffic has continued to move on through bills of lading via the Ogden gateway over the Rio Grande to and from the "closed door" territory, with the consent and knowledge of the Union Pacific and its presently preferred connections. The evidence is undisputed that many shippers pay the higher rates where they want to use the Rio Grande, and that the Union Pacific and the other defendant railroads involved never refused to issue a through bill of lading for such shipments (see Statement, *supra* pp. 13-17).

Both the principal traffic witness of the Union Pacific and counsel for the Union Pacific admitted that through routes via the Ogden gateway over the Rio Grande are open and available to shippers who are willing to pay through rates based on the aggregate of the intermediate local rates of the various carriers in the route (see Statement, *supra* pp. 11-13).

That the cancellation of joint rates does not cancel through routes was recently emphasized in *United States v. Great Northern Ry.*, 343 U.S. 562, 572.

This Court has also rejected as without legal significance the contention of a railroad that through routes which are said to be "commercially closed" as a result of higher and discriminatory rates are not through routes within the meaning of the Interstate Commerce Act. *Virginian Ry. v. United States*, 272 U.S. 658.

Upon the foregoing facts and authorities (and other authorities referred to in its opinion), the Colorado

court correctly held that the Commission erred in failing to find that through routes over the Rio Grande via the Ogden gateway in connection with freight traffic moving to and from the "closed door" territory are in existence.

The Colorado decision further held that the Commission erroneously treated itself as bound by the limitations of Section 15(4) of the Interstate Commerce Act, thereby subjecting its consideration of the whole case to the limitations of that section, which only apply to the establishment of through routes where none already exist.

Under its Final Judgment and Decree, the Colorado court annulled and set aside the order of the Interstate Commerce Commission insofar as it denied and withheld relief to the Rio Grande and the other intervening plaintiffs. The Commission, in denying and withholding relief, mistakenly regarded Sections 1(4), 3(4), 15(1) and 15(3) of the Interstate Commerce Act as subject to the limitations of Section 15(4), and thereby failed properly to apply those sections to the issues in the case.

Section 1(4), which requires a common carrier to furnish transportation upon reasonable request and to establish just and reasonable rates, fares, charges and classifications, is not subject to the limitations of Section 15(4) of the Act. *Atchison, T. & S. F. Ry. v. United States,* 279 U.S. 768, 777; *Virginian Ry. v. United States,* 272 U.S. 658, 666.

Section 3(4) of the Interstate Commerce Act which

requires carriers by railroad to afford reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines; and forbids them to discriminate between connecting lines in their rates, fares and charges, is not subject to the limitations of Section 15(4) of the Act. *United States v. Great Northern Ry.*, 343 U.S. 562, 574, 575; *Great Northern Ry. v. United States*, 81 F. Supp. 921, 924 (D.C. Del.), aff'd 336 U.S. 933.

Section 15(1) implements Sections 1(4) and 3(4) of the Act by empowering the Commission to prescribe just and reasonable railroad rates, fares and charges and just, fair and reasonable classifications and practices, in order to correct unjust, unreasonable, unjustly discriminatory or unduly preferential or prejudicial rates, fares, charges, classifications or other practices.

Section 15(3) of the Act authorizes and requires the Commission, "whenever deemed by it to be necessary or desirable in the public interest," to establish through routes and joint rates, fares and charges. The limitations of Section 15(4) do not apply to the establishment of joint rates, fares and charges over through routes which are already in existence. *United States v. Great Northern Ry.*, 343 U.S. 562, 576. However, the Commission erroneously considered its power to establish joint rates, fares and charges under Section 15(3) as limited by the restrictions of Section 15(4).

The Colorado court was, therefore, correct in holding that the Interstate Commerce Commission erred in the following particulars:

(1) In failing to hold, under the undisputed

evidence that through routes are in existence as a matter of law over the Rio Grande via the Ogden gateway in connection with the Union Pacific, and

(2) In narrowly limiting itself to a consideration of the case under the restrictions of Section 15(4) of the Interstate Commerce Act, since that section does not apply where (a) through routes are in existence, or (b) where under the evidence of the case, and as a matter of law, relief should be granted under Sections 1(4); 3(4), 15(1) or 15(3) of the Act.

A remand of the case as ordered by the Colorado court is the appropriate procedure for enabling the Commission to correct its several errors.

Nebraska Decision

The Commission in its order of January 12, 1953, prescribed competitive joint rates and through routes on granite and marble monuments from origins in Vermont and Georgia to destinations in the "closed door" territory, and on a limited number of commodities eastbound via the Union Pacific through Ogden or Salt Lake City from the "closed door" territory to points south and east of a designated area which extends northerly and to some extent southerly from Colorado common points such as Denver, Pueblo and Trinidad, without the imposition of any conditions with respect to the stopping of shipments at points in-transit for loading, unloading, cleaning, milling, storing, fabrication, etc.

The Nebraska court sustained the order of the Commission in part, and overruled it in part by restricting

the application of the rates prescribed by the Commission to shipments consigned in the first instance to points on the Rio Grande and requiring in-transit privileges at such points.

In modifying the Commission's findings, the Nebraska court entered the field allocated to the exclusive jurisdiction of the Commission and erroneously substituted its judgment with respect to the weight and significance of the evidence for the judgment of the Commission. Only questions of law, including those affecting constitutional power, statutory authority and basic prerequisites of proof can be raised against an order of the Commission. *Rochester Tel. Corp. v. United States*, 307 U.S. 125, 140, 145, 146; *Atchison, T. & S. F. Ry. v. United States*, 284 U.S. 248, 262; *O'Keefe v. United States*, 240 U.S. 294, 303; *ICC v. Union Pacific R. R.*, 222 U.S. 541, 547; *ICC v. Chicago, R. I. & Pac. Ry.*, 218 U.S. 88, and *ICC v. Illinois Cent. R. R.*, 215 U.S. 452.

The court below erroneously assumed that the primary need with respect to the named commodities covered by the Commission order was for in-transit privileges at points on the Rio Grande, whereas in fact the primary need was and is for competitive joint rates via the Rio Grande so that its route can be used and cars stopped at points on the Rio Grande or at points on other railroads east of the Rio Grande, if so desired by shipper. The facts before the Commission show without dispute that in-transit privileges already exist on the Rio Grande and its connections with respect to all the named commodities, but that competitive joint rates are necessary to make these privileges effective.

The Commission, in its administrative capacity, so decided.

The Commission correctly understood what the Nebraska court did not, that such existing in-transit privileges are commercially ineffective unless the freight which is accorded in-transit privileges may move from the original points of shipment to ultimate destinations at competitive joint rates.

The Nebraska court erred in interpreting and applying Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act, and particularly in holding that Section 3(1) and its implementing Section 15(1) were inapplicable to the facts in the instant case.

Section 3(1) of the Interstate Commerce Act provides that it shall be unlawful for any common carrier subject to the provisions of the Act—

> "to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: * * *"

The Nebraska court erred in holding that Section 3(1) does not apply to the instant case, even though the defendant railroads involved (the Union Pacific and its preferred connections) clearly have the power to eliminate the violations of that section.

In this connection the Nebraska court misconceived the decision of the Supreme Court in *Central R.R. of N.J. v. United States*, 257 U.S. 247. The court's error arose from its failure to grasp that the wrongs which the Rio Grande and the intervening complainant shippers sought to have the Commission correct could not exist, unless the other defendant railroads joined the Union Pacific in establishing and maintaining competitive joint rates and through routes with each other while refusing to include the Rio Grande in such rates.

A finding of undue prejudice and preference as between the territories and regions involved is sustained where, as here, the defendants singly or jointly, directly, or indirectly through connecting lines, serve the same origins or destination points or territories. *New York v. United States*, 331 U.S. 284; *Chicago, I. & L. Ry. v. United States*, 270 U.S. 287; *St. Louis Southwestern Ry. v. United States*, 245 U.S. 136; *Southern Ry. v. United States*, 204 Fed. 465 (Commerce Ct.); *Seneca Wire & Mfg. Co. v. Baltimore & O. R.R.*, 112 I.C.C. 95, and *Lake Dock Coal Cases*, 89 I.C.C. 170.

In dealing with Sections 15(3) and 15(4) the lower court erred in assuming that the question of public interest and of "adequate, and more efficient or more economic, transportation," as a purely legal proposition, must be confined to shipments requiring in-transit privileges on the Rio Grande, since the question of what is in the public interest and what constitutes adequate and more efficient transportation is, under the facts of this case, an administrative question with respect to which the Commission has exclusive jurisdic-

tion and is not a legal question to be determined by the court.

The errors of the Nebraska court requiring a reversal of its decision therefore may be briefly summarized as follows:

(1) It substituted its judgment for the judgment of the Commission with respect to administrative findings made by the Commission and supported by substantial evidence.

(2) It misinterpreted and misapplied Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act, particularly in holding that Section 3(1), which prohibits any carrier from giving undue preference to any person, locality, territory or region, or subjecting any person, locality, territory or region to any undue prejudice, does not apply in the instant case.

Disposition of the Consolidated Appeals

In view of the consolidation of the Colorado and Nebraska appeals, there immediately follows as a part of this Summary a brief statement, amplified in the Conclusion at the end of this Consolidated Opening Brief, as to what, in the opinion of Rio Grande counsel, would be an appropriate disposition of the appeals herein.

I.

The decision of the United States District Court for the District of Colorado involved in appeals Nos. 332, 333 and 334 should be affirmed, with appropriate directions to the Interstate Commerce Commission; the decision of the United States District Court for the District of Nebraska involved in appeals Nos. 117,

118 and 119 should be reversed, and the order of the Interstate Commerce Commission should be set aside insofar as it denies the relief sought by the Rio Grande.

II.

In the alternative, in the event that the decision of the United States District Court for the District of Colorado is not affirmed, the decision of the United States District Court for the District of Nebraska involved in appeals Nos. 117, 118 and 119 should be reversed and the order of the Interstate Commerce Commission should be affirmed.

ARGUMENT

COLORADO DECISION

I.

Geographic and Economic Background of This Litigation

For a proper understanding of the argument in connection with the Colorado decision it is appropriate to review the geographic and economic situation underlying this litigation.

The "closed door" territory in Northern Utah, Idaho, Montana, Washington and Oregon is a large and developing area of the United States (Consol. R., I, 178 *et seq.*), which the Union Pacific claims as its own principality, to and from which it asserts the right to control the movement of railroad traffic and with respect to which as a matter of whim or otherwise it asserts the right to prefer certain railroad connections. In so doing the Union Pacific discriminates

against the Rio Grande and the intervening shippers and excludes the Rio Grande from traffic moving to and from the area, unless the shippers (the public) are willing to pay a higher price.

As to freight traffic moving to and from the "closed door" territory, the Union Pacific with the aid of its preferred connections claims the right to say to shippers that they may ship over Union Pacific lines to and from Colorado common points and east thereof at competitive joint rates, or that they may ship at competitive joint rates via the Union Pacific and its preferred connections by routes longer than the distances via the routes of the Rio Grande through Ogden.

The extent of this situation is disclosed by the routes heretofore described in the Statement in this brief, pp. 17-20, and illustrated by the map attached hereto as Appendix C. The effect of this situation is that the Union Pacific maintains a monopoly with respect to the movement of railroad traffic to and from the "closed door" territory. It asserts the right, free from any authority of the courts or otherwise, to grant or withhold to other railroads equality as to rates and interchange practices as it sees fit. This is contrary to the provisions of and the policy underlying the Interstate Commerce Act, which requires railroads to act together to constitute one national coordinated system of transportation, of which the Rio Grande is as much a part as any other railroad.

The Interstate Commerce Act as a matter of broad policy intends that there shall be no discrimination in rates and charges between connecting railroad lines,

whereby the public is coerced into employing one competing line to the exclusion of another, and a monopoly is thus created in favor of one particular railroad. This principle was set forth in *New York & No. Ry. v. New York & N. E. R. R.*, 3 I.C.C. 542, 550, in the following words:

> "When, therefore, the Statute declares that there shall be no discrimination in rates and charges between connecting lines, it can only mean that no difference or distinction shall be made in rates that shall coerce the public to employ one competitor to the exclusion of another, or deprive one competitor of business that under freedom of selection by the public would be given to it, and thus create a monopoly in favor of another competitor. Unless this effect is given to the language of the Statute it is only a meaningless enactment. * * *"

The Rio Grande's complaint before the Interstate Commerce Commission (filed August 1, 1949) directly challenged this over-lordship exercised by the Union Pacific and its preferred connections with respect to the business and economic life of a territory greater in extent than the combined areas of New England, New York, Pennsylvania and Maryland. As already indicated, a number of interested shippers, organizations and public service commissions intervened. After the taking of voluminous testimony, the Interstate Commerce Commission through its present Chief Examiner, who heard all of the testimony, rendered a report in favor of the contentions of the Rio Grande. Numerous exceptions to the Examiner's Report were filed, followed by comprehensive briefs by the parties

directly involved (the Rio Grande and the Union Pacific); and by various intervenors on each side.

II.

No Clear Commission Decision with Respect to the Existence of Through Routes

On January 12, 1953, the Commission made its Report and Order—the Order specifically making the Report a part of the Order, by reciting in the Order that the "report is hereby referred to and made a part hereof" (Consol. R., II, 1595). This Report and Order, with certain territorial limitations, accorded relief to the Rio Grande and to the interested shippers with respect to certain named commodities but denied relief with respect to all other commodities shipped to and from the Union Pacific's "closed door" territory (See Map, App. E hereto). Among the ten commissioners who participated in the Commission decision (one, Commissioner Knudsen, not participating (Consol. R., II, 1592)), there was a wide difference of opinion, and several varying separate written opinions were filed (Consol. R., II, 1579 *et seq.*).

Although there was a concurrence of six Commissioners in the measure of relief granted as to the named commodities, there was an even division of opinion — five to five—on what was alleged in the complaint and treated by all of the Commissioners as the first and basic issue of the case, namely, whether as claimed by the Rio Grande through routes are in existence via the Ogden gateway in connection with the Union Pacific so as to entitle the Rio Grande to relief apart from Section 15(4) of the Act, which imposes limitations on the

Commission with respect to the establishment of through routes where none exist. The limitations of Section 15(4) were summarized by this Court in *Thompson v. United States*, 343 U.S. 549, 552, as follows:

> "The Commission's power to establish through routes is limited by a provision of §15(4), quoted in the margin, whenever such action would require a carrier to short haul itself. Under that Section, a carrier may be required to short haul itself only where its own line makes the existing through route 'unreasonably long as compared with another practicable through route which could otherwise be established,' or where the Commission makes special findings that a proposed through route 'is needed in order to provide adequate, and more efficient or more economic, transportation.'"

A reference to the Commission Report (287 I.C.C. 611) (Consol. R. II, 1579 *et seq.*) shows:

(1) That Commissioner Patterson *concurred in part,* but held the Report inconsistent in failing to grant relief on lumber;

(2) That Commissioner Arpaia *concurred* in the Report and Order as made, and though he *held that through routes existed,* voted to limit the competitive joint rates to the commodities specified in the majority Report;

(3) That Commissioner Lee *concurred in part,* but *held that through routes existed,* and would extend the relief;

(4) That Commissioner Mahaffie (with whom Commissioners Splawn and Cross joined) *dissented in part,* but *held that through routes existed,* and would extend the relief.—

The minute order entered by the Commission on January 12, 1953, reads as follows:

> "Report and order in the above-entitled proceeding approved and adopted; Commissioner Arpaia concurring, Commissioners Lee and Patterson concurring in part, Commissioners Mahaffie, Splawn and Cross dissenting in part, and Commissioner Knudsen not participating."

Whatever is otherwise said of what was decided or not decided as to the existence of through routes, it is apparent that there was no clear decision by a majority of the Commission on this first and foremost question —*the existence of through routes, via the Rio Grande through the Ogden gateway in connection with the Union Pacific*—and that the failure of the Commission to clearly decide this question colored and distorted its whole approach to the case.

The Colorado court held that under the evidence before the Commission and by reason of the admissions of counsel and of the principal traffic witness of the Union Pacific, through routes exist as a matter of law, and that the Commission in considering the issues erred in imposing upon itself the necessity of proceeding under the stringent limitations of Section 15(4) (Colo. R. 279 *et seq.*). Hence, the Colorado court remanded the case to the Commission for further proceedings in accordance with the law as determined by that court with respect to the existence of through routes.

III.

The Existence of Through Routes Via the Ogden Gateway Is the First and Basic Issue

The existence of through routes via the Rio Grande through the Ogden gateway in connection with the Union Pacific, was from the beginning and is now the first and basic issue in this litigation. The Rio Grande, as the original complainant, alleged the existence of such through routes (Consol. R. I, 6). The Commission admitted that the existence of through routes was the first issue in the case to be decided (Consol. R., II, 1523 *et seq.*), but never clearly decided it (Consol. R., II, 1579-1592). The Colorado court recognized the existence of through routes as the first and basic issue, and decided it in favor of the Rio Grande as a question of law. The Nebraska court assumed through routes were not in existence and acted on the assumption that new through routes must be established, and hence that Section 15(4) was the law governing the case.

The Rio Grande was and is entitled to have the basic issue in the case as presented to the Commission by its complaint resolved and decided independently and on its own merits. The Commission not having done so because of an equal division of opinion, the Rio Grande was and is entitled to a specific decision on this question by the courts.

The question of the existence of such through routes, although originally a mixed question of fact and of law, becomes a pure question of law where the evidence, as the Colorado court found in this case, is undisputed. Therefore, the Commission's failure to resolve this

question is not merely a failure to make an administrative finding. Although in the first instance the question was one for the Commission, yet after the underlying facts are established by undisputed evidence, either the failure of the members of the Commission to decide the basic issue in the case, or an erroneous decision of that issue (if it be argued that a decision was made) calls upon a court to examine into the matter and decide upon the whole record whether through routes are in existence as a matter of law. *Thompson v. United States,* 343 U.S. 549; *ICC v. Northern Pacific Ry.,* 216 U.S. 538. This is exactly the issue which the Colorado court had to deal with, and it decided this basic issue in favor of the Rio Grande.

IV.

Under the Law and the Evidence, Through Routes Via the Ogden Gateway Exist

As already indicated (see Statement, *supra* p. 11) the record discloses that through routes and joint rates to and from the points here involved were established in 1897. The joint rates continued until cancelled by the Union Pacific in 1906 from and to some points and in 1912 from and to remaining points. Admittedly, no specific action was taken to cancel the through routes. However, the Union Pacific seems to contend that the mere cancelling of the joint rates cancelled the through routes by somehow closing them "commercially." But there is no law to support what the Union Pacific contends in this particular. On the contrary, it has been definitely indicated by the Supreme Court that the cancellation of a joint rate does

not cancel a through route. This was recently (1952) emphasized in *United States v. Great Northern Ry.*, 343 U.S. 562, at page 572, where the Court said:

> "The Interstate Commerce Act contemplates the existence of through routes in the absence of joint rates. And this Court expressly has approved the Commission's consistent recognition of the existence of through routes whether the through rates applicable thereto are joint rates or combinations of separately established rates. As a result, the establishment of joint rates is an act separate and distinct under the statute from the establishment of through routes."

To the same effect are the decisions in *Thompson v. United States,* 343 U.S. 549; *Great Northern Ry. v. United States,* 81 F.Supp. 921 (D.C. Del.), aff'd. 336 U.S. 933; *Atchison, T. & S.F. Ry. v. United States,* 279 U.S. 768; *Virginian Ry. v. United States,* 272 U.S. 658, and *St. Louis Southwestern Ry. v. United States,* 245 U.S. 136. In the last cited case, Justice Brandeis stated in a footnote that:

> "A 'through route' is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a 'through rate.' This 'through rate' is not necessarily a 'joint rate.' It may be merely an aggregation of separate rates fixed independently by the several carriers forming the 'through route'; * * * ."

This statement by Justice Brandeis in the *St. Louis Southwestern* case is a judicial determination of what constitutes a through route under the provisions of the

Interstate Commerce Act: The court below in deciding that through routes exist was governed by that determination.

In *Routing via Quanah, A. & P. Ry.*, 220 I.C.C. 137, 139, the Commission acted on the theory that the cancellation of a joint rate does not cancel a through route; it went on to hold that when a joint rate is cancelled it is the duty of the railroads to leave in effect through combination rates which are just, reasonable and otherwise in accordance with the standards of the Interstate Commerce Act. Upon review by a three-judge court, the foregoing proposition in the *Quanah* case was sustained in *Thompson v. United States*, 20 F.Supp. 827 (D.C. E.D. Mo.).

The principle that the cancellation of a joint rate does not cancel an existing through route likewise is supported by *Quanah, A. & P. Ry. v. Atchison, T. & S. F. Ry.*, 226 I.C.C. 201, 209; *Routing Grain and Grain Products via Chicago, R.I. & Pac. Ry.*, 198 I.C.C. 117; *Routing on Iron and Steel Articles*, 168 I.C.C. 175, and *Grain and Grain Products*, 161 I.C.C. 709.

The proposition that the cancellation of a joint rate does not of itself cancel an existing through route is also supported by Section 6(1) of the Interstate Commerce Act, which affirmatively recognizes the existence of through routes in the absence of joint rates. The pertinent part of Section 6(1) provides:

> "That every common carrier subject to the provisions of this part shall file with the Commission created by this part and print and keep open to public inspection schedules showing all the rates, fares, and charges for transportation between dif-

ferent points on its own route and between points on its own route and points on the route of any other carrier by railroad, by pipe line, or by water when a through route and joint rate have been established. *If no joint rate over the through route has been established,* the several carriers in such through route shall file, print and keep open to public inspection as aforesaid, the separate established rates, fares and charges applied to the through transportation.* * *." (Emphasis supplied)

The emphasized language of the statute would not make sense unless Congress contemplated the existence of through routes in the absence of joint rates.

In the decision of the Colorado court (Colo. R. 279, at page 288) the evidence which the court characterized as "undisputed" as to the existence of through routes was effectively summarized as follows:

"A continuous use of the Rio Grande route in the movement of traffic to and from the closed door area at through combination rates, without objection of the Union Pacific or participating railroads, is shown by the evidence, although the volume of traffic involved is comparatively small. In 1948, which was selected as a representative year, 37 carload shipments were made on through bills of lading from the northwest area to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific or its connections, but none moved to any destination east of Colorado common points. In the same year, 18 carload shipments were made westbound on through bills of lading from points east and southwest over connecting lines and the Rio Grande to Salt Lake City or Ogden and the

Union Pacific to destinations in the Northwest area. In addition, 21 carload shipments moved on through bills of lading from various eastern points to destinations in the northwest area, which were routed over the Rio Grande and Union Pacific, were held by the Rio Grande at Denver or Pueblo for change of the routing because the joint through rates were not applicable. The traffic movement to and from the northwest area over the Rio Grande through the Ogden gateway on through bills of lading and at through rates was substantially the same in years prior to 1948 and continued into 1949, until the date of the Commission hearings.

"From November, 1942 to August, 1945, a number of shipments were diverted under service orders issued by the Commission from the regularly used routes to the Rio Grande route. During World War II mixed trains of troops in passenger cars and of military supplies in freight cars moved from eastern and southern points on through billing over the Rio Grande via Ogden and Union Pacific to the closed door area. These trains were not routed under service orders issued by the Commission. In 1949, when the main line of the Union Pacific in Wyoming was blocked by snow, the traffic was diverted over the Rio Grande between Denver and junctions with the Union Pacific in Utah. These latter movements were made under emergency conditions and admittedly do not tend to establish an ordinary course of business between the carriers involved, but the Commission did not invoke its authority under §15(4) of the Act to establish temporary through routes which indicates that the Commission assumed that through routes were already in existence."

There is no evidence to the contrary, to-wit: that the

Union Pacific has ever refused to issue a through bill of lading over the Rio Grande when the shipper is willing to pay the price.

V.

Commission's Misconception of the Law of Through Routes

The Commission (five members out of ten) misconceived *Thompson v. United States,* 343 U.S. 549, and erroneously assumed its facts to be similar to those of the Rio Grande case. There are substantial differences between the facts of the Rio Grande case and the facts in the *Thompson* case. In the *Thompson* case the Court said, at page 551, with respect to the existence of a through route from Lenora to Omaha via the Burlington line:

> "But there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line or that the carriers have ever offered through service over that route * * *."

In the instant case there is undisputed evidence of numerous through shipments through the Ogden gateway via the Rio Grande in connection with the Union Pacific (see Statement, *supra* pp. 13-17).

At page 557 of the *Thompson* case, the Court observed:

> "In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service."

What is a "holding out" as announced in the *Thompson* case? In any form of business, it does not require active, affirmative solicitation of business. The merchant who has his shop on any street, with his door open to the public, holds himself out to accept business and thus solicits business. There is a "holding out" whether he receives a large or a small amount of business and whether his prices are higher or lower than a shop up the street. There is a lack of "holding out" only when he refuses to accept business. Under the undisputed evidence in the instant case and under its own admissions, the Union Pacific never refuses to accept through shipments and issue through bills of lading over the Rio Grande where a shipper to or from the "closed door" territory is willing to pay the higher combination rate. As shown by the evidence and as set forth in the decision in the Colorado case, in spite of the higher rates, substantial typical shipments via the Rio Grande on through bills of lading issued by the Union Pacific were made during the years immediately preceding the institution of these proceedings before the Commission (see Statement, *supra* pp. 13-17). This evidence shows that the contention that the through routes are "commercially closed" is pure theory.

The five Commissioners out of the ten who participated in the decision of the Commission and who failed to hold that through routes exist, misconceived the meaning of Section 6(1) of the Interstate Commerce Act, and the *Thompson* case, 343 U.S. 549, and the *Virginian* case, 272 U.S. 658. They also ignored and disregarded the evidence which establishes that a substantial

volume of traffic has been shipped on through bills of lading by shippers, including the Government, via the Rio Grande in connection with the Union Pacific through the Ogden gateway; that another substantial volume of traffic had been handled via the same through routing under service orders of the Commission; and that in 1948 and prior thereto, and continuing to the time of the hearings, through routes have been used under through bills of lading issued to shippers by the Union Pacific and the other defendant railroads (Consol. R., I, 76). The same five Commissioners also ignored and disregarded the legal effect and significance of the admissions made by the Union Pacific principal traffic witness, Mr. Stilling (Consol. R., I, 799, 800), and by Mr. Collins, counsel for the Union Pacific (Consol. R., II, 1621), that through routes exist, as well as the legal effect and significance of the Commission's own service orders utilizing the through routes via R Grande already in existence.

The basic error inherent in the Commission's conclusion (five members) as to the non-existence of through routes is shown by the Commission's statement in its Report (287 I.C.C. 611, 616; Consol. R., II, 1518, 1523) as follows:

> "As above stated and as testified by numerous shippers in this proceeding, the Ogden Gateway routes are not considered as open or through routes *commercially*, but as routes that are closed to shippers *because of the higher rates applicable*. Plainly, a finding that such routes should be opened to shippers on a *commercial basis* by establishing competitive joint rates would result in the establishment of such routes as effective through routes,

a character which they do not now possess." (Emphasis supplied)

The Commission by that statement evidently adopted the position that because through routes are subjected by the Union Pacific to the commercial deterrent of shippers being arbitrarily required to pay higher than the competitive joint rate, they cannot be regarded as through routes within the meaning of the Act. In this the Commission erred. In *St. Louis Southwestern Ry. v. United States,* 245 U.S. 136, and in *Virginian Ry. v. United States,* 272 U.S. 658, this Court rejected as without legal significance the contention of a railroad that routes which are "commercially closed" as a result of higher and discriminatory combination rates are not through routes within the meaning of the Interstate Commerce Act.

The holding in the *Virginian* case that a through route does not cease to exist because *through traffic* over it is commercially restricted by reason of higher combination rates was cited with approval by the Supreme Court in *Thompson v. United States,* 343 U.S. 549. At footnote 18 of the decision in that case, Chief Justice Vinson, in distinguishing the facts in the *Thompson* case from those in the *Virginian* case, said that:

> "*Virginian R. Co. v. United States,* 272 U.S. 658, is inapposite since through routes were there found to be in existence but commercially closed solely because of unreasonable and discriminatory rates charged by the *Virginian* over its portion of the route."

Despite the noncompetitive character of the combina-

tion rates in effect over the routes via the Rio Grande, through traffic has continued to move over such routes as shown by the evidence summarized at pp. 13-17, 57, 58, of this brief. Hence, if the *Thompson* case, as Chief Justice Vinson stated, is inapposite with respect to the *Virginian* case, it is even more inapposite with respect to the Rio Grande case. Therefore, the Commission erred in treating the *Thompson* case as controlling.

It is also a distortion of the *Thompson* case to say, as five members of the Commission did, that the Supreme Court cited *Beaman Elevator Co. v. Chicago & N. W. Ry.*, 155 I.C.C. 313, with approval. The *Thompson* case referred to the *Beaman* case in footnote 13 which stated merely that the Commission held in the *Beaman* case that proof of one shipment—and that apparently in error—on a through bill of lading over a certain route was not sufficient to establish the existence of a through route because one shipment was not representative of the carriers' course of business.

Moreover, in *Great Northern Ry. v. United States*, 81 F.Supp. 921 (D.C. Del.) aff'd *per curiam*, 336 U.S. 933, the court reiterated the doctrine of the *Virginian* case and added at p. 924:

> "A 'through route' is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to the destination on the line of another. In determining the existence of a 'through route,' all of the circumstances connected with the shipments from place to place may be taken into account."

Whatever other facts or incidents may serve to prove

the existence of a through route, it is sufficient that "A through bill of lading is, as to the carriers recognizing it, conclusive evidence of the existence of a 'through route.'" *Through Routes and Through Rates,* 12 I.C.C. 163, 167. In that decision the Commission relied upon a passage defining through routes set forth in *Cincinnati, N.O. & T.P. Ry. v. ICC,* 162 U.S. 184. At page 167, referring to a Supreme Court definition of the existence of a through route in the above case, the Commission said:

> "The full significance of this passage" (from the Supreme Court decision in the *Cincinnati* case, *supra*) "appears when it is remembered that it was written in a decision holding that an intrastate common carrier became a part of a through route on traffic as to which it expressly declined to arrange for a joint rate, and to which it applied its local rates. Therefore it is settled that, whatever other facts or incidents of a shipment may serve to prove the existence of a through route, a through bill of lading is, as to the carriers recognizing it, conclusive evidence of the existence of a through route."

In connection with the through traffic moving over the Rio Grande via the Ogden gateway, the majority of the Commission ignored the statutory conditions under which a shipper may select a route. Section 15(8) of the Interstate Commerce Act provides that at the time of the delivery of property to a common carrier railroad for transportation, the shipper may designate in writing the route via which the shipment shall move where "two or more through routes and through rates shall have been established as in this part provided to

which through routes and through rates such carrier is a party * * *." Thus, unless there is a choice of two or more established through routes, a shipper is not permitted by law (Section 15(8)) to select a particular route as a through route. Hence the Union Pacific in permitting shippers in the "closed door" territory (even at a higher rate) to route over its lines and via the Rio Grande through the Ogden gateway on through bills of lading, as the record shows it continuously has consented to do, must under the law be treated as having recognized such a route as an existing through route. This conduct of the Union Pacific constitutes a "holding out" and is a legal recognition of the existence of a through route.

Clearly the Union Pacific's contention that the mere cancellation of joint rates effected a cancellation of through routes is contrary to law, and contrary to its own conduct, and as heretofore stated, contrary to the admissions of its own counsel and of its own principal traffic witness. Its counsel and its principal traffic witness expressly admitted that a shipper who is willing to pay the higher combination rate has the right to specify through routes via the Union Pacific and Rio Grande—which right only exists (Section 15(8)) when such through routes are already in existence.

To support the existence of through routes over the Rio Grande in connection with the Union Pacific, actual movement of traffic on through billing over each and every of the possible routes involved was not required. Typical shipments are sufficient to support the existence of through routes generally. Although four

members of the Commission treated the shipments as typical and sufficient, the majority held in effect that it is necessary to have detailed evidence covering every commodity from every point of origin to every destination via every route, before the Commission can find through routes in existence as alleged in the Rio Grande complaint. In this respect the Commission again erred as a mater of law.

As was cogently stated by Justice Brandeis in *The New England Divisions Case*, 261 U.S. 184, at page 197:

> "Obviously, Congress intended that a method should be pursued by which the task, which it imposed upon the Commission, could be performed. The number of carriers which might be affected by an order of the Commission, if the power granted were to be exercised fully, might far exceed 600; the number of rates involved, many millions. The weak roads were many. The need to be met was urgent. To require specific evidence and separate adjudication, in respect to each division of each rate of each carrier, would be tantamount to denying the possibility of granting relief. We must assume that Congress knew this; and that it knew also that the Commission had been confronted with similar situations in the past, and how it had dealt with them."

The quoted statement of the Court is as applicable to the nation-wide scope of the through route issue involved in the Rio Grande case as it was in *The New England Divisions Case*. The observation made in *The New England Divisions Case* is amply supported by the decisions of this Court in *Georgia Pub. Serv. Comm'n v. United States*, 283 U.S. 765, 774; *Wisconsin Railroad Comm'n v. Chicago, B. & Q. R.R.*, 257 U.S. 563, 579, and

Illinois Cent. R.R. v. Public Utilities Comm'n, 245 U.S. 493, 507.

The decisions in *Quanah, A. & P. Ry. v. Atchison, T. & S. F. Ry.*, 226 I.C.C. 201, and *Cancellation of Rates and Routes Via Short Lines*, 245 I.C.C. 183, embraced issues and rates and routes that were also nation-wide in scope. In the *Quanah, Acme and Pacific* case the defendants before the Commission were the same as the defendants before the Commission in the Rio Grande case, and in *Cancelation of Rates and Routes Via Short Lines* the same railroads were respondents. Each of these cases involved rates on commodities generally, between practically all points in the United States over more than a hundred routes. In those cases, as here, the defendant railroads contended that the Commission could not make the findings requested by the complainants in the absence of specific evidence which showed in detail that the transportation conditions on each railroad participating in the numerous alleged unduly preferred routes were substantially the same as the conditions on each railroad against which the alleged discrimination operated. In the cases cited, the Commission properly considered the evidence introduced as typical of the traffic and transportation conditions as a whole, and rejected the contentions made by the railroad defendants.

The Union Pacific has tried to belittle the Rio Grande evidence as to the number of shipments on through bills of lading via the Ogden gateway, but the wonder is that there have been so many shipments or instances of through bills of lading where shippers are arbitrarily required to pay a higher price in order to

use the Rio Grande. Since the evidence shows substantial and typical shipments, and there was an absence of any proof to the contrary, it was not necessary to submit further proof on the existence of through routes.

In this connection, it should be kept in mind that Mr. Hogue, Vice-President of the Rio Grande, in testifying with respect to the shipments during the year 1948, said that he used the year 1948 because it was the last calendar year prior to the hearings before the Commission, and that the same situation with respect to shipments existed to about the same extent in prior years and continued to the time of the hearings (Consol. R., I, 76).

Moreover, it is very rare to have the counsel for a litigant and the chief witness of that litigant admit a basic contention in a case, as was done here with respect to the existence of through routes via the Ogden gateway, and then be faced with denial by the litigant of the very proposition admitted.

VI.

The Commission's Misapplication of Section 15(4) Resulted in Its Failure to Give Full Force and Effect to Sections 1(4), 3(4), 15(1) and 15(3) of the Act

The Colorado court in its Final Judgment and Decree annulled and set aside the Commission Order insofar as it denied and withheld relief to the Rio Grande and its interveners. The opinion of the Commission indicates, as the Colorado court pointed out, that in denying and withholding full relief under the provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Interstate Commerce

Act, it mistakenly regarded itself as bound by the limitations of Section 15(4) with respect to the establishment of new through routes. Though the Commission made purported findings against the Rio Grande under these sections, it is obvious that its approach to the entire case, including the application of these sections, was colored and distorted by its erroneous conclusion that the stringent limitations of Section 15(4) governed its disposition of the case.

The provisions of these sections may be summarized as follows:

Section 1(4) requires every common carrier to furnish transportation upon reasonable request and establish just and reasonable through rates, fares, charges and classifications.

Section 3(4) imposes upon common carriers the duty, according to their respective powers, to "afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines"; and the duty not to "discriminate in their rates, fares and charges between connecting lines * * *."

Section 15(1) *inter alia* empowers the Commission on its own initiative or in extension of any pending complaint, when it is of the opinion that any individual or joint rate, fare, charge, classification or other practice by a carrier subject to the Act is "unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial," to prescribe just and reasonable rates, fares and charges and just, fair and reason-

able classifications and practices to be followed thereafter.

Section 15(3) of the Act authorizes and requires the Commission, "whenever deemed by it to be necessary or desirable in the public interest" to establish through routes and joint rates, fares and charges. The limitations of Section 15(4) apply only to the establishment of new through routes where none already exist. They do not restrict the broad power of the Commission under Section 15(3) to establish, whenever necessary or desirable in the public interest, competitive joint rates over existing through routes. This was expressly held in *United States v. Great Northern Ry.*, 343 U.S. 562, where the Court, speaking of the limitations of Section 15(4), pointed out at page 576 that this section restricted the power of the Commission only "in respect to those joint rates applicable to through routes established by the Commission," and that "the Commission's power to establish joint rates over existing through routes remains unimpaired."

Because in its entire approach to the instant case the Commission considered itself bound by the limitations of Section 15(4), it failed to give full force and effect to its unrestricted powers under Section 15(3) to prescribe competitive joint rates. It is clear from the Report of the Commission itself that the Commission erroneously considered its power under Section 15(3) to establish joint rates, fares and charges as limited by the restrictions of Section 15(4). The Commission stated (Consol. R., II, 1522): "The power to establish through routes *and joint rates* is limited by the provisions of Section 15(4),* * *." (Emphasis supplied)

As pointed out by the Colorado court, the Commission's failure to find through routes colored and distorted its approach to the entire case, including the application of Section 15(3). If through routes are in existence, as claimed by the Rio Grande and as determined by the Colorado court, the Commission is required to approach all the issues, particularly the necessity or desirability in the public interest of establishing competitive joint rates under Section 15(3), free from the limitations of Section 15(4).

The broad language of the Final Judgment and Decree of the Colorado Court must be interpreted as holding that the Commission erred in its interpretation and application of the foregoing sections to the facts in the instant case. Thus the Commission's misconception of the law of through routes clearly prejudiced the outcome of the proceedings before the Commission.

As is the situation in connection with Section 15(3), so also the limitations of Section 15(4) are inapplicable where under the evidence, relief should be granted under Section 3(4). The chief basis for the foregoing proposition with respect to Section 3(4) is the language of Section 15(4) itself, which expressly provides that the limitations on the establishment of through routes set out therein shall not apply to the power of the Commission to grant relief under Section 3. All the limitations on the power of the Commission in Section 15(4) with respect to the establishment of through routes are inapplicable to a Section 3 violation, and hence are not applicable to the granting of relief under Section 3(4).

The following cases support the foregoing proposi-

tion: *United States v. Great Northern Ry.*, 343 U.S. 562, 574, 575; *Great Northern Ry. v. United States*, 81 F.Supp 921, 924 (D.C. Del.) aff'd, 336 U.S. 933; *Atchison, T. & S.F. Ry. v. United States*, 279 U.S. 768, 777; *Virginian Ry. v. United States*, 272 U.S. 658; *General Mills, Inc. v. Great Northern Ry.*, 269 I.C.C. 457, 466, and *Idaho v. Oregon Short Line R.R.*, 157 I.C.C. 501, 505.

With special reference to Section 1(4) and Section 3(4), the policy of the Interstate Commerce Act was clearly stated in *Missouri & Illinois Coal Co. v. Illinois Cent. R.R.*, 22 I.C.C. 39, at page 46, as follows:

> "* * * Our railroads are called upon to so unite themselves that they will constitute one national system; they must establish through routes, keep these routes open and in operation, furnish the necessary facilities for transportation, make reasonable and proper rules of practice as between themselves and the shippers, and as between each other."

The aim of the Act and its policy are to bring about a national system of transportation to the end that the commerce of the country may freely move between all points in the United States over available rail routes, at rates that are neither unreasonable nor discriminatory as between shippers and the railroads or as between connecting railroads: *Railroad Comm'n of Wis. v. Chicago, B. & Q. R.R.*, 257 U.S. 563.

The provisions of Section 3(4) require that reasonable, proper, and equal facilities be provided for the operation of connecting lines as well as reasonable rules and regulations with respect thereto. The restrictive and arbitrary rate policy of the Union Pacific and the

other defendant railroads is not in accord with the foregoing general policy of the Act, and directly violates the specific statutory provisions of Section 3(4).

The only answer of the Commission to the applicability of Section 3(4) to the instant case was:

> "There is upon this record, however, no substantial evidence of the transportation conditions over the established routes referred to. The finding of discrimination under section 3(4) of the act must be supported by showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against and over the routes said to be preferred. No such showing has here been made." (Consol. R., II, 1577)

In the first place, the quoted statement by the Commission is broader than the evidence of record warrants. In the second place, once the Rio Grande establishes a *prima facie* case of discrimination, based upon the inequality of rates and routes and practices with respect to the traffic involved, it becomes the duty of the Union Pacific and the other railroad defendants to show, if they can, that the transportation conditions via the Union Pacific and its preferred connections are sufficiently dissimilar to the transportation conditions via the Rio Grande routes through Ogden to excuse the treatment as not unjustly discriminatory.

In *Continental Steel Corp. v. New York, C. & St. L. R.R.*, 256 I.C.C. 167, at page 174, the Commission said apropos of a similar question:

> "The burden is not on a shipper to show similarity of carrier competition from the alleged prejudiced and preferred points, but it is on defendants to show by satisfactory and convincing

evidence that a sufficient dissimilarity exists to justify the different treatment. Mere assertions that competition exists from the alleged preferred points is not enough."

It is established that while the burden of proof does not shift, the burden of going forward with the evidence does shift to the party in a given case who is in position to furnish the facts. There is a revealing discussion of this question in *Commercial Molasses Corp. v. New York T. Barge Corp.*, 314 U.S. 104, 111. There the Court said in effect that where a breach of duty is the issue, the law takes into account the relative opportunity of the parties to know the facts in issue and to account for the damage or loss which is claimed. In the instant case the Rio Grande alleged that the Union Pacific and the other railroad defendants before the Commission were guilty of breaches of duty in that they violated certain provisions of the Interstate Commerce Act which required them to maintain reasonable through routes and reasonable and non-discriminatory through rates and practices for the operation of such through routes, as well as reasonable, proper, and equal interchange arrangements, and also provides that carriers "* * * shall not discriminate in their rates, fares, and charges between connecting lines * * *."

Moreover, since the Interstate Commerce Act is a remedial statute which should be broadly construed and which imposes affirmative duties upon the railroads and confers authority upon the Commission to enforce such duties, the Commission erred as a major premise in holding that the burden of proof was upon the Rio

Grande to show that the transportation conditions over the alleged preferred railroad connections of the Union Pacific are the same, or substantially the same, as the transportation conditions via the route of the Rio Grande through Ogden. That view is supported by the decisions of the Commission and of the Supreme Court already cited, and by *United States v. Grogg*, 9 F.2d 424 (D.C. W.D. Va.); *Warn v. Davis Oil Co.*, 61 Fed. 631, 632 (D.C. S.D. N.Y.); *The Emma F. Angell*, 217 Fed. 311 (D.C. E.D. Pa.); *Williams v. Casebeer*, 126 Cal. 77; *Baxter v. Camp*, 71 Conn. 245; and other cases cited in Sec. 190, Chamberlayne on Evidence, and 27 Corpus Juris, Sec. 21.

When properly appraised, the evidence in the record before the Commission does show that the transportation conditions on the traffic involved through Ogden via the route of the Rio Grande and its connections are not less favorable than are the transportation conditions via the preferred routes which the Union Pacific maintains with numerous other railroads. On the contrary, there is substantial evidence which demonstrates that the transportation conditions over the routes of the Rio Grande and the Union Pacific through Ogden are just as favorable as the transportation conditions via many of the preferred routes in which the Union Pacific joins other railroads in maintaining competitive joint rates. Moreover, in many instances the distances are shorter in connection with the Rio Grande route through Ogden than are the distances via the Union Pacific's preferred routes. For example, it belies belief that the transportation conditions over the route of the Rio Grande and Union Pacific through Og-

den could be or are any less favorable than the transportation conditions via the Rio Grande where it now participates with the Southern Pacific and the Union Pacific and other railroads at competitive joint rates on traffic that originates or terminates at points in western Washington, which may be routed to Portland via the Union Pacific, thence via the Southern Pacific through Oregon, northern California, Nevada and Utah, to Ogden, thence via the Rio Grande to Denver, Pueblo or other Colorado common points and thence via the Rio Grande's prairie line connections, including the Union Pacific, to destinations such as Kansas City, St. Louis, or Chicago.

It is a known geographical fact that the Rio Grande route traverses a mountainous terrain. The same is true of the Southern Pacific over its lines through Oregon and northern California, and also of the northern transcontinentals in crossing the Rockies in Idaho and Montana, which railroads are preferred connections of the Union Pacific, and as such are accorded through routes and competitive joint rates. The same is also true of the Union Pacific on various portions of its lines.

Commissioner Lee said: "The evidence does not establish that transportation conditions are more favorable over these routes" (the Union Pacific and its connections) "than over the Rio Grande route which is discriminated against by the defendants" (Consol. R., II, 1584).

With respect to the present excellent status of the Rio Grande as an up-to-date railway with modern equipment and efficiently operated in comparison with other railroads throughout the United States, the Com-

mission entirely overlooked the significance of the testimony of Mr. Wilson McCarthy, President of the Rio Grande. Mr. McCarthy testified that within recent years the Rio Grande had become financially sound and is today an efficient, modern railway system. He said (Consol. R., I, 42 *et seq.*):

"The capital structure has been revamped so that annual fixed charges on our mortgage obligations, which in 1935 amounted to $5,073,390, are now only $1,314,077.

"The physical plant has been improved to the point where greater economy and expeditious operation is now possible. Since my coming to the property approximately 109 million dollars have been expended in improving the company's property and facilities.

"When I came to the property, 70 per cent of our standard gauge freight equipment was over twenty years old. Today only 40 per cent of this equipment is over that age. Proportionately even greater gains have been made in our freight and passenger schedules.

"In 1935 our locomotives had an average tractive effort of only 49,574 pounds. Today the average tractive effort is 70,638 pounds—a gain of over 42 per cent.

"The Rio Grande has moved rapidly toward dieselization and I believe today owns proportionately more of this type of equipment than any other western Class I railroad. Today over 70 per cent of our freight traffic is handled by diesel power. This compares with an average of 32 per cent for all Class I railroads.

"During the same period since 1935, the Company's main line was virtually rebuilt. Four hun-

dred and seventy-four bridges have been built or rebuilt, 531 repaired and some 215 eliminated. A total of 1,457 miles of rail have been laid—843 miles with new rail. Almost four million cross ties have been replaced with treated ties and heavy slag ballast has been applied to 634 miles of track.

"The capacity of our company's main line has been further increased through the construction of a second tunnel through the Continental Divide at Tennessee Pass, the installation of some 507 miles of Centralized Traffic Control and 186 additional miles of Automatic Block Signals, the building of more and longer passing tracks, and the reduction of grades and curvatures.

"Safety and economy have been promoted through the construction of slide detector fences, widening of cuts, installation of track and flange oilers, purchase of off-track work equipment and the providing of a greatly improved communications system. The Rio Grande was the first U. S. Railroad to receive a regular license to install and operate radio communication equipment on its trains.

"Similar improvements have been made in the company's yard and terminal facilities with the view to expediting service and reducing costs. These have included extensive track changes, the construction of modern yard offices, the flood-lighting of yards, and the installation of pneumatic tube, radio and loud-speaker communication systems. Service and schedules have likewise benefited from an extensive motive power modernization program.

"Our research laboratory is known throughout the world and many of its discoveries have added to the safety and economy of rail transportation.

"The effect of all this on the company's operating efficiency is evidenced in the fact that the Rio Grande has shown proportionately greater gains in recent years than either Class I or Western District Carriers as a group in the number of gross ton-miles it has produced per train hour operated. The record shows, moreover, that, notwithstanding the mountainous terrain, the company's freight trains in 1948 actually operated at higher average speeds than most lines.

"Because of the improved physical conditions, and for other reasons that will be covered in the testimony for the complainant, the management of the complainant reached the conclusion that there is no justification for the failure and refusal of the defendants, including the Union Pacific, to maintain joint competitive rates via the route of the Rio Grande through the Ogden Gateway; and, as a result of these considerations and conclusions, the complaint was filed with the Interstate Commerce Commission on August 1, 1949."

There is no evidence in the record contradicting the foregoing testimony as to the favorable transportation conditions and the efficiency of operation of the Rio Grande as compared with the other Class I railroads of the country or Western District Carriers as a group.

The statutes impose on railroads an affirmative duty to interchange and forward traffic between connecting lines without discrimination in their rates and charges. This principle was announced very early by the Commission and has never been varied. In *Western Pacific R. R. v. Southern Pacific Co.*, 55 I.C.C. 71, at p. 80, the Commission in referring to Section 3(2), which later became Section 3(4), said:

"There is no escape from the plain intent of these enactments. Reasonable, proper and equal facilities must be afforded for the affirmative duty, and there must be no partiality or injustice in the terms and conditions upon which the duty is performed—in other words, no discrimination in rates and charges. All parts of this provision are of equal authority and obligation. They are the mandate of the same source of power, and it must be assumed that they are intended to have full and complete effect. * * * "

As stated by Chairman Cooley in *New York & No. Ry. v. New York & N. E. R. R.*, 3 I.C.C. 542, 550, Section 3(4) "can only mean that no difference or distinction shall be made in rates that shall coerce the public to employ one competitor to the exclusion of another, or deprive one competitor of business that under freedom of selection by the public would be given to it, and thus create a monopoly in favor of another competitor. Unless this effect is given to the language of the Statute it is only a meaningless enactment. * * * "

The only excuse appearing in the record for the unjust discrimination above referred to, forbidden by Section 3(4) of the Interstate Commerce Act, was offered by the principal traffic witness for the Union Pacific, Mr. Stilling, who undertook to justify participation by the Union Pacific with the Southern Pacific, the Great Northern, the Northern Pacific, the Milwaukee and the Spokane International and their other preferred connections on the grounds:

(1) That the arrangements have been in effect over a long period of time (Consol. R., I, 816); and

(2) That the arrangements are mutually beneficial

in the sense that the railroads participating in the routes share in long hauls and short hauls with each other (Consol. R., I, 816, 817).

But the fact that the arrangements have been established for a long time and that they are mutually satisfactory to the participants in no manner excuses the discrimination and the violation of the statutes involved. In *Pennsylvania Co. v. United States*, 236 U.S. 351, where the validity of an order of the Commission was assailed, the defendants before the Commission contended that there was no unjust discrimination because of the lack of similar reciprocal interchange arrangements with the complaining railroad. In dealing with this question, the Supreme Court said, at p. 365:

> "We agree with the Commission and the court below that the alleged reciprocal shipping arrangements do not remove the discriminatory character of the treatment of the Rochester road."

The decision of the Supreme Court in *Chicago, I. & L. Ry. v. United States*, 270 U.S. 287, is to the same effect and deals with a situation substantially similar to the contentions made by the Union Pacific's witness Mr. Stilling.

The discrimination in this connection on the part of the Union Pacific and the other defendant railroads is obvious. Section 3(4) was designed to reach and terminate such discriminatory and unreasonably prejudicial practices as the Union Pacific and its favored connections are now imposing with respect to the movement of railroad traffic in and to the vast growing and

developing area consisting of large parts of five great western states.

We now turn to a consideration of Section 1(4) in its relationship to the Colorado decision. This section requires every common carrier to furnish transportation on reasonable request and with other carriers to prescribe just and reasonable through rates, fares, charges and classifications.

The limitations with respect to the establishment of through routes set forth in Section 15(4) were not intended as a restriction upon the duty of a railroad company to establish reasonable rates. Under Section 1(4), a railroad company has a duty to establish reasonable rates, and under Sections 15(1) and 15(3), the Commission has the power, after a hearing in an appropriate proceeding, to prescribe just and reasonable single or joint rates when the rates under investigation are unjust and unreasonable, or unduly prejudicial and unjustly discriminatory. The broad and unrestricted power of the Commission to pass upon the reasonableness of rates is well set forth in *Atchison, T. & S.F. Ry. v. United States*, 279 U.S. 768, at page 776, as follows (opinion by Justice Brandeis):

> "The broad power to pass on the reasonableness of rates conferred upon the Commission in 1887 has not been in terms limited by any amendatory act. On the other hand, there has been much legislation designed to make the power more effective. The special power to establish through routes and joint rates was not conferred until 1906. Act of June 29, 1906, c. 3591, §4, 34 Stat. 584. There is not, in that act as amended (see *United States v. American Ry. Express Co.*, 265 U.S. 425, 430, 44 S.Ct.

560, 68 L.Ed. 1087, note 2), or in any decision of this court construing it, or in any of the decisions of the Commission applying it, to which attention has been called, the slightest basis for the suggestion that in conferring the restricted power to establish through routes, Congress intended to limit the theretofore unrestricted power of the Commission to pass upon the reasonableness of rates. Compare *Nashville, Chattanooga & St. Louis Ry. Co. v. Tennessee*, 262 U.S. 318, 323."

Moreover, in *Great Northern Ry. v. United States*, 336 U.S. 933, this Court affirmed a decision of the United States District Court for the District of Deleware (81 F.Supp. 921), which in turn had affirmed a Commission decision (269 I.C.C. 457), holding that the Commission was not required to establish through routes under Sections 15(3) and 15(4), in order to find that combination rates were unlawful under Sections 1 and 3 of the Interstate Commerce Act. To the same effect is *New York v. United States*, 331 U.S. 284.

The facts referred to *supra* pp. 17-20, and *infra* pp. 107-110, with respect to prejudice and discrimination under Section 3(4) are equally applicable here to establish under Section 1(4) that the rates and practices of the Union Pacific and its preferred connections are unjust and unreasonable.

In the Rio Grande case, the Commission acted on the theory that in order to grant any relief whatever it was under the necessity of establishing new through routes under Section 15(4). The Colorado court was fully justified in stating that this erroneous self-imposed restriction upon the Commission's authority to estab-

lish reasonable or joint rates obviously prejudiced and distorted its approach to the entire case and improperly caused it to treat itself, in denying relief to the Rio Grande under Sections 1(4), 3(4), 15(1) and 15(3), as somehow restricted by the limitations of Section 15(4). Therefore the Colorado court in its Final Judgment and Decree (Colo. R. 361) properly remanded the entire cause to the Commission, in so far as the Commission denied and withheld relief to the Rio Grande and the intervening plaintiffs, for further proceedings "in conformity with the opinion and judgment" of the Colorado court.

VII.

The Errors of the Commission Require an Affirmance of the Colorado Decision

By way of summary, it is submitted that the Colorado court was correct in holding that the Interstate Commerce Commission erred in the following particulars:

(1) In failing to hold, under the undisputed evidence, that through routes are in existence as a matter of law over the Rio Grande via the Ogden gateway in connection with the Union Pacific, and

(2) In narrowly limiting itself to a consideration of the case under the restrictions of Section 15(4) of the Interstate Commerce Act, since that section does not apply where: (a) through routes are in existence, or (b) where under the evidence of the case, and as a matter of law, relief as to reasonable rates or joint rates should be granted under a proper application of Sections 1(4), 3(4), 15(1) and 15(3) of the Act.

A remand of the case with proper directions, as ordered by the Colorado court, is the appropriate procedure for enabling the Commission to correct its errors.

NEBRASKA DECISION

I.

Outline of Issues

As pointed out in connection with the appeal from the Colorado court, the Comission, by erroneously proceeding on the theory that through routes via the Rio Grande through the Ogden gateway in connection with the Union Pacific do not exist, granted only limited relief to the Rio Grande and to the intervening plaintiffs. The Commission limited the relief to prescribing competitive joint rates and through routes as to certain named commodities. It further imposed a territorial limitation which made the relief applicable on the named commodities via the Ogden gateway over the Rio Grande from points on the Union Pacific and its connections in Washington, Oregon, Idaho, Montana and northern Utah only to points south and east of a designated area which extends northerly and to some extent southerly from Colorado common points such as Denver, Pueblo and Trinidad (see Map, App. E hereto).

In terms the Commission order of January 12, 1953 requires the Union Pacific Railroad Company and the more than 200 other railroad defendants before the Commission to cease and desist from publishing, demanding or collecting transportation charges on cer-

tain commodities which exceed the rates and charges prescribed by the Commission from and to the points named and from practicing the undue prejudice, preference and unlawful discrimination referred to in the order (Consol. R., II, 1595-1597).

The Commission's Report, containing its findings of fact and conclusions, is expressly made a part of its Order and the two must be read together. *Georgia Pub. Serv. Comm'n v. United States,* 283 U.S. 765, 771. The conclusions are set forth in this brief at pages 29-31, but for convenience, are summarized as follows:

> The Commission concluded under Sections 15(3) and 15(4) of the Interstate Commerce Act that competitive joint rates and through routes on the traffic covered by its order are necessary and desirable in the public interest to provide adequate and more economic transportation; and under Sections 1 and 3 that the existing rates and charges on the said traffic are and for the future will be unjust and unreasonable and unduly prejudicial to shippers and receivers using or desiring to use the routes of the Rio Grande, and unduly preferential for shippers and receivers using the routes of the Union Pacific and other defendants. The Commission also found that maintenance by the Union Pacific and other railroad defendants of joint rates between the northwest area described, on the one hand, and points on the Bamberger Railroad between Salt Lake City and Ogden, Utah, on the other hand, while refusing to maintain like rates to and from the same points on the line of the Rio Grande between Ogden and Salt Lake City, subjects the Rio Grande to discrimination in violation of Section 3(4) of the Interstate Commerce Act.

The Nebraska court sustained the Order of the Commission in part, and over-ruled it in part by restricting the application of the rates prescribed by the Commission to shipments consigned in the first instance to points on the Rio Grande, to be accorded in-transit privileges at such points, and to be later shipped to points beyond the Rio Grande (Neb. R. 167).

The basic issues involved in the Nebraska case (which may not be reached if the Colorado decision is affirmed by this Court) are:

1. Whether the Nebraska court erroneously substituted its judgment for the judgment of the Commission with respect to the administrative findings made by the Commission under which the Rio Grande was granted relief (see Questions Presented 1-6, *supra* pp. 4-6).

2. Whether the Nebraska court erred in interpreting and applying Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act, and particularly in holding that Section 3(1) prohibiting any carrier from giving undue preference to any person, locality, etc., or subjecting any person, locality, etc., to any undue prejudice, does not apply where the persons and localities affected by the preference or prejudice are located on different railroad lines and where, as in this case, the defendant railroads involved (the Union Pacific and its preferred connections) clearly have the power to eliminate the preference and prejudice complained of (see Questions Presented 1-6, *supra* pp. 4-6).

II.

The Nebraska Court Erred in Overruling Findings of the Commission Which Were Administrative in Character and Supported by Substantial Evidence

In exercising its recognized administrative functions, the Commission is operating in an area over which it has been given exclusive jurisdiction by Congress for the purpose of assuring a coordinated and efficient national transportation system and establishing just, reasonable and non-discriminatory railroad rates. *Dayton-Goose Creek Ry. v. United States,* 263 U.S. 456, 478; *The New England Divisions Case,* 261 U.S. 184; and *Wisconsin Railroad Comm'n v. Chicago, B. & Q. R. R.,* 257 U.S. 563.

While in exercising its delegated powers the Commission does not have freedom of ownership and operates in an area limited by constitutional rights and legislative requirements, the Supreme Court has frequently said that the outlook of the Commission and its powers must be greater than the interest of particular carriers and must in fact be as comprehensive as the interest of the whole country, and that only questions of law including those affecting constitutional power, statutory authority and basic prerequisites of proof can be raised against an order of the Commission. *Rochester Tel. Corp. v. United States,* 307 U.S. 125, 140, 145, 146; *Atchison, T. & S.F. Ry. v. United States,* 284 U.S. 248, 262; *O'Keefe v. United States,* 240 U.S. 294, 303; *ICC v. Union Pacific R.R.,* 222 U.S. 541, 547; *ICC v. Chicago, R.I. & Pac. Ry.,* 218 U.S. 88, and *ICC v. Illinois Cent. R. R.,* 215 U.S. 452.

In modifying the Commission's findings in the instant case, the Nebraska court entered the field allocated to the exclusive jurisdiction of the Commission, erroneously substituted its judgment with respect to the weight and significance of certain facts for the judgment of the Commission and in doing so ordered different and narrower relief than the relief prescribed by the Commission. (Questions Presented 1-6, *supra*, pp. 4-6).

Since the subjects dealt with in paragraphs 1 to 6, inclusive, of the Questions Presented in the Nebraska case are interrelated and are concerned with interrelated findings and ultimate conclusions of the court below, they will be discussed collectively.

As we have already indicated, the Commission prescribed competitive joint rates and through routes on granite and marble monuments in carloads from origins in Vermont and Georgia to destinations in the "closed door" territory, and on a limited number of commodities eastbound from the "closed door" territory via the route of the Union Pacific through Ogden or Salt Lake City and via the Rio Grande to destinations south and east of a designated area which extends northerly and to some extent southerly from Colorado common points (see Map, App. E hereto), without the imposition of any conditions with respect to the stopping of the freight at points in transit for loading, unloading, cleaning, milling, storing, fabrication, etc.

Because the testimony of various shippers and producers before the Commission (see App. F hereto) emphasized the importance and the necessity of in-

transit arrangements, which are maintained by the Rio Grande and railroads generally throughout the country, as an aid to producers and shippers in the preparation and the processing of commodities for marketing, the court below erroneously assumed that the primary need was for in-transit privileges at points on the Rio Grande, whereas in fact the primary need is for competitive joint rates via the Rio Grande so that its route can be used and cars stopped at points on the Rio Grande or at points on other railroads east of the Rio Grande.

In-transit privileges are generally provided by the Rio Grande in its published tariffs (Consol. R., I, 114; Earley Exhibit 3, Sec. H, pp. 1-6). The privilege of stopping through freight in transit at points on the Rio Grande or on its eastern connections is, as stated, already provided for in the tariffs of the Rio Grande and other railroads. In the circumstances, the Commission was not called upon to require the defendant railroads to establish the privilege of stopping freight for various in-transit privileges at points on the Rio Grande or at points on the Union Pacific or on such railroads as the Missouri Pacific, the Rock Island, the Burlington, the Santa Fe and other railroads with which the Rio Grande connects at Colorado common points. The Commission correctly understood that such in-transit privileges are commercially ineffective unless the freight which is accorded in-transit privileges may move from the original points of shipment to ultimate destinations at competitive joint rates.

In paragraph I of the Conclusions of Law in the opinion of the Nebraska court (Neb. R. 167), that court held that the evidence supports the finding of the Commission that the establishment of competitive joint rates and through routes between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the commodities involved originating in the "closed door" territory, only if—

> "consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad. As to such commodities, the order of the Commission is valid under Sections 1, 15(3) and 15(4) of the Act and does not violate the direction of Section 15(4) that reasonable preferences be given the carrier which originates the traffic."

On the other hand, in paragraph III of its Conclusions of Law (Neb. R. 167, 168), the Nebraska court held that:

> "To the extent that the order of the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo or Trinidad, said order is not valid, because Sec. 15(4) constitutes a limitation on the

power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary in order to provide *inter alia*, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations specified in this paragraph, that factual premise, essential to the validity of the order, is lacking."

In the last conclusion quoted, the court said in effect that to the extent that the Order of the Commission requires the establishment of competitive joint rates and through routes via the Union Pacific and the Rio Grande on carload traffic from the "closed door" territory to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such a nature as not to require in-transit privileges, and as to all traffic moving from the "closed door" territory to points of original destination east of Denver, Pueblo and Trinidad, the Order is invalid because Section 15(4) constitutes a limitation on the power of the Commission to establish through routes which will result in short-hauling the Union Pacific unless such routes are necessary in order to provide, *inter alia*, adequate transportation.

In that conclusion the court ignored the fact that the Commission not only found that the competitive joint rates and through routes prescribed are "necessary and desirable in the public interest; in order to provide adequate and more economic transportation," but

that the rates assailed by the Rio Grande are and for the future will be unjust and unreasonable, and "unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes."

The conclusion of the Nebraska court results in the anomaly that lower joint rates are made available on in-transit shipments, stopped on the Rio Grande and then reconsigned, than will be available on through shipments that do not require the services or the expense connected with in-transit privileges.

The authority of the Commission to compel railroads to establish just, reasonable and non-prejudicial individual or joint rates or charges is conferred in Section 15(1) of the Act. The standard for action in that section is that the existing rates or charges are unjust, unreasonable, unduly prejudicial, etc.

Paragraph (3) of Section 15 authorizes the Commission "whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint * * * " to establish through routes and joint rates, fares or charges, etc., as well as the terms and conditions under which such through routes shall be operated. The standard for action under Section 15(3) is that the joint rates or through routes are necessary or desirable in the public interest.

Paragraph (4) of Section 15 provides that,

> "In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: Provided, however, that in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. * * * "

The limitations in Section 15(4) of the Interstate Commerce Act on the power of the Commission to require the establishment of through routes are exceptions to the general policy and objectives of the Interstate Commerce Act, and should be strictly construed, whereas the affirmative remedial provisions of the Act should be liberally construed. *Piedmont & No. Ry. v. ICC*, 286 U.S. 299, 311, 312 and *Spokane & I.E. R.R. v. United States*, 241 U.S. 344.

In *Routing via Quanah, A. & P. Ry.*, 220 I .C.

137, 139, sustained in *Thompson v. United States*, 20 F.Supp. 827 (D.C. E.D. Mo.), the Commission said that the provisions of Sections 15(3) and (4) with respect to through routes and joint rates do not stand alone and that "They must be considered in the light of other provisions of the Act, including Sections 1 and 3." In the recent decision of the Commission in *Borough of Edgewater, N. J. v. Arcade & A. R. Corp.*, 280 I.C.C. 121, 123, sustained in *Baltimore & O. R.R. v. United States*, 100 F.Supp. 1002 (D.C. S.D. N.Y.), the Commission stated this proposition more pointedly:

> "The provisions of section 15(4) quoted above, which recognize the right of a carrier to its long haul, are, as indicated, subordinate to the provisions of section 3 of the act, by which, among other things, any undue or unreasonable prejudice or disadvantage is prohibited."

In the same decision, 280 I.C.C. 121, at page 134, the Commission made the following significant statement as to the present policy of the Interstate Commerce Act:

> "Ever since the Transportation Act, 1920, it has been the purpose or policy of Congress that rates be adjusted and other steps taken to ensure adequate, efficient, and economical transportation for the country. That policy has never been regarded as intending that we should accept as the guide transportation service which is just barely adequate, or adequate only if needed or desirable improvements in service are lost sight of. See *McLean Trucking Co. v. United States*, 321 U.S. 67, 78, 81. Rather, that policy seeks affirmatively to build up a transportation system prepared to handle promptly all the traffic of the country.

Dayton-Goose Creek Ry. Co. v. United States; 263 U.S. 456, 478."

In short, the aim of the Interstate Commerce Act and its policy is to bring about a national transportation system, to the end that the commerce of the country may freely move between all points in the United States over available rail routes at rates that are neither unreasonable nor discriminatory as between shippers and railroads, or as between railroads. *Wisconsin Railroad Comm'n v. Chicago, B. & Q. R.R.*, 257 U.S. 563, and *The New England Divisions Case*, 216 U.S. 184.

The Commission was properly influenced by the testimony before it (see App. F hereto) which showed a widespread demand for the use of existing in-transit privileges at competitive joint rates, and it understood what the court below apparently did not understand, namely, that shippers and producers needed competitive joint rates via the Rio Grande and its connections on the traffic involved for general marketing purposes and not solely for in-transit purposes. The court not only erroneously applied the limitations in Section 15(4) of the Act on the power of the Commission to prescribe through routes, but too narrowly construed the exceptions in Section 15(4) which exclude the limitations.

Moreover, the court, in weighing the evidence and in considering the needs of shippers and the public interest, substituted its judgment for the judgment of the Commission and reached the erroneous conclusion that the competitive joint rates prescribed by the Commission are justified and necessary *only* as to traffic origi-

nally consigned to points on the Rio Grande, requiring in-transit privileges at such points, and later to be reshipped to points east and south of Denver, Pueblo and Trinidad and east and south of Kansas City, Mo., and certain other Missouri River points. In other words, the court below went beyond what the Supreme Court has repeatedly stated are the limited functions of courts in reviewing orders of the Commission. In *Ayrshire Collieries Corp. v. United States*, 335 U.S. 573, 593, the Supreme Court reiterated its views on this subject as follows:

> "We would depart from our competence and our limited function in this field if we undertook to accommodate the factors of transportation conditions, distance and competition differently than the Commission has done in this case. That is a task peculiarly for it."

The lower court also erroneously assumed that the joint rates prescribed by the Commission were needed only by shippers located on the rails of the Rio Grande. Most of the shippers who testified before the Commission are located at points in northern Utah, in Idaho, in Oregon and Washington served by the Union Pacific. A summary of the testimony of various shippers and producers of the commodities involved in the order of the Commission is set forth in Appendix F attached hereto. The testimony of these shippers establishes beyond question the need for the competitive joint rates and through routes prescribed by the Commission.

Generally speaking, the commodities covered by the order of the Commission produced in and shipped from the "closed door" territory are marketed at various

points throughout the United States. In numerous instances the ultimate purchaser of the commodity may not be known at the time the shipment starts "rolling" from the origin points. The shippers want to be in position to use whatever rail route best suits their purpose at a given time in the light of weather, market and other conditions, and some of the shipments are stopped several times in transit for partial loading or unloading before the shipment reaches its final destination.

Under the existing rate restrictions imposed by the Union Pacific and its preferred connections, shippers in northern Utah, Idaho, Montana, Washington and Oregon do not have an opportunity of making a selection of routes enabling them more profitably to market their products, and in some cases to "feel out" the markets at such points as Grand Junction, Pueblo, Colorado Springs and other points in Colorado and Utah served by the Rio Grande via Ogden or Salt Lake City. As already stated, the Order of the Commission prescribes joint rates via the Union Pacific, Ogden and the Rio Grande which if established would permit shippers of the commodities involved located on the Union Pacific in the "closed door" territory, as well as shippers, feeders, brokers and others located on the Rio Grande and on its eastern connections, to use the route of the Rio Grande without being penalized by the higher combination rates if the shipments were reconsigned to points beyond the Rio Grande.

Under the judgment of the Nebraska court a shipper in the "closed door" territory cannot obtain the bene-

fit of the competitive joint rates prescribed by the Commission unless the shipment is originally consigned to points on the Rio Grande, at which points it requires in-transit privileges, and then is reconsigned to points specified in the Commission order. In-transit privileges are important, but as the Commission recognized they are not needed on every shipment that might be routed via the Rio Grande under the rates and routes prescribed by the Commission. The fact that a shipper does not exercise his right to in-transit privileges should not warrant subjecting him to the penalty of a higher rate.

The Nebraska court has given the phrase "adequate and more efficient or more economic transportation" as used in clause (b) of Section 15(4) a narrow and unjustified interpretation with respect to the facts of this case. The Commission repeatedly has held that the public interest is not served by shutting out markets from shippers by the denial of joint rates and through routes which do not require the performance of substantially greater total service than the service over existing routes. *D. A. Stickell & Sons, Inc. v. Alton R.R.*, 255 I.C.C. 333, sustained in *Pennsylvania R.R. v. United States*, 54 F.Supp. 381 (D.C.-Md.) which decision in turn was affirmed by the Supreme Court in a case of the same title in 323 U.S. 588.

These decisions hold that the phrase "adequate, and more efficient or more economic, transportation" includes the interest and welfare of the shipper, as well as of the carrier, and that in these circumstances the Commission has authority to consider and weigh the

relative importance of all factors affecting both the shipper and the carrier. In exercising its administrative function in this area the Commission must be sustained when its action is supported by substantial evidence (see App. F hereto). The Nebraska court appears to have been primarily concerned with a comparison of the physical operating conditions of the Union Pacific and the Rio Grande, rather than with the needs of shippers under the complex market conditions that exist and with their right to use various railroads at competitive joint rates as the circumstances may require.

In this connection it should be pointed out that the word "adequate" and the words "more efficient or more economic, transportation" in Section 15(4) were not intended to be restricted to a comparison between two particular railroads, to-wit the Union Pacific and the Rio Grande. Moreover, the words of the statute are intended to be considered from the point of view of the shippers and the general public, at least as much as from the point of view of the carriers.

Nor are the words restricted to a consideration of the physical adequacy, the mechanical efficiency or the economical operation of one railroad as compared to another. Neither the dictionary nor the law defines "economic" as meaning "economical." It is not a question of cheapness of operation of one railroad as compared to another, but more a question of whether the transportation would be better for the economy of the area involved and the country as a whole.

Effective support for the foregoing propositions is

found in *Pennsylvania R.R. v. United States*, 323 U.S. 588, where the Supreme Court, in a detailed opinion, approved the thorough analysis of the language "adequate, and more efficient or more economic, transportation" by the court below, 54 F.Supp. 381, 388-390 (D.C. Md.), which in turn had approved the Commission's views of the same case, *D. A. Stickell & Sons, Inc. v. Alton R.R.*, 255 I.C.C. 333, 339-344. Other cases sustaining a broad meaning for the language are *Baltimore & O. R.R. v. United States*, 100 F.Supp. 1002, 1011 (D.C. S.D. N.Y.); *Helix Milling Co. v. Great Northern Ry.*, 287 I.C.C. 77, 86, 87; and *General Mills, Inc. v. Great Northern Ry.*, 269 I.C.C. 457, 465.

The questions to be answered in applying Section 15(4) are: Is the kind of transportation offered to the shippers to and from the "closed door" territory and to shippers to and from points in the area designated in the Commission order, as adequate as it would be if through routes and competitive joint rates were in operation over the Rio Grande through the Ogden gateway? Is it more efficient for the economy of the "closed door" territory and the economy outside the "closed door" territory to have a choice of routes, than to be confined to one route or required to pay a higher rate over one route when two alternative routes could be made available at the same rate; and would the economy of the "closed door" territory and the economy of the country as a whole be afforded "more economic transportation" if through routes and competitive joint rates were available via the Ogden gateway?

The Nebraska court erred in adopting a narrow and

erroneous interpretation of the language "adequate, and more efficient or more economic, transportation" found in Section 15(4) of the Interstate Commerce Act, and thereby erroneously reduced the measure of relief granted by the Commission.

III.

The Nebraska Court Erred in Interpreting and Applying Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act, and particularly in holding that Section 3(1) and its Implementing Section 15(1) were Inapplicable to the Facts in the Instant Case

Section 3(1) of the Interstate Commerce Act provides that it shall be unlawful for any common carrier subject to the provisions of this part—

> "to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: * * * "

One aspect of the caprice practiced by the Union Pacific in the exercise of its monopoly is illustrated by the fact that the Union Pacific between points in southern Utah, Nevada and southern California on its Los Angeles line, on the one hand, and Colorado common points

and points east thereof, on the other, participates in competitive joint rates and through routes in connection with the Rio Grande via Provo or Salt Lake City, Utah. In other words, from or to points on the Los Angeles and Salt Lake line in southern California, southern Nevada and southern Utah, the Union Pacific accords its shippers the right of selecting their own route as between the Union Pacific and the Rio Grande and of routing their freight at equal rates over the Rio Grande if they so elect (Consol. R., I, 91, 92).

Such position is in striking contrast to the arbitrary and monopolistic attitude adopted by the Union Pacific with respect to traffic from or to points in the "closed door" territory where it withholds from its shippers the right of selection of routes and of routing over the Rio Grande through Ogden or Salt Lake City at equal rates. The Union Pacific, therefore, from or to points in the "closed door" territory not only assumes the right to discriminate against the Rio Grande but also the right to discriminate against shippers in that area, resulting in undue prejudice to such shippers. Certainly, the shippers on the Union Pacific in the "closed door" territory are entitled to the same freedom in the choice of their routes and of routing over the Rio Grande at equal rates, if they so choose, as the shippers on the Los Angeles line of the Union Pacific.

The Commission also appears to have found undue prejudice and discrimination by the Union Pacific and its preferred connections against the territory served by the Rio Grande, as compared with the territory served

by the Union Pacific between Ogden on the west and Denver on the east, in violation of Section 3(1) of the Act. It is well known, and was found by the Commission, that effective participation in the national transportation system is required for the proper economic growth of any region or territory. To the extent that shipments via the Rio Grande are prevented by the rate differentials maintained by the Union Pacific, the economic growth of the territory and region along the Union Pacific lines is promoted at the expense of the territory and region along the Rio Grande. Since the rate differentials are unjustified by transportation conditions, the Commission properly found them to be violations of Section 3(1). The Nebraska court erred in holding that such a finding was not in accordance with law.

In dealing with the finding by the Commission that intervening shippers suffer undue prejudice and undue and unreasonable preference prohibited by Section 3(1), the Nebraska court misconceived the facts on which the Commission acted as well as the scope of Section 3(1), and of the issues before the Commission for decision. The court below said *apropos* of the finding by the Commission in respect to Section 3(1):

> "If the prejudice and preference shown by the evidence falls within the prohibition of Section 3(1) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15(3) and 15(4) heretofore considered. But the prejudice and preference prohibited by Sec. 3(1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3(1) which are served by the one carrier or the combination

acting as one. The prohibition of Sec. 3(1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion. Although the factual situation in *Central R. Co. of New Jersey v. United States,* 257 U.S. 247, was different, the purpose of Sec. 3(1) was there stated as follows: (loc. cit. 259-260) 'What Congress sought to prevent by that section, as originally enacted, was not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them by the same carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c.91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose or scope of Section 3.'"

The Nebraska court not only failed to appreciate the legal significance of the facts on which the Commission relied in finding that the rates assailed by the Rio Grande subjected the intervening shippers to undue prejudice and undue preference, but misconceived and misapplied the decision of the Supreme Court in *Central R.R. of N.J. v. United States,* 257 U.S. 247. This is illustrated by the above statement of the court below that the prohibitions against undue prejudice and preference of Section 3(1) of the Act do not apply to a situation "such as this where the comparison of preferences and advantages or prejudices and disadvan-

tages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion."

That is the nub of the error of the Nebraska court. It failed to grasp that while the Union Pacific is the principal defendant in the complaint before the Commission, there were more than 200 other railroad defendants who participated with the Union Pacific in the maintenance of competitive joint rates and through routes in connection with the traffic and between the areas involved and that these defendants acted in concert and in collusion with each other and are therefore in *pari delicto* as to the violations of Section 3(1) which the Commission found to exist. In other words, the wrongs which the Rio Grande and the intervening complaining shippers sought the power of the Commission to correct could not exist unless the defendant railroads and the Union Pacific joined in establishing and maintaining competitive joint rates and through routes with each other, while refusing to include the Rio Grande in such rates and routes.

Moreover, the Union Pacific and its preferred connections not only joined in maintaining the undue prejudice and undue preference against shippers found to exist by the Commission, but in numerous instances neither the Union Pacific nor its preferred connections, in joining in such practices, insist as against each other that each railroad always obtain its long haul. In other words, the other railroad defendants participate with the Union Pacific in maintaining the unjust competitive joint rates via various junction points with

each other, regardless of their respective long hauls, but refuse to maintain similar competitive joint rates in connection with the traffic from and to the "closed door" territory via Ogden or Salt Lake City over the Rio Grande.

A few examples (Consol. R., II, 1636 *et seq.*) will be sufficient to illustrate the above point.

Between Seattle, Wash., and Chicago, Ill., via the Union Pacific, to Council Bluffs, and thence via the Chicago and North Western, the distance is 2,439 miles and the haul of the Union Pacific is 1,954 miles. However, the Union Pacific participates in joint rates through Portland with the Southern Pacific on traffic moving through Oregon, California, Arizona and New Mexico, thence Rock Island to Chicago, where the total distance is 3,541 miles. In that movement, the Union Pacific receives a haul of 184 miles. If the Union Pacific is required to establish the rates sought with the Rio Grande through Ogden, it would receive a haul from Seattle to Ogden of 1,027 miles out of a total distance of 2,651 miles, instead of 184 miles between Seattle and Portland as it does when the traffic moves either via the Southern Pacific from Portland through Oregon, California, Arizona and New Mexico or via the Southern Pacific to Ogden, thence via the Rio Grande to Denver or Pueblo, and via the Burlington or any of the so-called prairie lines, including the Union Pacific.

Between Pendleton, Ore., and St. Louis, Mo., the long haul of the Union Pacific is from Pendleton to Kansas City, a distance of 1,674 miles. The Union

Pacific participates in joint rates on transcontinental traffic between Pendleton and St. Louis via the route through Spokane composed of the Spokane International, Canadian Pacific and Soo Line to Minneapolis and the Rock Island and the Wabash to St. Louis. The distance via this route is 2,317 miles, and the haul of the Union Pacific is 227 miles. If the competitive joint rates sought via Ogden were established via the Rio Grande to Denver, the Rock Island and the Wabash to St. Louis, the distance would be 2,149 miles and the Union Pacific haul would be 633 miles.

Between Pendleton, Ore., and Oklahoma City, Okla., the long haul of the Union Pacific would be via Kansas City. However, it participates in competitive joint rates with the Santa Fe through Denver via which route its haul is 1,144 miles, and it participates with the Northern Pacific through Wallula, Wash., and various connections through Kansas City in which the total haul is 2,602 miles, and the haul of the Union Pacific is only 70 miles. If the competitive joint rates sought via Ogden and the Rio Grande and its connections were established, the haul of the Union Pacific would be 633 miles, and the total distance via available routes would be 1,910 miles. The Union Pacific also participates in competitive joint rates between Pendleton and Oklahoma City via the Great Northern through Spokane and eastern connections in which the haul of the Union Pacific is 227 miles.

Between Colfax, Wash., and Chicago, Ill., the long haul of the Union Pacific is 1,756 miles through Council Bluffs, Iowa. But the Union Pacific participates with

the Milwaukee Railroad via Plummer, Ida., in which the haul of the Union Pacific is 54 miles and the total distance 1,888 miles. If the competitive joint rates sought through Ogden and the Rio Grande were established, the haul of the Union Pacific to Ogden would be 829 miles.

In addition to the examples referred to above, Appendix G shows numerous other situations in which the Union Pacific participates with other defendants in taking less than their respective long hauls in connection with particular traffic. On lumber moving from points on the Union Pacific and its connections in Idaho, Washington and Oregon, etc., to points east of Colorado common points, the Union Pacific participates in joint rates and routes with other railroads through Denver and Cheyenne in which it takes less than its long haul. It refuses to accord like treatment to the Rio Grande at Ogden. On the eastbound movement of fruits, vegetables, grain and certain other commodities from Idaho, Washington and Oregon, etc., the Union Pacific participates with other railroads in joint rates and routes which apply via Denver to destinations in Missouri River territory and the southwest. The long haul of the Union Pacific to most of the destination territory just mentioned would be the entire distance to some of the points, or to junctions on its line in Kansas or Nebraska.

The language of Section 3(1) and the numerous decisions of the Commission and of this Court make it clear that there is a sufficient basis in law and in the evidence to sustain the finding of undue prejudice and preference as between the territories or regions in-

volved if the defendants singly or jointly, directly, or indirectly through connecting lines, serve the same origin or destination points or territories. *Chicago I. & L. Ry. v. United States,* 270 U.S. 287; *Southern Ry. v. United States,* 204 Fed. 465 (Commerce Ct.); *Seneca Wire & Mfg. Co. v. Baltimore & O. R.R.,* 112 I.C.C. 95, and *Lake Dock Coal Cases,* 89 I.C.C. 170. In the cases cited the Commission held that where a carrier or a group of carriers participates in joint rates and is in a position either to continue participation or to decline to do so, such carrier or group may be held responsible for any undue prejudice or preference that arises out of such participation in such rates or in its failure to do so. This doctrine was pointedly recognized by this Court in *St. Louis Southwestern Ry. v. United States,* 245 U.S. 136, in which the Court stated that localities and shippers require protection as much from the combination of connecting carriers as from the action of a single carrier whose rails reach them.

In *New York v. United States,* 331 U.S. 284, the Court sustained an order of the Commission that found the relation between the interterritorial class rates to Official territory from Southern territory and the interterritorial class rates within Official territory resulted in an unreasonable preference of Official territory, as a whole, and of shippers and receivers of freight located therein and in undue prejudice to complaints in Southern territory in violation of Section 3(1). In that case contentions similar to the views of the Nebraska court here challenged were made by the State of New York and certain other parties who challenged the validity of the order of the Commission.

The claim was also made in the *New York* case that under the doctrine of *Texas & Pac. v. United States*, 289 U.S. 627, a Section 3 order of the Commission had to be in the alternative. However, this Court rejected these contentions and said (331 U.S. 341) that:

> "A proper finding of unlawful discrimination under §3(1) thus enables the Commission not only to direct the carriers to eliminate the practice but also, pursuant to §15, to prescribe the alternative."

And at page 345 the Court also said:

> "Once the Commission has found rates to be 'unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial,' it is empowered to prescribe rates which are 'just and reasonable' or 'the maximum or minimum,' or maximum and minimum, to be charged * * * ." §15(1)."

In holding that the Commission in the instant case erred in finding that the intervening complainant shippers before the Commission suffered undue prejudice and preference, the Nebraska court was obviously influenced by its misconception of the decision of the Supreme Court in *Central R. R. of N. J. v. United States*, 257 U.S. 247. In the *New York* case, 331 U.S. at page 342, this Court held in effect that the principle of the *Central R. R. of N. J.* case means merely that "the Commission may not require carriers to do what they are powerless to perform." In the instant case, the Union Pacific and its preferred connections have complete power to eliminate the prejudice and preference complained of.

The *Central R.R. of N.J.* case involved joint rail rates

on lumber which were maintained by southern and northern railroads from points in the south to points in the north, including Newark, N. J., and other points in New Jersey. Railroads in the south provided creosoting in transit on lumber at points on their line, but the Central Railroad of New Jersey and other northern railroads did not provide for creosoting in transit at Newark, N. J., or at other northern points. Upon the complaint in *American Creosoting Co. v. Director Gen.*, 61 I.C.C. 145, the Commission found that the refusal of the northern railroads to provide creosoting in transit at Newark, N.J. was unduly prejudicial to complainant. This finding was reversed by this Court on two grounds—first, that the establishment of transit at particular points on particular commodities is a local matter for each railroad to decide; and second, that the fact that the northern railroads participated with southern railroads in joint rates on lumber did not mean that the refusal of the northern railroads to provide like in-transit privileges at Newark, N.J. was unduly prejudicial.

The facts in the *Central R. R. of N. J.* case are distinguishable from the facts in the instant case, since here the Rio Grande provides in-transit privileges of practically every description at all points on its railroad. In the circumstances there was neither the occasion nor the necessity for the Commission to require the Rio Grande to establish in-transit privileges at points on its line. Moreover, the decision in the *Central R.R. of N.J.* case appears to have been modified, if not overruled by the *per curiam* decision in *Great North-*

ern Ry. v. United States, 336 U.S. 933, in which this Court granted the motion to affirm the judgment of the three-judge court in *Great Northern Ry. v. United States,* 81 F.Supp. 921 (D.C. Del.).

The latter judgment sustained the decision of the Commission in *General Mills, Inc., v. Great Northern Ry.,* 269 I.C.C. 457, in which the Commission required the Great Northern Railway to establish storage in transit at Great Falls, Mont. on wheat and its products originating at points on its line in central Montana and thereafter moved by the Great Northern to Butte, Mont. and thence by its connections to points in Utah, Nevada, Arizona and California, upon the ground that the refusal of the Great Northern to establish such transit at Great Falls was unreasonable and unduly prejudicial to the complainant. The Great Northern relied, *inter alia,* upon the *Central R.R. of N.J.* case in support of its contention that the Commission was without power under Section 3, and because of Section 15(4) of the Act to require the establishment of in-transit privileges at Great Falls and thence via Butte, which would deprive the Great Northern of its long haul through Seattle, Wash., and Portland, Ore., to the destinations involved.

The Commission knew from its own experience and from the evidence in the instant case that the in-transit privileges provided by the Rio Grande were commercially and competitively ineffective, in the absence of competitive joint rates via the route of the Rio Grande. Therefore, the Commission, acting in its administrative capacity, prescribed such competitive joint rates.

It is appropriate to state in passing that in the *Central R.R. of N.J.* case, this Court did recognize that the Commission had the power under Section 1 of the Interstate Commerce Act to determine whether in a particular case in-transit privileges should be granted or should be withdrawn (257 U.S., at p. 257).

Under Section 13(1) of the Interstate Commerce Act, any person, firm, corporation, company or association or any common carrier may complain to the Commission of anything done or anything omitted to be done by any common carrier subject to the provisions of the Act. The shippers and other associations which intervened in the complaint before the Commission in the instant case were authorized to do so under the General Rules of Practice of the Commission. Under the doctrine of the *Chicago Junction Case,* 264 U.S. 258, and *Youngstown Sheet & Tube Co. v. United States,* 295 U.S. 476, the shippers, chambers of commerce and associations which intervened as complainants before the Commission had a right to do so, and the Commission did not err in finding that the restrictions as to routing in connection with the existing rates via Ogden and the Rio Grande on the traffic involved resulted in undue prejudice to such complainants who use or desire to use the Rio Grande routes, and in undue preferences to shippers and others using the Union Pacific routes, in and to the extent that the rates via the Rio Grande routes exceed, or may exceed, the competitive joint rates on the commodities involved from and to the same points over the Union Pacific routes.

From the foregoing it is evident that the holding of the Nebraska court that the prohibitions against undue preference and prejudice under Section 3(1) of the Interstate Commerce Act do not apply to the instant case is erroneous.

IV.

The Errors of the Nebraska Court Require a Reversal of Its Decision

The errors of the Nebraska court requiring a reversal of its decision are as follows:

(1) It substituted its judgment for the judgment of the Commission with respect to administrative findings made by the Commission and supported by substantial evidence, by restricting the relief granted by the Commission to shipments requiring in-transit privileges at points on the Rio Grande west of Colorado common points such as Denver, Pueblo and Trinidad.

(2) It misinterpreted and misapplied Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act, particularly in holding that Section 3(1), which prohibits any carrier from giving undue preference to any person, locality, territory or region, or subjecting any person, locality, territory or region to any undue prejudice, does not apply in the instant case, although the defendant railroads involved (the Union Pacific and its preferred connections) clearly have the power to eliminate the violations of Section 3(1).

CONCLUSION

For the reasons stated, The Denver and Rio Grande Western Railroad Company respectfully submits:

I.

That the decision of the United States District Court for the District of Colorado, involved in appeals Nos. 332, 333 and 334 should be affirmed, with directions to the Interstate Commerce Commission that it proceed to a determination of the issues on the basis that through routes via the Ogden gateway are in existence, and that the Rio Grande is entitled to have the evidence considered and the case decided by the Commission free of the limitations of Section 15(4); that the decision of the United States District Court for the District of Nebraska involved in appeals Nos. 117, 118 and 119 should be reversed and the Order of the Interstate Commerce Commission of January 12, 1953, should be annulled and set aside in so far as it denies to The Denver and Rio Grande Western Railroad Company the relief prayed for in its complaint.

II.

In the alternative, in the event the decision of the United States District Court for the District of Colorado is not affirmed, that the decision of the United States District Court for the District of Nebraska involved in appeals Nos. 117, 118 and 119 should be reversed, and the Order of the Interstate Commerce Commission should be affirmed.

Respectfully submitted,

APPENDIX A

FORMAL ORDER OF INTERSTATE COMMERCE COMMISSION

JANUARY 12, 1953

This proceeding being at issue upon complaint and answers on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination:

It is ordered, That the defendant named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeed-

ing paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

GEORGE W. LAIRD, *Acting Secretary.*

(SEAL)

APPENDIX B

PERTINENT PROVISIONS OF THE INTERSTATE COMMERCE ACT (UNITED STATES CODE, TITLE 49)

Statutory declaration of National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this act (chapters 1, 8, 12 and 13 of this title), so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this act (chapters 1, 8, 12 and 13 of this title), shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1(4)—Title 49

"It shall be the duty of every common carrier subject to this chapter to provide and furnish transportation upon reasonable request therefor, and to establish rea-

sonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this chapter to establish reasonable through routes with common carriers by water subject to chapter 12 of this title, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 1(5)—Title 49

"All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

Section 1(15)—Title 49

"Whenever the commission is of opinion that shortage of equipment, congestion of traffic, or other emergency requiring immediate action exists in any section of the country, the commission shall have, and it is given, authority, either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleading by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the commission may determine: (a) to suspend the

operation of any or all rules, regulations, or practices then established with respect to car service for such time as may be determined by the commission; (b) to make such just and reasonable directions with respect to car service without regard to the ownership as between carriers of locomotives, cars, and other vehicles, during such emergency as in its opinion will best promote the service in the interest of the public and the commerce of the people, upon such terms of compensation as between the carriers as they may agree upon, or, in the event of their disagreement, as the commission may after subsequent hearing find to be just and reasonable; (c) to require such joint or common use of terminals, including main-line track or tracks for a reasonable distance outside of such terminals, as in its opinion will best meet the emergency and serve the public interest, and upon such terms as between the carriers as they may agree upon, or, in the event of their disagreement, as the commission may after subsequent hearing find to be just and reasonable; and (d) to give directions for preference or priority in transportation, embargoes, or movement of traffic under permits, at such time and for such periods as it may determine, and to modify, change, suspend, or annul them. In time of war or threatened war the President may certify to the commission that it is essential to the national defense and security that certain traffic shall have preference or priority in transportation, and the commission shall, under the power herein conferred, direct that such preference or priority be afforded."

Section 3(1)—Title 49

"It shall be unlawful for any common carrier subject to the provisions of this chapter to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corpora-

tion, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3(4)—Title 49

"All carriers subject to the provisions of this chapter shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this chapter or any common carrier by water subject to chapter 12 of this title."

Section 6(1)—Title 49

"Every common carrier subject to the provisions of this chapter shall file with the commission created by this chapter and print and keep open to public inspection schedules showing all the rates, fares, and charges for transportation between different points on its own route and between points on its own route and

points on the route of any other carrier by railroad, by pipe line, or by water when a through route and joint rate have been established. If no joint rate over the through route has been established, the several carriers in such through route shall file, print, and keep open to public inspection, as aforesaid, the separately established rates, fares and charges applied to the through transportation. The schedules printed as aforesaid by any such common carrier shall plainly state the places between which property and passengers will be carried, and shall contain the classification of freight in force, and shall also state separately all terminal charges, storage charges, icing charges, and all other charges which the commission may require, all privileges or facilities granted or allowed and any rules or regulations which in any wise change, affect, or determine any part or the aggregate of such aforesaid rates, fares, and charges, or the value of the service rendered to the passenger, shipper, or consignee. Such schedules shall be plainly printed in large type, and copies for the use of the public shall be kept posted in two public and conspicuous places in every depot, station, or office of such carrier where passengers or freight, respectively, are received for transportation, in such form that they shall be accessible to the public and can be conveniently inspected. The provisions of this section shall apply to all traffic, transportation, and facilities defined in this chapter."

Section 13(1)—Title 49

"Any person, firm, corporation, company, or association, or any mercantile, agricultural, or manufacturing society or other organization, or any body politic or municipal organization, or any common carrier complaining of anything done or omitted to be done by any common carrier subject to the provisions of this chapter

in contravention of the provisions thereof, may apply to said commission by petition, which shall briefly state the facts; whereupon a statement of the complaint thus made shall be forwarded by the commission to such common carrier, who shall be called upon to satisfy the complaint, or to answer the same in writing, within a reasonable time, to be specified by the commission. If such common carrier within the time specified shall make reparation for the injury alleged to have been done, the common carrier shall be relieved of liability to the complainant only for the particular violation of law thus complained of. If such carrier or carriers shall not satisfy the complaint within the time specified, or there shall appear to be any reasonable ground for investigating said complaint, it shall be the duty of the commission to investigate the matters complained of in such manner and by such means as it shall deem proper."

Section 15(1)—Title 49

"Whenever, after full hearing, upon a complaint made as provided in section 13 of this title, or after full hearing under an order for investigation and hearing made by the commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this chapter for the transportation of persons or property as defined in section 1 of this title, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this chapter, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions

of this chapter, the commission is authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—Title 49

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this chapter, or by carriers by railroad subject to this chapter and common carriers by water subject to chapter 12 of this title, or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. The Commission shall not, however, establish any through route, classification, or practice, or any rate, fare, or charge, between street electric passenger railways not engaged in the general business of transporting freight in addi-

tion to their passenger and express business, and railroads of a different character. If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancelation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section."

Section 15(4)—Title 49

"In establishing any such through route the Commission shall not (except as provided in section 3 of this title, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more conomic, transportation: *Provided, however*, That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b) of this paragraph, give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In

time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

Section 15(8)—Title 49

"In all cases where at the time of delivery of property to any railroad corporation being a common carrier for transportation subject to the provisions of this chapter to any point of destination, between which and the point of such delivery for shipment two or more through routes and through rates shall have been established as in this chapter provided to which through routes and through rates such carrier is a party, the person, firm, or corporation making such shipment, subject to such reasonable exceptions and regulations as the Interstate Commerce Commission shall from time to time prescribe, shall have the right to designate in writing by which of such through routes such property shall be transported to destination, and it shall thereupon be the duty of the initial carrier to route said property and issue a through bill of lading therefor as so directed, and to transport said property over its own line or lines and deliver the same to a connecting line or lines according to such through route, and it shall be the duty of each of said connecting carriers to receive said property and transport it over the said line or lines and deliver the same to the next succeeding carrier or consignee according to the routing instructions in said bill of lading: *Provided, however,* That the shipper shall in all instances have the right to determine, where com-

peting lines of railroad constitute portions of a through line or route, over which of said competing lines so constituting a portion of said through line or route his freight shall be transported."

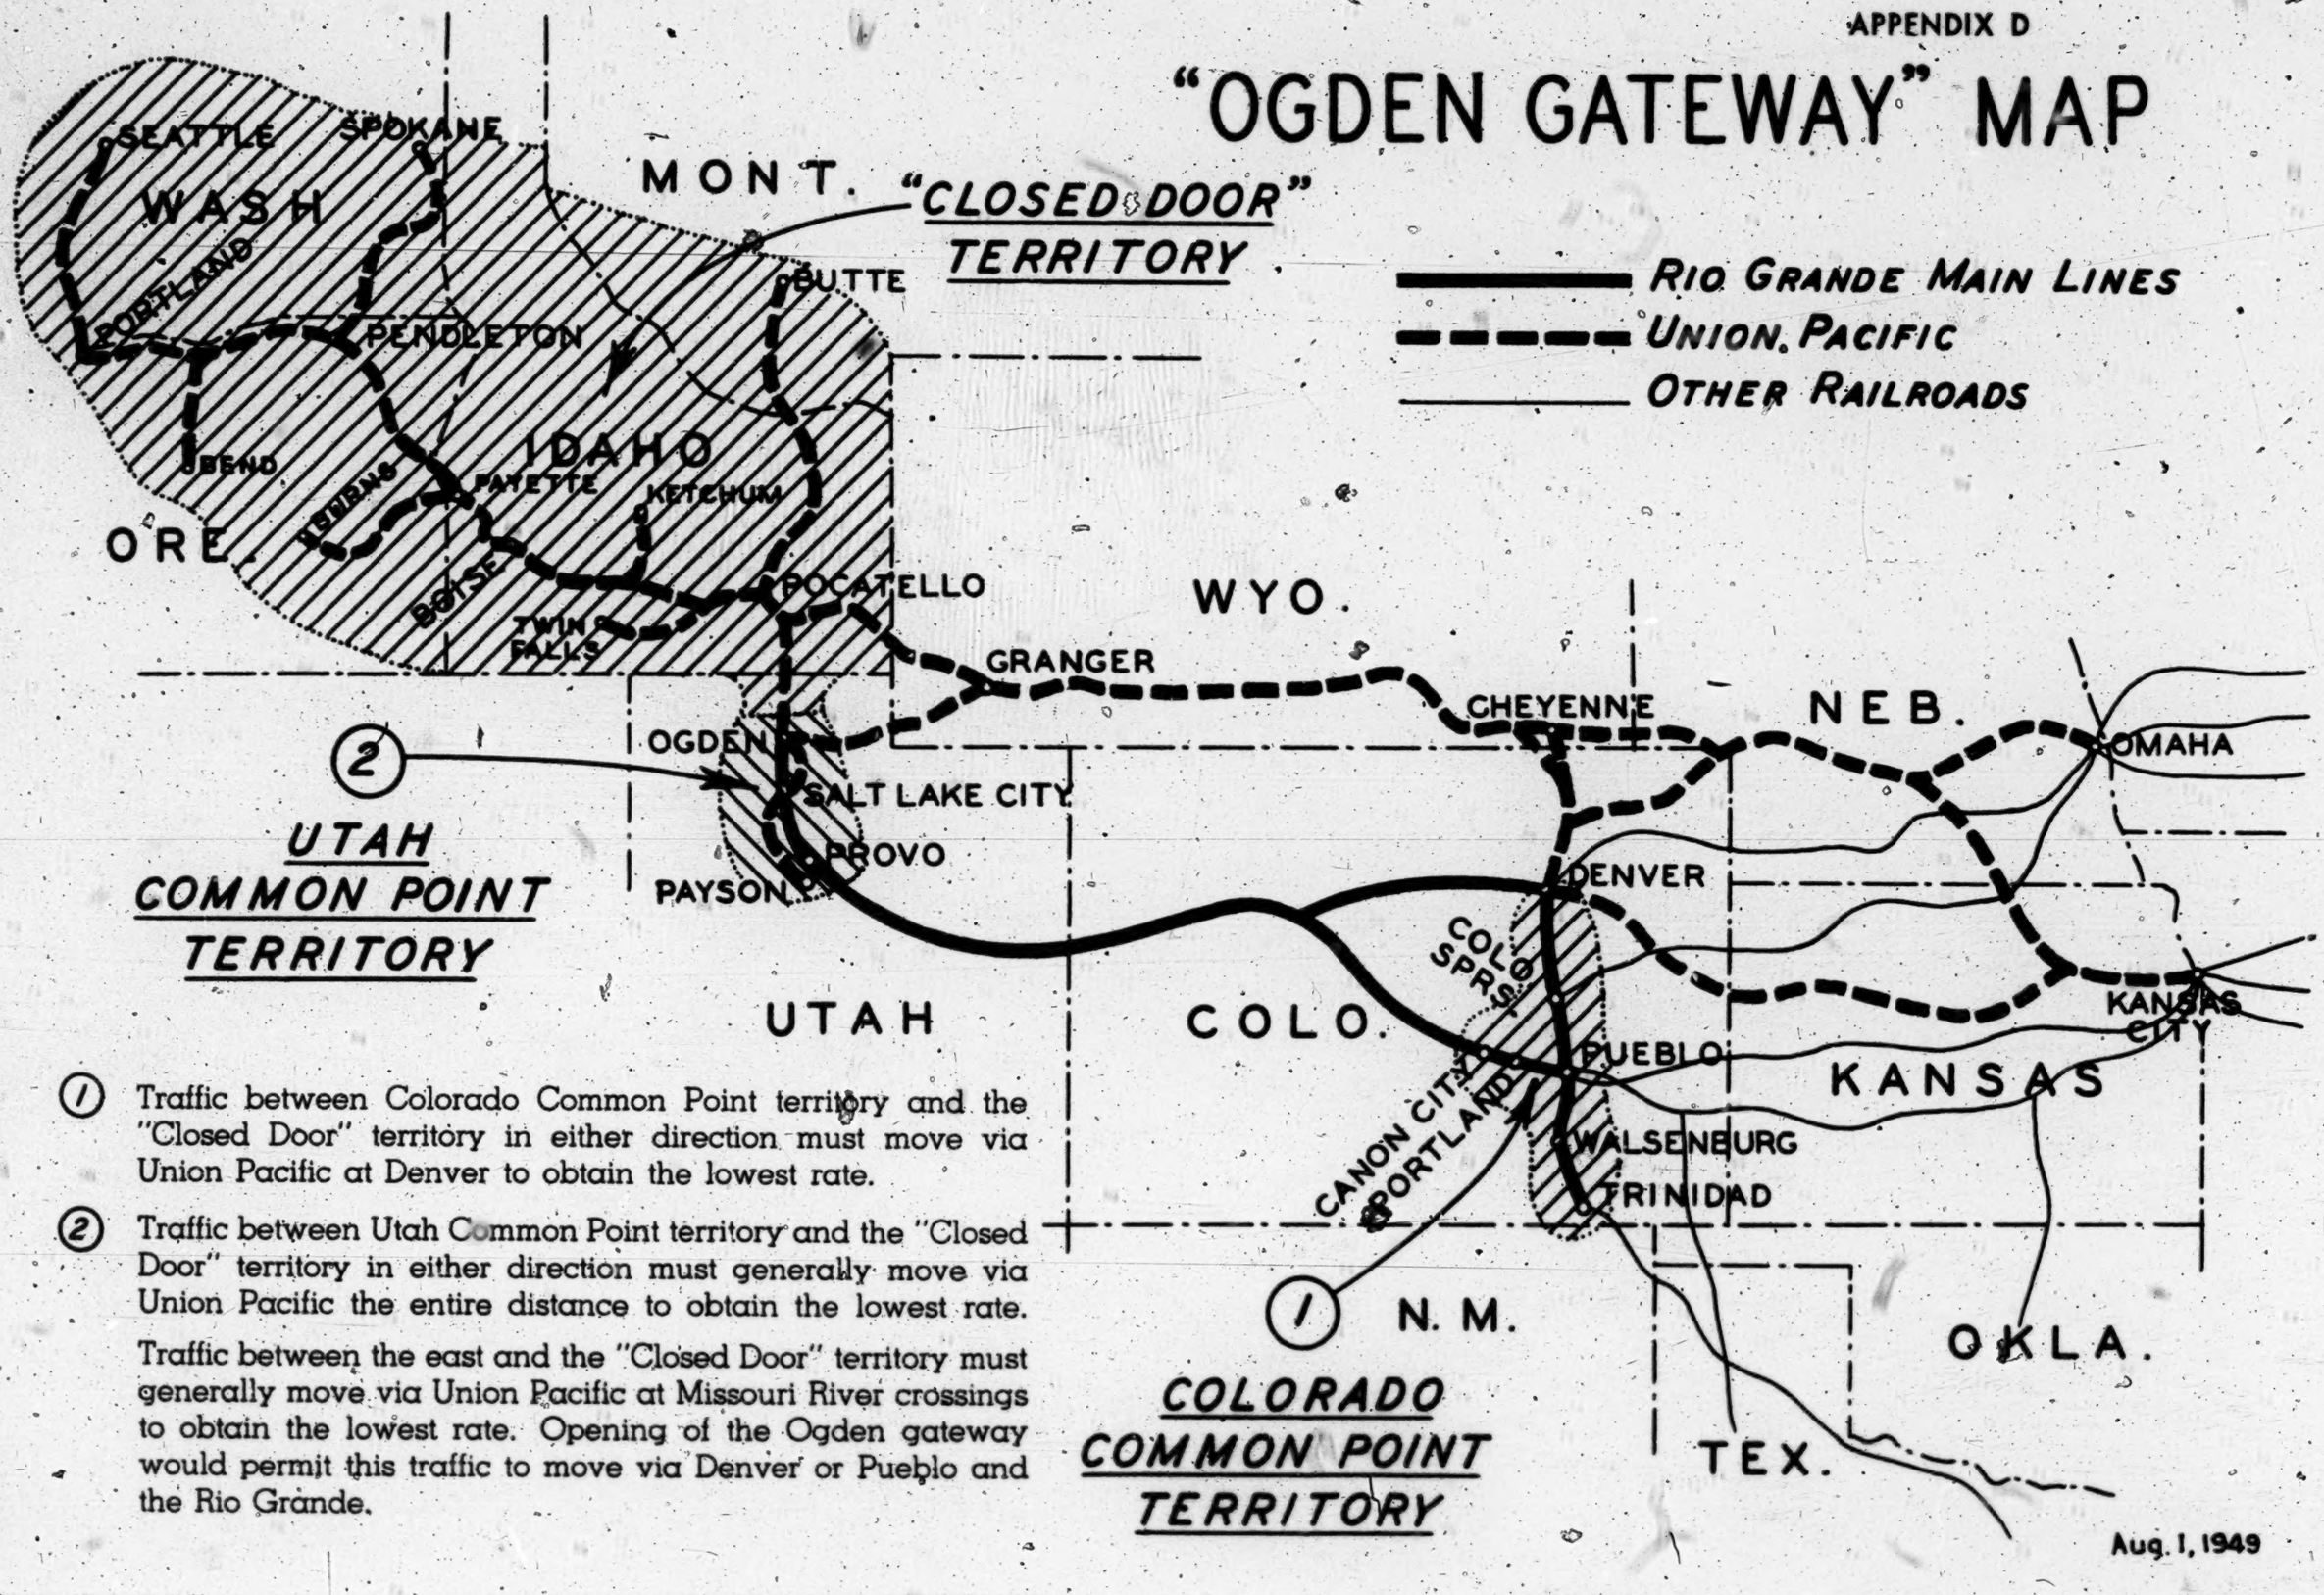
"OGDEN GATEWAY" MAP



(1) Traffic between Colorado Common Point territory and the "Closed Door" territory in either direction must move via Union Pacific at Denver to obtain the lowest rate.

(2) Traffic between Utah Common Point territory and the "Closed Door" territory in either direction must generally move via Union Pacific the entire distance to obtain the lowest rate.

Traffic between the east and the "Closed Door" territory must generally move via Union Pacific at Missouri River crossings to obtain the lowest rate. Opening of the Ogden gateway would permit this traffic to move via Denver or Pueblo and the Rio Grande.

APPENDIX F

SUMMARY OF TESTIMONY OF TYPICAL WITNESSES

Anton Poitevin, President of the Idaho Potato Growers, testified that his organization had 1200 members and shipped 5,000 cars of potatoes in 1948 for such members (Consol. R., I, 500); that the Idaho Potato Growers annually shipped 10% of the Idaho crop, and that he had personally grown and shipped as high as 200 cars of potatoes in a year. He testified that the Idaho Potato Growers favored the establishment of the joint rates sought by complainant (Consol. R., I, 500, 501).

He stated that the Idaho potato, while in demand throughout the United States, is not produced close to the larger markets and is always sold at a freight rate premium. For this reason there should be no rate handicap upon the sale of Idaho potatoes.

Many potato growers and shippers in Idaho produced evidence as to the importance of free and flexible routing of their product and as to the injury they had suffered because of the present rate and routing restrictions.

M. M. Bass (Consol. R., I, 242 *et seq.*) and *A. G. Stanger* (Consol. R., I, 250 *et seq.*) of Idaho Falls, Idaho, testified for the Idaho Falls Bonded Produce and Supply Company. In the last fiscal year this organization shipped 1,063 units of potatoes and onions (Consol. R., I, 245). Bass stated that closed gateways restricted markets of his organization (Consol. R., I, 243). Stanger stated that shippers and producers should have the right to route their products and at present they were restricted to the Union Pacific (Consol. R., I, 251).

In explanation of what he thought could be produced

by beneficial competition, Stanger cited a rate of $4.31 per hundred from Idaho Falls to New York on processed turkeys as compared to a rate of $3.51 per hundred from Cedar City, Utah. The same rate ($3.51) applied from Richfield, Utah, which is located on the Denver and Rio Grande. Richfield and Cedar City are competitive shipping points and are on different railroads. The comparative mileage from the three towns to market for rate-making purposes is the same.

Both men testified as to the need for flexible routing and for reconsigning privileges also as to the restrictions now effective on their shipping activities by the present rate barriers which bring about danger of being caught in the so-called "pocket markets."

L. E. Stephens of Blackfoot, Idaho (Consol. R., I, 247 *et seq.*), *C. R. Holden* of Idaho Falls (Consol. R., I, 292 *et seq.*), *P. G. Batt* of Caldwell, Idaho (Consol. R., I, 420 *et seq.*), *T. S. Vanderford* of Aberdeen, Idaho (Consol R., I, 472 *et seq.*), *Wayne Newcomb* of Burley, Idaho (Consol. R., I, 438 *et seq.*), *Jack Adams* of Idaho Falls (Consol. R., I, 474 *et seq.*), *W. B. Long* of Twin Falls, Idaho (Consol. R., I, 477 *et seq.*), and *L. D. Robbins* of Twin Falls (Con. R., I, 479 *et seq.*), all presented additional testimony as to the "pocket markets" and the restrictive effect on their business of being completely dependent upon the Union Pacific for rates, routes, cars and diversion privileges.

J. F. Watson of Parma, Idaho, testified that he is Vice-President and General Manager of the J. C. Watson Company of Parma, which is engaged in the production, packing and distribution of fresh fruits and vegetables, such as peas, lettuce, prunes, apples, potatoes and onions, and that these products are marketed throughout the United States and part of Canada (Consol. R., I, 432 *et seq.*). That company ships an-

nually from 1500 to 2000 cars. It is constantly seeking new markets. Watson supported the complaint, and testified that joint rates through the Ogden gateway and the Rio Grande should be established so that there could be a free flow of fruits and vegetables from Idaho to all markets (Consol. R., I, 432 *et seq.*). Watson also testified that relief sought by complainant would give producers in Idaho wider distribution and more markets, especially into the southwestern territory, which he considers a logical market (Consol. R., I, 432, 433).

He also testified that in shipping fruits and vegetables from Idaho these commodities frequently encounter market areas which may be called "pocket markets." That phrase means that certain shipments reach points in Kansas, such as Wichita and Hutchinson, which are not served by the Union Pacific, and if for any reason the shipments are rejected or cannot be sold at a satisfactory price, the shipments cannot be reconsigned to Kansas City or points east under the existing rate restrictions. If such shipments are re-shipped from points in Kansas, Oklahoma or any points south of the Union Pacific line to points east of the Missouri River, they must pay the combination rates to and from the "pocket market" (Consol. R., I, 433). If the joint rates sought by the complaint are established, these "pocket markets" in Kansas and Oklahoma will be eliminated.

Watson gave certain examples of the difficulties encountered and the additional expense incurred when shipments are distressed in a "pocket market." One example related to a car of potatoes from Notus, Idaho, on August 5, 1949, consigned to Wichita, Kansas, which was invoiced at $506.00. The car was rejected. Attempts were made to sell the potatoes in other markets, but because the car was "off the Union Pacific" it could not be marketed east of Kansas City without paying combination rates over Wichita. After making unsuccess-

ful efforts to dispose of the car without a loss, the original buyer offered $317.00 for the car. The car was sold to the original buyer at that figure, which meant a loss of $189.00 (Consol. R., I; 433, 434).

In addition, Watson cited an example of a car of lettuce to Wichita on which the loss was $218.40, and another car to Liberal, Kansas, which likewise was finally sold at a loss. He stated that he had 15 to 20 such distressed cars in a year's time, and that he had always been so handicapped (Consol. R., I, 434-436).

John W. Gerber is Executive Secretary and General Manager of the Utah Growers Cooperative (Consol. R., I, 465 *et seq.*), which has approximately 450 members (Consol. R., I, 468), and supported the complaint of the Rio Grande. The Cooperative operates two branches on the Union Pacific and three on the Rio Grande. The latter are at American Fork, Springville and Midvale (Consol. R., I, 465), all south of Salt Lake City in Utah. He would like to buy box crate material in Idaho and ship to his American Fork and Springville sheds on the Rio Grande, but the lowest rate does not apply via the Rio Grande in connection with the Union Pacific (Consol. R., I, 465, 466). To his Midvale shed he has to absorb a switching charge on this traffic (Consol. R., I, 465, 466). On manufactured fertilizer purchased for his growers at Pocatello, Idaho, and Anaconda, Montana, he stated that "it necessitates a combination of rates at Ogden or Salt Lake, or the trucking of this fertilizer across town at the two main operations, American Fork and Springville (Consol. R., I, 466). The same is true with seed potatoes obtained in Idaho and Montana (Consol. R., I, 466). On seed potatoes obtained in the Red River Valley of North Dakota (Consol. R., I, 466, 470) he would like to unload part carload shipments at Springville, American Fork, Midvale (at Rio Grande locations at all points) and "go into north of Ogden"

(Consol. R., I, 466). This cannot be done and have the through rate protected under present status (Consol. R., I, 466).

The markets east of the Mississippi River have been greatly limited because of post-war rate increases and because of increases in estimated weights on celery and carrots (Consol. R., I, 466, 471). This necessitated going into smaller markets, *viz.*, Idaho, Montana, Wyoming, Nebraska, by truck (Consol. R., I, 466, 467). He can not at present move his vegetables from American Fork, Springville and Midvale on the Rio Grande to Idaho and Montana without a penalty (Consol R., I, 467). He closed his Corrine operation this year (1949) and moved the celery produced in that area to Midvale by truck "so that we would not get into the so-called 'pocket markets' of the Southwest that we would be bound to reach moving via UP to Denver, and transferring on to other lines" (Consol. R., I, 467).

Gerber had 100 members in the district north of Ogden, and they would like to be able to load their onions and potatoes, ungraded, and move them to packing sheds at American Fork and Springville and process in transit and go on, which they cannot presently do (Consol. R., I, 467). His outbound business ranges from 600 to 1100 cars (Consol. R., I, 468). In bringing in cars via Union Pacific (*i.e.*, at Springville or American Fork) he *could* haul the traffic across town, but because of lack of icing facilities in summer and because of danger of freezing (seed potatoes) in winter, he does not do this (Consol. R., I, 468, 469).

W. S. Miller (Consol. R., I, 531 *et seq.*) is Manager of the Umatilla Canning Company in Milton, Oregon. This company is a farmers' cooperative and processes and sells fruits and vegetables for its farmer

members (Consol. R., I, 531). The principal markets for these canned products are distributed over a wide area and the company will ship 150 carloads of canned goods and 150 carloads of frozen goods this year (1949) (Consol. R., I, 532).

Two transportation factors that are important to this shipper are "time" and "temperature" (Consol. R., I, 533). Extreme temperatures have a detrimental effect on canned goods (Consol. R., I, 534) and if possible he would prefer to so route his products as to avoid storm areas. The rates sought here would be beneficial to his company (Consol. R., I, 533). His company is new and it is necessary to develop markets in the Southwest (Consol. R., I, 535, 536). Usually each car stops three times for partial unloading (Consol. R., I, 535). It cannot ship into the Colorado area because it cannot partially unload and ship on under a joint through rate. If one railroad gets blocked because of storm or other conditions he wants another with equal rates (Consol. R., I, 540).

Donald L. Reed (Consol. R., I, 140 *et seq.*), President of the Skyland Food Corporation, Delta, Colorado, testified that this company is engaged in the operation of a frozen food plant at that point, processing mostly fruit; that the capacity of the plant at Delta is about 15 million pounds annually, and that the average usage of his plant is about 50 per cent of capacity (Consol. R., I, 141). He also testified that, in addition to fruits procured in Western Colorado for processing at Delta, he also gets fruit from Utah points and could use apples from Idaho (Consol. R., I, 141, 142). He cannot, as a general rule, afford to obtain apples from Idaho for processing at Delta because of the absence of through competitive rates from Idaho by way of the Rio Grande through Delta to final destination. If through rates via Ogden and the Rio Grande were

available, he could likewise procure fruit in the Brigham area (Brigham, Utah, north of Ogden) and process that fruit in transit at Delta (Consol. R., I, 143). At present the fruit obtained in the Brigham district is trucked to Ogden and loaded there on the Rio Grande (Consol. R., I, 143).

Reed also testified that he might purchase 100 to 200 carloads of Idaho apples (per year) if he had joint competitive rates from Idaho through Delta (for processing) and that this would be new business for his company (Consol. R., I, 145). He does not operate his plant to capacity at the present time because of his inability to get sufficient quantities of fruit (Consol. R., I, 146). If he could run his plant another 30 to 60 days, particularly on apples, he could increase his capacity (Consol. R., I, 147), but the total of fruits now available to his processing plant is not enough to satisfy his demand (Consol. R., I, 147, 148). Because of the great difference in the type of fruit, he cannot use California fruit in his operations (Consol. R., I, 148).

LeRoy Snooks (Consol. R., I, 196 *et seq.*), Manager of the North Ogden (Utah) Fruit Exchange, a cooperative having about 70 members, testified that the members of his cooperative ship about 20-25 cars of cherries, 50-60 cars of apricots and 50-60 cars of peaches annually, and that a good portion of their apricots and peaches are shipped to witness Reed's processing plant at Delta, Colorado. They are trucked into Ogden and shipped by rail from there (Consol. R., I, 197). Two or three hundred tons of apricots were lost last season because of the high expense of trucking from Brigham to Ogden (18 miles) (Consol. R., I, 198). Fifty per cent of the peaches and apricots produced by the Exchange over a period of years are shipped to Delta (Consol. R., I, 201), but this year (1949) a portion was not marketed because that por-

tion could not be trucked to Ogden and shipped to Delta for processing at a profit (Consol. R., I, 201). This cooperative's problems would be solved by the establishment of joint competitive rates with the Union Pacific and Rio Grande via Ogden.

L. L. Belcher (Consol. R., I, 302 *et seq.*), Pueblo, Colorado, is President and General Manager of the Mountain Ice & Coal Company, which company has a cold storage plant at Pueblo with capacity of 75 carloads. He testified that he could store frozen foods (for example) from Oregon and Washington which moved over the Union Pacific if the Ogden gateway were opened at competitive joint rates (Consol. R., I, 304, 305). Because such through rates do not apply via Ogden and Pueblo, and because his destination (transit) territory is limited to points west of the Missouri River if the traffic moves via Union Pacific to Denver, thence via connecting lines to Pueblo, he does not presently obtain any of this traffic for storage in his plant. He also testified that if the Ogden gateway were opened, Pueblo would be in line of transit on traffic destined to Denver, which would be of advantage to his company (Consol. R., I, 305, 306, 307). He further stated that if the rates which complainant seeks were established, it would set up Pueblo as a point that would have transit and competitive rates to practically every place (Consol. R., I, 308).

Herbert P. Heidel (Consol. R., I, 412 *et seq.*), Pueblo, Colorado, testified that his company (The Lincoln Packing Division of the American Stores, Inc., Pueblo, Colorado) has a storage warehouse at Pueblo with a capacity of between 200 and 250 carloads (Consol. R., I, 412). He can store all kinds of perishable commodities, but the commodities that can be stored in transit at Pueblo when coming from Idaho, Oregon

and Washington via the Union Pacific are limited to apples, pears and other fruits. He cannot store turkeys, potatoes, onions and frozen foods which move from the Northwest via the Union Pacific because of the absence of through rates via Pueblo. In this regard he supported the testimony of Mr. Belcher (Consol. R., 1, 413).

J. L. Pease (Consol. R., II, 1069) testified for the United States Department of Agriculture. He stated that the Secretary of Agriculture intervened in behalf of the complainant according to certain United States statutes which require the Secretary to interest himself in transportation of the products of agriculture (Consol. R., II, 1069). Dr. Nelson (Consol. R., I, 177 *et seq.*) testified as to the industrial growth of the northwestern states. Mr. Pease prepared an exhibit as to agricultural products. The exhibit indicates the large volume of production and the need for as nearly unrestricted channels of distribution as possible. All areas of consumption are needed now for the disposal of agricultural production and all means of reaching these areas are important (Consol. R., II, 1070). Members of Idaho Potato and Onion Association have asked him for the past five years "When are we going to get the Ogden gateway open?" (Consol. R., II, 1074).

Pease stated that the Department of Agriculture is opposed to any routing restrictions on agricultural commodities (Consol. R., II, 1077). After consideration by all members of staff in his department they determined that it would be for the best interests of the agricultural community of the Northwest as a whole if the Secretary of Agriculture intervened in behalf of the complainant (Consol. R., II, 1079). In his opinion it would be better for agricultural producers if the joint rates were established (Consol. R., II, 1080, 1081).

In support of the position taken by the Secretary of Agriculture are numerous farm organizations. To mention a few of these, the Idaho Farm Bureau Federation composed of some 11,000 farm families in Idaho intervened in behalf of the complainant and *J. Cyril Lau*, President of the Federation, testified at Boise, Idaho (Consol. R., I, 551 *et seq.*).

Lau testified that he was directed by his board of directors to appear as a witness and stated that the Federation favored the complaint because of the better service, better car supply and more rail routes at equal rates that would be the result if complainant was successful. He stated that the Federation believed that the shipper should have the right to choose the roads over which to ship their products without penalty (Consol. R., I, 554). In the witness' opinion competition would improve the transportation service (Consol. R., I, 560).

Bert Higgins (Consol. R., I, 262 *et seq.*), a member of the Executive Committee of the Idaho State Grange, testified that the Grange was in favor of the complaint and desired to see the joint rates established. He stated that the Grange had 12,000 adult members in Idaho and that it was necessary to be a farmer before you could be a member of the Grange (Consol. R., I, 262). It was the opinion of the Grange members that transportation competition would improve the service and the car supply in Idaho (Consol. R., I, 267).

Cy Davis (Consol. R., I, 224 *et seq.*), Manager of the Idaho Falls Chamber of Commerce, stated that his organization supports the complaint. The Chamber has a membership of 618 and Idaho Falls is an important shipping point for agricultural products (Consol. R., I, 225). It is the position of the Chamber that all

rail facilities should be made available to the shipper at equal rates (Consol. R., I, 225).

Fred Simpson, Jr. (Consol. R., I, 405 *et seq.*), Colorado Springs, Colorado, whose company's name is Simpson & Company, and who is also affiliated with the Robinson Grain Company of Colorado Springs, is a shipper of dried beans and a transit operator at his warehouses in and adjacent to Colorado Springs (Consol. R., I, 405, 408). He brings beans from the West into his transit houses in straight carloads and ships out in various different packages and different or assorted varieties of beans. His destination territory is largely in the Southeast. For the year ending September 1, 1949, he shipped a total of 390 cars, each weighing 80,000 pounds.

He has lost business in many instances because he could not furnish Idaho red beans and Idaho Great Northern beans in his assorted cars from Colorado Springs (Consol. R., I, 407). He testified that, because of the rate situation (*i.e.*, because of the absence of the through rates which this complaint seeks), he never brings Idaho beans through Colorado Springs and consequently he cannot offer a full line of beans to the trade (Consol. R., I, 406, 407). If he purchased Idaho red beans or Great Northern beans in Idaho, and brought them through Colorado Springs via the Ogden gateway, he would pay a 39-cent higher rate to transit those beans at Colorado Springs (Consol. R., I, 407, 408).

Max Osborn (Consol. R., I, 408 *et seq.*), Fruita, Colorado, is a shipper of beans, operating under the name of The Osborn Bean and Elevator Company, and testified that his situation is substantially similar to that of Simpson (Consol. R., I, 411). He has run into difficulty in fulfilling the requirements of his trade for

mixed cars of beans. He cannot, on account of the combination of rates existing via Ogden, use Idaho beans in his transit operations at Fruita (Consol. R., I, 409). He trucks in Great Northern beans from Idaho (Consol. R., I, 409). He cannot handle peas from Idaho for the same reason as the one that prevents him from handling Idaho beans (Consol. R., I, 410). He would have to pay combination rates on the Idaho varieties which were transited at Fruita and went east, which would be prohibitive (Consol. R., I, 410). He handles between sixty and seventy 80,000-pound cars per year (Consol. R., I, 411).

C. A. Harris (Consol. R., I, 231 *et seq.*), a wheat farmer and implement dealer from Idaho, testified as to the restriction on the movement of wheat produced by him and other Idaho farmers into the Southwest markets, particularly at Wichita. He stated (Consol. R., I, 236) that there was a rate differential of 27½ cents over the Rio Grande as compared to the Union Pacific on wheat moving from Idaho to Wichita and that the gateways into the southern territory beyond Wichita were not open via any route (Consol. R., I, 237).

E. E. Kohlwes (Consol. R., I, 358 *et seq.*) represented and testified for a group of mills located in south-central Kansas. The interest of these mills lies in their inability to purchase wheat in the Pacific Northwest for movement into the specified milling points in Kansas for processing or storage, and subsequent reshipment from such processing or storage points in Kansas to Kansas City or beyond, on the basis of the direct through competitive rate (Consol. R., I, 359, 360).

He cited a specific example of a movement of nine cars of wheat from Idaho Falls, Idaho, to Moundridge,

Kansas. These cars moved Union Pacific to Denver, Rio Grande to Pueblo, Colorado, and Missouri Pacific to Moundridge. After being processed into flour the wheat moved from Moundridge to Pennsylvania. The through rate from Idaho to Pennsylvania aggregated $1.33½ per hundred. If the joint rates sought had been applicable the through rate would have been $1.21 per hundred (Consol. R., I, 360, 361). The Moundridge mill is thus penalized 12½ cents per hundredweight if Idaho wheat is to be used in producing flour at that point.

Kohlwes stated that the production of bakery products had become highly specialized and in order for these mills to meet the specifications that bakeries have established, it is necessary to originate and blend different grades, types and qualities of wheat in order to produce the desired quality flour. It is therefore necessary for the millers to procure a certain amount of wheat requirements in the Northwest (Consol. R., I, 361). The present rate situation restricts their ability to purchase wheat and limits their ability to move outbound with the finished product (Consol. R., I, 363, 364). His interest in the case is to obtain an equality of rates (Consol. R., I, 367).

L. R. Ginn (Consol. R., I, 369 *et seq.*), a grain buyer for the Kansas Milling Company, one of the companies which Kohlwes represented, testified as to the purchase of wheat for his company. He stated that wheat must be purchased according to the demands of the bakery trade and that some wheat mixes required 12 to 25 per cent of soft white wheat which is produced in the Pacific Northwest (Consol. R., I, 370). This was done to correct a lack of the desired element in Kansas wheat (Consol. R., I, 371).

In the purchase of wheat Ginn stated that he is lim-

ited by lack of joint through rates. He stated that he is often limited to a purchase of 5,000 bushels when he needs 25,000 bushels because of the lack of joint rates from Idaho into Kansas (Consol. R., I, 372). He stated that last year 385,000 bushels of this white wheat from the Northwest was purchased by his mill alone, but only 60,000 bushels originated on the Union Pacific. The balance of his purchases moved via Pueblo and originated on the Great Northern or the Northern Pacific (Consol. R., I, 373). Ninety to ninety-five per cent of his wheat must originate on a railroad other than the Union Pacific in order to overcome the freight rate disadvantage (Consol. R., I, 366).

The livestock organizations that were represented at the various hearings all supported the complaint and their witnesses testified as to the injury caused the livestock industry because of the present rate restrictions.

Roger S. Smith, of Denver, Colorado, Superintendent of Livestock operations of the Holly Sugar Corporation, testified that his company has sugar factories, among other places, at Delta and Swink, Colorado. He stated that there would be between 25 to 60 thousand tons of beet pulp available annually for feeding cattle and lambs at Delta, Colorado, located southeast of Grand Junction, Colorado, on the Rio Grande (Consol. R., I, 270). Also available are several thousand tons of molasses. He purchases livestock on the Union Pacific in Montana (440-450 head of cattle in 1948; 500 head in 1949) (Consol. R., I, 275, 276), but cannot move them to Delta for feeding in-transit at through competitive rates (Consol. R., I, 273). The livestock produced in the Northwest, "particularly in Idaho and Western Montana on the Union Pacific, is of excellent grade for use in our feeder operations on the D&RG and elsewhere" (Consol. R., I, 274). The higher basis of rates applicable from north of Ogden via the Rio

Grande hinders his operations on the D&RG and favors the operations of livestock feeders on the Union Pacific in Wyoming and Nebraska (Consol. R., I, 274).

He tries to buy his livestock as close to his feeding operations as possible, but at times has to reach way out to outlying districts (Consol. R., I, 279). He had buyers in western Montana territory this fall (1949) purchasing cattle at considerable less money than he had to pay for feeder cattle adjacent to the Delta factory (Consol. R., I, 281). These cattle, however, could not move to his Delta operation. In view of this, it is the desire of the Holly Sugar Corporation to have all possible routes open and available at competitive rates so that it can go to the purchasing areas where they can get the lowest price (Consol. R., I, 281).

Worth Stimets, Colorado Springs, Colorado, Chief Rate Clerk in the Traffic Department of the Holly Sugar Corporation, testified that the difference in rates, per cwt., on feeder cattle to Denver varies from a high of 35 cents from Divide, Montana, to a low of 31 cents from Idaho Falls, Idaho, over the direct Union Pacific rate when routed UP-D&RGW via Delta, Colorado (for feeding in-transit). He also testified that on sheep from Idaho and Montana points on the Union Pacific to Omaha, Kansas City, and Chicago, the rates via Union Pacific-Rio Grande-Union Pacific are 19 cents per cwt. higher than via Union Pacific direct from and to the same points (Consol. R., I, 288). Other examples of rate differences via the Rio Grande route were also shown by Mr. Stimets. On cattle from Divide, Montana, to Chicago, the difference in the rate is 57 cents per cwt. higher via the Rio Grande route (Consol. R., I, 289).

I. H. Jacob, Salt Lake City, Utah, is General Manager of the Producers Live Stock Marketing Associa-

tion and President and General Manager of the Wasatch Live Stock Loan Company. He has been connected with the livestock business all his active life. He has been in the livestock business since 1915 (Consol. R., I, 310). The Producers Live Stock Marketing Association is composed of producers (about 30,000 shippers) (Consol. R., I, 315) and markets its livestock, has its main office in Salt Lake City, operates in the eleven western mountain states, and has other offices in Ogden and North Salt Lake, Utah; Los Angeles, California; Denver, Colorado, and Billings, Montana. It is also affiliated with the National Live Stock Producers Association, intervener in support of complainant in this case. The Wasatch Live Stock Loan Company is an organization of livestock producers to take advantage of the discount facilities of the Federal Intermediate Credit Bank on loans to livestock producers, It has loans in Nevada, California, Utah, Idaho, Wyoming, Colorado and Arizona.

The Producers Live Stock Marketing Association handled the equivalent of 30,000 carloads of livestock, valued at about $110,000,000.00 in 1948, of which amount the witness testified that about 15,000 carloads moved by rail (Consol. R., I, 311). This witness testified (Consol. R., I, 317) that Colorado has an excellent summer pasture area to produce a certain type of lamb, the best source of supply for which has been the Northwest (Consol. R., I, 317, 318). It is the duty of his association, as a cooperative, to give the best service possible to its members (Consol. R., I, 318), and it is in the interest of his association to see that the stock it handles for its members moves in to feed or to range on the Rio Grande without penalty, that is, at the same rates as if they moved over the Union Pacific direct (Consol. R., I, 319).

T. Harry Benton, Burns, Colorado, is President and General Manager of the Benton Land and Livestock Company, which owns 16,000 acres and leases 30,000 acres of land in Western Colorado. It also has forest permits for grazing 970 head of cattle (Consol. R., I, 331). This company does not breed cattle, but buys its livestock wherever it can and fattens the stock thus obtained on their lands adjacent to the Rio Grande in the vicinity of Burns, Colorado (Consol. R., I, 331, 332). This witness testified that it would be advantageous to his operations if the Ogden gateway were opened, as he would then go into that territory (*i.e.,* Idaho, Oregon, Washington, Montana) and purchase the livestock on a "feed in transit" basis (Consol. R., I, 332, 333).

Benton also testified that he made a special trip to the Northwest this last season (1949) and endeavored to purchase cattle there. There had been a drought and grasshopper infestation in Montana and he thought he might be able to purchase some distressed cattle out there at a favorable price, but because of "not having through rates from that territory" he found that buyers from Iowa and St. Paul could afford to pay more for the cattle than he could (Consol. R., I, 334). Because of the gradual reduction in available grazing territory in the national forests, the grazers in his territory produce more winter feed and have gone into feeding operations on a larger scale, rather than to remain a breeding and grazing operation (Consol. R., I, 388). Opening of the Ogden gateway "would open up a territory for us to try and purchase our young stock in" (Consol. R., I, 337). Average outbound shipments from this witness's company at Burns in recent years have averaged 50 to 75 carloads of cattle (Consol. R., I, 339).

David G. Rice, Jr., Denver, Colorado, is Secretary of the Colorado Cattlemen's Association with 5,000

members (Consol. R., I, 344, 356), and testified that livestock feeders in Colorado have "to go more and more out of Colorado to purchase these animals" (*i.e.*, for their feeding operations) (Consol. R., I, 347). "A majority of the big operators go out of Colorado to buy at least a portion of their numbers which they feed" (Consol. R., I, 348). The forest service grazing areas being cut down made it a problem where "we would get our cattle to feed." This came up in connection with the development of the feeding program for the North Fork Valley, on the Rio Grande (Delta County, Colorado) (Consol. R., I, 348). Rice testified that "It was hard for them to purchase cattle in this area (*i.e.*, the Northwest) and be on a competitive basis, due to their feed in transit rates." His association is very much interested in the opening of the Ogden gateway because its members want to buy on a competitive basis for feeding in transit, especially for the Western Colorado areas and Arkansas Valley areas (Consol. R., I, 349, 350).

W. H. Hilbert, Denver, Colorado, is head of the sheep department at Denver for the Producers Livestock Marketing Association. Mr. Hilbert testified (Consol. R., I, 453) that, based on his 34 years' experience in the livestock business, the opening of the Ogden gateway would give livestock producers another important route without a rate disadvantage and would place them on a parity in the sale of their livestock as far as freight rates are concerned.

Herbert P. Heidel, of Pueblo, Colo., is with the Pueblo Division of the American Stores, Inc., Lincoln Packing Division, which is engaged at Pueblo in cold storage operations and in the slaughter of livestock. While Heidel testified under subpoena served by complainant, his testimony clearly shows that it is to the interest of the company he represents to have the joint

rates sought by the complainant. At the Pueblo plant there are regularly received carload shipments of lambs which originate in Idaho and Oregon on the Union Pacific, from which points competitive joint rates apply to Pueblo via the Union Pacific to Denver and thence Santa Fe, Colorado & Southern, or the Rio Grande to Pueblo, but do not apply via Ogden and the Rio Grande. The plant at Pueblo is served by the rails of the Rio Grande (Consol. R., I, 413). When the traffic moves via Ogden and the Rio Grande, the through charge based on combination of rates over Ogden is applied (Consol. R., I, 414). The aggregate of the combination through charge exceeds the through charge via the Union Pacific through Denver by from $70.00 to $80.00 per car. Despite that fact, Heidel testified that the lambs from points on the Union Pacific move through Ogden and the Rio Grande to Pueblo because the service via that route is more expeditious than via the route of the Union Pacific through Ogden and Denver and avoids the necessity of stopping the lambs to feed and the incident loss therefrom by shrinkage, etc. (Consol. R., I, 414, 415). When the lambs move through Ogden and the Rio Grande, the extra stop for feeding is not necessary; but such a stop is frequently necessary when the lambs move via the Union Pacific via Denver (Consol. R., I, 415). Even though the expense incident to the extra stop for feeding does not offset the extra transportation charge, ranging from $70.00 to $80.00 a car, exacted when the lambs moved through Ogden and the Rio Grande, that route is now used because the industry represented by Heidel finds the service through that route "more adequate" (Consol. R., I, 415). This is but another way of saying that from the shipper's standpoint the service of the Union Pacific through Denver to Pueblo on the livestock in question is inadequate.

Elmer J. Wagner, Lamar, Colorado, is the President of the Arkansas Valley Stock Feeders Association which has 215 members. This association is located and carries on its livestock feeding operations in the valley of the Arkansas River, east of Pueblo, Colorado, on the lines of the Santa Fe and the Missouri Pacific railroads. Its members wish to be able to purchase feeder livestock in Idaho, Oregon, Washington and Montana on a competitive basis with feeders of livestock in other localities, viz., Northern Colorado and Nebraska. At one time, for some years prior to 1932, livestock feeders in the Arkansas Valley could buy feeder lambs in large numbers in eastern Oregon because then, contrary to the general application of rates on all other traffic, the freight rates on livestock from certain points on the OWR&N were the same via OWR&N-OSL to Ogden, and thence via D&RGW and connecting lines to slaughter points on the Missouri River and east thereof (with feeding in-transit at Arkansas Valley points in Colorado) as via UP lines direct (Consol R., I, 488). Also, prior to 1932, it was the custom for Colorado range men to buy old ewes and lambs in Oregon, and summer them along the D&RGW in Colorado and then to move them into the Arkansas Valley for further fattening (Consol. R., I, 488, 489).

Since 1932, when competitive rates via the Rio Grande route were cancelled, feeders to the north of the Arkansas Valley, along the UP, can overbid the Arkansas Valley feeders. Witness Wagner states (Consol. R., I, 489), "We like the Northwest lambs and would like to buy them if we had the same freight rate advantage" (Consol. R., I, 489). He further testified (Consol. R., I, 490), "In 1928 we could compete with the Northern Colorado and Nebraska feeders. At the present time our freight rate on lambs from Baker, Oregon, to Missouri River points over the Union Pacific is $1.37.

per cwt. If we come down the Ogden gateway over the D&RGW and Santa Fe into the Arkansas Valley, our freight rate is $1.86 per cwt. This is 49 cents over the Colorado (Northern) and Nebraska feeders rate, or with tax and all, over $100.00 per car. That makes it impossible for us to compete" (Consol. R., I, 490, 491). In 1928 this association fed over 400,000 lambs in the Arkansas Valley. At present its members are feeding approximately 100,000 lambs (Consol. R., I, 491).

Angus McIntosh, Las Animas, Colorado, President of the Colorado Wool Growers Association, composed of 832 members, testified (Consol. R., I, 494) that "Ewe lambs are too valuable as 'killers or feeders' in the fall for Colorado sheepmen to hold over for herd replacements. He must and does look to other localities for such replacements where sheep raising does not produce fat lambs for immediate slaughter." Prior to 1932, a large part of the membership in the Colorado Wool Growers Association, having their operations along the Rio Grande, bought their herd replacements in the Northwest and enjoyed, at that time, through rates to Denver, Missouri River and eastern points via Ogden, thence Rio Grande and AT&SF, MP, CB&Q or CRI&P. Since 1932, the members of Mr. McIntosh's association can no longer compete with sheepmen in Wyoming and other states on the Union Pacific because of the lesser through rate via that line (Consol. R., I, 495). When this witness was purchasing sheep in Oregon (prior to 1932), he shipped via Ogden, thence via Rio Grande and AT&SF to Las Animas, and he had to feed only twice in transit via that route as against three and four feeds en route via Union Pacific to Denver, thence AT&SF (Consol. R., I, 496).

Don Clyde, Heber, Utah, is a livestock operator engaged principally in the production of sheep. He grazes his livestock on approximately 15 to 20 thousand acres

of private land, in addition to holding forest grazing permits. He operates about 4,000 breeding ewes and 200 head of cattle (Consol. R., I, 324). He estimates about 100,000 breeding ewes are in the vicinity of his operations. Most of the lambs produced by this witness move east to Denver and Kansas City. These ranges produce an extraordinary good fat lamb which are sold for slaughter. However, there is always a percentage of every sheepman's output which is sold as feeders. These usually go to midwestern states (Consol. R., I, 324).

Clyde brings in most of his herd replacements (breeding stock) from Idaho and Montana (Consol. R., I, 325). The ewes and lambs (pairs) are shipped in under a transit billing and then the billing is (later) picked up in sending lambs to market (Consol. R., I, 325). The buyers will reimburse the grower for the amount (of freight charges) he has already in the freight bill (Consol. R., I, 325, 326). An arbitrary charge of 19 cents (applicable via UP-Rio Grande through Heber to market) means that the returns to the Utah grower would be that much less than the returns to the grower located on the Union Pacific (Consol. R., I, 326). If the movement from this witness's location was to Kansas wheat pastures, combination rates would apply (Consol. R., I, 326).

Charles Redd, LaSal, Utah, testified in support of the complaint of the Rio Grande. His company had in late 1949 about 27 thousand head of sheep and about 2,000 head of cattle. He said that some of the best sheep in the country, for range purposes, come from eastern Oregon and western Montana, and the best fattening lambs come from Idaho. He would like to bring these sheep into Rio Grande territory on a transit basis (Consol. R., I, 375) at rates equal to those via Union Pacific (Consol. R., I, 376).

L. C. Montgomery, Heber, Utah, is engaged in the cattle business at that point, and is also Secretary of the Heber City Cattle Co. His individual operations and those of the latter company embrace about five thousand head of cattle (Consol. R., I, 442). Mr. Montgomery testified that his operations are substantially similar to those of Witness Clyde with this difference, Clyde operates mostly in sheep and he (Montgomery) in cattle (Consol. R., I, 442). He also testified as President of the Utah Cattle and Horse Growers Association (Consol. R., I, 444) which markets about 225,000 head of beef cattle each year. His association feels that opening the Ogden gateway would be beneficial to the producers in the State of Utah (Consol. R., I, 444) and that the burden of higher freight rates which they are now forced to pay in the movement of livestock from the Northwest via Ogden and D&RGW, when moving to eastern markets handicaps the growers and feeders on the Rio Grande (Consol. R., I, 444, 445). He further agreed that the handicap he has in mind is the difference between the combination rates applicable via the D&RGW and the through rates that exist via the Union Pacific (Consol. R., I, 445, 446).

Joe Fuller, Pocatello, Idaho, buys and sells livestock, principally sheep. At present he buys in Idaho, Oregon, Washington and Montana, and would like to do business in Colorado and Utah (Consol. R., I, 485, 486). He stated that he could not sell to Utah or Colorado sheep men on the same basis as he does to stockmen on the Union Pacific. He could enlarge his operation if rates were established via Ogden so that his entire purchase could be moved to Salt Lake or Ogden for sorting and grading, some going beyond to Colorado and Utah and some to California points (Consol. R., I, 486).

Roscoe C. Rich, of Burley, Idaho, engaged in the sheep business, spoke for the Idaho Wool Growers Association. He has been an officer in this organization, also the National Wool Growers Association and the American Wool Council. The Idaho Wool Growers filed a petition of intervention in behalf of complainant. Last year 8,000 sheep were sheared on his ranches and he stated that this was a low year (Consol. R., I, 509).

Rich stated that the demand for lambs is influenced by the availability of rail transportation. He stated that if lambs could move to Colorado with a feeding in transit arrangement at competitive through rates via Ogden it would benefit the growers of lambs in Idaho. This statement was based on his experience in this business which began in 1914. He stated that it would be to the best interests of Idaho to have all markets available at competitive freight rates (Consol. R., I, 512). He wanted to be able to ship any place where there is a logical market for his lambs at a competitive rate and cost (Consol. R., I, 515).

Lumber witnesses for the Rio Grande proved that they are restricted in their business operations because of their inability to ship lumber freely to and from the "closed door" territory. The Western Forest Industries Association intervened in behalf of its membership who ship lumber from mills in the Northwest and who are interested in a free and flexible routing to all points. The other three witnesses for the Rio Grande are located in Colorado and gave specific examples as to the restrictions placed on their businesses.

Reginald T. Titus (Consol. R., I, 215 *et seq.*), Executive Vice-President of Western Forest Industries Association, Portland, Oregon, testified for the membership of his organization. They are vitally interested

in having a flexibility of routing to all parts of the United States and believe they are discriminated against because they are unable to route lumber via Ogden and the Rio Grande from Union Pacific points at equal rates for shipment beyond. This factor affects their use of transit privileges at points in Utah and Colorado and other states. They believe that if the rates are granted it will increase the lumber consuming territory in which their products are marketed.

J. A. Hayley, Littleton, Colorado, Manager of the Monarch Lumber Company plant at Military Junction, Colorado, testified that he cannot, without competitive joint rates, transit lumber which originates on the Union Pacific and is handled by him at Military Junction, Colorado (Consol. R., I, 383). "Some of those mills we would like to buy from originate on the Union Pacific" (Consol. R., I, 383). He also testified that "As a business man he ought to be able to buy lumber off the Union Pacific at equal rates over available routes" (Consol. R., I, 385), and "We think we should be able to compete with competitors within 10 miles of us (*i.e.,* Denver) who are on a through rate on the Union Pacific (Consol. R., I, 386).

Floyde H. Hughes, Grand Junction, Colorado, is Purchasing Agent for the Independent Lumber Company which operates 14 retail lumber yards in Western Colorado, also (at Grand Junction) a wholesale distribution yard, a box factory, a lumber manufacturing plant, and a storing and drying yard covering about 13 acres. The Independent Lumber Company is also financially interested in the Crissey and Fowler Company at Colorado Springs, Colorado. Hughes testified (Consol. R., I, 518, 519) that in procuring lumber for his transit plant at Grand Junction, he prefers to purchase lumber on railroads other than the Union Pacific

because when the inbound routing on lumber is via these (other) lines, he enjoys competitive rates to Colorado common points and beyond. Cascade and Winchester, Idaho, and Burns, Oregon, were mentioned as typical points on the Union Pacific from which his company has procured lumber in the past, but could not do a transit business into such a point as Coloradio Springs or beyond with lumber originating at the Union Pacific points mentioned (Consol. R., I, 518, 519). He further testified that he gets about 300 carloads of lumber a year from the Northwest, that his plants can handle from 1 to 2 carloads a day, and he feels that the operation, in order to expand, must seek additional markets since his present market in Western Colorado is limited. If his inbound materials originate on the Union Pacific, he is limited to Western Colorado in his transit operations, and he feels that he should have the same rates as his competitors have to competitive areas of destination (Consol. R., I, 520, 521).

This witness also testified that, in some cases where the present rate on lumber to Grand Junction applies via Burlington Lines to Denver, thence Rio Grande, he would get a reduction in his present rate if the through competitive rates to Denver were established via the Rio Grande through Ogden. He showed that the 71-cent rate (to Denver) applied both via GN to Laurel, Montana, thence CB&Q or CB&Q-C&S to Denver, as well as via GN, Butte, UP. If the rate applied GN, Butte-UP, Ogden, D&RGW, the rate to Grand Junction would then become 71 cents instead of 80 cents which is now the rate via GN-CB&Q or CB&Q-C&S, Denver, D&RGW (Consol. R., I, 525).

Hughes also testified as to his company's need for partial unloading privileges at competitive rates (Consol. R., I, 523). He described an instance where, in

endeavoring to divide a carload of doors between Grand Junction and Colorado Springs, which car was to be shipped from Tacoma, Washington, via UP, he had to divert the car to the Great Northern out of Tacoma because the through rate via that line is not applicable via Union Pacific. The shipper charged him a penalty of $25.19 which was the amount the shipper figured he lost because of the inapplicability of the inbound Union Pacific transit credit at Tacoma (Consol. R., I, 523, 524). He also described a similar disability which he faced in trying to divide a carload of screen doors between Colorado Springs and Grand Junction which traffic originated at Hoquiam, Washington. He stated that he would probably have to crate the doors from Colorado Springs at Grand Junction and ship them by common carrier truck to their yard at that point (Consol. R., I, 524).

This company is sometimes forced to go to mills located on the Union Pacific for supplies at its Grand Junction plant because of price and quality (Consol R., I, 526) and when this is done, he cannot move such lumber out of storage to his yard at Colorado Springs except at combination rates because of the absence of joint through rates from Cascade and Winchester, Idaho, by way of Grand Junction. The Colorado Springs yard once had to procure 10 carloads from a competitor (at disadvantage) because it would have cost an additional 46 cents per cwt. to move Union Pacific lumber into Colorado Springs from Grand Junction storage (Consol. R., I, 526, 527).

Robert C. Johnson, of Denver, Colorado, is District Manager, Wood Preserving Division of the Koppers Company, which has plants at Salida, Colorado on the Rio Grande and at Denver served through a belt line by either the Rio Grande or the Union Pacific. The testimony of Johnson relates to the plant at Salida which

is engaged in the preservation and treatment of lumber (Consol. R., I, 417). The lumber treated at Salida originates in the States of Colorado, New Mexico, Utah, Washington and Oregon. The lumber that is shipped from Washington and Oregon moves via the Southern Pacific or the Western Pacific and the Rio Grande (Consol. R., I, 417). Johnson testified that about 60 per cent of the lumber treated at Salida moves to points east, south and southeast beyond the state of Colorado (Consol. R., I, 418). He also stated that this plant would use lumber from such points as Baker and Burns, Oregon, if the joint competitive rates sought in this proceeding were established (Consol. R., I, 418).

Since as stated about 60 per cent of the lumber treated at Salida moves eastbound beyond the state of Colorado, the Salida plant cannot purchase lumber at points served by the Union Pacific in Oregon or other states northwest of Oregon without the risk of paying combination rates. Johnson also stated that his company favors the establishment of the competitive rates sought, because the Salida plant needs a large range of flexibility in securing lumber for treatment at that point, and that with such flexibility the plant would gain in production and often in price if the joint rates involved were established (Consol. R., I, 417, 418). In other words, the Koppers Company would like to be in position to buy lumber for treatment at Salida regardless of the source of the lumber or the originating railroad (Consol. R., I, 419). The plant of the Koppers Company at Denver is not restricted in the same manner as is the plant at Salida, because, as already stated, it is served by the Union Pacific as well as by the Rio Grande and lumber may therefore be moved from points on the Union Pacific in Idaho, Oregon, etc., for treatment at Denver at competitive rates (Consol. R., I, 419).

J. Arthur Knudsen, of Salt Lake City, Utah, President and General Manager of Knudsen Builders Supply Company, receives 400 to 500 cars per year in the conduct of his business, 150 to 200 from the East. These cars contain roofing, insulation, wallboard and a full line of building material, originate at various points in the United States from Missouri on the west to the Atlantic Seaboard on the east and from Minnesota on the north to the Gulf on the south, and are consigned to various dealers and branches of his company in western Colorado, Utah and Idaho. Frequently these are pool cars, as in the case of Celotex moving from Louisiana. Such cars contain about 56,000 feet of this product and are stopped four or five times en route for partial unloading. He cannot always time his shipments for his western Colorado customers (Grand Junction, Colorado, for example) (Consol. R., I, 206) with cars that are *not* consigned north of Ogden, which precludes the possibility of servicing his Colorado customers in such cars (Consol. R., I, 204-207).

Knudsen testified (Consol. R., I, 207) that if the competitive rates were established he would be able to give better service to his customers in the western part of Colorado and effect savings for them on numerous occasions, would help to build up their financial capacity and their efficiency, which in turn would enable Knudsen to increase his business with them. He also testified that by the same token he cannot freely use the route of the Rio Grande on carloads consigned to certain customers at Salt Lake City because many of these cars are consigned to Pocatello and other points in Idaho and Oregon in the "closed door" territory and that when such reconsignments occur, the shipments would be subject to the excessive combination through rates instead of the competitive through rates.

Knudsen also testified (Consol. R., I, 210): "We have

to pass up business as far east as Glenwood Springs, Colorado, due to the fact that we couldn't so route the cars in order to accommodate those customers with the tonnages they could accept and pay for." He also said (Consol. R., I, 212, 213) that of the 150 cars moving from the east, the maximum number he would want to stop in transit to partly unload at points in Colorado on the D&RG would be 25 per cent.

M. S. Rosenblatt is President and General Manager of the Structural Steel and Forging Company of Salt Lake City, Utah. He testified in support of the complaint of the Rio Grande. His company has a warehouse and fabricating plant in Salt Lake City served by the Rio Grande. Steel is shipped into his plants from the Pacific coast, from Geneva, Utah, from Chicago, Pittsburgh and other points in the eastern United States (Consol. R., I, 221, 222). For the first ten months of 1949 he received 105 inbound cars from the east. He said that "all steel originating in the east comes over the Union Pacific Railroad and is transferred here at Salt Lake City for delivery at our plant" (Consol. R., I, 222). He stated that he routes all of the business to Salt Lake City via Union Pacific "primarily because we have no transit privileges for fabricating on any steel moving from eastern points via the D&RG. I mean by that, transit privileges into areas which take approximately 50 per cent of our business, Idaho particularly, and parts of Montana. It is impossible for us to use tonnage coming in on the D&RG, fabricating the steel, and then competing in the Idaho and Montana market," also, "when the steel is ordered, * * *, we have no way of knowing where the final destination is liable to be. Therefore, we can't take a chance on bringing in steel which we might have to fabricate and furnish in markets to which the D&RG tonnage would carry no fabrication in transit privileges" (Consol. R., I, 223).

Lorenzo J. Bott, of Brigham, Utah, testified in support of the complaint of the Rio Grande. He is a fabricator and wholesaler of granite and marble, chiefly used for monuments and tombstones (Consol. R., I, 388-397). Granite, which he sells, comes in semi-finished blocks from several points, one for example, being Tate, Georgia. He also gets marble from Vermont. He has a dealer in Grand Junction, Colorado, whom he cannot always supply with stone, marble or granite originating at these and other points in part carload lots, since the cars almost invariably contain some material for either Brigham or for other customers located in Utah, Idaho or Montana north and west of Ogden. If he can do so, he ships cars with some tonnage for Grand Junction in them, but the difficulty is that such cars must terminate on the Rio Grande and he can seldom do this. The only alternative is to ship to Grand Junction in LCL lots, the cost of which is prohibitive.

W. H. Snyder, Grand Junction, Colorado, a retail dealer in monuments, supported Bott's testimony (Consol. R., I, 398 *et seq.*)

Bott sells marble to Snyder, and other customers which originates, for example, at Tate, Georgia. Because of the cost of an entire carload of marble, or granite from Barre, Vermont, it frequently happens that Snyder has to forego the business because Bott cannot readily sell him a part-car (stop in transit at Grand Junction to partially unload) since the cars almost invariably contain tonnage for other Bott customers north of Ogden, including Bott's own operation at Brigham. Such part-car shipments as Snyder gets have to be included in cars which terminate on the Rio Grande. The alternative for Snyder is to pay LCL rates which are prohibitive (Consol. R., I, 399). If he had to ship everything LCL, he would close down (Consol. R., I, 403).

Kenneth G. Self, Salt Lake City, is the majority stockholder in the Inter-Mountain Tractor Sales Corporation, whose place of business at Salt Lake City is located on the tracks of the Rio Grande. He likewise supports the complaint of the Rio Grande. His concern is the distributor for Ford tractors and Dearborn farm equipment for Utah, southeastern Idaho and portions of Nevada and Wyoming (Consol. R., I, 458). He ships into Salt Lake City in carload lots and distributes from there to his dealers by his own truck (Consol. R., I, 459). Fifty per cent of his customers are located in Idaho. He originally purchased the truck during the post-war period when shortages made allocation of machinery necessary (Consol. R., I, 459, 460). Then it was necessary to limit dealers to a part of a carload and he found out that cars which were brought into Utah over the Rio Grande could not be stopped in transit at Salt Lake for partial unloading and reforwarded at the through rate to Idaho Falls for example (Consol. R., I, 460).

Rather than be faced with such situations, he bought a motor transport and has served his territory from Salt Lake since then by means of this equipment (Consol. R., I, 460). If he could partially unload in both states, he would use the railroads and discontinue his trucking (Consol. R., I, 460). He bought trucks for this operation because he did not have a competitive joint rate (via Rio Grande) from eastern points to points in Utah and Idaho (Consol. R., I, 460, 461). He serves Logan and Tremonton, Utah; Preston, Burley, Boise and Nampa, Idaho; all points on the Union Pacific north and west of Ogden (Consol. R., I, 461). He also serves some inland dealers adjacent to Price, Utah, on the Rio Grande (Consol. R., I, 464). He has no customers in Idaho today who would take over a partial carload (Consol. R., I, 464).

D. G. Adams, of Salt Lake City, Utah, is Branch Manager of the branch of the J. I. Case Company at that point. This branch is served by the tracks of the Rio Grande. The J. I. Case Company produces agricultural implements and farm machinery at points in Wisconsin, Illinois, Iowa and Alabama. The Salt Lake branch is the distribution point for these products in the intermountain territory. About 70 per cent of these products are destined to points in Utah north of Salt Lake City and to points in Idaho, and eastern Oregon, and about 30 per cent are destined to other parts of Utah and western Colorado (Consol. R., I, 543). Adams has only recently been put in charge of the Salt Lake branch and as yet is not entirely familiar with the potentialities of the territory in which his branch is interested (Consol. R., I, 549).

Although the Salt Lake City branch is served by the tracks of the Rio Grande, Adams testified that to be on the safe side all shipments from the East to Salt Lake City should be routed via the Union Pacific, and that most of them are, because if they are routed to Salt Lake City via the Rio Grande and are then reshipped to points on the Union Pacific in Idaho, northern Utah, etc., the combination rates will apply. However, Adams stated that his company recognizes that to route all shipments of the Salt Lake City branch via the Union Pacific would be unfair to the Rio Grande, and therefore on occasion shipments are routed to Salt Lake City via the Rio Grande (Consol. R., I, 550, 551).

Adams testified as to an example which hindered his operations and affected him adversely. A carload of plows moving from the east to Salt Lake City by the Rio Grande were needed badly at Idaho Falls. These plows could not be diverted to Idaho Falls at the competitive joint rates, so they were rebilled after arrival at Salt Lake to Idaho Falls, and it cost ap-

proximately $300.00 extra freight to do this (Consol. R., I, 545).

Another instance was given by Adams as to injuries suffered by his branch operations because of the lack of competitive joint rates which the complainant seeks. A carload of tractors was en route from the east to Salt Lake City which contained two tractors of the type needed by his Ontario, Oregon, dealer and Adams told the dealer he would unload all the tractors from this car at Salt Lake, except two, and then divert the car to Ontario. However, the car was moving to Salt Lake City via Rio Grande and the two tractors for Ontario were shipped by truck from Salt Lake City at a cost of about $50.00 apiece, which represents the loss to the J. I. Case Company (Consol. R., I, 545). Opening of the Ogden gateway at competitive rates would enable Adams to stop cars in western Colorado en route to Salt Lake, as well as en route to Idaho and reship them to Idaho, Oregon, etc., without the extra freight now imposed (Consol. R., I, 544).

APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

CONSOLIDATED REPLY BRIEF OF THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

PRELIMINARY RESTATEMENT OF THE POSITION OF THE PARTIES

By way of conforming to the spirit of the order of consolidation of this Court entered October 24, 1955, The Denver and Rio Grande Western Railroad Company (hereinafter sometimes called "the Rio Grande") duly filed its Consolidated Opening Brief covering the above-entitled series of appeals.

Appeals Nos. 117, 118 and 119 are from the United States District Court for the District of Nebraska.

Appeals Nos. 332, 333 and 334 are from the United States District Court for the District of Colorado.

These appeals deal with various aspects of a Report and Order of the Interstate Commerce Commission dated January 12, 1953, which upon complaint of the Rio Grande, supported by interested shippers, accorded relief to the Rio Grande and to the interested shippers with respect to through routes and joint rates as to certain named commodities. The Commission Order denied relief with respect to all other commodities, shipped to and from what is known as the "closed door" territory in northern Utah, Idaho, Montana, Washington and Oregon—as to which territory the Union Pacific Railroad Company claims the right to control the movement of all railroad freight traffic, to prefer certain of its favored railroad connections, and to exclude the Rio Grande from all such traffic moving to and from that area unless the shippers (the public) are willing to pay a higher price.

The position of the Rio Grande and its interveners, as set forth in its Consolidated Opening Brief, is that the

Colorado decision should be affirmed and the case remanded to the Commission with instructions that through routes via the Ogden gateway are in existence and that the Rio Grande is entitled to have the case considered and decided by the Commission, free of the limitations of Section 15(4) of the Interstate Commerce Act; that the Nebraska court should be reversed and the Commission's Order reversed in so far as it denies the relief prayed for by the Rio Grande; that in the alternative, in the event that the Colorado court is not affirmed, this Court should reverse the Nebraska decision and affirm the Commission Order.

The United States of America, the Interstate Commerce Commission and the Secretary of Agriculture (hereinafter sometimes called "the Government") also in conformity to the spirit of the order of consolidation, filed a Consolidated Opening Brief dealing with the issues in all of the above-entitled appeals. In that brief the above named appellants seek a reversal of the Colorado decision, a reversal of the Nebraska decision, and a restoration of the Commission Order of January 12, 1953. (It should be noted, however, that the Secretary of Agriculture is not a party to the appeal from the Colorado court—see Government brief, footnote 1, page 2.)

In Case No. 118 the Union Pacific Railroad Company, *et al.* (hereinafter sometimes called "the Union Pacific"), filed a separate opening brief seeking a reversal of the Nebraska decision and a reversal of the Commission Order; the Union Pacific also filed a sep-

arate opening brief in Case No. 333 seeking a reversal of the Colorado decision.

The Washington Public Service Commission, *et al.*, filed a separate opening brief in Case No. 118, joining the Union Pacific in seeking a reversal of the Nebraska decision, and filed a separate opening brief in Case No. 332 supporting the position taken by the Union Pacific with respect to reversal of the Colorado decision and a reversal of the Commission Order. The arguments made and the authorities cited in the brief of the Washington Public Service Commission, *et al.*, are so nearly identical with those set forth in the Union Pacific brief that they do not require any separate answer.

ADDITIONAL STATUTES INVOLVED

Due to the arguments advanced by the Union Pacific in its opening briefs, these appeals now involve the following additional statutes:

Title 28, United States Code, Sections 1336 (62 Stat. 931) and 1398 (62 Stat. 936), set forth verbatim in Appendix A hereto.

The Interstate Commerce Act, 24 Stat. 379, as amended, Title 49 U.S.C., part of Section 1(3)(a) and Sections 15(7), 17(3) and 20(11), set forth verbatim in Appendix A hereto.

COLORADO DECISION

Appeals Nos. 332, 333, 334

REVIVAL OF PROCEDURAL QUESTIONS HERETOFORE ARGUED

The Union Pacific in its opening brief on appeal from the Colorado court first revives and reargues certain procedural questions heretofore fully argued to this Court in special briefs filed in connection with a Union Pacific motion for summary reversal of the Colorado decision made and presented to this Court before probable jurisdiction was noted in these appeals. The Rio Grande at page 34 of its Consolidated Opening Brief referred to these procedural contentions of the Union Pacific as having been inferentially denied when this Court noted probable jurisdiction. These procedural questions (based upon motions originally made by the Union Pacific in the Colorado court but by no other litigant) will first be analyzed and answered before dealing with the substantive issues in the Colorado case.

ANSWER TO PROCEDURAL QUESTIONS AGAIN RAISED BY THE UNION PACIFIC

I.

The Colorado Court Had Jurisdiction to Set Aside the Order of the Commission

Section 1336 of Title 28, U.S.C. (62 Stat. 931), reads as follows:

> "Except as otherwise provided by Act of Congress, the district courts shall have jurisdiction of any civil action to enforce, enjoin, set aside, annul

or suspend, in whole or in part, any order of the Interstate Commerce Commission."

The proper forum for maintaining this action authorized by Section 1336 is prescribed by Section 1398 of Title 28, U.S.C. (62 Stat. 936), which provides:

> "Except as otherwise provided by law, any civil action to enforce, suspend or set aside in whole or in part an order of the Interstate Commerce Commission shall be brought only in the judicial district wherein is the residence or principal office of any of the parties bringing such action."

The principal office of the Rio Grande is situated in Denver, Colorado, in the District of Colorado. Accordingly, the United States District Court for the District of Colorado is the only proper judicial district in which the Rio Grande could institute an action to review the Commission's Order of January 12, 1953.

The Union Pacific asserts that the Colorado court erred in failing to dismiss the Rio Grande complaint because the matters complained of therein did not involve a Commission order or part of an order. In support of this contention the Union Pacific chiefly relies on *United States v. Atlanta, B. & C. R. R.*, 282 U.S. 522. The facts in that case are distinguishable from those in the instant case. That case involved a complicated accounting situation growing out of the receivership and reorganization of the Atlanta, Birmingham and Atlantic Railway Company, 117 I.C.C. 181 (supplemental report of the Commission in the same case 117 I.C.C. 439). The order of the Commission authorized the new company to issue preferred and common stock and imposed certain conditions with respect

to the accounting classification of "investment in road and equipment." When the new company set up its books it did not comply with those conditions. As a result of a further hearing and reconsideration of the questions involved, the Commission issued its report in *Atlanta, B. & A. Ry. Reorganization,* 158 I.C.C. 6, 13, 14, in which it stated the value of the property of the railroad for rate making purposes and prescribed accounting rules and regulations but entered no formal order whatsoever. The concluding paragraph of the last decision reads as follows:

> "Upon consideration of the record, as supplemented, we find and conclude that the amount to be included in the balance sheet statement of the new company representing investment in road and equipment as of January 1, 1927, may not exceed $9,216,043.87. The company will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report."

It will be seen that the Commission merely stated that the company "will be expected" to adjust its accounts in accordance with the Commission's finding within 60 days from the service of its report. The finding there was neither in the form of an order nor did it purport to be a part of any order.

That decision should be compared with the recent decision of the Court in *Henderson v. United States,* 339 U.S. 816, which reversed with directions to remand the decision of the court below that sustained the decision of the Commission in *Henderson v. Southern Ry.,* 269 I.C.C. 73, 78, wherein the Commission found that under the revised rules of the Southern Railway, Hen-

derson had not been subjected to unreasonable prejudice and disadvantage. The Commission did not enter any order for the future. It merely dismissed the complaint. In that case the United States by brief and oral argument supported the appellant on the ground that it was clear that he had standing to institute the suit and to bring the proceedings, since he was an aggrieved party, free to travel again on the Southern Railway. This Court sustained that view, overruled the Commission by finding that Henderson was subject to undue prejudice in violation of Section 3 of the Interstate Commerce Act and remanded the case with directions. It will thus be seen that in the *Henderson* case this Court considered a decision of the Commission on which no order for the future had been entered, despite the earlier decision of the Court in the *Atlanta, B. & C. R. R.* case, 282 U.S. 522.

There is attached as Appendix A to the Rio Grande's Consolidated Opening Brief a copy of the Order of the Commission of January 12, 1953, in this case. It will be observed that the first paragraph of the Order specifically states that the Report containing the Findings of Fact and Conclusions of the Commission "is hereby referred to and made a part hereof; * * *." No such order was made in the *Atlanta B. & C. R. R.* case relied upon by the Union Pacific. This fact in itself renders that case wholly inapplicable here.

The Union Pacific in its brief stresses the fact that the Order of the Commission did not use the word "dismissed" in connection with its failure to find through routes and competitive joint rates on the commodities

involved in the litigation other than the limited number of commodities named in the Order. But the failure to use the actual word "dismissed" is of no significance since as was pointed out in the *Rochester Telephone* case, 307 U.S. 125 at page 142:

> "The nature of the issues foreclosed by the Commission's action and the nature of the issues left open, so far as the reviewing power of courts is concerned, are the same."

The discussion of this general question by Mr. Justice Frankfurter at page 142 and other pages of the *Rochester Telephone* case is a complete answer to the contentions of the Union Pacific that that part of the decision of the Commission which denied the relief sought by the Rio Grande and which is involved in the instant appeal is not an order and therefore is not subject to review by this or any other court. The Commission in its Conclusions (which were expressly made a part of its Order) distinctly stated "That except as indicated in the preceding findings, the allegations made in the complaint are not sustained." This was the legal equivalent of a dismissal of these allegations.

The Union Pacific also relies to a large extent upon the so-called negative order doctrine of *Standard Oil Co. v. United States,* 283 U.S. 235, to support its position. In *United States v. ICC,* 337 U.S.426, 436, after referring to the negative order doctrine and to the *Standard Oil* case, the Court made the statement:

> "This doctrine was wholly abandoned in *Rochester Tel. Corp. v. United States,* 307 U.S. 125."

Another decision relied on by the Union Pacific is *Manufacturers Ry. v. United States,* 246 U.S. 457, a

decision based upon the now repudiated doctrine that only affirmative orders of the Commission are reviewable. The facts of that case are so different from the facts in the instant case as to make it wholly inapplicable. In *Manufacturers Ry. v. United States,* a failure by the Commission "to fix divisions" was held not to be subject to judicial review because it only involved a failure or refusal of the Commission to exercise its administrative authority. In the instant case the Commission exercised its administrative authority by granting the Rio Grande limited relief under Section 15(4) of the Interstate Commerce Act, but by reason of an erroneous interpretation of the law denied relief in all other respects.

It should be pointed out that both the *Atlanta B. & C. R. R.* case and the *Manufacturers Ry.* case above referred to, and so heavily relied upon by the Union Pacific, were decided prior to the *Rochester Telephone* case, and the *Henderson* case.

All of the foregoing cases were referred to and relied upon by the Union Pacific in its Statement and Argument on its Motion to Reverse filed in this Court prior to the noting of probable jurisdiction and were undoubtedly fully considered by this Court at that time.

The only additional case of consequence now relied upon by the Union Pacific is *Brady v. ICC,* 43 F.2d 847 (N.D.W.Va.), aff'd *per curiam* 283 U.S. 804. The legal situation and the facts in the *Brady* case are clearly distinguishable from those in the instant case. The *Brady* case involved a suit brought to set aside a reparation order, of no interest to the public at large, in which

it was sought to review in the courts the amount of damages allowed by the Commission, and thereby to secure a larger money judgment. There was no allegation there as to any basic error of law on the part of the Commission, or showing of irreparable injury to the complainant. A mere matter of dispute over the adequacy of damages has no analogy to a situation where basic issues of law are involved as alleged in the Rio Grande's complaint in the Colorado court.

There never has been any doubt but that where an issue as to the existence of through routes is involved, a court may examine into the matter and decide upon the whole record whether through routes are in existence as a matter of law. *Thompson v. United States,* 343 U.S. 549; *ICC v. Northern Pacific Ry.,* 216 U.S. 538.

The action of the Commission in failing to find that through routes are in existence via the Ogden gateway over the Rio Grande resulted in its making and entering an erroneous Order. When the Rio Grande, in its complaint in the Colorado court, assailed this Order as erroneous, that court had jurisdiction to hear and determine the matter.

II.

The Rio Grande Had Standing to Bring Suit to Set Aside the Order of the Commission

Procedural question II raised by the Union Pacific is based on the contention that the Rio Grande had no legal right or standing to maintain its suit in the Colorado court. In this connection, the Union Pacific harks back to the Rio Grande complaint before the Commission and erroneously attempts to make it ap-

pear that this complaint was filed for the sole purpose of improving the Rio Grande's financial position and securing pecuniary gain at the expense of the Union Pacific. To further distort this erroneous charge, the Union Pacific uses extravagant and theoretical figures regarding what the loss to the Union Pacific and the gain to the Rio Grande might be if the Rio Grande should prevail in its contentions. Any proceeding successfully maintained by one railroad against another to correct allegedly unjust, unreasonable, discriminatory or prejudicial rates inevitably results in some shift in pecuniary advantage.

The Rio Grande complaint before the Commission was based upon the relevant provisions of the Interstate Commerce Act which govern and require all railroads, even including the Union Pacific, to charge just, reasonable, non-prejudicial, and non-discriminatory rates over existing through routes. It was not, as the Union Pacific persistently contends, based upon the idea of the Rio Grande trying to deprive the Union Pacific of traffic to which the Union Pacific claims an inherent right. No railroad has an inherent right to traffic. The shipper alone has the right to determine how traffic shall flow over existing through routes (see Section 15(8)).

Actually, what the Union Pacific is attempting in connection with the denial by the lower court of its motion to dismiss is to bring in, as a part of its procedural attack, the language of Section 15(4) requiring the Commission in prescribing new through routes to "give reasonable preference to the carrier by railroad which originates the traffic" and providing that

"No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs." Section 15(4) and its applicability to the facts in the instant case are not properly involved in the procedural issues raised by the Union Pacific in the Colorado case, because the Rio Grande complaint in that case was not based upon the contention that new through routes should be established under that section, but rather upon the contrary proposition that through routes are already in existence.

It is important to point out that the Union Pacific from the beginning has attempted to force the Rio Grande to justify its standing to maintain its action by contending that the standing of the Rio Grande to sue in the Colorado case must be grounded on Section 15(4) with its restrictive provisions, and thus to defeat the complaint of the Rio Grande on that ground. But the Union Pacific is unable to argue that the limitations of Section 15(4) are applicable where through routes are already in existence as alleged by the Rio Grande in the Colorado case. The Union Pacific attempted to make such a contention, however, and in so doing has tried to obscure the real contention of the Rio Grande in the Colorado case, to-wit, that Section 15(4) is inapplicable in a case where through routes are already in existence. Having thus based its whole procedural attack on Section 15(4), the Union Pacific's entire argument as to the Rio Grande's standing to sue must fall. It is clear that the restrictive provisions of Section 15(4) cannot be successfully used to support the Union

Pacific motion to dismiss when the standing of the Rio Grande as shown by its complaint is chiefly based upon alleged violations of various provisions of the Interstate Commerce Act (other than 15(4)). The substance of these sections for convenience is set forth as follows:

Section 13(1) of the Interstate Commerce Act affirmatively provides that any person, firm, corporation, company, or association, *or any common carrier*, may file a complaint with the Commission against anything done or omitted to be done by any other common carrier subject to the provisions of the Act in violation of such provisions. (Thus the Rio Grande, as a common carrier, had the statutory right to complain against the Union Pacific and the other defendants for their violations of the provisions of the Interstate Commerce Act.)

Section 1(4) of the Act requires every common carrier railroad to furnish transportation upon reasonable request and to establish just and reasonable through rates, fares, charges and classifications.

Section 1(5) states that:

> "All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

Section 3(1) makes it unlawful for any common carrier subject to the Act

> "to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association,

locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3(4) provides:

"All carriers subject to the provisions of this chapter shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, * * * ."

The cited provisions of the Interstate Commerce Act impose duties upon common carriers by railroad subject to that Act. The authority of the Commission to enforce obedience to those duties is found principally in Sections 13 and 15 of the Act. These sections confer the right to complain where railroads such as the Union Pacific and its preferred connections fail and refuse to comply with their statutory duties.

It, therefore, follows that where, as here, it is claimed by the Rio Grande that the Union Pacific violates the Interstate Commerce Act by its failure and refusal to

participate with the Rio Grande in the maintenance of reasonable and non-discriminatory joint rates, rules and regulations with respect to the operation of through routes and has failed and refused to accord reasonable, proper and equal treatment in the matter of rates and the interchange of traffic, such a complaint is grounded on the provisions of the Interstate Commerce Act, which confer statutory rights upon the Rio Grande for the violation of which the Rio Grande has a right to complain.

In addition to the decision in the *Rochester Telephone* case, there are numerous other decisions of this Court which support the standing of the Rio Grande to maintain this suit. In *Youngstown Sheet & Tube Co. v. United States,* 295 U.S. 476, 479, contentions similar to those made here by the Union Pacific were rejected by the Court, as follows:

> "The appellants were entitled to bring and maintain this suit to set aside the order. They were parties to the proceeding before the Commission, had a pecuniary interest in the rates and were affected by the order. The authorities cited by the appellees are to be distinguished on the ground that the plaintiffs either had no legal interest or capacity to sue or failed to allege that the rates under attack were unreasonable or discriminated against them."

The court below had jurisdiction to review the order of the Commission under 28 U.S.C., Sections 1336 (62 Stat. 931) and 1398 (62 Stat. 936). The complaint of the Rio Grande in the Colorado court alleged that it not only has a pecuniary interest in the issues raised, but that the Order, unless remanded to the Commission for correction of errors, would cause the Rio Grande irre-

parable injury in that the alleged unjust, unreasonable and unjustly discriminatory rates, routes and practices of the Union Pacific would be perpetuated by the Commission's erroneous Order and Conclusions and would violate the statutory right of the Rio Grande to participate on equal terms in the revenues from through traffic at competitive joint rates over through routes under the provisions of the Interstate Commerce Act. These allegations are amply sufficient to sustain the Rio Grande's standing to sue in the Colorado court. The fact that the part of the Order of the Commission involved in the Colorado case is negative in form does not bar the right of the Rio Grande to maintain the suit.

In *Mitchell v. United States*, 313 U.S. 80, this Court considered the decision and order of the Commission in *Mitchell v. Chicago, R. I. & P. Ry.*, 229 I.C.C. 703, in which the Commission held that the treatment accorded Mitchell by the railroads which he claimed was unjustly discriminatory was neither that nor unduly prejudicial under the provisions of the Interstate Commerce Act. This Court did not hesitate to overrule the Commission and hold that the treatment accorded Mitchell was unjustly discriminatory and unduly prejudicial under the provisions of the Interstate Commerce Act. It clearly based its reversal on that ground and not on the constitutional ground mentioned in the decision. At page 93 of the opinion, the Court said:

> "He [Mitchell] presents the question whether the Act does forbid the conduct of which he complained."

See also *Henderson v. United States*, 339 U.S. 816. In *The Chicago Junction Case*, 264 U.S. 258, which

dealt with an order of the Commission that authorized, but did not require, the New York Central to purchase control of the Chicago Junction Railway, the Court sustained the right of the Pennsylvania Railroad, the Baltimore & Ohio, and other competitors of the New York Central to maintain a suit to set aside the order of the Commission. It was there claimed by the defendants that the plaintiffs, as competitors, did not have a sufficient legal interest to permit them to bring or to maintain the suit. In that case the Court was moved in part by the consideration that the plaintiff railroads would lose large sums of money by virtue of the control of the Chicago Junction by the New York Central. They were parties to the proceeding before the Commission and thereby acquired the right to sue, and also had such a right under Section 212 of the Judicial Code (28 U.S.C., Section 41(27) note). The Court stated, 264 U.S., at page 267, apropos of the large loss sustained by the railroad plaintiffs:

> "This loss is not the incident of more effective competition. Compare *Edward Hines Trustees v. United States,* 263 U.S. 143, 148. It is injury inflicted by denying to the plaintiffs equality of treatment. To such treatment carriers are, under the Interstate Commerce Act, as fully entitled as any shipper. *Pennsylvania Co. v. United States,* 236 U.S. 351."

The right of the Rio Grande to bring and to maintain the instant suit in the court below under the Interstate Commerce Act is also sustained by *United States v. ICC,* 337 U.S. 426, 435; *Barrett Line, Inc. v. United States,* 326 U.S. 179; *American Trucking Ass'ns v.*

United States, 326 U.S. 77; *ICC v. Parker,* 326 U.S. 60; *Alton R. R. v. United States,* 287 U.S. 229; *United States v. New River Co.,* 265 U.S. 533; *Skinner & Eddy Corp. v. United States,* 249 U.S. 557, and the revealing and comprehensive opinion by Judge Parker in *Anchor Coal Co. v. United States,* 25 F.2d 462 (S.D. W. Va.)

See also article by Kenneth Culp Davis in 49 Columbia Law Review 759-795 (1949), where at pages 772-73 he states:

> "In none of the Supreme Court decisions denying standing under the Interstate Commerce Act was the petitioner a carrier. Even a mere competitive interest of a carrier is sufficient for enforcing the Act or for challenging action of the Commission."

The Union Pacific in arguing its procedural point II refers to the Colorado decision as stating that the Commission's failure to grant the Rio Grande's demands "caused no pecuniary loss to the Rio Grande." This quotation is taken out of context and overlooks the fuller statement of the Colorado court with respect to the Rio Grande's pecuniary interest, which reads (Colo. R. 294) as follows:

> "If the Rio Grande, on its showing before the Commission and an application of the provisions of §1(4), §3(4), §15(1) and §15(3), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the Rio Grande of a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its op-

erating income, and, no doubt, in its net earnings. More succinctly stated, if the Rio Grande, under the facts established by the evidence before the Commission, and the application of the provisions of §1(4), §3(4), §15(1) and §15(3) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande."

In this paragraph the court makes it clear (and this is axiomatic in any case of this character) that if a carrier bringing a complaint alleges that it is entitled under the law and the facts involved to the prescription of joint rates over existing through routes, then necessarily the denial of the appropriate statutory relief prayed for deprives the carrier of pecuniary gain, which denial it is entitled to have reviewed in a three-judge court. This is precisely the situation in the instant case.

THE GOVERNMENT'S POSITION

It should be noted that neither the United States, the Interstate Commerce Commission nor the Department of Agriculture supports the Union Pacific's contentions with respect to either of its procedural points.

SUBSTANTIVE ISSUES — COLORADO CASE

The Union Pacific opening brief in the Colorado case and the collaborating opening brief of the Washington Public Service Commission, *et al.*, contain so many erroneous statements and irrelevancies that a serious and prejudicial confusion of the issues here involved

may result unless clarification is undertaken. To help clarify and delineate the actual issues, some of the more flagrant misstatements and irrelevancies are now mentioned.

Erroneous and Irrelevant Statements in the Union Pacific Brief

1. At page 3 of its Colorado opening brief, the Union Pacific refers to the Rio Grande as a "chronically bankrupt" and "financial needs" short line railroad. Elsewhere in its brief, the Union Pacific seeks to discredit the Rio Grande as a railroad which is neither efficiently operated nor financially sound. These epithets and innuendos are untrue as shown by the undisputed testimony in the case—particularly that of Mr. Wilson McCarthy, late President of the Rio Grande, who testified at length regarding the present excellent physical and financial condition of that railroad (Consol. R., I, 42, *et seq.;* see also R. G. Consol. Op. Br. 77-79). Even Mr. P. V. Webb, a statistician on the staff of the General Auditor of the Union Pacific, testified that operating conditions on the Rio Grande compared favorably with operating conditions on the Union Pacific, and with the operating conditions on other leading transcontinental railroads (Consol. R., I, 876).

The Union Pacific's erroneous statements regarding the Rio Grande's financial stability and operating conditions are based upon conditions of many years ago, which existed not only with respect to the Rio Grande, but also with respect to the Union Pacific and many other railroads, and overlook the fact that the Union Pacific and many other presently sound and well-op-

erated railroads have passed through periods of financial distress and receivership.

In any event, these misstatements of fact are also wholly irrelevant, because so far as the question of the existence of through routes is concerned (the basic issue in the Colorado case), such statements have no bearing.

2. Again at page 3 of the Union Pacific brief, and also at pages 11, 13 and 35, the Union Pacific seeks to represent that if the Rio Grande prevails in its contentions with respect to the existence of through routes and competitive joint rates, the Union Pacific would suffer heavy financial loss and become impoverished.

First of all, this is an admission by the Union Pacific (though not intended) that there must be such great public need for Rio Grande service and such great dissatisfaction with Union Pacific service, that many shippers in the "closed door" territory would shift their freight business to the Rio Grande, thus diverting substantially all of the traffic of the Union Pacific, and seriously undermining its financial structure.

Such a statement on the part of the Union Pacific is not only a ridiculous speculation, but is completely irrelevant. The truth or falsity of the speculation has no bearing upon the actual issues in the case as to whether the Rio Grande is entitled to competitive joint rates and through routes. The financial results which may be claimed to follow compliance with or enforcement of the provisions of the Interstate Commerce Act do not

constitute a basis for the Commission or the courts to excuse violations of such statutory provisions.

3. For the purpose of making it appear that only the Rio Grande is interested in or complaining about the Union Pacific monopoly of railroad freight traffic to and from the "closed door" territory, the Union Pacific at page 12 of its Colorado opening brief makes the following misleading statement: "No complaint has ever been filed by shippers or the public or by any state public service commission demanding the longer through routes and joint rates sought by the Rio Grande." This suggests that no complaint of any kind has ever been made. Whether a formal proceeding had been brought before the Commission previous to the formal institution of proceedings by the Rio Grande is immaterial as to the issues in the instant case.

The fact is that numerous shipping organizations, flour milling companies, chambers of commerce, lumber and grain shippers and associations interested in the production of fruits and vegetables, public service commissions, and the United States Secretary of Agriculture complained either as interveners in support of the Rio Grande or testified in support of the Complaint of the Rio Grande (See the list of interveners and witnesses set forth at pages 26 and 27 of the Consolidated Opening Brief of the Rio Grande).

A very large number of additional individual witnesses also testified in support of the complaint of the Rio Grande (See Appendix F, attached to the Consolidated Opening Brief of the Rio Grande).

4. The Union Pacific asserts at various places in its

brief that the Rio Grande has no right to the traffic it is seeking. No railroad carrier has an inherent right to traffic. It is the shipper and not the carrier who determines how the traffic shall be routed. If the Rio Grande has no right to the traffic, neither has the Union Pacific, because, as is disclosed by the evidence of the shippers in the "closed door" territory, even in the face of the higher rates enforced by the Union Pacific, they route shipments over the Rio Grande (See summary of testimony of shipper witnesses, *infra* 36-39).

5. Misrepresentation and irrelevancy are also inherent in the oft-repeated, unsupported *ipse dixit* of the Union Pacific that "the order issued by the Commission grants the demand (of the Rio Grande) to the extent of about one-third of the traffic from which the Union Pacific earns over eleven million dollars annually." This is a mere self-serving speculation. No one can possibly determine or even estimate to what extent shippers in the "closed door" territory in routing their railroad freight traffic will prefer to use the through route over the Rio Grande via the Ogden gateway, instead of the through route over the Union Pacific. The exercise of any such preference will depend upon the usual factors involved in any competitive situation, largely upon the comparative excellence of treatment and service accorded respectively over the Union Pacific route and over the Rio Grande route (which route, of course, embraces the Union Pacific north of Ogden) and the economic need for service over the line of the Rio Grande. Surely, the Union Pacific with all the claims it makes as to the superiority of its service should not fear such competition. It should be borne

in mind, however, that service over the Rio Grande route, as stated by Vice-President Bradford of the Rio Grande, will depend entirely upon the service rendered by the Union Pacific north of Ogden. If it has the benefit of "on-time" performance by the Union Pacific, the Rio Grande with its established schedules will be able to render comparable service with that of the Union Pacific to many points. If, however, the Union Pacific is slow in making delivery to the Rio Grande at Ogden, the service over the Rio Grande route will be correspondingly slow (Consol. R., I, 168).

Instead of trying to speculate on the question of loss, it is more reasonable to forecast that due to the rapidly developing economic and industrial potential of the "closed door" territory, the establishment of competitive joint rates over the Rio Grande through the Ogden gateway will not reduce the tonnage being carried by the Union Pacific. This was pointed out by several responsible and experienced witnesses.

Mr. P. G. Batt, the owner of a one thousand acre farm in Idaho, engaged in raising and shipping fruits and vegetables, and other perishables, testified that in shipping to midwest and eastern markets over the Union Pacific, he has had many experiences with distressed cars, that is, with carload shipments which arrive at points where they can be reconsigned only at higher combination rates. Such points are known as "pocket markets." He testified that he did not think competitive joint rates over the Rio Grande would reduce the tonnage of the Union Pacific, but rather would open the "pocket markets" to Idaho products, increas-

ing their consumption by as much as would be diverted away from Union Pacific (Consol. R., I, 420-28).

J. E. Watson, vice-president and general manager of the J. C. Watson Company, operating a large business at Parma, Idaho, engaged in producing, packing and distributing fruits and vegetables, and shipping annually from 1500 to 2000 cars, testified that his company is constantly seeking new markets, and that the establishment of competitive joint rates via the Rio Grande would provide a freer flow of fruits and vegetables from Idaho to markets outside that State, especially in the southwest territory. This witness pointed out that because of the lack of such competitive joint rates, new markets cannot now be developed. Of course, the development of new markets would increase the total amount of freight traffic to be moved (Consol. R., I, 432-37).

Bert Higgins, a member of the Executive Committee of the Idaho State Grange, a state-wide organization consisting of 12,000 members (farmers, shippers, growers and dealers in potatoes and grain), testified that the establishment of competitive joint rates over the Rio Grande via the Ogden gateway would be to the best interest of Idaho as an agricultural state by enabling it to increase its markets (Consol. R., I, 262-69).

Many other witnesses testified that the establishment of competitive joint rates via the Rio Grande through the Ogden gateway would result in the development of new markets, and increase the tonnage of products to be shipped from the "closed door" territory.

For example, Mr. Donald L. Reed, president of the

Skyland Food Corporation, operating a frozen fruit plant at Delta, Colorado, engaged in the processing of fruits, testified that the plant has a capacity of fifteen million pounds annually, but is operated at only about fifty per cent of its capacity; that Idaho fruit is desirable, but it cannot be processed at Delta because of the lack of competitive joint rates via the Rio Grande. He stated that if such rates were available, his company could use fruits from the "closed door" territory to the extent of several thousand tons annually. Such testimony again indicates that the present situation serves to stifle the normal economic development of th "closed door" territory (Consol. R., I, 140, *et seq.*).

The nature and extent of the economic development and growth in the "closed door" territory was outlined in detail by Dr. El Roy Nelson, Director of the Bureau of Economic and Business Research of the University of Utah. Dr. Nelson testified (Consol. R., I, 177-195) that due to the availability of power from federally constructed hydro-electric projects in the area and the industries dependent upon cheap hydro-electricity, such as aluminum, chemicals, paper and products of electric furnaces, war expansion and the subsequent sales of war-built plants to private industry, the northwest area in less than a decade achieved a 30-40 year expectancy in industrial development. One of the most significant migrations in American history, according to Dr. Nelson, was the shift in population since 1940 to the northwest. During the decade 1940-1949, the population of the states of Oregon and Washington, percentage-wise, increased approximately four times as fast as did that of the nation as a whole. Idaho's pop-

ulation in that decade increased about the same percentage as did that of the nation as a whole. The unusual industrial expansion in the northwest area has resulted in increased importation of raw materials and other goods into the area, and a corresponding increase in the exportation of their agricultural products, raw materials and manufactured goods. This newly developed industrial territory needs all available rail facilities, services and routes at competitive joint rates to permit its continued and unrestricted expansion. The establishment of competitive joint rates via the Ogden gateway and the Rio Grande will have the effect of permitting a greater and unrestricted flow of traffic from and to that territory, thereby increasing the amount of railroad traffic and the need for increased railroad facilities.

Mr. J. L. Pease, a witness for the United States Department of Agriculture, supporting the application of the Rio Grande, stated that it is the position of that Department that the establishment of competitive joint rates via the Ogden gateway route of the Rio Grande will promote the increased distribution of agricultural products. This witness testified that he is a transportation specialist, and Assistant Chief of the Transportation and Warehousing Branch, Production and Marketing Administration, of the United States Department of Agriculture; also that he represented the Secretary of Agriculture, which Department of the Government had an interest in the proceedings because of two statutes—Section 201 of the Agricultural Adjustment Act of 1932, and various sections of the Agricultural Marketing Act of 1946. Mr. Pease testified

that the continued inability of shippers in the "closed door" territory to use the Ogden gateway at joint through rates is not in the interest of the general agricultural public (Consol. R., II, 1069-73); also, that the Department of Agriculture is opposed to the existing routing restrictions on agricultural commodities and is of the view that the small amount of tonnage the Union Pacific might lose, if competitive joint rates were applied through the Ogden gateway, would do no substantial harm to that carrier (Consol. R., II, 1080-81).

But again, whether the prognostications of the experienced witnesses above named are correct as to the amount of freight traffic that the Union Pacific might lose if competitive joint rates were prescribed via the Rio Grande, the estimates of the Union Pacific or others regarding this matter have no relevancy because whether the loss be great or small, or none at all, any loss that follows compliance with or enforcement of the provisions of the Interstate Commerce Act does not constitute a basis for the Commission or the courts to excuse violations of such statutory provisions.

6. The Union Pacific in its Colorado opening brief contemptuously refers to the Rio Grande as a "bridge route" to give the impression that the Rio Grande is not used or usable as a through route or a trunk-line route for transcontinental traffic generally. The Government in its brief, by an obvious *reductio ad absurdum* in the form of an exaggerated illustration at page 60, tries in its own way to convey the erroneous impression that the Rio Grande is an insignificant short line railroad.

Although traffic may be properly referred to as "bridge traffic" where a carrier performs intermediate services only, it is unlikely, if competitive joint rates were established over the through routes via the Ogden gateway and the Rio Grande, that shippers generally would use the Rio Grande merely as a "bridge route." The chief need and desire of the shippers in the "closed door" territory, as shown by their evidence, is not to use the Rio Grande as a "bridge route," in the sense that is implied by the Union Pacific and the Government, but to use it as a part of a through route from and to Colorado common points and points south and east thereof, and, of course, to avail themselves of numerous in-transit privileges on the Rio Grande (Consol. R., II, 1574-76; R. G. Consol. Op. Br. 137, App. F).

Just as the Union Pacific is in error under the evidence in the instant case in stating that the Rio Grande is a "chronically bankrupt" and "financial needs" railroad, so it is in error in stating that the Rio Grande is an insignificant "bridge route."

The Rio Grande is an essential, valuable and necessary link in transcontinental transportation, and as such, its facilities are essential to the maintenance of an adequate, and efficient and economic national transportation system. The Union Pacific, which is admittedly one of the largest railroads of the country, boasts that it has a total mileage of more than 5,000 miles in the "closed door" territory. The evidence in this case discloses that although the Rio Grande is not as large as the Union Pacific, it is nevertheless one of the large and important railroads of the country with over 2,400 miles of line, and that the improvements and replace-

ments made during the last twenty years are such that it is today one of the most up-to-date railroads in the country as to its physical lines and equipment, and one of the most efficiently operated and financially sound (Consol. R., I, 42-45, 80; R. G. Consol. Op. Br. 77-79).

The Rio Grande is not an orphan railroad and should not be so treated, or required to maintain standby through routes for the convenience of the Union Pacific and the Government, when for one reason or another they are disposed to utilize the existing through routes over its lines. Although it is true that the Rio Grande carries a substantial volume of so-called "bridge traffic," which has increased in recent years, the record likewise shows that the Rio Grande originates a large volume of traffic on its lines and is also the destination carrier for a large volume of traffic, and that in recent years, due to the increased industrial development on its lines, its services as an originating and destinating carrier have become increasingly important (Consol. R., II, 1546,1547).

7. At various places in its Colorado opening brief (pages 3, 10, 11, 13, 35, 38, 39, 77, and elsewhere) the Union Pacific undertakes to represent that the sole basis of the Rio Grande's complaint before the Commission is to enable the Rio Grande to achieve "pecuniary gain at the expense of the Union Pacific." This is another misstatement of fact.

A reference to the Rio Grande complaint will disclose that its allegations are not grounded on the idea of achieving "pecuniary gain." The complaint is in the usual form of any complaint filed before the Interstate Commerce Commission by one carrier to correct

alleged violations by another carrier (or carriers) of provisions of the Interstate Commerce Act. Any action based upon such a complaint, if successful, necessarily results in some shift of pecuniary advantage between the carriers involved. No carrier or its officials could justify themselves in the eyes of their stockholders with respect to the expense necessarily incurred in instituting and prosecuting such an action, unless as an incident thereto there is a prospect of "pecuniary gain." This is not to say that the basic purpose of such an action is to improve the carrier's financial position, or that any relief granted by the Commission is necessarily for the purpose of assisting the complainant to meet its financial needs. Every such complaint, as in the instant case, must be primarily based upon appropriate allegations of non-compliance by another carrier or carriers with provisions of the Interstate Commerce Act.

Hence, the Union Pacific's repeated reference to "pecuniary gain" on the part of the Rio Grande as a sole basis for its complaint is a distortion and a smoke screen.

There is a variety of other misstatements and irrelevancies in the Union Pacific's Colorado opening brief (others will be pointed out in connection with the Nebraska case), but those mentioned will suffice to indicate the attempt that has been made to confuse unnecessarily the real issues in the Colorado case.

Points III, IV, V and VI of the Union Pacific Colorado Opening Brief

Points III, IV, V and VI of the Union Pacific's opening brief in the Colorado case undertake to deal with substantive, as distinguished from procedural, issues. The arguments advanced under these points to some extent overlap each other and require a restatement of the substantive issues now before this Court. The Rio Grande believes that these substantive issues may be appropriately summarized as follows:

A. Whether the Colorado court was correct in holding that the Interstate Commerce Commission erred in failing to hold under the undisputed evidence that through routes are in existence as a matter of law over the Rio Grande via the Ogden gateway in connection with the Union Pacific.

B. Whether the Colorado court was correct in holding that the Commission erred in narrowly limiting itself to a consideration of the case under the restrictions of Section 15(4) of the Interstate Commerce Act, thereby imposing upon itself restrictions as to its authority to establish joint rates, which obviously prejudiced its approach to the entire proceeding.

C. Whether the Colorado court, in setting aside the Commission's Order of January 12, 1953, insofar as it denied relief to the Rio Grande, erred in remanding the case to the Commission for further proceedings in conformity with that court's opinion.

In discussing the above questions, we shall endeavor not to repeat the arguments made in the Rio Grande Consolidated Opening Brief, which relate to and in

most respects directly answer the points now argued by the Union Pacific and argued in substantially identical form in the collaborating brief of the Washington Public Service Commission, *et al.* Because of the similarity of the arguments made in the brief of the Washington Public Service Commission, *et al*,, no special reference will be made to that brief, but where occasion requires, special reference will be made in this reply brief to certain of the Government's arguments in its consolidated opening brief.

I.

The Colorado Court Correctly Held That the Commission Erred in Failing to Hold That Through Routes Are in Existence as a Matter of Law Over the Rio Grande Via the Ogden Gateway in Connection with the Union Pacific

In arguing the question of the existence of through routes over the Rio Grande via the Ogden gateway in connection with the Union Pacific, it is indicated at page 56 of its Colorado opening brief that the Union Pacific is satisfied to rely upon the Commission's views with respect to the question of the existence of through routes. An examination of the Commission's views, as quoted at page 56 of the Union Pacific brief, discloses that so far as the scope of the question of the existence of through routes is concerned, the Commission dealt with it the same as did the Colorado court, and not on the basis that the Union Pacific now suggests in its brief — the fantastic basis of whether 113,100,000 through routes are involved. No such fantastic suggestion was contemplated by either the Commission or the Colorado court. Since the appeal here is from the

decision of the Colorado court, it is important to refer to the exact language of that court to determine the scope of what it held with respect to the existence of through routes. On this question, the Colorado court said (Colo. R. 292):

> " * * * In our view, the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond. * * * "

It is to be noted that the Colorado court meticulously confined its holding to the existence of through routes "to and from points on the Union Pacific," and because of the Commission's error in this respect remanded the case to the Commission for a new look, leaving to the Commission the question of how far through routes might or might not extend to and from points on other railroads, such as the Great Northern, the Northern Pacific, and the Milwaukee, with which the Rio Grande has no physical connection.

The Union Pacific, in attempting to follow through on its fantastic theory as to the scope of the matter here to be reviewed with respect to the existence of through routes, states that there is nothing in the record to show that the through routes, admittedly in existence between the Rio Grande and the Oregon Short Line Railroad Company, and the Oregon-Washington Railroad and Navigation Company extend to shipments to and from points on the Great Northern, the Northern Pacific, and the Milwaukee. There is nothing in the record to the contrary, but this question was not decid-

ed by the Colorado court and under the decision of that court is carefully left open for consideration and determination by the Commission upon the remand.

In attempting to show that the Colorado court erred in holding that through routes to and from points on the Union Pacific exist, the Union Pacific in its brief chiefly relies upon the *Thompson* case (343 U.S. 549) and the *Beaman* case (155 I.C.C. 313), and continues to belittle the number of shipments moving over the Rio Grande to and from points in the "closed door" territory via the Ogden gateway. In view of the exceedingly large differential between the higher non-competitive combination rates and joint through rates, the wonder is that so many shipments as shown at pages 13 to 17 of the Rio Grande Consolidated Opening Brief moved on *through bills of lading* from and to points in the "closed door" territory. The attempt to show that these shipments on through bills of lading were not substantial and not sufficient to satisfy the criteria of the *Thompson* and *Beaman* cases is clearly contrary to the realities of the transportation situation here involved—where substantial actual shipments were made over the through route of the Rio Grande via the Ogden gateway. In addition to the evidence of shipments made in the typical year of 1948 to and from the "closed door" territory, and the shipments of troops and military supplies during the war period, there was undisputed evidence that from November 2, 1942, to August 17, 1945, approximately 19,000 carloads of freight traffic moved via the Union Pacific and Rio Grande through route into the "closed door" territory. These 19,000 carloads, although originally routed via the Rio

Grande and the Western Pacific or the Rio Grande and the Southern Pacific, were in fact accepted and carried by the Union Pacific as through shipments, and so delivered by it to points in the "closed door" territory.

A persistent effort is made by the Union Pacific to exclude from consideration, as of no consequence, the through shipments of troops and military supplies and the through shipments of 4,208 carloads of freight moving over the Rio Grande because of storm conditions on the Union Pacific. In the final analysis, it seems to be the theory of the Union Pacific that the through routes over the Rio Grande should be treated as *standby* through routes only. Apart from the fact that there is no such concept under the law, it would be patently unfair and inequitable to establish any such doctrine, giving the Union Pacific all the benefits and conveniences of existing through routes but none of the burdens. Either through routes are in existence, or they are not. No carrier should be allowed to say they are in existence at such times and for such purposes as suits that particular carrier's convenience; then when no such convenience is to be served, be in a position to deny that the through routes which have been so used do not exist, but that their existence is subject to being revived again whenever it suits the convenience of the particular carrier. This is simply a neat device for excluding competition.

The same situation would exist with respect to the shipments of troops and military supplies, to-wit, that, according to the Union Pacific, through routes exist when it is desired that the Rio Grande accept its share of a competitive joint rate on through shipments of

troops and military supplies, but when the Rio Grande's service is not sought, the through routes over which such troops and military supplies moved are said to no longer exist. This theory, which also seems to be advanced by the Government in its opening brief, pages 57-74, would reduce the law as to the existence of through routes to a basis of "off again, on again, gone again, Finnegan."

The Government, at several places in its consolidated opening brief, particularly pages 69-70, suggests that shipments via the Rio Grande at higher combination rates, were so routed over the Rio Grande through "the ignorance or inadvertence of shippers or originating carriers." The fact is that various shippers knowingly use the Rio Grande and knowingly pay the higher combination rates because in view of their particular needs they definitely desire to use the through routes over the Rio Grande.

For example:

Mr. Herbert P. Heidel of the Lincoln Packing Division of the American Stores, Inc., which firm is engaged in cold storage operations and in the slaughter of livestock at Pueblo, Colorado, testified that his company purchases lambs at points in Oregon and Idaho on the Union Pacific and ships them to Pueblo via Union Pacific to Ogden, thence Rio Grande, at the combination rate because the service via that route is more expeditious than via the route of the Union Pacific (Consol. R., I, 414). The testimony of Mr. Heidel was substantiated by Rio Grande witnesses Joe Fuller (Consol. R., I, 486) and Roscoe C. Rich (Consol. R., I, 512).

Mr. Donald L. Reed, President of the Skyland Food Corporation, Delta, Colorado, testified that his firm, which operates a frozen food plant at that point, processing fruits primarily, shipping to Colorado common points and east, purchased apples in the Payette, Idaho, district in 1949 and shipped them to Delta, paying the combination rate over Ogden (Consol. R., I, 142, 143).

Mr. Kenneth G. Self, majority stockholder in the Inter-Mountain Tractor Sales Corporation, distributor for Ford tractors and Dearborn farm equipment at Salt Lake City for Utah, southeastern Idaho and portions of Nevada and Wyoming, testified that his company shipped a car of machinery from the east to Idaho Falls, Idaho, via the Rio Grande to Salt Lake City, Union Pacific beyond and paid the higher combination rate (Consol. R., I, 459, 460).

Mr. D. G. Adams, Branch Manager of the J. I. Case Company, Salt Lake City, Utah, testified that his firm shipped machinery to Idaho via the Rio Grande to Salt Lake City, thence Union Pacific, paying the combination rate through Salt Lake City (Consol. R., I, 545).

Apart from instances of individual shippers who used the through route of the Rio Grande and paid the higher combination rates knowingly and not through ignorance or inadvertence, the Rio Grande through routes were not used by the Union Pacific through ignorance or inadvertence when it used the Rio Grande because of storm conditions on its own lines; neither were the through routes of the Rio Grande used by the Government for its war-time shipments due to any ignorance or inadvertence. The Rio Grande through routes were used because they were there available to

be used. Neither did the Union Pacific accept the 19,000 cars of freight traffic, above mentioned, and share in the division of the rates applied thereto because of ignorance or inadvertence.

Thompson v. United States, 343 U.S. 549, misapprehended by the Union Pacific, and misapplied by the Commission in its Report in the instant case, dealt with a situation where the Commission had erroneously assumed the existence of a through route on grain from Lenora, Kansas, to Omaha, Nebraska, because the Missouri Pacific had interchange facilities at Concordia, Kansas, with the Burlington Railroad, and because there were joint rates and through routes on grain from the origin point to points on the Burlington Railroad intermediate to but short of Omaha. In such circumstances the Commission prescribed joint rates on grain from Lenora, Kansas, a typical origin on the Missouri Pacific, to Omaha, as just and reasonable rates, without finding that through routes existed and without other findings under Sections 15(3) or (15(4) of the Interstate Commerce Act.

This Court overruled the Commission principally on two grounds: (1) that there was no evidence in the case that any grain had ever moved from Lenora, Kansas, to Omaha via the Missouri Pacific and the Burlington via Concordia, and (2) that the mere fact that the Missouri Pacific and the Burlington maintained joint rates and through routes from Lenora to points on the Burlington intermediate to but short of Omaha did not establish the existence of a through route to Omaha. It is clear that in that case the Court was not called upon to define and did not place limits upon, the power of the

Commission to establish joint rates and through routes under the provisions of Section 15(3) and Section 15(4) of the Interstate Commerce Act.

Neither the *Thompson* case nor the *Beaman* case, nor any other case undertakes to specify the number of shipments on through bills of lading necessary to show the existence of a through route. In the *Thompson* case there had been no shipment whatsoever. The language of that case must be read and interpreted in relation to that basic fact. In the *Beaman* case there had been only one shipment, which later was admitted to have been made in error. On the basis of these decisions one might well conjecture as to whether five shipments are enough, or whether ten are required, and so on; but such observations have no place in the instant case because here the shipments ran into thousands of cars, and there is no evidence in the record that the Union Pacific ever refused to issue a through bill of lading when requested to do so for through carriage to and from points on its lines via the Ogden gateway and the Rio Grande. Accordingly it is clear that neither the *Thompson* case nor the *Beaman* case is contrary to the contention of the Rio Grande in the instant case.

Under the decisions in *Virginian Ry. v. United States*, 272 U.S. 658, and *Great Northern Ry. v. United States*, 81 F.Supp. 921 (D.C. Del.), aff'd *per curiam* 336 U.S. 933, as well as under the doctrine of the *Thompson* case and the *Beaman* case, the through route shipments shown by the uncontradicted evidence in the instant case, as summarized in the opinion of the Colorado court, established the existence of through routes to and from points on the Union Pacific in the north-

west area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways, and beyond.

The Union Pacific in its Colorado opening brief, pages 80-81 (but not the Government in its brief) takes the position that the *Thompson* case overrules the *Virginian* case. This untenable theory advanced by the Union Pacific is analyzed and shown to be without foundation in the detailed discussion of the *Virginian* and *Thompson* cases, appearing at pages 62 and 63 of the Rio Grande Consolidated Opening Brief.

The only answer that the Commission undertook to make is shown by the Commission's own statement in its Report (Consol. R., II, 1518, 1523) to the effect that "the Ogden gateway routes are not considered as open or through routes *commercially*, but as routes that are closed to shippers because of the higher rates applicable" (Emphasis supplied). The Colorado court correctly held that the Commission's view in this regard was contrary to law. For in *St. Louis Southwestern Ry. v. United States*, 245 U.S. 136, and *Virginian Ry. v. United States*, 272 U.S. 658, this Court expressly rejected the contention that routes which are "commercially closed" as a result of higher and discriminatory combination rates are not through routes within the meaning of the Interstate Commerce Act.

When the numerous irrelevant arguments in the Union Pacific brief are screened out, its chief argument with respect to the non-existence of through routes rests on the assertion and reassertion that a cancellation of joint rates effectuates a cancellation of through routes.

That this is not the law is shown by the cases cited at pages 54, *et seq.*, of the Rio Grande Consolidated Opening Brief.

The Union Pacific has not cited a single case which holds that the cancellation of joint rates results in a cancellation of through routes. However, in order to confuse the simplicity of the legal issue involved in its position, the Union Pacific indulges in a series of speculations (U. P. Colo. Op. Br. 62-82), theorizing as to what the Colorado court had in mind in deciding that through routes are in existence to and from points on the Union Pacific in the northwest area via the Ogden gateway and the Rio Grande. These speculations are numbered 1 to 9, pages 62 to 82 of the Union Pacific brief, and constitute mere "shadow boxing." They are based on a series of *ifs* as to what the lower court had in mind, but they are not tied directly into what the lower court said as shown by its opinion.

At one point, page 67, it is asserted by reference to some unidentified brief filed before the Commission, which is not a part of the record here, that the cancellation of joint rates was so effective in closing the through routes via the Rio Grande, that the Rio Grande complained to the Commission in the aforesaid brief that the commercial deterrent of higher rates in various ways prevented the movement of traffic through the Ogden gateway via the Rio Grande. There has never been any denial anywhere at any time that the action of the Union Pacific in cancelling the joint rates constitutes a commercial deterrent. Obviously it is on that account that these proceedings were instituted before the Commission. It is a clear distortion of the Rio

Harold B. Willey, Esquire
Clerk, Supreme Court of the United States
Washington, D.C.

Dear Sir:

This letter is written for the purpose of correcting the following error that was inadvertently made on page 44 of the Consolidated Reply Brief of The Denver and Rio Grande Western Railroad Company in the Ogden Gateway Cases, Nos. 117, 118, 119, 332, 333 and 334.

The three cases listed in the first full paragraph on page 44 of that brief are not in the sequence intended and should be put in the following order:

Lumber Rates, Oregon and Washington to Eastern Points, 29 I.C.C. 609;

The Ogden Gateway Case, 35 I.C.C. 131; and

United States v. Union Pacific R.R., 28 I.C.C. 518.

This transposition of the three cases is necessary in order to make the discussion in the three paragraphs that immediately follow them conform to what was intended by the authors of the reply brief.

A copy of this letter has been sent to all counsel of record.

Very truly yours,

FRANK E. HOLMAN
DENNIS McCARTHY
ROBERT E. QUIRK

THE DENVER & RIO GRANDE
WESTERN RAILROAD COMPANY

Grande's position to say or to imply that the Rio Grande admitted or recognized that the Union Pacific had effectually cancelled the through routes by merely cancelling the joint rates.

In claiming that the cancellation of joint rates was understood by the Rio Grande as a cancellation of through routes, the Union Pacific in its brief, pages 63 to 65, cites the following early ICC cases:

> *The Ogden Gateway Case,* 35 I.C.C. 131;
>
> *Lumber Rates, Oregon and Washington to Eastern Points,* 29 I.C.C. 609; and
>
> *United States v. Union Pacific R.R.,* 28 I.C.C. 518.

The first case above cited has nothing to do with the Ogden gateway or the Rio Grande. Through routes via the Ogden gateway over the Rio Grande were not involved in that case. The action is merely an illustration of the well-known proposition that where a carrier either undertakes to cancel a through route or a joint rate, or both, the power of the Commission may be invoked to investigate and to enter an order either approving or disapproving the cancellation of joint rates and/or through routes. In no respect is the case authority for the persistent assertion of the Union Pacific that the cancellation of joint rates effectuates the cancellation of through routes.

The second case above cited involved cancellation of joint *passenger* fares and had nothing to do with *freight* traffic. Moreover, the Commission was careful to make it clear that the cancellation of the joint passen-

ger fares and the imposition of higher rates left the through routes in existence as useable through routes.

In the third case above cited, the action was brought by an auditor of the Department of the Interior (apparently without authority from any executive or superior officer of that department) seeking through routes and joint rates, with no indication of any knowledge on the part of the complainant that through routes were ever in existence or had been used via the Rio Grande and the Ogden gateway. The opinion is sketchy. The Rio Grande was neither a party to the proceeding nor was it accorded any opportunity to be heard. In fact, so far as the appearances listed in the report indicate, it was a proceeding carried on solely between the auditor of the Interior Department and the Union Pacific without the knowledge or intervention of any other interested carriers. The case has no significance so far as the issues in the instant case are concerned.

All three of the foregoing cases cited by the Union Pacific are old and outdated Commission decisions, which antedate this Court's clarifying opinions in the *Virginian* case and the *St. Louis Southwestern Ry.* case to the effect that the cancellation of joint rates does not effectuate a cancellation of through routes.

At pages 69 and 70 of its Colorado opening brief, the Union Pacific asserts that there is nothing in Section 15(8) of the Act which prevents a shipper from routing his traffic over any series of connecting railroads where physical interchange is possible and the carrier has published local rates; that the choice accorded a shipper under 15(8) is a choice between competing lines of railroad and has nothing to do with the

existence or non-existence of through routes. This is a plain distortion of the statute, and disregards the express language of Section 15(8), which is that a shipper may, where "two or more through routes and through rates shall have been established * * * designate in writing by which of such through routes such property shall be transported to destination * * * : *Provided, however,* That the shipper shall in all instances have the right to determine, where competing lines of railroad constitute portions of a through line or route, over which of said competing lines, *constituting a portion of said through line or route* his freight shall be transported." (Emphasis supplied) The Union Pacific's interpretation would permit a shipper to zig-zag his freight all over the United States and over any number of different railroads, and under the guise of transportation use railroad equipment chiefly for warehouse purposes. The plain language of the statute gives a shipper a choice of a particular route only when two or more through routes exist.

Section 15(8) confers the statutory right upon a shipper to designate the route upon delivery of his freight to the origin carrier only where "two or more through routes and through rates shall have been *established* as in this part provided to which through routes and through rates such carrier is a party * * *." It is, therefore, clear that when the origin carrier issues a bill of lading to a shipper which designates the route of the shipment, that fact is conclusive evidence that there was a choice of two or more through routes and that the route selected is an established through route, since otherwise the shipper would have no statutory right t

designate the route. In *Through Routes and Through Rates,* 12 I.C.C. 163, at page 166, which decision was cited by the Supreme Court in the *Thompson* case, 343 U.S. 549, at page 557, the Commission held that " * * * whatever other facts or incidents may serve to prove the existence of a through route, a through bill of lading is, as to the carriers recognizing it, conclusive evidence of the existence of a through route."

At pages 74 and 75 of the opening brief of the Union Pacific in the Colorado case, it criticizes the statement by the Colorado court to the effect that the Union Pacific and other participating railroads "have issued through bills of lading, thereby recognizing the through route status." That criticism is based upon the false premise that under Section 20(11) of the Interstate Commerce Act a railroad must issue a bill of lading on shipments accepted by it for through movement beyond its line, even though no through route has been established. The Union Pacific persists in misunderstanding the provisions of Section 20(11). That section provides that any common carrier, railroad, or transportation company subject to the provisions of this part *receiving property* for transportation " * * * shall issue a receipt or bill of lading therefor, and shall be liable to the lawful holder thereof * * *."

It will thus be seen that no railroad is required to issue a bill of lading under Section 20(11) and to assume liability for loss and damage on a shipment destined to points beyond its line until and unless it receives the property from the shipper. In other words, a railroad is not required to receive property for through movement to points beyond its line unless the railroad

is a party to through routes and has published applicable rates over such routes in accordance with Section 6(1) and other sections of the Act. Section 6(1) of the Act provides that every common carrier subject to the provisions of the Act shall file with the Commission tariffs showing all rates, charges, etc., for transportation:

> " * * * between different points on its own route and between points on its own route and points on the route of any other carrier by railroad, by pipe line, or by water *when a through route and joint rate* have been established. If no joint rate over the through route has been established, *the several carriers in such through route* shall file, print and keep open to public inspection as aforesaid, the *separately* established rates, fares and charges applied to the through transportation. * * * " (Emphasis supplied)

The Union Pacific stubbornly refuses to recognize the distinction between a through route via which the combination of rates may make the route commercially non-competitive and the through route itself. These distinctions are pointedly shown in the *Virginian Ry.* case, 272 U.S. 658, 660-661, and in *United States v. Great Northern Ry.*, 343 U.S. 562, 572. It will be observed that Section 6(1) of the Act provides that if no joint rate over the through route between different carriers has been established "*the several carriers in such through route* shall file, print and keep open to public inspection as aforesaid, the *separately* established rates, fares and charges applied to the through transportation." In other words, the provisions of Section 6(1) plainly show that railroads are not even required to publish separately established rates between points on

their own line for use in connection with through traffic except where *through routes* have been established.

The Union Pacific in its brief seems to base its entire position (after dealing in numerous roundabout theories) upon the proposition that there was nothing else it could do to cancel the existing through routes via the Ogden gateway and the Rio Grande, except to cancel the joint rates and publicize that fact. It claims that this action put the world on notice that the existing through routes were also cancelled. But, however roundabout its approach, the Union Pacific is always necessarily and finally met with the decisions of this Court which definitely hold that the cancellation of joint rates does not cancel through routes. *United States v. Great Northern Ry.*, 343 U.S. 562; *Thompson v. United States*, 343 U.S. 549; *Great Northern Ry. v. United States*, 81 F.Supp. 921 (D.C. Del.), aff'd *per curiam* 336 U.S. 933; *Atchison, T. & S. F. Ry. v. United States*, 279 U.S. 768; *Virginian Ry. v. United States*, 272 U.S. 658, and *St. Louis Southwestern Ry. v. United States*, 245 U.S. 136.

It is hardly believable that the Union Pacific is not aware of how existing through routes may be effectually closed or cancelled. Clearly a through route once in existence, as again and again pointed out, is not cancelled by a mere cancellation of the joint rates that may have applied to it. It can be cancelled, however, by the carrier in question declining to issue through bills of lading over the routes which it desires to cancel as through routes. The undisputed evidence shows that the Union Pacific never took this significant step. On the contrary it has allowed the through routes to con-

tinue to exist as "standby" through routes to be used by it when its convenience and its selfish purposes so dictate, for example, to enable it to accept valuable freight traffic and participate in substantial through revenues, as it did in connection with the 19,000 carloads hereinbefore referred to which were carried at joint rates over the Rio Grande-Union Pacific through routes into the "closed door" territory.

If, when a railroad cancels joint rates over through routes, it also wishes to close the through routes, it can do so legally and factually by simply publishing in its tariffs that it will not thereafter issue a through bill of lading or accept shipments which are routed by shippers over such previously existing through routes. As above indicated, the Union Pacific failed to take this significant and essential step for effectually closing the through routes over the Rio Grande via the Ogden gateway.

Of course, when a railroad does undertake to close through routes by publishing that determination in its tariffs, and thereafter refuses to accept through shipments, any interested party may protest such action before the Interstate Commerce Commission, and upon investigation and hearing by the Commission, may obtain a ruling as to whether the railroad may close the through routes involved. This remedy is provided by Sections 15(3) and 15(7) of the Interstate Commerce Act. In a proceeding thereunder, the burden of justifying the closing of the through routes rests upon the carrier.

II.

The Error of the Commission as to the Existence of Through Routes Prejudiced the Entire Proceedings to the Injury of the Rio Grande

At pages 87, *et seq.*, of its Colorado opening brief, the Union Pacific asserts that even if the Commission erred in its failure to find that through routes existed via the Ogden gateway and the Rio Grande, and even if this is an error of law, that the error is irrelevant and in no way prejudices the Rio Grande, because no one can demonstrate that the error had any effect or influence upon the conclusion of the Commission with respect to its failure to grant the Rio Grande fuller relief. This is an astonishing assertion and requires only a brief examination to expose its fallacy.

If through routes are in existence as a matter of law as found by the Colorado court, then in considering the relief to be granted to the Rio Grande the Commission has no occasion to give any heed to the restrictive provisions of Section 15(4). Having erroneously failed to find that through routes are in existence, the Commission by this self-imposed restriction was required to determine whether the criteria of proof required by Section 15(4) were satisfied. It is almost too simple to require argument that the Rio Grande had the legal right to maintain before the Commission that through routes are in existence and if it was entitled as a matter of law to have the Commission so find, then the only question for the Commission to determine was whether the rates applicable to through routes already in existence were unjust, unreasonable, discriminatory, or prejudicial, or not in the public interest. Questions of

long haul and short haul; adequate and more efficient or more economic transportation; and preference to the originating carrier, as specified in Section 15(4) would not then have been the crucial issues before the Commission.

The Union Pacific again and again stresses the fallacy that the Rio Grande suffered no prejudice through the Commission's failure to find through routes in existence via the Ogden gateway over the Rio Grande, by suggesting that even if the case is remanded to the Commission, the Commision has already given full consideration to the Rio Grande's contentions as to its right to competitive joint rates to the same extent as if the Commission had not considered itself bound by the limitations of Section 15(4). Obviously, where a commission, or a court, or other tribunal has acted under some special statutory limitation, because it has committed an error of law in concluding that its power was limited by such a statute, there can be little doubt that its consideration of the matter was prejudiced by its own erroneous conclusion as to the necessity of limiting its power.

What the exact extent of that prejudice is cannot, of course, be accurately determined, and it need not be at this time. No one can undertake to pre-judge, and the Colorado court itself did not pretend to do so, what the nature and extent of the Commission's administrative findings will be when it considers the case free of the limitations of Section 15(4). However, apart from what the Commission may or may not do in the future as to rates, the Rio Grande is entitled to have the case remanded to the Commission so that any doubt that has

heretofore prevailed as to the existence of through routes will be adjudicated and settled. This in itself is a substantial and valuable right inhering not only in the Rio Grande, but in the shippers. It is important for the shippers to have the question settled so they may have an undisputed right to choose as between two through routes as permitted by Section 15(8). It is equally important to the Rio Grande that the shippers, both within and without the "closed door" territory, have such a right of choice. However small or large the revenue which may come to the Rio Grande from the shippers exercising such choice, there is no doubt that there will be some such revenue, as indicated by the shipments that have heretofore moved over the Rio Grande by shippers exercising their choice on the assumption that through routes exist.

The question of the existence of through routes via the Rio Grande through the Ogden gateway in connection with the Union Pacific was from the beginning the first and basic issue in the litigation. The Rio Grande as original complainant alleged the existence of such through routes (Colo. R. 6). The Commission admitted that the existence of through routes was the first issue to be decided, but never clearly decided it. The Colorado court recognized the existence of through routes as the first and basic issue, and decided it in favor of the Rio Grande as a matter of law. It goes without saying that for the Commission to fail to decide this issue, or to decide it incorrectly, and as a result operate under the highly restrictive provisions of Section 15(4) prejudiced the whole proceeding as the Colorado court held.

The Union Pacific in its brief (pages 93, *et seq.*) particularly charges the Colorado court first with "commingling and confusing" the provisions of Sections 1(4), 3(4), 15(4) and 15(3) of the Act, and later with undertaking to make administrative findings under those sections.

In quoting from the Colorado court's decision regarding these matters, the Union Pacific overlooks the fact that the quotations are from that part of the court's opinion dealing with the procedural issues raised by the Union Pacific's Motion to Dismiss, and that the court was following the normal judicial process of pointing out that *if* the allegations and contentions of the complainant were true, then the Rio Grande had standing to maintain the action as against the procedural attack. For such a purpose the allegations of a pleading are deemed to be true. The proper way to approach such a problem is to use a series of "ifs" to indicate that the court is merely hypothesizing the truth of the allegations.

An examination of the Colorado court's opinion on the merits will disclose that the court carefully refrained from invading the administrative province of the Commission, and limited its decision to two propositions of law, namely, (1) that under the undisputed evidence in the case, the Commission erred in failing to hold that through routes are in existence over the Rio Grande via the Ogden gateway in connection with the Union Pacific, and (2) that in passing on whether the defendant should be required to establish or maintain future just, reasonable, and non-discriminatory competitive joint rates, the Commission is to apply the

provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act, free from the limitations imposed by Section 15(4).

III.

The Colorado Court Was Correct in Remanding the Case to the Commission for Further Proceedings in Conformity with the Court's Opinion

The Union Pacific in its Colorado opening brief at page 98, *et seq.*, undertakes to suggest that the District Court exceeded its power in remanding the case to the Commission for further proceedings in conformity with its opinion. An attempt is made to support the foregoing proposition—on the theory that the Colorado court in its remand undertook to make administrative findings favorable to the Rio Grande. As we have already pointed out, the Colorado court meticulously avoided invading the administrative field and remanded the case solely for the purpose of permitting the Commission to correct its error with respect to its failure to find through routes in existence, and thereafter to reconsider the case free from the limitations of Section 15(4).

In this instance, as in many others in its opening brief, tying the argument to some initial fallacy as to what the Colorado court decided, the Union Pacific then undertakes to say that since the word "remand" does not appear anywhere in the statute (28 United States Code, Section 1336), authorizing court review of Commission orders, that a court may not remand a case to the Commission for the correction of its errors of law. A mere statement of this proposition is suffi-

cient to demonstrate the absurdity of the position of the Union Pacific in this regard. Courts have never hesitated to remand cases to the Commission where, as in the instant case, it was necessary to send the case back to the Commission to correct an error of law. Thus in *Henderson v. United States*, 339 U.S. 816, this Court reviewed a judgment of a three-judge district court in connection with an Interstate Commerce Commission decision, and concluded at p. 826 as follows:

> "The judgment of the District Court is reversed and the cause is remanded to that court with directions to set aside the order of the Interstate Commerce Commission which dismissed the original complaint *and to remand the case to that Commission* for further proceedings in conformity with this opinion." (Emphasis supplied)

See also *Mitchell v. United States*, 313 U.S. 80, 97.

Finally to summarize again what has been pointed out earlier in this reply brief, both the Union Pacific brief and the brief of The Washington Public Service Commission, *et al.* confuse and complicate the actual issues before this court upon this appeal. These actual issues (leaving out the one raised with respect to the right to remand, which is palpably too fallacious to be further considered as an issue) may be restated as follows:

A. Whether the Commission erred in failing to hold that through routes are in existence as a matter of law over the Rio Grande via the Ogden gateway in connection with the Union Pacific.

B. Whether in narrowly limiting itself to a consideration of the case under the restrictions of Section

15(4) of the Interstate Commerce Act, the Commission imposed upon itself a restriction upon its authority to establish joint rates which prejudiced the entire proceeding to the injury of the Rio Grande.

Both of these issues were resolved in favor of the Rio Grande by the Colorado court. The action of the Colorado court is clearly supported by the law and by the evidence in this case.

CONCLUSION

For the reasons stated, the judgment of the United States District Court for Colorado should be affirmed and the case remanded to the Commission to proceed in conformity with the opinion of that court.

NEBRASKA DECISION

Appeals Nos. 117, 118, 119

The decision in the Nebraska case was unsatisfactory to all parties. The Denver and Rio Grande Western Railroad Company is the appellant in No. 117; the Union Pacific Railroad Company, *et al.*, and the Washington Public Service Commission, *et al.*, are appellants in No. 118; the United States of America, the Interstate Commerce Commission and the Secretary of Agriculture are appellants in No. 119. In No. 117 and No. 119, the appellants (the Rio Grande and the Government) seek a reversal of the Nebraska decision and a restoration of the Commission Order of January 12, 1953. In No. 118, the Union Pacific Railroad Company, *et al.*, and the Washington Public Service Commission, *et al.*, seek both a reversal of the Nebraska decision and

a reversal of the Commission Order. The brief of the Washington Public Service Commission, *et al.*, is largely a paraphrase of the Union Pacific brief and so nearly identical that it does not require separate attention or answer.

UNFOUNDED INFERENCES, MISSTATEMENTS AND IRRELEVANCIES IN THE NEBRASKA OPENING BRIEF OF THE UNION PACIFIC

The Union Pacific Nebraska opening brief contains so many unfounded inferences, misstatements and irrelevancies that it must be read with great caution before determining the extent to which reliance upon the factual statements therein is possible. Among the more serious of the irrelevant or erroneous statements are the following:

1. The Union Pacific erroneously states or infers (pp. 3, 17, 19 and elsewhere) that the relief granted the Rio Grande by the Commission involves an annual diversion of traffic "* * * resulting in a potential estimated revenue loss to the Union Pacific alone of more than $11,000,000 annually, * * *." This estimate is apparently based on the fantastic assumption that the Union Pacific would lose in its entirety all of the traffic covering the named commodities. No attempt has been made to explain why the allegedly adequate, efficient, shorter and cheaper (See U.P. Neb. Op. Br. 5 and numerous other places) Union Pacific will lose substantially all of its traffic to the slower, more expensive and more onerous (See U.P. Neb. Op. Br. 9 and numerous other places) Rio Grande, when the rates over the Rio Grande will be no lower than those over the Union Pa-

cific. It is, of course, ridiculous for the Union Pacific to assume or claim that it will lose all of this traffic or any substantial portion thereof with the establishment of equal rates via Ogden and the Rio Grande.

Witness Lynch of the Union Pacific admitted that the Union Pacific based its case all the way through on the assumption that it would lose all of the estimated potential traffic (Consol. R., I, 735). Witness Burns of the Union Pacific became more enthusiastic and testified that the Union Pacific would suffer a revenue loss of approximately $50,000,000 per year on such traffic (Consol. R., I, 782, 865; Consol. R., II, 1568). While the Union Pacific, as it has consistently done throughout its opening brief, gives no basis for the loss of $11,000,000 annually, it is a logical assumption that the loss was computed in a manner similar to that used by Witness Burns when he estimated the Union Pacific would suffer an annual loss of approximately $50,000,000 on the total potential.

On the other hand, Witness Hogue of the Rio Grande testified that the Rio Grande's present participation in transcontinental traffic is only about 10% of the potential and that, as a result, in his opinion the Union Pacific's estimated revenue loss of approximately $50,000,000 per year is excessive by at least 90% (Consol. R., II, 1134, 1135, 1543, 1544). Moreover, Witness Pease of the United States Department of Agriculture stated in his opinion that if the Rio Grande obtained 1,000 carloads per year "they would be doing pretty well" (Consol. R., II, 1080, 1544).

As concluded by the Commission, based upon all the

evidence presented, it is impossible to "find definitely, or to estimate with any degree of accuracy, how much traffic might be diverted to the Rio Grande if all of the rates sought were to be made applicable over that carrier, nor how much traffic will be diverted to the Rio Grande under the restricted findings herein made" (Consol. R., II, 1570).

2. The Union Pacific repeatedly and disparagingly refers to the Rio Grande as a "bridge route" because it handles "bridge traffic," which involves shipments as to which a carrier performs intermediate service only. At pages 16, 17, 18, 21, 22, 32, 33, 43-47, 75, 125, 126 and 172, and particularly at page 46 of its opening brief, the Union Pacific undertakes to claim that the handling of "bridge traffic" characterizes a railroad as a "financial needs" railroad. There are many well-known railroads in the United States which are "bridge" lines. The Union Pacific, for example, depends upon "bridge traffic" to a very great extent. It "bridges" traffic between points east of the Missouri River and Salt Lake City, in connection with the Western Pacific and between such eastern points and Ogden, in connection with the Southern Pacific, and points on its preferred connections in the "closed door" territory, as well as between various other points located on its lines and connections. Contrary to the inference of the Union Pacific, there is nothing reprehensible about "bridge traffic." The fact that the Rio Grande, one of seven available transcontinentals, now carries 10% of the annual transcontinental "bridge traffic" testifies to the public need for competitive and reasonable rates over its lines (Consol. R., I, 163).

3. Expressly at page 56 of its Nebraska Opening Brief the Union Pacific states that the Commission found " * * * that service over Union Pacific's shorter and faster routes is not only equal but greatly superior in every way to service via the Rio Grande for the through traffic concerned." This quotation is taken out of context and is therefore misleading. What the Commission actually found, after a general discussion, of which the quoted statement is only a fragment, was that "While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated." On such traffic the Commission found that " * * * the defendants' routes are inadequate and less economical than are the Rio Grande routes" (Consol. R., II, 1574, 1575).

4. The Union Pacific in its Nebraska Opening Brief at page 3, and again, inferentially, at pages 18, 32, 96 and 115, states that the establishment of competitive joint rates via Ogden in connection with the Rio Grande " * * * would short haul Union Pacific routes 925 miles * * * ." This statement is apparently based upon the examples cited by the Commission as to the hauls from Lewiston, Idaho and Centralia and Seattle, Washington (Consol. R., II, 1538). However, where traffic is routed beyond Denver over the Union Pacific, the Union Pacific receives a further haul of 560 miles to Omaha and 640 miles to Kansas City (Consol. R., II, 1537-1538), thereby substantially reducing the Union Pacific loss in mileage. Furthermore, the hauls of the

Union Pacific of 847, 937 and 1029 miles to Ogden from Lewiston, Centralia and Seattle, respectively, are substantially longer than many of the short hauls the Union Pacific accepts to junctions with its preferred connections (Consol. R., II, 1538, 1539; see also R. G. Consol. Op. Br. 133, App. C, 171, 172, App. G). Thus the Union Pacific statement in this regard is again misleading.

5. The Union Pacific at numerous places in its brief expressly or inferentially complains that it is entitled to protect its long haul (pp. 18, 21, 30, 31, 50, 67, 143, 144, 156, 157, 174, 203), that it has done so for 75 years (pp. 8, 17, 18), that as originating carrier it has an inherent right to its long haul (pp. 14, 31, 41, 229-232) and that in-transit privileges cannot be used to deprive it of its long haul (pp. 10, 11, 37, 59, 92-96, 121, 130, 198-205). As a matter of fact, the Union Pacific has not been particularly zealous in protecting its long haul in dealing with its railroad connections other than the Rio Grande.

Appendices C and G of the Rio Grande Consolidated Opening Brief (pp. 133, 171, 172) based on Section F of Exhibit 3, by Witness Earley, and the testimony of Witness Earley (Consol. R., I, 101-11) show numerous typical examples of distances and routes over which the Union Pacific, as well as its preferred connections, take less than their respective long hauls. These appendices and the testimony of Witness Earley disclose that the Union Pacific freely joins its preferred railroad connections in competitive joint rates covering through routes that traverse the northern and southern portions of the United States, as well as in routes

which involve hauls of hundreds of miles through Canada. In other words, the Union Pacific singles out the Rio Grande, and in the exercise of its monopoly in the "closed door" territory, undertakes to prevent any traffic from moving on through routes via the Ogden gateway over the Rio Grande at anything except the higher non-competitive combination rates.

6. At pages 118 and 119 of its opening brief, the Union Pacific asserts that the Rio Grande and not the Union Pacific should be "punished" for maintaining the existing higher combination rates which were found by the Commission to be discriminatory, unreasonable and prejudicial. It was clearly understood by the Commission that the existing combination rates are the result of the discrimination, prejudice and unreasonableness practiced by the Union Pacific in favor of its own lines and those of its preferred connections, in refusing to accord the Rio Grande the same joint rate treatment as that accorded to its railroad connections other than the Rio Grande, and not the result of any wrongful act of the Rio Grande in connection with the maintenance of combination rates (Consol. R., II, 1570-1579).

It should be noted at this point that throughout its brief there is a basic confusion on the part of the Union Pacific of three entirely independent issues. First, the Rio Grande is not complaining that any of the local rates (either of the Union Pacific or the Rio Grande) are discriminatory, prejudicial or unreasonable, but that the discrimination, prejudice and unreasonableness of the practices of the Union Pacific lie in its refusal to accord joint rates, via the Ogden gateway over the Rio

Grande, to the Rio Grande and to the shippers in the "closed door" territory. The other two issues as to whether through routes are already in existence or if not, whether new through routes should be established under Sections 15(3) and 15(4), are separate issues to be resolved independently of questions of discrimination, prejudice or unreasonableness as to rates.

Unnecessary confusion has been injected into this litigation by the constant commingling of issues by the Union Pacific and the making of broadside arguments on all the issues under whatever point or points the Union Pacific undertakes to discuss the case.

7. The Union Pacific at page 118 of its opening brief argues that since neither it nor its preferred connections demand or collect rates that exceed their own joint rates for the transportation of the specified commodities, they are being improperly ordered to cease, desist and abstain from publishing demanding or collecting rates that exceed their own joint rates and that the Commission erred in requiring them to so cease, desist and abstain from doing what they are not doing.

This is but one of many examples of an attempt to distort what the Commission actually did or said. No one charges the Union Pacific with collecting a rate in excess of its own joint rates on through shipments moving over its own lines. The complaint is that it does demand and collect rates that exceed its own joint rates on through shipments via the Ogden gateway over the Rio Grande. This was the issue before the Commission which the Commission resolved by prescribing competitive joint rates. There was no issue before the Com-

mission as to wrongful conduct of the Union Pacific in the rate schedules applicable to its own lines.

8. A further obvious confusion of the issues appears in the Union Pacific brief (page 119) where it is suggested that shippers in the "closed door" territory cannot be said to be debarred from effective participation in national markets because they get better service over the lines of the Union Pacific than they could over the Rio Grande. This ignores the Commission Finding that in order to participate effectively in national markets shippers to and from the "closed door" territory need as wide-spread and as flexible through routing opportunities as possible (Consol. R., II, 1574, 1575). That Finding is based upon the undisputed evidence that shippers of the commodities specified in the Order of the Commission need to be able to "feel out" the markets along the routes of the Rio Grande, and to be able effectively to avail themselves of in-transit and reconsignment privileges along the Rio Grande. This accords with the principle of "adequate, and more efficient or more economic, transportation." It enables shippers to avail themselves of in-transit and reconsignment privileges, both along the lines of the Rio Grande and its connections as well as long the lines of the Union Pacific. Shippers who want to "feel out" markets in Rio Grande territory obviously cannot ship competitively with those desiring to "feel out" markets via the Union Pacific (see R.G. Consol. Op. Br. 137, App. F).

9. At twelve points in its opening brief (pp. 6, 10, 34, 35, 36, 55, 56, 60, 61, 107-113, 121, 130) the Union Pacific injects the idea that the Commission found that competitive joint rates were needed *solely* because the

Union Pacific does not serve Rio Grande territory, and claims that on this basis the long haul protection of Section 15(4) is in effect done away with. This is a further attempt to confuse the issues by charging the Commission with making a Finding which it never made.

10. The Union Pacific erroneously states (U.P. Neb. Op. Br. 11, 26, 35, 61, 63) that the Commission improperly based its Conclusion that relief was needed in order to provide adequate and more economic transportation upon its Finding that the proposed Rio Grande route is inadequate and also inefficient and uneconomical; whereas, what the Commission actually found was that *the conduct of the Union Pacific* in not according shippers competitive joint rates over the Rio Grande resulted in inadequate, inefficient and uneconomic transportation. This is another illustration of the repeated efforts of the Union Pacific to confuse and twist to its own purposes the actual Findings and Conclusions of the Commission.

11. Although the matter has no relevancy, the Union Pacific in its brief repeatedly states (pp. 5, 17, 18, 127, 165) that the Rio Grande has no trackage in the "closed door" territory and proposes to render no service in that territory. This is not only irrelevant but confusing. By the same token, the Union Pacific has no trackage in Illinois and in many other states, nor does it render any service in such areas. Yet, it vigorously asserts its right to the benefit of the competitive joint rates that apply between the "closed door" territory and points in Illinois and other points in the east and points in the south, where it has no lines.

12. The Union Pacific again and again in its brief makes statements, unsupported by any record reference, (see *e.g.* pp. 15-19) and other statements (see *e.g.* pp. 50, 96, 117, 230, 231) wherein it relies on various cost figures in no way supported by any underlying or particularized studies covering the respective routes involved in this litigation. The Commission clearly recognized that these cost figures, introduced and relied upon by the Union Pacific, were of little or no value because after considering them it specifically pointed out that they "were not based on studies of particular movements of traffic over the respective routes" (Consol. R., II, 1571).

13. The Union Pacific, throughout the proceedings and again in its opening brief in this Court, has undertaken to graphically indicate the alleged differentials in mileage between its routes and the Rio Grande routes by a map or chart (attached to both its opening briefs as Appendix A) showing the claimed differentials in oblongs thereon. This map is unreliable in that it does not fairly represent the differentials or comparative distances that actually exist with respect to the through routes over which Union Pacific traffic normally and ordinarily moves. The differentials, ranging from a minimum of 33 miles to a maximum of 219 miles (from which differentials the Union Pacific compiles many of its other alleged mileage differentials), are in various instances based upon routes which are not the long haul routes customarily used by the Union Pacific and actually required by the tariffs.

Specific errors of the Union Pacific's map or chart in this regard are set forth in detail in the Rio Grande's

Consolidated Opening Brief at pages 21, 22 and 23 where it is shown that the customary through route of the Union Pacific is actually longer—for example, to a point like New Orleans—than the customary through route of the Rio Grande.

Without indulging in unnecessary repetition, reference will be made here only to the last named situation at New Orleans, where the claimed differential in mileage in favor of the Union Pacific route is shown on its map as 33 miles, but where the actual differential in mileage is in favor of the Rio Grande by 35 miles.

In the case of New Orleans traffic from and to the "closed door" territory customarily moves and is required to move in most instances over the Union Pacific via its long-haul route through Kansas City, thence over connecting railroads, such as the L&A to Shreveport, Louisiana, and KCS to New Orleans, which long-haul route via the Union Pacific is 35 miles longer than the route over the Rio Grande and the latter's connections (UP-Ogden, Utah; Rio Grande-Pueblo, Colo.; C&S-Sixela, N.M.; FW&D-Ft. Worth, Tex.; T&P) to New Orleans (Consol. R., I, 132-35; Earley Exhibit 3, Sec. K, pp. 2, 3, 5-15, line 12).

14. The Union Pacific (pp. 158 to 173 of its opening brief) in dealing with what it calls "the overwhelming preponderance of evidence against the Rio Grande" makes particular point of the fact that the Union Pacific had 120 public witnesses, and at pages 167 and 168 announces the novel proposition that there is no good reason why the Commission should have accepted the testimony of the 50 witnesses supporting the Rio

Grande and not have *equally* accepted the testimony of the 120 witnesses who testified for the Union Pacific. If a commission or a court accepted *equally* the testimony for and against the factual issues in any controversy, there would be a stalemate and no decision could be rendered one way or another. Moreover, a mere superiority in the number of witnesses does not give one side the right to claim it has the preponderance of evidence. Of course the Union Pacific's witnesses testified in behalf of the Union Pacific and insisted there were no "pocket markets," and that there was no need for through routes over the Rio Grande for vegetables and perishables, etc.; but the witnesses in behalf of the Rio Grande testified to the contrary. The Commission was in the best position as a part of its administrative function to determine the intelligence, the responsibility, and the over-all credibility of the witnesses.

15. At eight different points in its Opening Brief (U.P. Neb. Op.Br. 10, 11, 37, 59, 92-96, 121, 130, 198-205) the Union Pacific argues that the Commission has no power to establish through routes or to prescribe competitive joint rates for the purpose of making in-transit privileges effective. The contention that in-transit privileges are not embraced in the statutory definition of transportation, is an unjustifiable distortion of the statutory language. Section 1(3)(a) reads in part as follows:

> "* * * The term 'transportation' as used in this chapter shall include locomotives, cars, and other vehicles, vessels, and *all instrumentalities and facilities of shipment or carriage,* irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with

the receipt, delivery, elevation, and *transfer in transit*, ventilation, refrigeration or icing, storage, and *handling of property* transported. * * * *" (Emphasis supplied)

The language "all instrumentalities and facilities of shipment or carriage," and the language "transfer in transit," and the language "handling of property transported," sufficiently negative the contention of the Union Pacific. The Commission has frequently dealt with in-transit privileges as being a part of transportation service as defined in Section 1(3)(*a*) of the Act.

Further reference to the many other unfounded inferences, misstatements and irrelevancies in the Union Pacific Nebraska opening brief is deemed unnecessary in order to demonstrate that the statements and inferences in that brief must be approached with great caution.

SUBSTANTIVE ISSUES — NEBRASKA CASE

The Nebraska opening brief of the Union Pacific *et al.*, in No. 118 consists of 243 printed pages.* That brief presents five main points in which it is claimed the Nebraska court erred in declining to reverse the Order of the Commission *in toto*. In addition there are numerous breakdowns and sub-points which are interrelated to the five principal points. Since the issues in the Nebraska case are comprehensively stated and ar-

---

* As heretofore indicated, the Nebraska Opening Brief of the Washington Public Service Commission, *et al.*, is merely a paraphrase of the points and arguments advanced by the Union Pacific in its opening brief, and therefore requires no separate answer.

gued at pages 85-115 in the Consolidated Opening Brief of the Rio Grande, an appellant in No. 117, it would not only be an imposition on this Court, but it is unnecessary to repeat these arguments here.

The following portion of the Rio Grande Consolidated Reply Brief will deal with the arguments which the Union Pacific advances in its opening brief in the Nebraska case.

I.

The Rio Grande Did Not Institute the Proceedings to Assist It in Meeting Its Financial Needs, and the Commission Properly Excluded Any Such Consideration from Its Determination of the Issues

In its first point the Union Pacific alleges that the Nebraska court erred in failing to hold that the complaint of the Rio Grande was filed with the Commission for the purpose of enabling the Rio Grande to meet its financial needs and in these circumstances the Commission was prohibited from prescribing joint rates and through routes on the commodities named in its Order via the Rio Grande and between the territories described. The prohibition relied upon by the Union Pacific is set forth in Section 15(4) of the Interstate Commerce Act, which provides:

> "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

Section 15(4) must be considered in connection with Section 15(3) and other provisions of the Interstate Commerce Act, and in connection with the basic policy of the Act. The Order of the Commission assailed by

the Union Pacific in its appeal found, *inter alia* (Consol. R., II, 1578):

> "That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City in connection with the Rio Grande [on the commodities involved] * * *."

The Commission also found that the rates assailed on the commodities and from and to the points described are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that such rates exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes. These findings were made in the Report of the Commission, 267 I.C.C. 611, at page 659 (Consol. R., II, 1579).

In its decision which prescribed joint rates and though routes on the traffic involved, the Commission said (Consol. R., II, 1529):

> "Consistently throughout the proceeding, the complainant [the Rio Grande] disclaimed any intent to prosecute the complaint for the object of assisting it in meeting its financial needs. The prohibition referred to is directed to us; not to any complaining carrier. In reaching our conclusions herein, no consideration has been given to the financial needs of the complainant. The motion [to dismiss] is overruled."

It will be observed that—

(a) the clause in Section 15(4) provides that

"No through route and joint rates * * * shall be established by the Commission for the purpose of assisting any carrier * * * to meet its financial needs."

(b) the Commission properly found that the prohibition in that clause is directed to the Commission and not to the complaining carrier, and that

(c) in reaching its conclusion no consideration was given by the Commission to the financial needs of the Rio Grande.

The argument of the Union Pacific is based upon a false premise and a misconception of the language of the clause in Section 15(4). Its argument assumes that the prohibition in the clause concerning financial needs is directed at the complaining carrier, which, as we have just indicated, is not true. Even if in the instant case the Rio Grande filed its complaint with the Commission to enable it to meet its financial needs (and it did not do so), the clause in question would not be applicable unless the Commission prescribed the relief sought on that basis.

The record shows that the Rio Grande is in a sound financial condition and that at no time has it claimed that the relief sought before the Commission was for the purpose of aiding it to meet "its financial needs." While Mr. Wilson McCarthy, the late President of the Rio Grande, admitted on the witness stand that the stockholders would naturally be interested in improving the financial condition of the Rio Grande, neither he nor anyone else stated or claimed that the financial

needs of the Rio Grande are the reasons for seeking the establishment of competitive joint rates. It is one thing to admit, as Mr. McCarthy did, that should the relief sought by the Rio Grande be granted one result would be to improve revenues of the Rio Grande and an entirely different thing to rely upon "financial needs" as the ground for the relief sought.

In its Nebraska opening brief at pages 43 and 44, the Union Pacific selected two questions out of the numerous questions asked on cross-examination and the answers made to those questions by Mr. McCarthy. The two questions and answers as quoted in the brief of the Union Pacific are:

> "Q. That is, from the standpoint of what I will say the treasury of the Rio Grande and the stockholders, that would be the purpose?
>
> A. Yes, we hope to improve our condition if we can get these through rates.
>
> Q. Insofar as the corporate management and the stockholders of the Rio Grande are concerned, that would really be the only immediate purpose to them, would it not?
>
> A. Yes—that they would want to improve the financial condition of our railroad."

The third question and answer which immediately followed the two questions quoted was omitted from the brief of the Union Pacific. That question and answer are here quoted (Consol. R., I, 48):

> "Q. Yes. That, of course, is apart from what you anticipate or what you have said would be some additional transportation conveniences that you would expect the public to derive?
>
> A. That is right."

That question and the answer by Mr. McCarthy, which the Union Pacific did not see fit to quote in its brief filed in this Court, together with the affirmative position of the Rio Grande in the proceeding before the Commission and as an intervening defendant in the Nebraska court, clearly reveal that in filing the complaint with the Commission the aim of the Rio Grande was and is to obtain equal treatment with the Union Pacific and its other connections by persuading the Commission to prescribe the same basis of competitive joint rates on traffic to and from the "closed door" territory via the Union Pacific, as apply not only via the Rio Grande through Ogden, Salt Lake City and Provo to and from California, western Oregon and Washington points and the Union Pacific, but also apply generally via transcontinental railroads between points in western territory and points in the east and southeast (Consol. R., I, 92).

If the Union Pacific is right in its contentions, no common carrier could ever seek an order from the Commission for competitive joint rates and through routes via its connecting railroads if the granting of such relief would increase the revenues or improve the financial condition of the complaining carrier. Section 13(1) of the Interstate Commerce Act specifically provides that any common carrier has the right to file a complaint with the Commission against other common carriers of anything done, or omitted to be done, by any common carrier subject to the Act in contravention of the provisions thereof. The complaint of the Rio Grande alleged that the failure and the refusal of the Union Pacific, *et al.*, to establish competitive joint

rates applicable to the traffic and between the points involved via the route of the Rio Grande through Ogden constitute violations of various provisions of the Interstate Commerce Act. In *The Chicago Junction Case*, 264 U.S. 258, at page 267, the Court after distinguishing that case from another case said that the issue before it involved:

> "* * * injury inflicted by denying to the plaintiffs equality of treatment. To such treatment *carriers* are, under the Interstate Commerce Act, as fully entitled as any shipper. *Pennsylvania Co. v. United States*, 236 U.S. 351." (Emphasis supplied)

The fact that the Order of the Commission which prescribed competitive joint rates and through routes on particular commodities may cause some loss of revenue to the Union Pacific and some increase in revenue to the Rio Grande, if the rates prescribed are established, is an incident to the exercise by the Commission of valid statutory powers. This Court has repeatedly held that the mere fact that an order of an administrative tribunal may result in loss of revenue to some of the litigants and gain to others does not constitute the taking of property contrary to the Fifth Amendment nor is it a bar to the proper exercise of the authority to prescribe rates, routes or regulations. *Baltimore & O. R. R. v. United States*, 345 U.S. 146; *American Trucking Ass'ns v. United States*, 344 U.S. 298, 322; *United States v. Berwind-White Coal Mining Co.*, 274 U.S. 564, 583, 584; *Atlantic Coast Line R. R. v. North Carolina Corp. Comm'n*, 206 U.S. 1; *Chicago, B. & Q. Ry. v. Illinois*, 200 U.S. 561; *United States v. Lynah*, 188 U.S. 445, and *Legal Tender Cases*, 12 Wall. 457, 550.

Under the "financial needs" clause of Section 15(4) and the decisions cited, the question whether the relief granted by the Commission would increase the revenues of the Rio Grande and thereby improve its financial condition is irrelevant. However, the great improvements in the physical properties of the Rio Grande, in its efficiency of operation during the last twenty years and the soundness of its financial condition are such as to brand as absurd the claim by the Union Pacific that the complaint of the Rio Grande was filed with the Commission to obtain an order to enable the Rio Grande to meet its "financial needs."

The testimony of Mr. McCarthy referred to on pages 77-79 of the Rio Grande Consolidated Opening Brief reveals that the Rio Grande acquired from the trustees on April 11, 1947 the property since operated by it (*Denver & R. G. W. R. R. Reorganization,* 267 I.C.C. 862); that during the trusteeship approximately $73,000,000 were expended to improve the property; that since the Rio Grande acquired the property on April 11, 1947, many additional millions have been expended for that purpose. These improvements include large sums for additions and betterments, the acquisition of diesel power and other modern and up-to-date equipment, the establishment of centralized traffic control, the installation of automatic signalling, new and heavier rails, improved ballast and other physical improvements. Moreover, since 1935 the main line of the Rio Grande between Ogden, Salt Lake City and Provo, Utah, and Denver, Colorado, has been substantially shortened and virtually rebuilt (Consol. R., I, 42 *et seq.*).

As the result of these improvements and the large

expenditure of money, the Rio Grande has shown proportionately greater gains in increased revenue and in the reduction of operating expenses than many other Western District Class I railroads. The Union Pacific presentation of one phase of its case to the Commission confirmed the foregoing fact (Consol. R., II, 1651, 1652). In 1949 and 1951 the operating ratio, the total maintenance ratio, and the transportation ratio of the Rio Grande were in each category lower than the same ratios of the Union Pacific (Consol. R., II, 1652). Among other things, Exhibit 28 of Witness Webb of the staff of the General Auditor of the Union Pacific shows that while Class I railroads in the Western District had an increase in operating revenues of 178.31 per cent in 1949 over 1930 and that four transcontinental lines, including the Union Pacific, had an increase of 191.62 per cent in 1949 over 1930, the Rio Grande had an increase of 220.82 per cent in 1949 over 1930 (Consol. R., I, 872-73). Mr. Webb's testimony discloses that the operating conditions on the Rio Grande are comparable with operating conditions on other leading transcontinental railroads (Consol. R., I, 876).

The Commission properly understood that the "financial needs" clause of Section 15(4) of the Interstate Commerce Act is directed to the Commission and not to a complaining carrier. It specifically held that it did not consider the "financial needs" of the Rio Grande in issuing its Order and in denying the motion of the Union Pacific to dismiss the complaint on the grounds that the complaint of the Rio Grande was filed to meet its "financial needs." Nor did the Nebraska court err in refusing to annul the Order of the Commission on the

foregoing ground as urged by the Union Pacific. In the Consolidated Opening Brief of the Rio Grande it was shown that where the Nebraska court did err was in narrowing the scope of the Order of the Commission, by cutting down the relief granted the Rio Grande by the Commission.

II.

The Nebraska Court, Insofar As It Sustained the Relief Prescribed, Correctly Reviewed the Commission Order of January 12, 1953

In its second main point the Union Pacific contends that the Nebraska court erred in failing to judge the Order of the Commission by the standards the Commission invoked and in substituting its own standards for those used by the Commission, and that the court also erred in refusing to hold that the Order of the Commission is entirely void because the Commission allegedly misconstrued and failed to observe and make the findings required by the controlling statutory standards.

On the reasons and facts stated at pages 85-115 of the Consolidated Opening Brief of the Rio Grande it was shown that the Nebraska court erred in substituting its judgment for the judgment of the Commission, in that it cut down and narrowed the decision of the Commission by assuming that it was in a better position to determine the extent of the relief that should be granted in the case than was the Commission. On the other hand, the contention of the Union Pacific that the Nebraska court erred in refusing to decide that the Order of the Commission is void in its entirety amounts to saying that the Nebraska court in all respects should have substi-

tuted its judgment for the administrative discretion and experience of the Commission.

As is shown in the Rio Grande Consolidated Opening Brief, as well as in the brief of the United States, the Interstate Commerce Commission and the Secretary of Agriculture, the Commission did not ignore or violate the standards which should be followed by an administrative agency when it decided that the competitive joint rates and through routes prescribed by it on the commodities covered are necessary and desirable in the public interest in order to provide adequate and more economic transportation; and that when it decided that the rates assailed by the Rio Grande on the commodities involved in the Order from and to the points described are and for the future will be unjust and unreasonable and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and also unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that such rates exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

In relying upon the decisions of this Court in *SEC v. Chenery Corp.*, 332 U.S. 194, and *United States v. Carolina Freight Carriers Corp.*, 315 U.S. 475, the Union Pacific, wittingly or unwittingly, hoisted itself on its own petard. In the *Chenery* case the Court was called upon for the second time to decide the validity of an order of the Securities and Exchange Commission. In its first decision in that case, 318 U.S. 80, 87, it had held that the grounds upon which the order of the Securities

and Exchange Commission was based could not be sustained. In its second decision this Court sustained the order of that Commission and, in doing so, held, among other things, 332 U.S., at page 209:

> "The Commission's conclusion here rests squarely in that area where administrative judgments are entitled to the greatest amount of weight by appellate courts. It is the product of administrative experience, appreciation of the complexities of the problem, realization of the statutory policies, and responsible treatment of the uncontested facts. It is the type of judgment which administrative agencies are best equipped to make and which justifies the use of the administrative process."

The language just quoted is equally applicable in the instant case.

In the *Carolina Freight Carriers* case, 315 U.S. 475, the Court considered the validity of an order of the Commission which, in granting "grandfather" rights to the Carolina Freight Carriers Corporation, restricted the certificate in a manner that excluded commodities which the motor carrier had held itself out to transport. The issues and the facts, as well as the law, before the Commission and before this Court in that case are clearly distinguishable from the issues, the facts and the law applicable to the case at bar.

Under Section 15(3) of the Interstate Commerce Act the Commission is given the authority to require the establishment of joint rates and through routes whenever the Commission considers that such rates and routes "are necessary or desirable in the public interest." This authority implements the duties imposed upon railroads by Section 1(4) and Section 3(4) of the

Interstate Commerce Act which require railroads to establish reasonable through routes and reasonable rates, as well as reasonable interchange facilities and arrangements, for the handling of through traffic.

Section 15(4), which places certain limitations on the power of the Commission to establish through routes, also contains six exceptions which exclude the limitations. The exceptions here pertinent are that the limitations on the power of the Commission to prescribe through routes do not apply where the Commission finds that undue prejudice, preference and discrimination exist or that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation. As shown in its Order in the instant case, the Commission found that the rates assailed in the complaint of the Rio Grande were unduly prejudicial, as well as unreasonable, and also that the rates and routes prescribed are necessary and desirable in the public interest in order to provide adequate and more economic transportation. In *D. A. Stickell & Sons, Inc. v. Alton R. R.*, 255 I.C.C. 333, 343, the Commission held that "adequate transportation" is a concept which concerns the needs of the shipping public while the phrase "more efficient or economic transportation" may well embrace the interests of both shippers and carriers. That decision was sustained by this Court in *Pennsylvania R. R. v. United States*, 323 U.S. 588, 592-593.

The Union Pacific at page 65 of its Nebraska Opening Brief (and at other pages of that brief) cites the *Pennsylvania R. R.* case (affirming the *D. A. Stickell &*

Sons decision by the Commission) as authority for the proposition that the Commission must, in considering any Section 15(4) case, find that through routes are needed for efficient *and* economic transportation as well as adequate transportation, and that the word "or" in the statute must be read as "and". Examination of these decisions discloses that neither the Commission nor the Court discussed this particular question or held that the word "or" must be construed as "and". It happened that in the *Pennsylvania R. R.* case the Commission found that through routes were needed for both "more efficient" and "more economic" transportation. But it used these words in the conjunctive only in connection with the observation (which was the real holding in the case) that any material finding under the language of Section 15(4) must, insofar as the question of *need* is concerned, be related both to the carriers and the shippers.

The language of the statute involved was not carelessly written. The history of the enactment discloses that Congress was carefully concerned with the language used as it always is where it is spelling out a provision empowering the Commission to act under what may be described as an exception to an exception. The actual language of Section 15(4)(b), which is the part of Section 15(4) here involved, applies to the establishment of through routes and not to the prescription of joint rates. It says that a through route may be established if "needed" (which obviously is equivalent to "necessary") "to provide adequate, and more efficient or more economic, transportation." This language, in view of the placement of the commas, is the same as

"adequate and more efficient transportation" or "adequate and more economic transportation."

Equally erroneous is the position of the Union Pacific under the two foregoing cases or any other cases, that Congress intended that the word "adequate" and the words "more efficient or more economic, transportation" in Section 15(4) should be restricted to a comparison between two particular railroads, to-wit, the Union Pacific and the Rio Grande. As held in the *Pennsylvania R.R.* case, 323 U.S. 588, the words of the statute are intended to be considered from the point of view of the shippers and the general public, at least as much as from the point of view of the carriers.

Nor are the words restricted to a consideration of the physical adequacy, the mechanical efficiency or the economical operation of one railroad as compared to another. Neither the dictionary nor the law defines "economic" as meaning merely "economical." It is not a question of cheapness of operation of one railroad as compared to another (Rio Grande and Union Pacific) but more a question of whether with the establishment of the new through route, the transportation would be better for the economy of the area involved and the country as a whole.

The above stated views regarding the meaning and intent of the statute are fully supported by the cases cited at page 101 of the Rio Grande Consolidated Opening Brief.

In its brief the Union Pacific cites the decision of this Court in *ICC v. Northern Pacific Ry.*, 216 U.S. 538, nine times. That decision was rendered in March 1910. At

that time the authority of the Commission to establish through routes and joint rates was conditioned upon the proviso in the Act that "No reasonable or satisfactory through route exists" (Chap. 3591, Section 4, 34 Stat. L. 589). The power of the Commission to prescribe joint rates and through routes has been enlarged since that time. In that case this Court held that the Commission had no power to make the order establishing through routes via routes other than the Northern Pacific if the route of the Northern Pacific was a reasonable and satisfactory through route. The Court sustained the lower court, which held that the route of the Northern Pacific between the points involved was a reasonable and satisfactory through route.

The standard for action in that case should be contrasted with the standard for action in Section 15(3) of the Interstate Commerce Act which now provides that the Commission may establish joint rates and through routes whenever after a hearing it finds that such rates and routes are deemed by it "to be necessary or desirable in the public interest." The Commission has held that the phrase "necessary or desirable in the public interest" does not mean that an absolute public necessity for a through route or joint rate is required and that these words "do not in either case connote indispensability." *D. A. Stickell & Sons, Inc. v. Alton R. R.*, 255 I.C.C. 333, 338.

The Commission acted within its statutory authority and upon sufficient evidence in prescribing competitive joint rates via the route of the Rio Grande through Ogden on the level of rates applicable generally on transcontinental traffic, and applicable via the Rio Grande

on traffic generally except to and from points in the states of Montana, northern Utah, Idaho, Oregon and Washington, via the Union Pacific. The fact that some of the rates have been influenced by competitive forces is of no significance. In *Hormel & Co. v. Atchison, T. & S. F. Ry.*, 263 I.C.C. 9, at page 43, the Commission said apropos of this question:

> "Defendants criticise the mountain-Pacific comparisons of complainants by labeling them depressed rates, usually truck compelled. It is noted, however, that these so-called low mountain-Pacific rates instanced by complainants apply between practically all points between which the traffic moves. They, therefore, represent the normal rate structure in that territory and afford a proper guide for determining a just and reasonable rate level for the future from the Midwest to mountain-Pacific territory."

Rate making is not an exact science. The Commission and the courts have repeatedly stated that there is no such thing as a mathematically reasonable rate or any rule of thumb for the determination of the reasonableness of a rate or rates and that the question requires the exercise of an informed and sound judgment based upon the facts in a particular case. These principles were recognized by this Court in *Atlantic Coast Line R. R. v. North Carolina Corp. Comm'n*, 206 U.S. 1, 26, where it referred to the "flexible limit of judgment which belongs to the power to fix rates," and in *Baltimore & O. R. R. v. United States*, 345 U.S. 146, *State of New York v. United States*, 331 U.S. 284, and *Georgia v. Pennsylvania R. R.*, 324 U.S. 439, 461.

III.

The Commission's Order of January 12, 1953, to the Extent That It Grants Relief, Is Amply Supported by the Findings and Conclusions of the Commission

In its third main point the Union Pacific contends that the Nebraska court erred in refusing to hold that the entire Order of the Commission is void because the basic facts found by the Commission contradict and are inconsistent with its Conclusions and therefore afford no rational or valid basis for the ultimate Conclusions and the Order.

The argument of the Union Pacific in support of its third point is rambling and fallacious. It is based largely upon false premises and upon decisions of this Court and of other courts which are not pertinent to the points discussed. It is also based upon the notion that the limitations on the power of the Commission to prescribe through routes in Section 15(4) of the Act, which are exceptions to the general policy of the Act, should dominate the viewpoint and action of the Commission. The argument made by the Union Pacific is lacking in substance.

The aim of the Interstate Commerce Act and its policy are to bring about a national system of transportation to the end that the commerce of the country may freely move between all points over available rail routes at rates that are neither unreasonable nor discriminatory as between shippers and railroads or as between connecting railroads. *Railroad Comm'n v. Chicago, B. & Q. R. R.*, 257 U.S. 563; *Borough of Edgewater,*

N.J. v. Arcade & A. R. R., 280 I.C.C. 121, 134, and *Missouri & Illinois Coal Co. v. Illinois Cent. R.R.*, 22 I.C.C. 39, 46. In the *Borough of Edgewater* case, sustained in *Baltimore & O. R.R. v. United States*, 100 F. Supp. 1002 (S.D. N.Y.), the Commission stated, 280 I.C.C., at page 123, that the provisions of Section 15(4) which recognize the right of a railroad to its long haul are subordinate to the provisions of Section 3 of the Act which, among other things, prohibit any undue or unreasonable prejudice or disadvantage. Moreover, the limitations on the power of the Commission to prescribe through routes in Section 15(4) are by the very terms of that section set aside where a Section 3 violation of the Act is found, as was the situation in the instant case.

However, the Union Pacific argues that the finding of undue prejudice and preference made by the Commission as to shippers is precluded in the absence of evidence showing that transportation conditions affecting them are substantially similar, and it argues that such a finding is also precluded by the statement of the Commission that transportation conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific (Consol. R., II, 1575). The Commission found (Consol. R., II, 1575, 1576) that the differences in operating conditions and lengths of haul over the Union Pacific routes as compared with the Rio Grande routes via the Ogden gateway are substantial for hauls between the "closed door" territory, on the one hand, and points in Colorado east of and including Colorado common points, such as Denver, Pueblo, etc., Kansas (west of points on the Missouri River), Nebraska (except

Omaha), the Dakotas, Minnesota, Wisconsin, Iowa and Illinois (north of points on the route of the Union Pacific and Chicago & North Western between Omaha and Chicago) on the other hand. But the Commission also found—

> "that for hauls between points in the excluded territory and points in the United States east and south of the points and territory above described, the differences in the transportation conditions are, in general, spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar." (Consol. R., II, 1576)

The Union Pacific repeatedly and erroneously states, or infers in its opening brief (see e. g. pp. 5, 18, 31, 32, 96, 114) that the Commission found that routes via the Rio Grande " * * * would range from 33% to more than 50% longer than many of the Union Pacific routes * * * ." This is a misstatement of the Finding made by the Commission in this respect. The Commission stated (Consol. R., II, 1576):

> "From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the Northern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 per cent, and range up to more than 50 per cent, than the short routes."

It will be noted that the Commission did not say that

the routes via the Rio Grande are in any instance 33% to 50% longer than the routes of the Union Pacific itself. The comparison was confined to the Rio Grande route as against the short routes in the territory north of the Omaha-Chicago line of the Union Pacific and Chicago & North Western, from and to which territory, as pointed out by the Commission, the short routes run over the Northern Pacific, Great Northern or Milwaukee.

Moreover, as shown by the Rio Grande Consolidated Opening Brief, pages 21, 22, 23, in a number of specific instances (contrary to the Union Pacific's contention), the Rio Grande through routes are actually shorter than the through routes via the Union Pacific and its connections.

It will thus be seen that the Commission made appropriate findings based upon the evidence with respect to the competitive joint rates and through routes prescribed by it which are involved in the Order of the Commission, since that Order applies only to the limited territory described in the Findings of the Commission above quoted and shown as the open territory on the map, Appendix E, of the Rio Grande Consolidated Opening Brief, at page 135. The Commission did not establish through routes or prescribe competitive joint rates on the named commodities with respect to freight traffic from and to the "closed door" territory and the areas within the cross-hatched territory shown on such Appendix E.

Moreover, in *United States v. Chicago Heights Trucking Co.*, 310 U.S. 344, the Court sustained the order

of the Commission in *Chicago & Wisconsin Points Proportional Rates,* 17 M.C.C. 573, 580. In the latter case, the Commission found that the proportional rates investigated, which were lower than the local rates, were unduly preferential of proportional rate traffic in violation of the anti-discrimination provisions of Section 216(d) of the Act despite the fact that the unchallenged evidence in that case showed that transportation conditions and the unit costs were more favorable as to traffic handled by the trucks under proportional rates than as to traffic handled by the motor carriers under local rates.

The Court recognized these differences and the arguments made with respect to them as weighty, but held that weighty as the arguments were, it found no reason to set aside the order of the Commission, despite the fact that the discrimination found to exist was based upon differences in costs, etc., which favored the services under the proportional rates of the motor carriers which were under investigation.

The Findings of the Commission in the instant case are not contradictory or inconsistent. Even if they were, that fact would not be a valid basis for enjoining the Order. This Court has said on many occasions that it is not concerned "with the correctness of the Commission's reasoning, with the soundness of its conclusions, or with the alleged inconsistency with findings made in other proceedings before it." *Virginian Ry. v. United States,* 272 U.S. 658, 665-666.

The Commission weighed the testimony of the numerous shippers who testified in support of the com-

plaint of the Rio Grande and the shippers who supported the Union Pacific, and considered the nature, the extent and the functioning of the intricate and far-flung commodity marketing system, as well as the growth of the population in the northwestern states and the development of that part of the country that has required a constantly expanding flow of diverse commodities. It found that adequate transportation facilities and services are required for the proper functioning of the marketing system, especially with respect to commodities of a perishable nature, such as food articles, fresh fruits and vegetables, frozen poultry, frozen foods, butter and eggs, ordinary livestock and dried beans. It held that the marketing and the transportation of such commodities require that as much flexibility as possible, such as the necessity of reconsignment and other in-transit privileges, be permitted in the transportation incident to the distribution process (Consol. R., II, 1574).

Consistent with the foregoing findings, the Commission made the ultimate finding (Consol. R., II, 1574, 1575) to the effect that, because of the higher combination rates and lack of effective in-transit privileges over the Rio Grande, the shippers here involved are debarred from effective participation in the national markets.

The foregoing approach is orderly and logical, and furnishes ample support for the Conclusions and Order of the Commission.

IV.

The Commission Order, Insofar As It Prescribes the Relief Sought, Is Amply Supported by the Evidence

In its fourth main point, the Union Pacific contends that the Nebraska court erred in refusing to enjoin the Order of the Commission in its entirety because it says the ultimate Findings and Conclusions of the Commission are not supported by evidence and are contrary to the preponderance of evidence.

The argument of the Union Pacific in support of its fourth point is even more confused than is its argument made in support of its third point. In dealing with point III it has already been shown that the Order of the Commission involved in the appeals from the Nebraska court is supported by substantial evidence and appropriate findings.

The Union Pacific challenges the probative weight which the Commission gave to the testimony of numerous witnesses representing shippers, chambers of commerce, livestock and other organizations of shippers whose members testified as to their respective needs for competitive joint rates via the route of the Rio Grande between the territories involved (R.G. Consol. Op. Br. 137, App. F). That challenge appears to be based upon the ridiculous charge that the Rio Grande improperly solicited these various witnesses to testify and influenced them to take part in the proceedings by improper means. The Union Pacific goes so far as to charge that the witnesses were procured and that the Rio Grande is guilty of champerty. That charge was made before the Commission in a special brief and was also made before the Nebraska court and the Colorado court.

The charge is frivolous and ridiculous. When the complaint of the Rio Grande was filed it received wide publicity and shippers, chambers of commerce, farmers, industrialists, brokers and persons engaged in various commercial activities were obviously and instantly interested in the successful outcome of the complaint which sought competitive joint rates over routes of the Rio Grande via which unreasonably higher combination rates applied. These shippers and others needed no prodding or stimulation to be urged to support the complaint. On the other hand, because of the vigorous activities and the great influence of the Union Pacific in all of the interested western states, the Rio Grande was required to spend a substantial amount of time and energy after its complaint was filed with the Commission in order adequately to deal with the numerous unjustified, misleading and prejudicial oral statements repeatedly made in the press, in speeches or in typewritten statements released to the public by a plethora of agents and representatives of the Union Pacific against the complaint of the Rio Grande, and to attempt to prepare appropriate replies to charges daily made against the complaint of the Rio Grande in the propaganda initiated and perpetuated by officers and agents of the Union Pacific.

During the hearings before the Commission, the Union Pacific did not object to the testimony of any of the witnesses who supported the complaint of the Rio Grande on the grounds now stated in its opening brief in this Court. The Union Pacific cross-examined the witnesses at great length and sought by such examina-

tion to impeach them and generally to attack their credibility. However, in that objective it utterly failed. Such cross-examination of the witnesses having proved futile, the Union Pacific has no right to challenge their credibility or their competency in this Court. *New York Cent. & H. R. R. v. ICC*, 168 Fed. 131, 138 (C.C.S.D.N.Y.); *Poole v. Poole*, 96 Kan. 84; *Stair v. McNulty*, 133 Minn. 136, and *Edwards v. Lattimer*, 183 Mo. 610.

The Commission dealt with the various contentions of the Union Pacific with respect to the alleged procurement of witnesses in the following sensible manner:

> "The record shows that both the Rio Grande and the Union Pacific sought to interest the public in the controversy and to inform other persons, especially shippers, as to the merits of their respective views. For example, the Rio Grande issued a pamphlet entitled '20 Questions' as a means of informing the public of the Rio Grande's side of the case and its reasons for seeking opening of the gateway. In its brief, the Railroad Commission of the State of Montana states that it had informal conferences with official representatives of both the complainant and the defendants before it intervened in the proceeding. A number of witnesses related that they had listened to representatives of both sides before appearing to give testimony. All witnesses were men of responsibility in their communities and were successfully engaged in their respective occupations. Many appeared and testified as representatives of large groups of producers, shippers, and receivers of freight in their areas. There is no indication that these witnesses, whether for or against the complaint, were improperly influenced, or that their respective interests in the subject matter of the controversy had been stimu-

lated in any questionable manner." (Consol. R., II, 1547)

The quoted statement of the Commission is an abbreviated paraphrase of similar findings by Hearing Examiner Mullen, who presided at all of the hearings and heard all of the witnesses and was in the best position to judge their demeanor, their truthfulness and their general credibility.

In disposing of these frivolous and specious charges made by the Union Pacific, the Nebraska court said:

> "Considerable attention has been given by the Union Pacific in its brief to the action of the Commission in rejecting a portion of evidence offered by it in an attempt to show improper conduct in the preparation and presentation of the Rio Grande's case before the Commission. We do not find justification for serious consideration of that question." (Neb. R. 165)

In *State of New York v. United States*, 331 U.S. 284, similar claims of alleged improper conduct were made before the Interstate Commerce Commission, before the lower court, and before this Court. The lower court in *State of New York v. United States*, 65 F.Supp. 856 (N.D. N.Y.), at page 874, considered the question but held in effect that it lacked substance. The attention of this Court is also invited to its decision in *Bridges v. California*, 314 U.S. 252, where the Court rejected as without substance similar unfounded charges. In that case, speaking with reference to the public's right to interest itself in judicial proceedings of general importance, and to express itself with regard thereto, this Court, at page 270 stated:

"For it is a prized American privilege to speak one's mind, although not always with perfect good taste, on all public institutions."

and at page 278 continued:

"The words of Mr. Justice Holmes, spoken in reference to very different facts, seem entirely applicable here: 'I confess that I cannot find in all this or in the evidence in the case anything that would have affected a mind of reasonable fortitude, and still less can I find there anything that obstructed the administration of justice in any sense that I possibly can give to those words.'. *Toledo Newspaper Co. v. United States, supra,* 247 U.S. 425."

V.

The Commission Properly Prescribed Relief to Correct the Preference and Prejudice Existing As Against Shippers and the Public in General

In its fifth and last main point the Union Pacific contends that the Nebraska Court erred in refusing to enjoin and annul the Order of the Commission on the ground that the Commission acted arbitrarily in prescribing competitive joint rates and through routes on the theory that "because shippers had intervened the Rio Grande's complaint became a shipper complaint."

The Union Pacific says that in its complaint the Rio Grande did not allege that the rates assailed were unduly prejudicial and preferential with respect to shippers and that the Rio Grande did not allege that through routes at competitive joint rates via its line are necessary or desirable in the public interest. Para-

graph XV of the complaint of the Rio Grande filed with the Commission reads as follows (Consol. R., I, 10):

> "That by reason of the facts stated in the foregoing paragraphs, the failure and refusal of the Union Pacific and the other defendants to establish competitive joint through rates and charges applicable to the freight traffic and between the points hereinbefore described constitutes violations by defendants of Section 1(4), Section 3, Section 15(1) and Section 15(3) of the Interstate Commerce Act, is contrary to the National Transportation Policy, and deprives the public and the complainant of the use of available and reasonable through routes at reasonable and non-discriminatory through joint rates which are necessary and desirable in the public interest."

It will be observed that contrary to the contentions of the Union Pacific the quoted paragraph from the complaint affirmatively alleges that by reason of the facts stated in the previous paragraphs of the complaint, the refusal of the Union Pacific and the other railroad defendants to establish competitive joint rates and charges, etc., constitutes violations by them of "Section 1(4), Section 3, Section 15(1) and Section 15(3) of the Interstate Commerce Act, is contrary to the National Transportation Policy, and deprives the public and the complainant of the use of available and reasonable through routes at reasonable and non-discriminatory through joint rates which are necessary and desirable in the public interest."

The contentions of the Union Pacific that the Rio Grande complaint did not contain proper allegations were made before the Commission, the Nebraska court

and the Colorado court, and were rejected by each of them. Even if the pleadings in the complaint of the Rio Grande did not recite the precise language of each of the statutes alleged to be violated, that omission would not be fatal. This Court has held that it is no more necessary to plead the exact words of a statute or the statute itself in a proceeding before the Commission than it is in a judicial proceeding. *Chicago, R. I. & P. Ry. v. United States,* 274 U.S. 29, 37.

Equally without merit is the contention that the Rio Grande has no standing to allege that its own rates were unreasonable. The Rio Grande did not allege that its own rates were unreasonable, and it is surprising that the Union Pacific would repeat in this Court such a contention, which was rejected as unsound by the lower courts and the Commission. The Rio Grande alleged that the aggregate of the through charge, made by adding together for example the local rate of the Union Pacific (from origin points to Ogden), the rate of the Rio Grande (from Ogden to Pueblo or Denver) and the rate of the Missouri Pacific, the Sante Fe, the Rock Island, and the Burlington (from Denver and Pueblo to Chicago, St. Louis, New Orleans and other destination points in the east and southeast) is unjust and unreasonable as well as unduly prejudicial as compared with the lower joint through rates maintained by the Union Pacific in connection with the other railroad defendants.

Under Section 13(1) of the Interstate Commerce Act the Rio Grande, as a common carrier, has a right to complain to the Commission of anything done in contravention of the provisions of the Act. The fact that one

link in the chain of the combination of intermediate local rates includes the local rate of the Rio Grande from Ogden to Pueblo and Denver, etc., does not deprive the Rio Grande of its statutory right to complain against the Union Pacific and the other railroad defendants, since it is their refusal to join with the Rio Grande in establishing reasonable, non-prejudicial and non-discriminatory competitive joint rates which constitutes the violation of the provisions of the Interstate Commerce Act.

The Union Pacific contends that the finding by the Commission that the rates assailed are unduly prejudicial to shippers and receivers using or desiring to use the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent they exceed or may exceed the joint rates maintained on the commodities involved from and to the same points over the Union Pacific routes, should have been annulled by the Nebraska court because (it is stated) the complaint of the Rio Grande gave shippers no standing to seek such relief. This contention is without substance or merit. Section 13(1) of the Interstate Commerce Act confers a statutory right to complain upon "any person, firm, corporation, company, or association, or any mercantile, agricultural, or manufacturing society or other organization, or any body politic or municipal organization, or any common carrier * * * ."

Moreover, the Union Pacific overlooks the express language of Sections 15(1) and 15(3) to the effect that the Commission may prescribe relief "either in exten-

sion of any pending complaint or without any complaint whatever" whenever it finds unjust, unreasonable, discriminatory or unduly preferential or prejudicial practices and whenever "deemed by it to be necessary or desirable in the public interest." The language just quoted empowers the Commission to prescribe relief as required by the Interstate Commerce Act regardless of whether the complaint of the Rio Grande or of any shipper requests such relief.

In keeping with the language and the spirit of the law itself (Section 17(3), 49 U.S.C.) the General Rules of Practice of the Commission authorize the filing of petitions of intervention with the Commission by any person or other groups named in Section 13(1) of the Act. Numerous such persons were allowed to intervene in the action of the Rio Grande before the Commission as intervening complainants, and numerous other persons, consisting of farmers, shippers, representatives of chambers of commerce, livestock associations, and others, testified as witnesses for the Rio Grande without formal intervention. In *The Chicago Junction Case*, 264 U.S. 258, 267-269, this Court held that the Baltimore & Ohio and the other plaintiffs, in that case which involved an order of the Commission that authorized, but did not require, the New York Central to acquire control of the Chicago Junction Railroad, had standing as complainants to maintain the suit since they were intervening parties in the proceeding before the Commission out of which the order arose. The Court also said, at page 268, that the fact that interventions were allowed by the Commission

"implies a finding by the Commission that the

plaintiffs have an interest. In the proceeding before the Commission, they opposed by evidence and argument the granting of the application. This they did as of right. For under the rules of practice, adopted by the Commission pursuant to paragraph 1 of §17 of the Interstate Commerce Act, the intervener becomes a party to the proceeding, entitled, like any other party, to appear at the taking of testimony, to produce and cross-examine witnesses, and to be heard in person or by counsel."

In *Youngstown Sheet & Tube Co. v. United States*, 295 U.S. 476, 479, the plaintiffs who were interveners in a proceeding before the Commission were held to be entitled to bring and to maintain the suit to set aside the order of the Commission, since they were parties to the proceeding before the Commission, had a pecuniary interest in the rates and were adversely affected by the order. See also *ICC v. Oregon-Washington R. R. & Nav. Co.*, 288 U.S. 14, 26-28.

The general rule is that an intervener in a pending action ordinarily acquires rights and is subject to obligations equal to or as broad as those of the plaintiff or the other parties. *Gates v. Hepp*, 95 Colo. 285, 35 P.2d 857, 860; *Fitch v. United Royalty Co.*, 143 Kan. 486, 55 P.2d 409, and 67 C.J.S., *Parties* §§58-70 (1950).

Since an administrative agency such as the Commission operates under rules of procedure which are more flexible than the more technical rules that govern courts, it follows that intervening complainants before that Commission acquired the right to complain of any violation of the Interstate Commerce Act which is involved in the pleadings filed. Moreover, under Section 13(1) of the Interstate Commerce Act the Commission

is authorized to investigate complaints where there are reasonable grounds for the investigation. Therefore, every complaint before the Commission is also an investigation. In the course of such an investigation the Commission has the authority, as well as the duty, to see to it that all violations of the Interstate Commerce Act revealed by the evidence and the pleadings in the investigation shall be corrected. *Beaumont, Tex., Port Comm'n v. Beaumont, S. L. & W. Ry.*, 229 I.C.C. 119, 121, and *Eastern Interior Iowa Industrial Ass'n v. Chicago & N. W. Ry.*, 210 I.C.C. 197, 203.

VI.

General Comments

The Union Pacific contends at 34 different places in its brief that since its facilities are adequate, this precludes a finding by the Commission that through routes and competitive joint rates are needed for adequate transportation. In this connection, the Union Pacific disregards the fact that while its own lines may be adequate and its operating conditions efficient, and even less onerous than those of the Rio Grande, at the same time transportation over the Rio Grande is necessary and desirable in the public interest for an adequate national transportation system. Again, the meaning and scope of the word "adequate" in the Act is not to be tested by the adequacy of one particular railroad with reference to the territory through which its lines run only. Neither does it follow, as the Union Pacific repeatedly contends, that the availability of through routes over two competing railroads constitutes economic waste, if the route of one railroad happens to be shorter

than the other, or if a particular railroad is adequate in the sense that it is presently moving the traffic.

The Union Pacific furnishes no support in law or fact for its dogmatic statement that the relief prescribed will result in waste or be contrary to national transportation policy.

The Union Pacific persists in misinterpreting and confusing the basis upon which the Commission found that the Rio Grande routes are necessary for adequate transportation, which was that in order to accord shippers adequate transportation with respect to the national markets, the Rio Grande routes are necessary.

The Union Pacific contends that the Commission acted arbitrarily in failing to give any effect to the clause in Section 15(4) of the Act which provides

> "That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b) of this paragraph, give reasonable preference to the carrier by railroad which originates the traffic."

It will be observed that the quoted clause is not unqualified. At most, it is an admonition. It does not restrict the power of the Commission to prescribe through routes if it finds that adherence to the clause would not be consistent with the public interest; if the inclusion of controlled lines in an existing route would make the through route unreasonably long as compared with another practical through route which could otherwise be established, or if the Commission finds that the through route is needed in order to provide adequate and more efficient or more economic transportation.

Moreover, by its argument, which is tenuous, the Union Pacific desires to eat its cake and have it, too. The Union Pacific does not serve such Colorado common points as Colorado Springs, Pueblo, Trinidad and Canon City, which points are served by the Rio Grande. Any shipper served by the Rio Grande at those points who desires to make a shipment to a point on the Union Pacific north of Ogden, Utah, in the "closed door" territory must route the shipment via the Rio Grande to Denver and thence Union Pacific to destination territory in order to avoid the higher combination rates. Thus under existing practices the Rio Grande, the originating carrier, is short hauled by the Union Pacific. In these instances the Rio Grande is the originating carrier, but if a shipment should be routed Rio Grande to Ogden and thence Union Pacific to the "closed door" territory, the charges would be based upon the substantially higher combination rates. It is obvious that under the language of the clause referred to, the Rio Grande is as much entitled to its long haul from Colorado Springs, Pueblo, Trinidad and Canon City to Ogden as is the Union Pacific to Denver on shipments moving from points on its line in the "closed door" territory destined to Colorado Springs, Pueblo, Trinidad and Canon City.

The Union Pacific vigorously argues at several points in its brief to the general effect that the Commission used its powers under Sections 15(3) and 15(4) to correct violations of Sections 1 and 3 of the Interstate Commerce Act, in order to avoid the necessity of handing down an alternative decree (U.P. Neb. Op. Br. 102-104). The claim of the Union Pacific that the Order of the

Commission had to be in the alternative is based upon *Texas & Pac. Ry. v. United States*, 289 U.S. 627.

Examination of this case reveals that in footnote 39 on page 650 of that decision this Court stated that an alternative order is not required where the Commission prescribes maximum or minimum reasonable rates. In the instant case the Commission not only found that the rates assailed are unduly prejudicial to the complaining shippers desiring to use the Rio Grande but also are unreasonable. It will thus be seen that the Union Pacific has failed to appreciate the full import of the decision in the *Texas & Pacific* case and that in the light of the findings of the Commission an alternative order was not required.

Moreover, in *State of New York v. United States*, 331 U.S. 284, at pages 341 and 345 the Court clearly indicated that it is not necessary for the Commission in all cases to prescribe an alternative where discrimination is found to exist. At page 341 of its decision in the *State of New York* case, the Court said:

> "A proper finding of unlawful discrimination under § 3(1) thus enables the Commission not only to direct the carriers to eliminate the practice but also, pursuant to § 15, to prescribe the alternative."

At page 345 the Court resolved all doubt on the matter when it said:

> "Once the Commission has found rates to be 'unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial,' it is empowered to prescribe rates which are 'just and reasonable' or 'the maximum or minimum, or maximum and minimum, to be charged * * *.' §15(1)."

The Order of the Commission here involved, as has

been demonstrated, is neither indefinite nor vague. Therefore the decision of this Court in *American Express Co. v. Caldwell*, 244 U.S. 617, and the other similar decisions cited by the Union Pacific are inapplicable and beside the point.

VII.

The Order of the Commission of January 12, 1953, Should Be Affirmed and the Judgment of the Nebraska Court Should Be Reversed Insofar As It Reduced the Relief Granted to the Rio Grande by the Order of the Commission

For the reasons stated the Findings of the Commission in its Order of January 12, 1953, that through routes and competitive joint rates via the Ogden gateway over the Rio Grande, are necessary and desirable in the public interest, in order to provide adequate and more economic transportation, in order to establish just and reasonable rates, and in order to eliminate preference, prejudice and discrimination, are in accord with the purposes and requirements of the Interstate Commerce Act.

Similarly the Order of the Commission of January 12, 1953, prescribing competitive joint rates and through routes as to certain named commodities via the Ogden gateway over the Rio Grande from and to points on the Union Pacific and its preferred connections in the "closed door" territory is supported by substantial evidence.

The Nebraska court erroneously substituted its judgment for the administrative judgment of the Commis-

sion in restricting the application of the rates prescribed by the Commission to shipments consigned in the first instance to points on the Rio Grande to be accorded in transit privileges at such points and to be later shipped to points beyond the Rio Grande.

Finally, the Nebraska court erred in interpreting and applying Sections 3(1), 15(3) and 15(4) of the Interstate Commerce Act, and particularly in holding that Section 3(1) prohibiting any carrier from giving undue preference to any person, locality, etc., or subjecting any person, locality, etc., to any undue prejudice, does not apply where the persons and localities affected by the preference or prejudice are located on different railroad lines, and where, as in this case, the defendant railroads involved (the Union Pacific and its preferred connections) clearly have the power to eliminate the preference and prejudice complained of.

CONCLUSION

In conclusion, The Denver and Rio Grande Western Railroad Company respectfully submits:

That the judgment of the United States District Court for the District of Colorado in Appeals Nos. 332, 333 and 334 should be affirmed, and in accordance therewith that the case be remanded to the Interstate Commerce Commission, to proceed to a determination of the issues on the basis that through routes via the Ogden gateway are in existence, and that the case be considered and decided by the Commission free of the limitations of Section 15(4) of the Interstate Commerce Act; that the judgment of the United States District Court

for the District of Nebraska in Appeals Nos. 117, 118 and 119 should be reversed insofar as it denies the relief prayed for by the Rio Grande, that in the alternative in the event that the judgment of the United States District Court for the District of Colorado is not affirmed, this Court should reverse the judgment of the United States District Court for the District of Nebraska and affirm the Commission Order.

Respectfully submitted,

APPENDIX A

ADDITIONAL STATUTES INVOLVED

Section 1336—Title 28

"Except as otherwise provided by Act of Congress, the district courts shall have jurisdiction of any civil action to enforce, enjoin, set aside, annul or suspend, in whole or in part, any order of the Interstate Commerce Commission."

Section 1398—Title 28

"Except as otherwise provided by law, any civil action to enforce, suspend or set aside in whole or in part an order of the Interstate Commerce Commission shall be brought only in the judicial district wherein is the residence or principal office of any of the parties bringing such action."

Section 1(3)(a) [in part]—Title 49

" * * * The term 'transportation' as used in this chapter shall include locomotives, cars, and other vehicles, vessels, and all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, and transfer in transit, ventilation, refrigeration or icing, storage, and handling of property transported. * * * "

Section 15(7)—Title 49

"Whenever there shall be filed with the commission any schedule stating a new individual or joint rate, fare, or charge, or any new individual or joint classification, or any new individual or joint regulation or practice affecting any rate, fare, or charge, the commission shall have, and it is given, authority, either upon complaint or upon its own initiative without complaint, at once,

and if it so orders without answer or other formal pleading by the interested carrier or carriers, but upon reasonable notice, to enter upon a hearing concerning the lawfulness of such rate, fare, charge, classification, regulation, or practice; and pending such hearing and the decision thereon the commission, upon filing with such schedule and delivering to the carrier or carriers affected thereby a statement in writing of its reasons for such suspension, may from time to time suspend the operation of such schedule and defer the use of such rate, fare, charge, classification, regulation, or practice, but not for a longer period than seven months beyond the time when it would otherwise go into effect; and after full hearing, whether completed before or after the rate, fare, charge, classification, regulation, or practice goes into effect, the commission may make such order with reference thereto as would be proper in a proceeding initiated after it had become effective. If the proceeding has not been concluded and an order made within the period of suspension, the proposed change of rate, fare, charge, classification, regulation, or practice shall go into effect at the end of such period; but in case of a proposed increased rate or charge for or in respect to the transportation of property, the commission may by order require the interested carrier or carriers to keep accurate account in detail of all amounts received by reason of such increase, specifying by whom and in whose behalf such amounts are paid, and upon completion of the hearing and decision may by further order require the interested carrier or carriers to refund, with interest, to the persons in whose behalf such amounts were paid, such portion of such increased rates or charges as by its decision shall be found not justified. At any hearing involving a change in a rate, fare, charge, or classification, or in a rule, regulation, or practice, after September 18, 1940,

the burden of proof shall be upon the carrier to show that the proposed changed rate, fare, charge, classification, rule, regulation, or practice is just and reasonable, and the Commission shall give to the hearing and decision of such questions preference over all other questions pending before it and decide the same as speedily as possible."

Section 17(3)—Title 49

"The Commission shall conduct its proceedings under any provision of law in such manner as will best conduce to the proper dispatch of business and to the ends of justice. The Commission shall have an official seal, which shall be judicially noticed. Any member of the Commission, the Secretary of the Commission, or any member of a board may administer oaths and affirmations and any member of the Commission or the Secretary of the Commission (or any member of a board in connection with the performance of any work, business, or functions referred under this section to a board upon which he serves) may sign subpenas. A majority of the Commission, of a division, or of a board shall constitute a quorum for the transaction of business. The Commission may, from time to time, make or amend such general rules or orders as may be requisite for the order and regulation of proceedings before it, or before any division, individual Commissioner, or board, including forms of notices and the service thereof; which shall conform, as nearly as may be, to those in use in the courts of the United States. Any party may appear before the Commission or any division, individual Commisioner, or board and be heard in person or by attorney. Every vote and official act of the Commission, or of any division, individual Commissioner, or board, shall be entered of record, and such record shall be made public upon the request of any party interested. All hearings before the Commission, a divi-

sion, individual Commissioner, or board shall be public upon the request of any party interested. No Commissioner or employee shall participate in any hearing or proceeding in which he shall have any pecuniary interest."

Section 20(11)—Title 49

"Any common carrier, railroad, or transportation company subject to the provisions of this chapter receiving property for transportation from a point in one State or Territory or the District of Columbia to a point in another State, Territory, District of Columbia, or from any point in the United States to a point in an adjacent foreign country shall issue a receipt or bill of lading therefor, and shall be liable to the lawful holder thereof for any loss, damage, or injury to such property caused by it or by any common carrier, railroad, or transportation company to which such property may be delivered or over whose line or lines such property may pass within the United States or within an adjacent foreign country when transported on a through bill of lading, and no contract, receipt, rule, regulation, or other limitation of any character whatsoever shall exempt such common carrier, railroad or transportation company from the liability hereby imposed; and any such common carrier, railroad, or transportation company so receiving property for transportation from a point in one State, Territory, or the District of Columbia to a point in another State or Territory, or from a point in a State or Territory to a point in the District of Columbia, or from any point in the United States to a point in an adjacent foreign country, or for transportation wholly within a Territory, or any common carrier, railroad, or transportation company delivering said property so received and transported shall be liable to the lawful holder of said receipt or bill of lading or to any party entitled to re-

cover thereon, whether such receipt or bill of lading has been issued or not, for the full actual loss, damage, or injury to such property caused by it or by any such common carrier, railroad, or transportation company to which such property may be delivered or over whose line or lines such property may pass within the United States or within an adjacent foreign country when transported on a through bill of lading, notwithstanding any limitation of liability or limitation of the amount of recovery or representation or agreement as to value in any such receipt or bill of lading, or in any contract, rule, regulation, or in any tariff filed with the Interstate Commerce Commission; and any such limitation, without respect to the manner or form in which it is sought to be made is declared to be unlawful and void: *Provided;* That if the loss, damage, or injury occurs while the property is in the custody of a carrier by water, the liability of such carrier shall be determined by the bill of lading of the carrier by water and by and under the laws and regulations applicable to transportation by water, and the liability of the initial or delivering carrier shall be the same as that of such carrier by water: *Provided, however,* That the provisions hereof respecting liability for full actual loss, damage, or injury, notwithstanding any limitation of liability or recovery or representation or agreement or release as to value, and declaring any such limitation to be unlawful and void, shall not apply, first, to baggage carried on passenger trains or boats, or trains or boats carrying pasengers; second, to property, except ordinary livestock, received for transportation concerning which the carrier shall have been or shall be expressly authorized or required by order of the Interstate Commerce Commission to establish and maintain rates dependent upon the value declared in writing by the shipper or agreed upon in writing as

the released value of the property, in which case such declaration or agreement shall have no other effect than to limit liability and recovery to an amount not exceeding the value so declared or released, and shall not, so far as relates to values, be held to be a violation of section 10 of this title; and any tariff schedule which may be filed with the commission pursuant to such order shall contain specific reference thereto and may establish rates varying with the value so declared and agreed upon; and the commission is empowered to make such order in cases where rates dependent upon and varying with declared or agreed values would, in its opinion, be just and reasonable under the circumstances and conditions surrounding the transportation. The term 'ordinary livestock' shall include all cattle, swine, sheep, goats, horses, and mules, except such as are chiefly valuable for breeding, racing, show purposes, or other special uses: *Provided further,* That nothing in this section shall deprive any holder of such receipt or bill of lading of any remedy or right of action which he has under the existing law: *Provided further,* That all actions brought under and by virtue of this paragraph against the delivering carrier shall be brought, and may be maintained, if in a district court of the United States, only in a district, and if in a State Court, only in a State through or into which the defendant carrier operates a line of railroad: *Provided further,* That it shall be unlawful for any such receiving or delivering common carrier to provide by rule, contract, regulation, or otherwise a shorter period for the filing of claims than nine months, and for the institution of suits than two years, such period for institution of suits to be computed from the day when notice in writing is given by the carrier to the claimant that the carrier has disallowed the claim or any part or parts thereof specified in the notice: *And provided*

further, That for the purposes of this paragraph and of paragraph (12) of this section the delivering carrier shall be construed to be the carrier performing the line-haul service nearest to the point of destination and not a carrier performing merely a switching service at the point of destination: *And provided further*, That the liability imposed by this paragraph shall also apply in the case of property reconsigned or diverted in accordance with the applicable tariffs filed as in this chapter provided."

mission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, appellees in Nos. 117 and 119, and appellants in No. 118, move that the portion of the judgment of the district court enjoining the order of the Interstate Commerce Commission in part, from which portion of the judgment the appeals were taken in Nos. 117 and 119, be affirmed, and that the portion of the judgment sustaining the order in part, from which the appeal was taken in No. 118, be reversed,[2] and the case remanded to the district court with direction to issue the injunction and relief prayed by the plaintiffs in that court.

STATEMENT

These are direct appeals from a final judgment entered December 20, 1954, by a three-judge district court convened pursuant to 28 U. S. C. 2284, 2325, sustaining "in part" and enjoining "in part" an order of the Interstate Commerce Commission requiring the railroad appellants herein and numerous other railroads to establish and maintain through routes and joint rates in connection with The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") "the same" as the joint rates maintained by appellants and other railroads over transcontinental routes embracing the lines of Union Pacific Railroad Company and others on certain commodities that move by railroad between points in the four northwestern states, Washing-

2 As a precedent for this part of this motion, see *Williamsport Co. v. United States*, 277 U.S. 551, 556-557, and *U.S. v. Pan American Corp.*, 304 U.S. 156, in which a motion to reverse was filed, although not mentioned in this Court's decision.

ton, Oregon, Montana and Idaho, and points in the eastern and southern parts of the United States described in the order.[3]

The Commission's order (Appendix C to Statement as to Jurisdiction in No. 118) was issued upon a complaint filed with the Commission by the Rio Grande demanding that the defendants named in the complaint be ordered to establish and maintain in connection with the Rio Grande joint rates "the same" as the joint rates maintained by those defendants over many hundreds of thousands of through routes over their connecting lines between points in the areas just described. The joint rates are substantially lower than the combination or sum of the local rates that would apply if the traffic moved via the Rio Grande.

The Rio Grande has been a chronically bankrupt and "financial needs" railroad during most of its existence. Its President testified frankly that the purpose of the complaint in this case was to improve the Rio Grande's financial position by diverting for a "bridge" haul over its line as much as possible of some 172,000 carloads of traffic annually hauled for many years over Union Pacific routes.[4]

The Commission evaded the "financial needs" prohibition of Section 15(4) of the Interstate Commerce Act by asserting in its report that it gave no consideration to the Rio Grande's "financial needs". It found that the traffic the Rio Grande seeks to divert to its line or-

dinarily moves over the Union Pacific routes through Wyoming because those routes have lower rates and are from 33 to 219 miles shorter than any route that could be made by including the Rio Grande and are more than 50% shorter than many of the routes demanded by the Rio Grande.[5] The Commission also found that diversion of the traffic to the Rio Grande would short haul existing Union Pacific routes at least 925 miles on each shipment so diverted, and that movement of the traffic via the Rio Grande would require at least 24 hours more time in transit and one or two more interchanges of traffic between connecting carriers.

The Commission further found that Union Pacific routes are efficiently operated, furnish good service and are adequate to move "the present volume of traffic and any additional volume that may be anticipated in the foreseeable future." It also found that operating conditions on the Rio Grande's mountainous route between Ogden and Denver are "more onerous" than those on the lines of the Union Pacific or any other western line and that dissimilarities in transportation and operating conditions were so substantial and unfavorable to the Rio Grande as to prevent a finding of discrimination against the Rio Grande resulting from refusal of lines comprising Union Pacific routes to make their joint rates applicable over the Rio Grande.

Notwithstanding those findings, the Commission held that the Rio Grande's's combination rates were unreasonable and unduly prejudicial to shippers using its line and ordered the railroad appellants herein and other

5 The Commission's findings are summarized at pages 18-23, Jurisdictional Statement in No. 118, and its report is printed as Appendix B to that Statement.

railroads to make their joint rates applicable via the Rio Grande on the several articles named in the order, which articles comprise about 57,000 carloads annually, or one-third of the traffic the Rio Grande seeks to divert to its line.

The Commission, further disregarding its own findings as to the efficiency, surplus capacity and shorter mileage and transit time of Union Pacific routes compared to the Rio Grande, nevertheless, asserted that shippers of perishable food products from the northwest area to markets in the eastern and southern parts of the country are "debarred from effective participation" in the marketing system for such products because they would have to pay higher rates if they shipped via the Rio Grande than they pay when shipping over the shorter and faster Union Pacific routes from the same origins to the same destinations, and condemned Union Pacific routes as "inadequate" and less economical than the Rio Grande route, because "at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available and higher rates apply".

The Commission rejected the Rio Grande's contention that through routes for the traffic concerned were already in existence via its line and that the joint rates it demanded should be required without regard to the short haul prohibition of Section 15(4) of the Act. The Commission held that prescription of any of the joint rates demanded by the Rio Grande would have to be grounded upon clause "(b)" of Section 15(4), which permits the Commission to short haul existing routes only if it finds that "the through route *proposed* to be established is

needed in order to provide adequate, and more efficient or more economic, transportation".[6]

The district court (Circuit Judge Johnsen dissenting on the ground that the Commission's order was void and should be enjoined in its entirety) held that the order is valid only to the extent that it embraces shipments of the articles named therein to stop for processing, milling, grazing cattle in transit and other commercial operations known as "transit privileges", at points on the Rio Grande and later reshipped to destinations beyond its termini. (App. D, Jurisdictional Statement, No. 118.) In sustaining the order to that extent, the court adopted a different theory or basis from that on which the Com-

---

6 Section 15 (4) provides

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

mission rested its order. The Commission had correctly held that it could not order through routes via the Rio Grande short-hauling Union Pacific routes unless it could first find that Union Pacific routes were "inadequate", and, as stated above, it found them inadequate because they were not available at points served exclusively by the Rio Grande, and because higher rates apply over the Rio Grande.

The majority of the court held that the evidence does not support or justify the Commission's finding that service over Union Pacific routes is inadequate or less economical than Rio Grande routes. But the court proceeded to hold that transportation service for the involved traffic over the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical" and that the through routes and joint rates ordered by the Commission are justified for shipments stopped for in-transit privileges at points on the Rio Grande and later reshipment to points beyond its termini. For shipments *not* stopped for in-transit privileges on the Rio Grande, the court held the order invalid.

ARGUMENT

The Part of the Judgment of the District Court Involved in Nos. 117 and 119 Should Be Affirmed

The appeals in Nos. 117 and 119 are from that part of the judgment of the district court which enjoins the order in part, and rejects and nullifies the Commission's condemnation of Union Pacific routes as "inadequate and less economical" than the Rio Grande route, on the novel and fantastic grounds, (1) that "at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available and higher rates

apply", and (2) that shippers of perishable food products from the northwest area to markets in the eastern and southern parts of the country are "debarred from effective participation" in the marketing system for such products because freight rates are lower over Union Pacific routes than the same shippers would have to pay if they routed their products for a "bridge" haul over the Rio Grande from the same northwest origins to the same far eastern and southern destinations.

The Commission's condemnation and short-hauling of the shorter and faster Union Pacific routes on these grounds is so manifestly erroneous as to vitiate and nullify the entire order, and we submit that to the extent the judgment below enjoins and annuls the order, the judgment should be affirmed without awaiting oral arguments and briefs. A similarly frivolous and untenable reason for condemning and short-hauling a shorter existing route under Section 15(4) of the Act was flatly rejected by this Court, *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, in the first short-hauling through routes case considered by this Court after Congress conferred the through routes powers on the Commission.

The majority opinion below (App. D to Jurisdictional Statement, No. 118) correctly holds that transportation service over the shorter, faster and efficient Union Pacific route is clearly adequate, and as "economical" as it would be via the Rio Grande under the order because the joint rates ordered by the Commission for application via the Rio Grande would only *equal* the joint rates now applicable to the same traffic moving over Union Pacific routes. Those conclusions of the court are inescapable from the Commission's own findings (see pp. 18-23,

Jurisdictional Statement, No. 118), and upon them the court was clearly right to the extent it enjoined the order.

In the face of its own findings, the Commission's conclusion that the required through routes and joint rates via the Rio Grande are "necessary and desirable in the public interest" is but an assertion that "public interest" requires that the traffic be diverted to and move over the longer Rio Grande as a "bridge" line instead of the shorter and direct Union Pacific line for part of the distance between the far northwest and the eastern and southern parts of the country. A similar misinterpretation by the Commission of the term "public interest", in an effort to deprive the Missouri Pacific Railroad of a 300-mile haul and leaving it a 46-mile haul by ordering through routes for the benefit of a 40-mile, financially weak railroad, was rejected in *Missouri Pac. R. Co. v. United States,* 21 F. (2d) 351. The three-judge district court unanimously nullified the order, and held that public interest "does not justify the taking of a part of petitioner's [Missouri Pacific] line and using it as an instrumentality for producing income for the Subiaco [railroad] in competition with and to the detriment of the petitioner". The judgment of the district court was unanimously affirmed in *United States v. Mo. Pac. R. Co.,* 278 U. S. 269, in which this Court held (p. 277) that the short haul prohibition in Section 15(4):

> "* * * lays down the rule that, subject to specified exceptions, a carrier may not be compelled to participate in a through route which does not include substantially its entire line lying between the termini of the route. *The purpose is to protect the long haul routes of carriers.*" (Italics added.)

The addition in 1940 of clause (b) to Section 15(4) did not, as the Commission apparently thinks, abandon the steadfast purpose of Congress to protect the long hauls of carriers. In *I. C. C. v. Columbus & Greenville Ry.*, 319 U. S. 551 (decided June 7, 1943), this Court quoting Section 15(4) as amended in 1940, held at page 555:

> "Disregard of the statutory requirements for the establishment of joint tariffs may have important substantive consequences. The Interstate Commerce Act contemplates that joint railroad rates shall be established only by concurrence of the participating carriers or by the Commission in proceedings under §15. In the exercise of its power under §15 to fix joint rates without the concurrence of the participating carriers, *the Commission is required by §15(4) to protect, in stated circumstances, the long hauls of participating carriers, and to give reasonable preference to originating carriers.*" (Italics added.)

The more recent decision (June 2, 1952) of this Court, in *Thompson v. United States*, 343 U. S. 549, plainly shows that the Commission is not justified in construing the 1940 addition of clause "(b)" as, in effect, repealing the short haul prohibition. At page 555, this Court said:

> "The Commission's effort to limit by construction the impact of the short-hauling restriction on its power to establish through routes was rejected by this Court in *United States v. Missouri Pacific R. Co.*, 278 U. S. 269 (1929). Following this decision, the Commission asked Congress to delete completely the short-hauling restriction. In the Transportation Act of 1940, Congress refused to eliminate the restriction against short hauling, but adopted a compromise under which the restriction against short hauling was retained subject to a new exception applicable only where the Commission makes the special findings listed in the amended Section 15(4)."

The Commission's holding in the instant case that the 1940 addition of clause "(b)" as an exception to the short haul prohibition empowers it to short haul the adequate, shorter, faster and cheaper Union Pacific routes is exactly contrary to the Congressional intent as shown by the history of legislative action leading to the enactment of clause "(b)". In its report No. 404, April 22, 1937, on Senate Bill 1261, 75th Congress, 1st Session, the Senate Committee on Interstate Commerce said at page 2:

> "Your committee feels that the shippers of the country should be given the right to use the *shortest, quickest, and cheapest routes available* * * * The bill does not give the Commission power to order the railroads to route shipments in any particular way, but merely provides that *if a shorter route exists*, and if it is in the public interest for the shippers to have this route available, the railroads shall, upon the Commission's order, publish the route and rate in their tariffs. It is not the intention of the committee to interfere with the right of the trunk lines to their long haul, except where this right conflicts with the shippers' right to the *shortest route and lowest rate*. If there is this conflict, the *shipper is merely given the opportunity, if he wishes, of using the shorter or cheaper route.*" (Italics added.)

That the Congressional purpose to protect the long hauls of carriers and to prevent the Commission from depriving them of long hauls by diverting traffic to financially weak short lines, was not abandoned by the 1940 enactment of clause "(b)" is plainly demonstrated by the fact that in the same enactment it added to Section 15(4) the provisions:

> "That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic."

"No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

On its own findings that the Union Pacific routes are shorter, faster, efficient and adequate to haul any foreseeable volume of involved traffic at lower rates than those maintained over the longer, more onerous, Rio Grande route, the Commission clearly was precluded from condemning the Union Pacific routes as "inadequate and less economical" than the Rio Grande, and the lower court was correct in so holding.

A second and equally erroneous and untenable basis on which the Commission attempts to rest its order is the Commission's newly invented criterion that short-hauling the Union Pacific routes is justified on the ground that the marketing system for perishable food articles requires "as wide a distribution as possible", "as many routes as possible", "as much flexibility as possible" and "as many markets and outlets as possible". The Commission invented this new criterion in the face of the statutory standard of Section 1(4) of the Act which, by its own terms, and as held by this Court in the *Thompson* case, p. 558, requires carriers to establish *only* "reasonable through routes". The Commission's new criterion nullifies not only the statutory standard and the short haul prohibition, but also the rule and norm of its prior decisions[7] that when sufficient through routes have been established adequately and efficiently to move the traffic from origin to destination, additional through

---

7 In *Sec'y of Agriculture v. United States*, 347 U.S. 645, 653, this Court refused to sustain an order because of the Commission's unexplained departure from the "norms" of its prior decisions, and its failure to spell out the "legal basis" of its decision.

routes are not justified, to say nothing of as many routes "as possible" to short haul admittedly adequate, more efficient, and shorter existing routes by requiring longer and more onerous routes.[8]

---

8 Examples are:

In *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I.C.C. 331, 333-334 the Commission said:

"Section 15(4) of the act has been in its present form since September 18, 1940. In several proceedings since then, reasonable through routes which short haul one or more carriers have been prescribed. See *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 255 I.C.C. 333 (sustained in *Pennsylvania R. Co. v. United States*, 323 U.S. 588); *Allied Mills, Inc., of Virginia v. Alton R. Co.*, 272 I.C.C. 49; *California Milling Corp. v. Atchison, T. & S. F. Ry. Co.*, 269 I.C.C. 725 and 274 I.C.C. 120. In the first two of those proceedings it appeared that the routes required to be established eliminated expensive out-of-line hauls, and in the latter proceeding the routes required were shown to be shorter in many instances than those which had existed. In all of those proceedings the routes required were at least as economical, from the standpoint of the carriers as well as of the shippers, as were most of the existing routes.

"The instant situation differs. All of the routes sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic transportation. In addition, because of the circumstances here present, we believe a requirement that the routes sought be established would not 'give reasonable preference' to the originating carrier."

In *Kansas City Hay Dealers Asso. v. C.G.W.R.R.Co.*, 49 I.C.C. 372, at page 377, the Commission held:

"To compel the application of short-line rates over indirect and longer routes, merely as a means of providing a channel of doubtful benefit to comparatively few shippers, would lay an unnecessary expense upon the railroads *against the interest of the public as a whole*. When joint rates that are neither unreasonable nor unduly prejudicial are maintained over direct routes *adequate response is made to the reasonable requirements of the public*, and carriers should not be required to perform wasteful transportation by maintaining the same rates over indirect and more circuitous routes." (Italics added.)

In *C. & C. Traction Co. v. B. & O. S.W.R.R.Co.*, 20 I.C.C. 486, 492, the Commission said:

"* * *we have little sympathy with, and will not ordinarily lend our aid to, an effort by one road to secure traffic that is reasonably tributary to another road by compelling the latter to join with it in through routes and rates* * *"

A third patently erroneous basis for the order is that the Commission, though positively declaring that any order requiring through routes and joint rates via the Rio Grande in this case must be grounded on the provisions of Section 15(4)(b), thoroughly mutilated, departed from and declined to make the findings required by clause "(b)", which requires findings that "the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation", and which this Court held in the *Thompson* case, p. 555, to be "applicable only" where the Commission makes the "special findings" so required. The Commission here departed from the standards of that clause, first, by asserting a necessity for "more" adequate transportation, and, second, by finding the Rio Grande route "necessary and desirable" *only* to provide "adequate and more economic transportation". It did not find, as required by clause "(b)", that the Rio Grande route is "needed" or that it will provide "more efficient" transportation than Union Pacific routes. And, although it found that the Rio Grande route was necessary to provide "more economic" transportation, this is obviously an arbitrary and incorrect assertion for, as pointed out by the majority opinion below, the transportation via the Rio Grande could not be "more economic" because the rates ordered via the Rio Grande are "the same" as, and would only "equal" present rates via Union Pacific routes, and wasteful and uneconomical transportation would necessarily result from the fact that every carload that might be diverted to the Rio Grande would require from 33 to 219 more miles of transportation effort and at least 24 hours more time than if moved via Union Pacific routes. Clearly, the requirement in clause "(b)" of a finding that the *proposed* new route will provide "more economic" transportation may not be satisfied merely by reducing

the higher rates of the Rio Grande so as to equalize them with rates via Union Pacific routes, and this would be so even if the Rio Grande route were not more onerous and longer than Union Pacific routes.

Contrary to the positive declaration in the Commission's report that any requirement of through routes and joint rates via the Rio Grande must be grounded on findings as specified in Section 15(4)(b), the Jurisdictional Statement of the Government asserts at pages 10 and 11 that the Commission's finding that the combination rates via the Rio Grande were unreasonable and unduly prejudicial to shippers using that line constitutes "an independent basis of the Commission's order establishing through routes". The Rio Grande's Statement makes the same assertion at page 13. Thus, both of those appellants would justify the order on a different statutory basis than that on which it rests, by having this Court ignore the Commission's direct powers to cure unreasonable rates under Section 1 and unduly prejudicial rates under Section 3(1) and hold that the Commission has power to order joint rates over the longer, more onerous Rio Grande route that would exactly equalize rates maintained over shorter, adequate and more efficient Union Pacific routes; upon the Commission's mere assertion that equalization of the rates over the two routes is necessary and desirable in the public interest because it has found the Rio Grande's higher rates unreasonable and unduly prejudicial. No decision can be found to support such contentions, and they are clearly erroneous and squarely in conflict with the statutory pattern and specific independent provisions thereof, and with decisions of this Court. The decision in *Central R. R. Co. v. United States*, 257 U. S. 247, 257, holds that the Commission has

ample direct powers to remedy unreasonable rates and to cure undue prejudice and discrimination, and that the Commission may not "accomplish by indirection" that which it has direct power to accomplish; *Thompson v. United States, supra,* makes it plain enough that the Commission may not use its power to prescribe reasonable rates as a means of evading or circumventing the short haul prohibition in Section 15(4); *Texas & Pacific Ry. Co. v. U. S.,* 289 U. S. 627, at page 650, lays down the positive rule that, where undue prejudice or discrimination is found, the most the Commission can require is that the violation be eliminated and that "an actual alternative" be given the offending carriers to abate the violation; and *United States v. Mo. Pac. R. Co.,* 278 U. S. 269, plainly precludes any interpretation or use of the Commission's through routes powers for the financial benefit of the Rio Grande, or any purpose not clearly within the legislative intent.

At page 11, the Government's Jurisdictional Statement argues:

> "The Commission found that the Union Pacific, by refusing to establish through routes and joint rates with the Rio Grande, has subjected shippers who use the latter's route to undue prejudice, and, by the same token, has given undue preference to their competitors who use the Union Pacific routes. Such action would appear to violate the statutory prohibition against a carrier subjecting any person to preference or prejudice 'in any respect whatsoever.'"

The Rio Grande's Jurisdictional Statement at page 13 asserts that the Commission's findings of undue prejudice in violation of Section 3 against shippers using the Rio Grande affords a legal basis for the Commission's

requirement of through routes and joint rates and that, in view of the Section 3 finding, the restriction in Section 15(4) on the Commission's power to require short-hauling through routes does not apply.

While Section 15(4) provides that in establishing through routes, the Commission shall not, "except as provided in Section 3," require a carrier to short haul itself, there is no "provision" in Section 3 which even hints that the Commission has power to short haul existing routes by requiring an additional route to remedy undue prejudice in violation of Section 3. As pointed out by the Commission itself in *Nicholson Universal S. S. Co. v. Pennsylvania R. Co.*, 203 I. C. C. 637, at page 647, the Commission's power to require through routes and joint rates has been enlarged since its original enactment in 1906, while the wording of Section 3 enacted in 1887, "has remained substantially the same and does not include within its terms any reference to routes." Since that decision was issued, Congress expanded Section 3 to prohibit undue preference or advantage to any port, region or territory, but at the same time it added to that section the restrictive proviso—

> "* * * this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

From our discussion above and authorities there cited, this Court will find no occasion to give serious consideration to contentions of the Government and the Rio Grande that a finding of violation of Section 3 emasculates and renders ineffective the short-hauling prohibition in Section 15(4). Their arguments that a Section 3 finding justifies the short-hauling order in this case are pressed, apparently because their counsel recognize that the Com-

mission's own findings of fact afford no basis or support whatever for its order requiring through routes and joint rates via the longer and more onerous Rio Grande route, and in recognition of the further fact that in attempting to justify the short-hauling order under clause "(b)" of Section 15(4) the Commission mutilated, departed from and failed to make the jurisdictional findings required by that clause, as we have already noted above.

Plainly, the order is entirely vitiated and nullified by the Commission's failure to make the jurisdictional findings required by the standards and criteria of Section 15(4)(b), upon which its report definitely states that its order is based, and counsel may not substitute a new and different basis in their efforts to defend the order. The majority of the district court was clearly right in holding that if the Commission may order new through routes and joint rates that short haul existing routes as a remedy for undue prejudice and preference in violation of Section 3(1), "the prohibition of Sec. 15(4) would be practically emasculated."

Efforts of the Government and the Rio Grande to transform this case into an interterritorial case of undue preference and prejudice among shippers by emphasizing this Court's decision in *New York v. United States*, 331 U. S. 284, are unavailing and merit no consideration by this Court. That decision did not involve, as here, the case of an impecunious short line railroad attempting by its own complaint, to substitute its longer line for a "bridge" haul of traffic to be diverted from shorter, more efficient routes for the admitted purpose of improving its financial position. Instead, the decision involved an order resulting from an investigation covering most of the nation by the Commission pursuant to statutory

command, and requiring removal of undue preference and prejudice found as between interterritorial class rates paid by shippers.

The *New York* case did not involve the Commission's power to order through routes or joint rates, and it is entirely erroneous to suggest that the decision affords the slightest support for a contention that the Commission may lawfully order through routes and joint rates that short haul existing routes upon a finding of undue preference and prejudice in violation of Section 3. This is also true of the other cases cited, in the Jurisdictional Statements of the Government and the Rio Grande.

The suggestion at page 5 of the Government's Statement that the through routes required by the order are partly justified by the Commission's statement in its report that shippers of perishable products from the northwest territory "are debarred from effective participation" in the markets for such articles, merits no consideration because, first, the Commission's own statement is clearly fallacious since those same shippers of the same articles from the same points in the northwest area to the same destinations have the shorter, faster Union Pacific routes available at lower rates and have always shipped their products over those routes without complaint of any kind, second, because those shippers market their products in all 48 states and several foreign countries and, third, the order includes ordinary livestock and tombstones—articles that could not by any stretch of imagination be classified as perishable food products.

In short, so long as the Union Pacific routes are adequate to haul the traffic efficiently and economically, there can be no possible legal justification for requiring this

traffic to pass over the longer, more onerous Rio Grande route in its movement from the northwest area to the large consuming markets, such as Chicago, New York, Boston and others in the east and southeast portions of the country.

Contrary to the Rio Grande's suggestion at page 11 of its Statement, diversion of the traffic from the Union Pacific to the Rio Grande at Ogden for a bridge haul over the Rio Grande to Denver instead of through movement over the Union Pacific will not correct or relieve such isolated and hypothetical instances as there indicated at points in Kansas and Oklahoma which are several hundred miles from the eastern termini of the Rio Grande's line. The remedy for such situations, if any exist, is simply to remove pertinent restrictive routing provisions from the tariffs of carriers publishing *existing* through routes and joint rates, and not the establishment of new routes via the Rio Grande's longer line that short haul the shorter Union Pacific routes.

The Part of the Judgment of the District Court Involved in No. 118 Should Be Reversed

The appeal in No. 118 is from that part of the judgment of the district court which sustains the validity of the Commission's order insofar as it requires through routes and joint rates on shipments of the specified articles stopped for in-transit privileges, such as processing, storage, milling and grazing cattle, at points on the Rio Grande and later reshipment beyond its termini. In sustaining the order to that extent, the district court committed fundamental errors so obviously requiring reversal as to make it unnecessary for this Court to hear further argument.

First: Having correctly held that the evidence does not support or justify the Commission's finding that Union Pacific routes are inadequate and less economical than the Rio Grande, and, thus, rejecting and nullifying the fantastic and untenable grounds (*ante*, pp. 7-8), on which that finding and the whole order rests, the court plainly erred in refusing to annul and enjoin the entire order instead of enjoining it only as to shipments of the specified articles *not* stopped for in-transit privileges at points on the Rio Grande. For, if, as the court correctly held, the basic jurisdictional finding and fundamental premise on which the Commission based the order are legally, factually and rationally erroneous and untenable, then certainly the entire order is null and void, and the court clearly erred in refusing to enjoin and set it aside, instead of exceeding its own powers by devising a different but equally erroneous legal and factual basis for the order, as will be shown presently, in its efforts to save a part of it.

Second: The majority opinion of the district court clearly shows that the court proceeded on the wholly erroneous assumption that there are no transit privileges available on the Rio Grande, that the absence or lack of such privileges affords a legal basis for a finding that transportation service via the Rio Grande is "inadequate", and that the Commission's requirement of through routes and joint rates is justified in order to make such privileges available on the Rio Grande (App. D, pp. 11-12, Jurisdictional Statement, No. 118). But the fact is that all such privileges *are available* on the Rio Grande, as expressly stated in its complaint to the Commission, in the Commission's report and in the Rio Grande's Jurisdictional Statement at page 7, where it is plainly shown that the Rio Grande's complaint is not the absence or lack of in-transit

privileges on its line but the fact that shippers make no use of those privileges at points on its line for the traffic concerned because rates via the Rio Grande are so much higher than rates via the Union Pacific routes.

If, as the district court erroneously assumed, an absence or a lack of transit privileges on the Rio Grande's line were the cause of its inability to divert the traffic and revenues to its line, then no complaint to or order of the Commission was necessary, for it is settled by decisions of this Court and the Commission that establishment of a transit privilege is "a matter local to the railroad on which the transit point is situated", and that "[w]hether the privilege shall be granted or withheld is determined by the local carrier." *Central R. R. Co. v. United States*, 257 U. S. 247, 255.

As the majority decision below, in sustaining the validity of the order insofar as it requires through routes and joint rates on shipments of the specified articles stopped for in-transit privileges at points on the Rio Grande rests entirely on the false or erroneous assumption that those privileges are not now available on that line, we submit that, insofar as it sustains the order for such shipments the judgment is so clearly erroneous as to warrant no further argument for its reversal.

Third: The district court committed plain error in holding that as to shipments stopped for transit privileges at points on the Rio Grande, the order is valid because of its own finding that transportation via the *proposed* Rio Grande route "is inadequate and also inefficient and uneconomical," and, further, in sanctioning the Commission's use of its through route powers to

force a reduction in the Rio Grande's rates to equalize them with rates via Union Pacific routes. (App. D, pp. 12-13, Jurisdictional Statement, No. 118.)

The clear and unambiguous purpose of clause "(b)" of Section 15(4) (*ante*, p. 6, footnote 6), on which the Commission based the order, is to permit short-hauling *existing* routes where they do not furnish service that meets all of the tests specified in that clause and where improved service which meets the specified tests will be provided by a *proposed new route*. As correctly held by both the Commission and the district court, the *proposed* Rio Grande route could not be ordered without findings by the Commission that service furnished by *existing* Union Pacific routes does not meet the tests specified in clause "(b)", and that the *proposed* Rio Grande route is "needed" to provide service which would meet those tests. Unless the evidence justifies the "special findings" listed in clause "(b)", the authority there granted to short haul *existing* routes is not "applicable" and may not be used, *Thompson* case, *supra*, p. 555.

The Commission concluded erroneously, we submit, that *existing* Union Pacific routes are "inadequate" because they are "not available" at points on the Rio Grande and because higher rates apply at points on that line than at points on the Union Pacific routes. But the court, although holding that the evidence does not support the Commission's finding that transportation service via Union Pacific routes is inadequate or less economical than service via the Rio Grande and enjoining the order as to shipments *not* requiring stoppage at points on the Rio Grande for transit privileges, proceeded on the theory that the order could be justified as to

shipments requiring stoppage for transit privileges at points on the Rio Grande, if it could be found that transportation service via the *proposed* Rio Grande route is inadequate, and, thereupon, made its own finding that for such shipments the service via the *proposed* Rio Grande route "is inadequate and also inefficient and uneconomical", and sustained the order for such shipments. (App. D, pp. 12-13, Jurisdictional Statement, No. 118.)

The court thus not only reverses and substitutes its own, for the Commission's approach and basis for its order but also reverses and distorts the statutory pattern and circumstances under which short-hauling *existing* routes is permitted under clause "(b)". In other words the court condemns the very route *proposed* to be established as "needed" to provide the "adequate, and more efficient or more economic, transportation", contemplated by clause "(b)".

While the court was clearly correct in holding that the Union Pacific routes, being shorter, faster and having lower rates than the proposed Rio Grande route, may not be condemned as inadequate and less economical than the Rio Grande route and that there is no basis in law or fact for the Commission's condemnation of the Union Pacific routes, we submit that upon that correct holding the court clearly erred in failing to enjoin and annul the order in its entirety, and, further, that the court grossly misconstrued clause "(b)" and proceeded upon a palpably erroneous and untenable theory in holding that clause "(b)" permits short-hauling the adequate, efficient and economic Union Pacific routes because it finds from the evidence that service via the Rio Grande "is inadequate and also inefficient and uneconomical."

It is clear beyond a shadow of doubt that the statute does *not* permit short-hauling the shorter, adequate, efficient and more economic Union Pacific routes for the purpose of equalizing their lower rates with the Rio Grande's higher rates, or for the purpose of improving the Rio Grande's service, or reducing the cost of it to shippers.

If the Commission is correct in its view that Union Pacific routes may be condemned as inadequate and less economical and short hauled by establishment of a longer route via the Rio Grande because higher rates apply on that line, and because the shorter Union Pacific routes with their lower rates are not available at points on the Rio Grande, then the Commission is at liberty to condemn and short haul every railroad and every through route in the country as inadequate and uneconomical and require them to short haul themselves by joining in through routes that pass through every point on every railroad in the country on the theory that such disregard of the short haul prohibition in Section 15(4) is necessary to provide adequate and more economic transportation.

If the court is correct in its view that the shorter, efficient, and adequate Union Pacific routes may be short hauled because service for shipments requiring transit at points on the *proposed* Rio Grande route "is inadequate and also inefficient and uneconomical", then every *existing* through route may be short hauled wherever the Commission can find a railroad that has higher rates and is inadequate, inefficient and uneconomical.

Neither of these plain distortions of the Act can afford any possible legal basis for the part of the order

sustained by the court, and, because both completely nullify the short-hauling prohibition of Section 15(4), and ignore the adequate, efficient and economic service admittedly provided by existing Union Pacific routes, the order clearly is void and must be annulled. *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538; and *United States v. Mo. Pac. R. Co.*, 278 U. S. 269.

Fourth: Although the court correctly holds that transportation service is as economical via the Union Pacific routes as it would be via the Rio Grande under the Commission's order for traffic *not* requiring stoppage for transit at points on the Rio Grande, because the joint rates prescribed would *only equal* the joint rates via Union Pacific routes, it, nevertheless, holds that for shipments stopped for transit privileges at points on the Rio Grande, the through routes and joint rates prescribed by the Commission are necessary "to provide adequate and more economic transportation" and "will result in more economical transportation" (Appendix D, pp. 19 and 13, Jurisdictional Statement, No. 118). It is impossible, we submit, that "more economic" transportation than that provided by the shorter Union Pacific routes can be provided via the Rio Grande over its longer and more onerous route by simply reducing its higher rates to the exact level of rates maintained over Union Pacific routes. And, while reducing the rates via the Rio Grande will make transportation over that line cheaper for shippers than it is under its present combination rates, plainly a mere equalization of its rates with rates of Union Pacific routes will not provide "more economic" transportation within the meaning of clause "(b)", nor does it justify short-hauling Union Pacific routes. *Thompson* case, *supra*.

Fifth: In sustaining the Commission's finding that the Rio Grande route is "necessary and desirable in the public interest, in order to provide adequate and more economic transportation," the court sanctions and upholds jurisdictional findings by the Commission which clearly depart from and fail to comply with the statutory standards and criteria of clause "(b)", on which the Commission states its order is based. Under that clause, as noted above, *existing* routes may be short hauled if "the Commission finds that the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation," but the clause is "applicable only" where the Commission makes "the special findings" listed therein, *Thompson* case, *supra*, p. 555. The Commission in this case did not make "the special findings." It made only a part of them. It did not find that the Rio Grande route is "needed" or that it will provide "more efficient" transportation than that provided by Union Pacific routes. The Commission clearly may not select one or more of the several criteria from the statutory standard of clause "(b)" and disregard the others, for this Court, in dealing with the language of clause "(b)", said in *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, 592-593, that, "if the Commission is asked to abrogate the general rule with regard to the short-haul, the statute says it must have regard to several matters," the first of which is "adequacy of transportation" and the second and third are "efficient and economic transportation."

CONCLUSION

For the foregoing reasons, we submit that there is no warrant for the delay and expense of printing the record in these cases or for briefs and oral arguments, and that this Court should affirm the judgment of the dis-

trict court involved in the appeals in Nos. 117 and 119 and reverse the portion of the judgment below from which the appeal is taken in No. 118, and remand the case to the district court with direction to issue the injunction and relief prayed by the plaintiffs in that court.

Respectfully submitted,

BERT L. OVERCASH,
Counsel of record for the Five State Appellants,
State Capitol Building,
Lincoln, Nebraska.

PROOF OF SERVICE

I, ELMER B. COLLINS, one of counsel of record for Movants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 29th day of June, 1955, I served, on behalf of all Movants herein, copies of the foregoing Motion on the several adverse parties in Nos. 117, 118 and 119, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

E. Riggs McConnell, Esq.
Special Assistant to the Attorney General
Department of Justice
Washington 25, D. C.

and with first-class postage prepaid to:

Donald R. Ross, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq., Asst. General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Henry B. Cockrum, Esq.
Acting Associate Solicitor
United States Department of Agriculture
Washington 25, D. C.

Charles W. Bucy, Esq.
Associate Solicitor
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who work for The Denver and Rio Grande Western R. R. Co., and National Live Stock Producers Association, by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

ELMER B. COLLINS,
One of Counsel of Record for Movants Herein.

FOR THE DISTRICT OF COLORADO

SUPPLEMENTAL MEMORANDUM FOR UNION PACIFIC RAILROAD COMPANY, ET AL., WASHINGTON PUBLIC SERVICE COMMISSION, ET AL.

This Supplemental Memorandum is filed pursuant to suggestions of the Court made during the oral arguments April 23rd and 24th that additional information be furnished the Court concerning certain questions and particularly the question whether the tariffs published in 1906 to 1912 cancelled the through routes previously published in connection with the Rio Grande via Utah gateways and the Union Pacific; whether the tariffs publishing joint rates for the involved traffic when the Rio Grande filed its complaint with the Commission August 1, 1949, published any provisions concerning through routes in connection with the Rio Grande, and whether the tariffs publishing local rates of the Union Pacific publish any notice, statement or "holding out" of through routes or through service by the Union Pacific in connection with the Rio Grande at the combination or sum of the local rates.

In approaching the through routes question and the Rio Grande's contention that through routes for the traffic concerned now exist and for many years have existed via its line, the following facts and circumstances should be kept in mind:

Although the Rio Grande's complaint to the Commission alleged (Vol. I, p. 6) that "through routes now exist and have for many years existed for the interchange of traffic by complainant [Rio Grande] with the Union Pacific" at points in Utah and with the Union Pacific

and certain other defendants at Denver and other points in Colorado, the Rio Grande did not allege and has never attempted to state or show by evidence or otherwise what through routes it contended to be in existence via its line for the involved traffic from and to the northwest nor what the termini of the claimed through routes are, or for what commodities the through routes are claimed to exist or what carriers comprise the claimed through routes for the traffic it seeks to divert for a "bridge" haul over its line between points in the northwest area and points in the eastern and southern parts of the country; nor did the Colorado court indicate what through routes between what termini for what commodities or what carriers form the through routes it held to be in existence in connection with the Rio Grande (Colo. R. Nos. 332, 333 and 334, page 292). In short, the Rio Grande and the Colorado court both claim that through routes are in existence via the Rio Grande's line for the traffic concerned but apparently base their conclusion solely on the fact that traffic can be physically interchanged between the Union Pacific and the Rio Grande at Ogden and at Denver, and from that fact they erroneously conclude that the Rio Grande automatically becomes a part of all or some unnamed and unspecified through routes out of the millions of routes that exist for the transcontinental traffic moving between the 2,900 stations in the northwest area and the 39,000 stations in the eastern and southern parts of the country (see brief of Union Pacific and other railroads in No. 333, pp. 53-86).

Since a through route is necessarily definitely and specifically described or determinable from tariffs by naming its termini, the commodity or commodities for which it exists, the connecting carriers which form the

through route, it is and would be impossible for the Union Pacific and other railroads, or for the Commission to give practical application to the contention of the Rio Grande and the holding of the Colorado court that unnamed, unspecified and undescribed through routes are in existence between the Union Pacific and the Rio Grande for the traffic concerned.

WHETHER OR NOT THROUGH ROUTES FOR THE INVOLVED TRAFFIC WERE ALREADY IN EXISTENCE VIA THE RIO GRANDE IS A MOOT QUESTION WHICH HAS NO BEARING UPON THE VALIDITY OF THE ORDER ISSUED BY THE COMMISSION.

Although the Rio Grande has argued on brief and orally to this Court that the question whether through routes were already in existence via its line for the involved traffic is "crucial" to the decision to be made in this case, and the Colorado court held that the Commission's finding that the through routes claimed by the Rio Grande were not already in existence via its line "obviously prejudiced the entire proceeding" before the Commission (Colo. R. 288), neither the Rio Grande nor the Colorado court indicates how or in what manner the Commission's finding on the through routes question is now relevant or in what manner that finding prejudiced the Rio Grande.

The Rio Grande, of course, claimed that through routes already existed via its line for the involved traffic in the hope of avoiding the short-haul restriction upon the Commission's authority to order an additional through route which short hauls existing through routes, and its pursuit of that question through the Colorado court and before this Court clearly is for the purpose of forcing

the case back upon the Commission, insofar as it failed to grant the full demands, in the further hope of obtaining the financial benefit of joint rates on still other commodities, while precluding the Commission from reconsidering that part of the "prejudiced" proceedings which gives the Rio Grande the financial gain the order confers.

We submit that all of the talk both in briefs and in the oral arguments concerning the question whether the five-to-five decision of the Commission was a "clear-cut" holding that through routes already exist via the Rio Grande for the involved traffic, and the discussion as to whether such routes did exist in fact or in law, is idle and futile, because, for the reasons set forth at pages 36-38 of the brief of Washington Public Service Commission, et al., No. 332, and at pages 87-98 of the brief of Union Pacific Railroad Company, et al., No. 333, the question whether through routes already existed via the Rio Grande became and has been moot, since the Commission, although finding that through routes via the Rio Grande were not in existence, nevertheless found that they were necessary in the public interest to provide adequate and more economic transportation.

With the latter finding, the short-haul prohibition of Section 15(4) became impotent and was no longer an obstacle to the Commission's ordering the joint rates demanded by the Rio Grande to the extent they were justified by the evidence. This is indisputable for the reason that as argued at page 17 of the brief filed in this Court by The American Short Line Railroad Association in Nos. 332, 333 and 334, "the mere finding that through routes existed, as was alleged by the Rio Grande in its complaint to the Commission, would not grant the relief" sought by the Rio Grande, because "it is the level of

rates which is the impediment to full utilization of the routes." Contrary to the contention there made, the "degree this impediment is to be removed" is a question already answered by the Commission by its finding that joint rates via the Rio Grande equal to those maintained over Union Pacific routes were necessary in the public interest, but, upon the showing made by the evidence, only for the articles named in the order.

Having eliminated the obstacle of the short-haul prohibition by its finding that through routes via the Rio Grande were necessary in the public interest, the Commission then had only the problem of determining for what commodities the evidence showed joint rates to be necessary in the public interest. Having given full effect to the evidence by its finding that public interest required joint rates only on the commodities named in the order, the Commission has exhausted the so-called "relief" it could grant the Rio Grande. Obviously, it would have benefited the Rio Grande none at all if the Commission had found that through routes were in existence via the Rio Grande for all commodities—but that the evidence failed to show that public interest required equal joint rates on any commodity.

The impotency and "straw-man" nature of the question whether through routes already existed via the Rio Grande for the involved traffic is sharply demonstrated by the fact that the Chief Examiner found in his proposed report (sheet 5) the routes did not exist but were necessary in the public interest for all commodities, and by the fact that Commissioner Patterson held that in his view the evidence justified joint rates on "lumber and articles taking lumber rates" and that those articles should also be included in the order, whereas Commissioner Arpaia held that through routes were already in exis-

tence via the Rio Grande for the involved traffic but that the evidence of public interest warranted joint rates "only" on the commodities for which relief is included in the majority report" (Nebr. R. Nos. 117, 118, 119, pp. 78-79).

Therefore even if the case be remanded to the Commission as ordered by the Colorado court, or upon decision of this Court holding that through routes were already in existence via the Rio Grande for the involved traffic, such remand could not direct the Commission to abandon its exclusive administrative function of appraising the extent to which the evidence of public interest requires joint rates. Thus, such remand would be futile since the Commission has already determined that the evidence justifies joint rates in the public interest only for the commodities named in its order.

However, if this Court should disagree with the foregoing views, it still could not, or should not, reach the question whether through routes via the Rio Grande already exist unless and until it has considered and overruled the contentions in our opening briefs in the Colorado case:

(1) That the Commission's *failure* to compel through routes and joint rates for commodities not named in the order is neither an "order" nor a part of the order issued and therefore there is no jurisdictional basis for the Colorado court's action, and,

(2) That, as the Rio Grande has no semblance of a legal right to the traffic it seeks to divert to its line, it was without standing or legal right to maintain its suit in the Colorado court.

These contentions are discussed, respectively, at pages 31 and 18 of the brief of Washington Public Service Com-

mission, et al., No. 332, and at pages 27 and 35 of the brief of Union Pacific Railroad Company, et al., No. 333.

THE THROUGH ROUTES ESTABLISHED IN CONNECTION WITH THE RIO GRANDE IN 1897 DURING THE RECEIVERSHIPS WERE EXPLICITLY CANCELLED BY TARIFFS PUBLISHED AFTER THE RECEIVERSHIPS ENDED.

The history of through routes and joint rates, which existed for a short period more than 50 years ago, in connection with the Rio Grande for through traffic between the northwest area and the eastern part of the country is short and simple:

Having invested hundreds of millions of dollars during the 1870's in constructing and acquiring lines in the northwest to develop and serve that area, the Union Pacific, desiring to protect and retain its long haul to and from the Missouri River on traffic from and to the northwest, refused to establish through routes and joint rates with the Rio Grande for that traffic.

Union Pacific lost control in 1897, through separate receiverships of its lines and those of its northwest subsidiaries, the Oregon Short Line Railroad and Oregon-Washington Railroad & Navigation Company. In that year, the Short Line and the Navigation Company established through routes and joint rates with the Rio Grande via Utah gateways for traffic betwen the northwest and the east. (Neb. R. Nos. 117, 118, 119, p. 35.)

When the Union Pacific regained control after the receiverships ended, it proceeded with a program to regain and safeguard its long haul on the traffic originated and terminated on its lines in the northwest. This it accomplished by publishing tariffs which *eliminated* the Rio

Grande from the through routes by *cancelling* parts of some of the old tariffs and by issuing new tariffs in which the Rio Grande was *omitted* from the through routes over which joint rates were applicable.

At the hearings before the Commission in the instant case the Rio Grande's traffic witness Earley cited the new tariffs (thus making them a part of the record before the Commission) which cancelled and superseded the old tariffs in which through routes had been established in connection with the Rio Grande. He stated that the new tariffs cancelled joint rates via the Rio Grande (Vol. I, 87-88), but neglected to state the fact that what actually and in reality was accomplished by the new tariffs was the *elimination* of the Rio Grande as part of the through routes over which the joint rates would apply. This was done by issuing new tariffs cancelling the parts of the old tariffs that named the Rio Grande as a part of the through routes over which joint rates would thereafter be applicable.

The Rio Grande now erroneously argues at this late date that the new tariffs cancelled the joint rates but did not cancel or close the through routes, or, in other words, that the new tariffs accomplished exactly the reverse of what they intended, and quite clearly and undeniably accomplished.

Cancellation of old through routes via Rio Grande

Pursuant to the Court's permission to file a memorandum covering this history of the through routes and joint rates via Utah gateways in connection with the Rio Grande, there is attached hereto as Appendix A, a sworn statement personally prepared by A. J. Stilling, Assistant Freight Traffic Manager, with 39 years experience in

freight tariff and traffic work with the Union Pacific. His statement quotes the pertinent parts of the tariffs cited by witness Earley in the record before the Commission, and the quotations show beyond dispute that the tariffs published by Union Pacific in 1906 and 1912 quite explicitly *cancelled* the old through routes with the Rio Grande.

The excerpts quoted by Mr. Stilling from the tariffs of 1906 and 1912 cited by Witness Earley expressly show:

(1) "CANCELLATION" notice was issued, effective August 25, 1906, to "CANCEL representation of the * * * Denver and Rio Grande R. R. from title page of tariff", I. C. C. No. 1970, which had published the Rio Grande as a participating carrier in the through routes over which the joint rates applied.

(2) That I. C. C. tariff No. 1583 which published specific routes via Utah junctions with the Rio Grande was cancelled in full by notice effective November 24, 1906, published in tariff I. C. C. No. 1976, stating that "U. P. I. C. C. No. 1976 Supersedes I. C. C. No. 1583." The new tariff, I. C. C. No. 1976, *omitted* all through routes over Union Pacific via Utah junctions with the Rio Grande which had been advertised or held out to the public in the previous tariff, I. C. C. No. 1583, thus, eliminating the Rio Grande and closing the through routes previously offered shippers in connection with that railroad.

(3) That Westbound Tariff I. C. C. No. 942 which published through routes via Denver and other Colorado gateways in connection with the Rio Grande and other named railroads, through Salt Lake City, Huntington

and Portland, Oregon, and other northwestern gateways, in connection with the Union Pacific, Oregon Short Line, Oregon-Washington Railroad & Navigation Company, was amended by Supplement No. 12, thereto, effective November 4, 1912—

"by ELIMINATING Gateways 43 D, 44, 45, 46 and 47 (and all references thereto shown in the tariff), reading as follows:"

Then follows the paragraphs quoted in Mr. Stilling's memorandum, pages 3-5, under "No. 3", in which the gateways and railroads via which through routes were "ELIMINATED" are specified by name. In each paragraph under each of the numbered "gateways" the "Denver & Rio Grande RR" is "ELIMINATED". These included all routes that existed via Utah junctions in connection with the Rio Grande and with the elimination of through routes via those gateways in connection with the Rio Grande the routes were closed and the Rio Grande ceased to be a part of the through routes that previously existed.

(4). Through routes via Utah gateways in connection with the Rio Grande and other lines had been published in Eastbound Tariff 2-H, R. H. Countiss, I. C. C. No. 930, as shown in the excerpts quoted in Mr. Stilling's memorandum under "No. 4" pages 5-8. That tariff was cancelled "in full" by cancellation notice effective December 16, 1912, in Eastbound Tariff 2-I, I. C. C. No. 958, reading as follows:

"LIST OF TARIFFS CANCELLED IN FULL BY THIS TARIFF

ICC No.	Agent	Tariff	Cancellation
930	R. H. Countiss	2-H	In full"

The routes or gateways previously published in Tariff 2-H, ICC No. 930, were not brought forward or republished in Tariff 2-I, ICC 958, and were therefore cancelled effective December 16, 1912, when the Rio Grande ceased to be a part of the through routes.

In view of the foregoing indisputable facts showing the Union Pacific's repeated publication of notices in the tariffs "eliminating" the Rio Grande from the old tariffs which published through routes via its line; "cancelling" the name of the Rio Grande from the old tariffs and "superseding" the old tariffs by new tariffs that "omitted" the Rio Grande pursuant to the very purpose and declaration of the published cancellation notices, we submit that the Rio Grande's assertion at page 54 of its opening brief, and throughout this litigation that Union Pacific cancelled the joint rates with the Rio Grande in 1906 and 1912 but that "no specific action was taken to cancel the through routes"—is simply not true. The excerpts quoted from the tariffs prove that exactly the reverse is true, and that the Rio Grande's reiteration of its false contention misled the Colorado court to say "nothing was ever done to close the routes" (Colo. R. Nos. 332, 333 and 334, page 291).

Neither the Interstate Commerce Act, or any other statute, nor any decision, rule or regulation promulgated or stated, formally or informally by the Commission or the courts, specifies, prescribes or suggests what a railroad must do to cancel or close a through route. Any language sufficiently clear to be understood suffices to notify the public that a previously existing through route is "closed" for the future, and, we submit, that the language of the tariffs quoted in Mr.

Stilling's memorandum is so explicit in terms, and so clear in meaning as to preclude any rational mind from an honest belief that the language fails to serve notice that through routes with the Rio Grande are thereby "closed".

While the Rio Grande has argued to this Court that the Union Pacific could have published a "notice" in its tariffs stating that it would refuse to accept any through or "bridge" shipment tendered for movement over the Rio Grande—even at the combination or sum of the local rates—it has never even hinted that there is any law, rule or regulation requiring such action to close or cancel a through route.

Such contention is absurdly erroneous, particularly in view of:

a. Section 6 of the Act requiring railroads to publish rates between points on their respective lines.

b. Section 1(4) of the Act, which declares that: "It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor."

c. Section 20(9) of the Act conferring power upon the federal courts—

> "to issue a writ or writs of mandamus commanding such common carrier to comply with the provisions of said Act, or any of them."

The Rio Grande's contention that to retain any protection against being short hauled under Section 15(4) the Union Pacific must violate its statutory duty to provide transportation upon "reasonable request" and its

duty under Section 20(11) to accept and issue a bill of lading for property tendered for transportation is so patently untenable as to merit neither discussion here nor consideration by the Court. (See Union Pacific brief in No. 333, pages 74-76.)

In its desperation to support its through routes contention, the Rio Grande has argued to this Court that, since Section 15(8) of the Act assures shippers the right to select their choice of routes where "two or more through routes and through rates shall have been established", it necessarily follows that through routes within the meaning of Section 15(3) and (4) already exist via its line for the involved traffic because a few shippers have elected to route some isolated shipments via its line even at the extra expense of its higher combination of local rates. But this is a clear distortion of Section 15(8), for that section does not purport to cover the myriad of situations where no through route exists. It merely prevents a carrier from depriving the shipper of his selection of the route over which he wants his traffic to move, if and where there are two or more established through routes. The rights of shippers to route their traffic where two or more through routes with through rates have not been established are not declared or covered by this section.

Section 15(8) was added to the Act in 1910 (36 Stat. 553) as a part of the expansion of Section 15 with reference to the establishment of new through routes. As an accompanying part of that expansion, Section 15(8) was clearly intended as protection to shippers in the routing of their traffic where a duplication of routes might result from the Commission's expanded authority to order additional routes, and to prevent carriers from controlling the routing for their own selfish interests.

Moreover, since there is no provision in the Act preventing a shipper from routing his traffic over any series of connecting railroads wherever physical interchange is possible and the carriers have performed their duty of publishing local rates on their respective lines, a shipper may exercise his right to route his traffic over the lines of any such connecting carriers if he is willing to pay the rates published over the route he chooses, regardless of whether the rates are combinations of local rates or joint rates. But the fact that he may do so obviously could not result in the creation of a new through route where none had been established within the meaning of the Act, for, if so, the Commission's restricted power under Section 15(3) and (4) to order through routes that short haul existing routes would be reduced to meaningless surplusage.

The language of tariffs effective when the Rio Grande filed its complaint with the I. C. C. August 1, 1949.

Since through routes via the Rio Grande for the traffic concerned were explicitly cancelled in 1906 and 1912, as shown above, the tariffs published since that time have not repeated that cancellation of the Rio Grande from the through routes for such repetition is no more necessary than it would be to repeat an obituary notice continuously after its first publication.

As pointed out in Mr. Stilling's memorandum, page 8, the joint rates apply only over the routes and through junctions of carriers published in the tariffs. As the Rio Grande has not been a part of the through routes since 1906 and 1912, the tariffs effective at the time the Rio Grande filed its complaint with the Commission and those effective at the present time do not mention the Rio Grande or any other carrier or carriers whose lines

do not form a part of the through routes over which the joint rates are applicable. In other words, the Rio Grande and other non-participating carriers are excluded from the through routes simply by omitting them from the tariffs in which the through routes over which the joint rates apply, and there can be no through routes in connection with the Rio Grande unless and until the Union Pacific republishes the routes and gateways which it cancelled in 1906 and 1912.

In addition to the complete absence of routes or gateways via Utah junctions with the Rio Grande in the present tariffs of the Trans-Continental Freight Bureau to and from the northwest area, the Union Pacific publishes the following routing prohibition as a further safeguard against being short hauled:

> *Publishing Agent W. J. Prueter's ICC No. 1563, Item 90* (Mr. Prueter is the present-day publishing agent for railroad freight rate tariffs that were issued by Agent Countiss in 1912.)
>
> "Westbound rates to points subject to the Western Gateways named herein do not apply on traffic delivered to the UP by connecting lines at junction points in the State of Utah.
>
> "Eastbound rates from points subject to the Western Gateways named herein do not apply on traffic delivered by the UP to connecting lines at junction points in the State of Utah."

Inasmuch as through routes via Utah junctions in connection with the Rio Grande were cancelled some 50 years ago, the language just quoted from the present tariff serves notice to the public that the joint rates will not apply to shipments to and from the northwest area delivered to the Union Pacific by connecting lines and

shipments delivered by the Union Pacific to connecting lines at Utah junctions. The quoted tariff provisions thus safeguard the Union Pacific's haul from and to the Missouri River on traffic moving between points on its lines in the northwest area and points in the eastern part of the country.

Union Pacific tariffs publish no "offer" of through transportation in connection with the Rio Grande.

Questions from the Court during the oral arguments suggested the possible thought that after the through routes in connection with the Rio Grande were cancelled some 50 years ago the Union Pacific might have continued to "advertise" or hold out an offer of through transportation of the traffic concerned in connection with the Rio Grande at the combination or sum of the local rates. Mr. Stilling points out at page 9 of his memorandum that no tariff of the Union Pacific publishes or has published or contained any statement or provision advertising or offering to perform through transportation of the involved traffic in connection with the Rio Grande at the combination or sum of the local rates. The absence of any such offer in the Union Pacific tariffs necessarily negatives any holding out by the Union Pacific of any "course of business" in connection with the Rio Grande for the through traffic concerned.

The fact that the Union Pacific and the Rio Grande both publish rates between local points on their respective lines and that traffic can be physically interchanged between the two carriers may not be construed as a "holding out" or offer of through service or the establishment of a through route within the meaning of the Act, in view of this Court's holding in *Thompson v. United States*, 343 U. S. 549, at page 558, that:

"The fact that appellant's line connects with the Burlington at Concordia does not aid the Commission in proving the existence of a through route since the power to establish through routes under Section 15(3) and (4) also presupposes such physical connection. And the showing that appellant publishes a local rate from Lenora to Concordia and that the Burlington publishes a local rate from Concordia to Omaha proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines."

THE ORDER IS VOID AND SHOULD BE SET ASIDE BECAUSE THE COMMISSION WAS PRECLUDED FROM ISSUING IT BY THE "FINANCIAL NEEDS" PROHIBITION OF SECTION 15(4) OF THE INTERSTATE COMMERCE ACT.

This is the first ground upon which the railroads and the five States contend that the Commission's order is void and should be set aside. The contention is thoroughly discussed at pages 42-51 of the brief of the Union Pacific and other railroads and at pages 55-60 of the brief of Washington Public Service Commission, et al., both in No. 118. The crucial significance of this contention was quickly recognized by Mr. Justice Frankfurter at the oral arguments. We venture to refer again to this contention since its acceptance by the Court would dispose of this entire litigation.

Motion was made to the Commission to dismiss the Rio Grande's complaint on the ground that its case was a "financial needs" case and the so-called "relief" demanded by that perenially bankrupt railroad could not be granted in view of the "financial needs" prohibition in Section 15(4) of the Act. The Commission denied the motion, saying that in reaching its conclusions, "no con-

sideration has been given to the financial needs" of the Rio Grande (Nebr. R. 34). At the oral argument before this Court counsel for the Government also denied that this is a "financial needs" case, saying that the record does not contain sufficiently complete financial data on which a financial needs determination could be made.

In making that statement, Government counsel undoubtedly overlooked the testimony of the Rio Grande's own President (Vol. I, 48-50) that its sole purpose in filing the complaint with the Commission was to improve its financial condition; the testimony of its Vice President Hogue (Vol. I, 69) that the decline in traffic along the Rio Grande Railroad forced it to turn to "bridge" traffic and that in no other way could it have "survived;" and the testimony of the Rio Grande's Freight Traffic Manager, Witness Earley (Vol. I, 81-82) emphasizing the financial importance to the Rio Grande of overhead or "bridge" traffic, and reciting at pages 89-90, the almost continuous bankruptcy of the Rio Grande for the last several decades.

The Commission emphasizes early in its report the passing of the Rio Grande "through various hands and receiverships" and its almost continuous bankrupt condition until its last reorganization was completed April 11, 1947 (Nebr. R. 34, 36). In addition to the testimony of record referred to in our opening briefs and just mentioned above, the Rio Grande's tragic financial history is, as suggested by Mr. Justice Frankfurter at the oral arguments, a matter of public knowledge, and of particular knowledge to the Commission and to this Court. See *Reconstruction Finance Corp. v. Denver & R. G. W. R. Co.*, 328 U. S. 495; *Denver & Rio Grande Investigation*, 113 I. C. C. 75; *Commercial Club, Salt Lake*

City v. A., T. & S. F. Ry. Co., 19 I. C. C. 218, 221-222; *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486; *Livestock-Western District Rates*, 176 I. C. C. 1, 98, and 190 I. C. C. 175; *Utah Coal Operators Assn. v. Atchison, T. & S. F. Ry. Co.*, 218 I. C. C. 663.

The "financial needs" prohibition was added to Section 15(4) by the Transportation Act of 1940, 54 Stat. 911-912, 49 U. S. C. § 15(4), to stop the Commission once and for all from attempting to use its through routes powers to divert traffic from the trunk line railroads for the financial benefit and maintenance of impecunious short lines, for which purpose the Commission had continuously sought to use its through routes power. See *United States v. Mo. Pac. R. Co.*, 278 U. S. 269; *Thompson v. United States*, 343 U. S. 549, 555-556, and numerous footnotes in that opinion concerning the purpose and legislative history of the short-haul prohibition of Section 15(4) as amended.

It is no answer to say, as the Rio Grande and counsel for the Government said in the oral arguments, that the Rio Grande is not presently in financial distress or in need of financial aid through the diversion of traffic from other railroads, for obviously, as the financial needs prohibition prevents the Commission from diverting traffic from other lines to aid a financially distressed short line railroad, then the prohibition, *a fortiori*, precludes the Commission from using its through route powers to divert traffic from other routes to improve the financial condition of the Rio Grande in its presently solvent financial condition.

Our discussion of this contention in our opening briefs mentioned above, clearly shows that the record, the facts and all of the circumstances recited and recog-

nized in the Commission's own report plainly contradict its assertion that in issuing the order there it gave no consideration to the financial needs of the Rio Grande.

At the oral arguments, Mr. Justice Frankfurter quickly recognized the compelling significance of the "financial needs" contention and remarked that the financial needs prohibition seemed to be rather crucial to this controversy. We think it is crucial and decisive of the invalidity of the Commission's order, and we submit that this Court should hold that because the order is prohibited by the "financial needs prohibition" of Section 15(4), this Court should set it aside and end its consideration of the entire litigation right there.

ADEQUACY, EFFICIENCY AND ECONOMY OF UNION PACIFIC ROUTES

During the oral arguments on April 23 and 24, an inquiry from the Court concerned the question whether the Commission found the Union Pacific routes "adequate" for the traffic concerned.

At page 62 of the Record in the Nebraska case (Nos. 117, 118 and 119), concerning Union Pacific routes the Commission made the following findings:

> "* * * It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.
>
> "Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity and efficiency in operation, shows that the

railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line."

The majority of the three-judge Nebraska court held (Nebr. R. Nos. 117, 118, 119, page 160) that:

"There is no evidence to suport a finding that the physical transportation facilities furnished by the Union Pacific between the northwest area, on the one hand, and points east of Denver are inadequate."

That court further held (Nebr. R. 161-162):

"But, again, there is no evidence that the service is inadequate or that more economical transportation service will result with respect to shipments from the northwest area to points between Ogden and Provo served by both the Union Pacific and the Rio Grande and to be reshipped to final points of destination east of Denver. The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific. And that service is as economical via the Union Pacific as it would be over the Union Pacific and the Rio Grande if the through route and joint rates were established."

The first Finding of Fact made by the Nebraska court (Nebr. R. 165) was as follows:

"The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points

of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points."

The table set forth in the Commission's report (Nebr. R. 40) shows that Union Pacific routes are from 33 to 219 miles shorter than any routes that could be made over the Rio Grande between the northwest area and principal consuming markets in the east and south. At page 71 of the Nebraska Record, the Commission finds that between the northwest area and many destinations "the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and range up to more than 50 percent" than present routes between the same points.

At page 65 of the Nebraska Record, the Commission stated:

"A large number of shippers and representatives of communities served by the Union Pacific, and traffic associations, opposed the complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commission of those States, except Idaho, Utah, and Colorado. Those three supported the complaint in whole or in part, and as indicated, the Kansas commission later qualified its opposition by supporting the position of the complainant insofar as it pertains to wheat and livestock."

The Commission then found that:

"* * * Most of the shippers in opposition to the complaint commented upon the adequacy, efficiency, and

satisfactory character of the service which they had received over the Union Pacific routes. Many of them testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event. * * *"

As shown in our briefs filed in this Court, 120 public and shipper witnesses testified positively and affirmatively to the adequacy, efficiency and economy of the shorter, faster Union Pacific routes. In our reply brief, filed April 19, 1956, it is shown in Appendix B thereto that the Public Service Commissions of Washington, Montana and Oregon vigorously opposed the Rio Grande's complaint before the Interstate Commerce Commission; that 14 witnesses from the State of Washington testified in opposition to the Rio Grande and that no witness from that State supported its complaint; that 5 witnesses from Montana opposed the Rio Grande's complaint and no witness from that State supported it; that 13 witnesses, speaking for numerous shippers of large quantities of traffic from and to Oregon, opposed the Rio Grande's complaint and only 2 witnesses from that State supported it. In short, Appendix B to our reply brief shows that 73 witnesses from the entire northwest area vigorously opposed the Rio Grande's complaint and only 22 witnesses from that area supported it and the latter were from the southeast corner of Idaho, except 2 witnesses from northern Utah and 2 witnesses from Oregon.

Witnesses opposing the Rio Grande testified unanimously that Union Pacific routes are adequate, efficient, shorter, more direct and furnish shippers in the northwest area excellent and entirely adequate transportation services.

Among the witnesses opposing the Rio Grande was Alfred P. Graham, Traffic Manager, Boeing Airplane Co., Seattle, Washington (listed in Martindale-Hubbell Law Dictionary, Vol. II, P. 4325, as a client of the law firm of Holman, Mickelwait, Marion, Black & Perkins of Seattle). Mr. Grahams' testimony is typical and representative of the testimony of all shippers in the northwest area who opposed the Rio Grande. His testimony appears in Vol. II of the Transcript of Record at pages 937-941 and the pertinent part of it is as follows:

> "The Union Pacific's service in regard to road haul, switching, car supply, tracing and in all other related respects has been excellent. The Union Pacific has also prepared and supplied special equipped excess height cars for the movement of large airplane components such as wings fuselages, etc., which are too large to load in standard cars. We have found the Union Pacific particularly mindful and willing to assist in the special transportation problems of our company prior to, during and since the war. It has been particularly important that special equipment assigned to service between our plants move on an expeditious over-the-road schedule, coordinated with our production schedules.
>
> "We have never asked nor do we have need for joint through rates on transcontinental traffic via the Denver and Rio Grande Western in connection with the Union Pacific. The existing routes and services of the Union Pacific are entirely adequate and sufficient for our purposes. We have routed some of our cars to Seattle via [fol. 1370] the Denver and Rio Grande Western in connection with other carriers. Transit time has been two days or more longer that when routed via the Union Pacific.
>
> "The exigencies of our production require the fastest transit time possible. If the route proposed,

which would short haul the Union Pacific, were established, it is only reasonable to assume that such a situation would result in a loss of revenue to the Union Pacific. It would naturally follow that such a loss would have to be offset by an increase in rates or by savings from a curtailment of service. Either of these results would be to the definite detriment and disadvantage of my company.

* * * * *

"The Boeing Airplane Company desires to go on record in opposition to the establishment of the requested through routes and respectfully requests the Commission to take no action that would possibly impair the ability of the Union Pacific to render the service it has in the past, which is vital to our operations."

In an obvious effort to circumvent its inescapable finding from the physical and other facts of record that the Union Pacific routes are adequate to move the present volume of traffic and any additional volume that may be anticipated in the foreseeable future, the Commission said (Nebr. R. 70) that:

"While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. * * *"

But this incredible assertion follows the Commission's correct statement at page 69 of the Nebraska Record that:

"There is no contention here by complainant that the present routes of the defendants are not ade-

quate for the traffic hauled, and no finding is sought by complainant to that effect. * * *"

And that assertion embraces the Commission's erroneous view at page 69 of the Nebraska Record that it is authorized to short haul existing routes, no matter how adequate they may be, to provide "more adequate" service by ordering additional routes.

The assertion also embraces the Commission's further erroneous view that it has power to authorize "as many routes as possible" for perishable food products regardless of the adequate, efficient and economic transportation service of existing routes. Finally, the Commission's efforts to find existing Union Pacific routes indaequate for perishable food products rests upon its wholly irrational and erroneous view expressed at page 70 of the Nebraska Record that it has power to condemn Union Pacific routes as inadequate and to short haul them because they "are not available, and higher rates apply" *at points on the Rio Grande which are not served by the Union Pacific routes.*

In other words, it was only by indulging in the three clearly erroneous premises that the Commission propelled itself to the ultimate false conclusion that Union Pacific routes, though adequate and satisfactory for any commodities moving over them, were, nevertheless, unsatisfactory for perishable food commodities requiring stoppage for in transit (commercial) operations at points located exclusively on the Rio Grande.

Such reasoning is a plain distortion of the purpose of clause "(b)" of Section 15(4) of the Act which authorizes the Commission to condemn and short haul existing routes only where they can be shown to be inade-

quate, inefficient and uneconomic for traffic moving over them, and when a *proposed* route between the same termini can be shown to afford "adequate, and more efficient or more economic, transportation," than that performed by existing routes.

Such flagrant misconstruction of the Act and such clear abuse of its power to short haul existing routes is demonstrated by the legislative history of clause "(b)" quoted at page 12 of our reply brief where it is shown that the purpose of the legislation, as stated in a report of the Senate Committee, was to give shippers "the shortest, quickest and cheapest routes available," where existing routes did not meet those tests.

Counsel for the Commission was unable to support its assertion that Union Pacific routes were inadequate for the through transportation of the involved traffic, as shown by the following from the transcript of the oral arguments:

> "Mr. Ginnane: I should make it clear the Commission did not find and the Rio Grande did not contend that Union Pacific does not render good service on its routes. The Commission made no findings that Union Pacific does not render adequate service on its routes." (p. 98)
>
> "No one challenges the fact that Union Pacific, on its routes furnishes adequate transportation services. * * *" (p. 99)
>
> "Justice Frankfurter: Adequate for what?
>
> "Mr. Ginnane: Adequate for moving these commodities along the Union Pacific's routes."
>
> "Justice Black: From your standpoint, they found the U. P.'s service adequate?
>
> "Mr. Ginnane: On U. P.'s routes." (p. 100)

The testimony of Witness R. K. Bradford, Vice President of Rio Grande, fully supports the position Mr. Ginnane was compelled to take (Vol. II, p. 1161):

> "In regard to the testimony of Mr. Hanson, may we again state that at no time have we in any way questioned the capacity of the Union Pacific Railroad physically to handle the business it now handles, nor have we at any time in this case brought up for discussion the relative efficiency of the Union Pacific—Rio Grande."

INADEQUATE, INEFFICIENT AND UNECONOMIC RIO GRANDE ROUTES

As stated above, the Commission found that the Rio Grande route would add from 33 to 219 miles additional transportation to points like Omaha, Nebraska, and that between the northwest area and many of the eastern points via the Rio Grande would be from 33 to more than 50% longer than present Union Pacific routes.

The majority of the three-judge Nebraska court held (Nebr. R. 166) that transportation service via the Rio Grande:

> "* * * is inadequate and also inefficient and uneconomical".

We urge this Court's careful attention to the compelling significance of the following:

The Examiner's proposed report (which is included in the record before this Court as an original, but not printed, document) recommended at sheet 30 that the Commission make the following finding:

"The Rio Grande, like the Union Pacific, is an efficiently operated railroad and an important and essential railroad in the national transportation system. It is capable of handling efficiently over its line traffic that it may receive from its connections coming from or destined to the territories described in this proceeding. It has demonstrated its efficiency and capacity during the war period of 1942 to 1945, and during the storm period in February 1949 when it received freight, passengers, express and mail traffic diverted from the Union Pacific, when certain portions of the latter railroad's lines in Wyoming were blocked by snow storms. The record contains evidence in considerable detail about the extent and scope of that operation, which it is not necessary to review. From that evidence it is concluded that the Rio Grande has sufficient capacity to handle efficiently the additional traffic that may be routed over its line, in the event that the joint through rates sought in this proceeding are established."

The Commission rejected the recommendation and refused to make the recommended finding. Instead, the Commission found (Nebr. R. 62):

"The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile, as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. East-bound on the Union Pacific the maximum grade at any point is 1.52 percent and westbound 1.55 percent. The Rio Grande's maximum grade is 2 percent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union Pacific. The total rise and fall in feet on the Rio Grande is 66.3 percent greater than that

of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services."

The Commission further found (Nebr. R. 70-71):

"Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recognized by the Commission in prior proceedings. See *Livestock, Western District Rates, supra,* and *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486."

Thus, the Commission not only failed to find that the *proposed* Rio Grande route was adequate or more efficient or more economic than the shorter, faster Union Pacific routes, but refused to adopt the Examiner's recommended finding that the Rio Grande is efficiently operated and has sufficient capacity to handle efficiently additional traffic from and to the northwest that might be diverted to its line. In other words, the finding recommended by the Examiner with respect to the *proposed* Rio Grande route is an essential prerequisite to ordering that route under clause "(b)" to short haul existing routes, but the Commission refused to make the prerequisite findings, obviously because there was no evidence to support such findings, and, indeed, the Examiner's recommended finding was clearly contrary to the evidence of record.

The Commission's attempt to condemn existing routes as inadequate because they were not available at points

in territory they did not traverse or serve was stricken down by this Court in *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, holding at page 545, that it was only by "an artificial use of words" that existing routes were condemned by the Commission and that "[t]he condition in the statute is not to be trifled away."

This Court has also rejected "the Commission's effort to limit by construction the impact of the short-hauling restriction on its power to establish through routes", *Thompson v. United States*, 343 U. S. 549, 555, citing *United States v. Mo. Pac. R. Co.*, 278 U. S. 269.

A fortiori, the Court should strike down the Commission's effort here to completely emasculate the short-hauling restriction by misconstruing it as permitting condemnation and short-hauling of the admittedly shorter, faster, efficient and adequate Union Pacific routes, by ordering the longer, slower and "more onerous" Rio Grande route, merely because of its "artificial" assertion that perishable food products require "as many routes as possible", or because Union Pacific routes and their lower rates are "not available" at points located exclusively on the Rio Grande.

CONCLUSION

The judgment of the Nebraska district court in Nos. 117 and 119, enjoining and annulling the Commission's order in part, should be affirmed and its judgment in No. 118, sustaining the validity of the order in part, should be reversed and the case remanded with direction to issue the injunction and relief prayed by the plaintiffs in that court.

The judgment of the Colorado district court, Nos. 322, 333 and 334, should be reversed and the case re-

manded to that court with direction to dismiss the complaint.

Respectfully submitted,

DON EASTVOLD, Attorney General of Washington,
ROBERT L. SIMPSON, Asst. Attorney General of Washington,
Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington.

C. W. FERGUSON, Attorney for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon.

JAMES B. PATTEN, Attorney for Board of Railroad Commissioners of the State of Montana, Helena, Montana.

PROOF OF SERVICE

I, ELMER B. COLLINS, attorney for Union Pacific Railroad Company, one of the Appellants-Appellees herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 11th day of May, 1956, I served, on behalf of all Appellants-Appellees herein, copies of the foregoing Supplemental Memorandum on the several adverse parties in Nos. 117, 118, 119, 332, 333 and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff.
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

and with first-class postage prepaid to:

William Spire, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Neil Brooks, Esq.
Assistant General Counsel
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who

work for The Denver and Rio Grande Western R. R. Co.; National Live Stock Producers Association; Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company, Inc.; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

Lee J. Quasey, Esq.
139 N. Clark Street
Chicago 2, Illinois

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

and with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

6. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to;

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

ELMER B. COLLINS,
Of Counsel for Appellants-Appellees Herein.

MEMORANDUM

My name is A. J. Stilling. I am Assistant Freight Traffic Manager of the Union Pacific Railroad and my business address is 1416 Dodge Street, Omaha 2, Nebraska. I am the same A. J. Stilling who testified (Vol. I, pp. 796-865) in behalf of the Union Pacific Railroad Company in "The Denver and Rio Grande Western Railroad Company, Complainant, v. Union Pacific Railroad Company, et al., Defendants, Interstate Commerce Commission Docket No. 30297". I have now had 39 years experience in freight tariff and traffic work with the Union Pacific Railroad Company.

Mr. T. K. Earley was the chief traffic witness for the Rio Grande in the proceeding before the Commission and was at the time he testified Assistant Freight Traffic Manager of the Denver and Rio Grande Western RR. After referring to the establishment in 1897 of through routes and joint rates between the Rio Grande and the Oregon Short Line Railroad Company, Witness Earley stated (Vol. I, pages 86-88):

(1) "Ogden was continued as an open gateway until August 25, 1906, when through competitive rates between Colorado Common Points and certain Montana points on or via the OSL and the Rio Grande through Utah junctions were cancelled by Supplement No. 1 to Union Pacific Tariff No. 10340, ICC No. 1970."

(2) "Between OSL points in Idaho and Oregon, on the one hand, and Colorado Common Points and east thereof, on the other hand, the joint competitive rates via the Utah gateways with the Rio Grande were cancelled effective November 24, 1906, in UP Tariff No. 8606, ICC No. 1583."

(3) "On November 4, 1912, transcontinental rates to OWR&N points were cancelled in Supplement No. 12 to TCFB Tariff No. 4-I, Agent R. H. Countiss' ICC No. 942."

(4) "Eastbound transcontinental rates via D&RG through Utah gateways from OWR&N points were cancelled in TCFB Tariff No. 2-I, Agent R. H. Countiss' ICC No. 958, on December 16, 1912."

In the preceding four sentences Witness Earley refers to the cancellation of "through competitive rates", "joint competitive rates" and "transcontinental rates" via Ogden or Utah gateways. I have personally examined each of the tariffs and supplements referred to by Witness Earley and will show by quotation of pertinent parts of them that the through routes via Utah gateways with the Rio Grande were cancelled on the dates mentioned by him. The numbered sentences above will be dealt with separately.

No. 1

Union Pacific Tariff 10340, ICC No. 1970, contained joint rates and through routes via Utah junctions with the Rio Grande. The following cancellation notice appears in Supplement No. 1 to that tariff effective August 25, 1906:

"CANCELLATION

"CANCEL representation of the Colorado Midland Ry. and Denver and Rio Grande R. R. from title page of tariff. * * *"

This cancellation eliminated the Denver and Rio Grande Western R. R. from participation in the through routes and joint rates published in this tariff.

No. 2

Union Pacific Tariff 8606, ICC No. 1583, contained specific routes via Utah Junction points with the Rio Grande. That tariff was cancelled in full effective November 24, 1906, by Union Pacific Tariff No. 10375, ICC No. 1976. The cancellation notice reads:

"U.P. I.C.C. No. 1976 Supersedes I.C.C. No. 1583.

"U.P. G.F.O. No. 10375 Supersedes G.F.O. No. 8606."

All through routes over the Union Pacific via Utah junctions and the Rio Grande were *omitted* from the new tariff effective November 24, 1906, on which date the Rio Grande ceased to be a part of the routes over which the through rates applied.

No. 3

The following (among other things having no reference to these proceedings) appears on pages 88 and 89, Supplement 12, Trans-Continental Freight Bureau Westbound Tariff No. 4-I, Agent R. H. Countiss' ICC No. 942:

"Effective November 4, 1912 (in Supplement No. 12): AMEND pages 30 to 36, inclusive of tariff by ELIMINATING Gateways 43D, 44, 45, 46 and 47 (and all references thereto shown in tariff), reading as follows:

"43D—Union Pacific RR., or Chicago, Burlington & Quincy RR., Denver, Colo., or Chicago, Rock Island & Pacific Ry., Denver, Colorado Springs or Pueblo, Colo., in connection with Denver & Rio Grande RR., to Salt Lake City, Utah, Oregon Short Line RR., Huntington, Ore., thence Oregon-Washington Railroad & Navigation Co. to destination;

or

Union Pacific RR., or Chicago, Burlington & Quincy RR., Denver, Colo., or Chicago, Rock Island

& Pacific Ry., Denver, Colorado Springs, or Pueblo, Colo., in connection with Colorado Midland Ry. and Denver & Rio Grande RR. to Salt Lake City, Utah, Oregon Short Line RR., Huntington, Ore., thence Oregon-Washington Railroad & Navigation Co. to destination.

"44—Union Pacific RR., or Chicago, Burlington & Quincy RR. to Denver, Colo., or Chicago, Rock Island & Pacific Ry. to Denver, Colorado Springs or Pueblo, Colo., in connection with Denver & Rio Grande RR., to Salt Lake City, Utah, Oregon Short Line RR., to Huntington, Ore., Oregon-Washington Railroad & Navigation Co. to Portland, Ore., thence Southern Pacific Co. (Lines in Oregon) to destination.

or

Union Pacific RR., or Chicago, Burlington & Quincy RR., to Denver, Colo., or Chicago, Rock Island & Pacific Ry. to Denver, Colorado Springs, or Pueblo, Colo., in connection with Colorado Midland Ry. and Denver & Rio Grande RR. to Salt Lake City, Utah, Oregon Short Line RR. to Huntington, Ore., Oregon-Washington Railroad & Navigation Co. to Portland, Ore., thence Southern Pacific Co. (lines in Oregon) to destination.

"45—Denver & Rio Grande RR. in connection with Oregon Short Line RR., Huntington, Ore., thence Oregon-Washington Railroad & Navigation Co.

or

Colorado Midland Ry., and Denver & Rio Grande RR., in connection with Oregon Short Line RR., Huntington, Ore., thence Oregon-Washington RR. & Navigation Co.

"46—Denver & Rio Grande RR., in connection with Oregon Short Line RR., Huntington, Ore., Oregon-Washington Railroad & Navigation Co., to Portland, Ore., thence Oregon City Transportation Co. to destination.

or

Colorado Midland Ry., and Denver & Rio Grande RR., in connection with Oregon Short Line RR., Huntington, Ore., Oregon-Washington Railroad and Navigation Co. to Portland, Ore., thence Oregon City Tranportation Co. to destination.

"47—Denver & Rio Grande RR., in connection with Oregon Short Line RR., Huntington, Ore., Oregon-Washington Railroad & Navigation Co to Portland, Ore., thence Spokane, Portland & Seattle Ry. to destination.

or

Colorado Midland Ry. and Denver & Rio Grande RR. in connection with Oregon Short Line RR., Huntington, Ore., Oregon-Washington Railroad & Navigation Co. to Portland, Ore., thence Spokane, Portland & Seattle Ry. to destination."

In Agent Countiss' Trans-Continental tariffs, the routes in the western states over which the joint rates applied were called "Gateways" or "Western Gateways". Those quoted above included all routes that were in effect via Utah gateways or junction points with the Denver & Rio Grande RR. When those routes or gateways and all reference thereto were eliminated from the tariff, the Rio Grande to Utah junctions ceased to be a part of the through routes over which the joint rates applied.

No. 4

The following routes or "Western Gateways", as they were called, via Utah junctions with the Denver & Rio Grande RR. appear on pages 23 and 24 of Trans-Continental Freight Bureau Eastbound Tariff 2-H, R. H. Countiss' ICC No. 930, which became effective October 10, 1910:

"50-E. Via Oregon & Washington RR., Oregon Railroad & Navigation Co., Huntington, Ore., Oregon Short Line RR. to Salt Lake City, Utah, thence Denver & Rio Grande RR. to Pueblo, Colorado Springs or Denver, Colo., in connection with Chicago, Rock Island & Pacific Ry., or Denver, Colo., in connection with Union Pacific RR.

or

Via Oregon & Washington RR., Oregon Railroad & Navigation Co., Huntington, Ore., Oregon Short Line RR. to Salt Lake City, Utah, thence Denver & Rio Grande RR., and Colorado Midland Ry. to Pueblo, Colorado Springs or Denver, Colo., in connection with Chicago, Rock Island & Pacific Ry. or to Denver, Colo., in connection with Union Pacific RR.

"50-F. Via Oregon & Washington RR., Oregon Railroad & Navigation Co. to Huntington, Ore., and Oregon Short Line RR. in connection with Denver & Rio Grande RR.

or

Via Oregon & Washington RR., Stockdale, Ore., Oregon Railroad & Navigation Co., Huntington, Ore., Oregon Short Line RR. and Denver & Rio Grande RR. in connection with Colorado Midland Ry.

"53-A. Via Oregon Railroad & Navigation Co. to Huntington, Ore. and Oregon Short Line RR., in connection with Denver & Rio Grande RR., or Denver & Rio Grande RR. and Colorado Midland Ry.

"59. Via Oregon Railroad & Navigation Co. to Huntington, Ore., Oregon Short Line RR. to Salt Lake City, Utah, and Denver & Rio Grande RR., or Denver & Rio Grande RR. and Colorado Midland Ry. in connection with Union Pacific RR., Chicago, Rock Island & Pacific Ry., Chicago, Burlington & Quincy RR., Atchison, Topeka & Santa Fe Ry., or the Missouri Pacific Ry.

"60. Via Oregon City Transportation Co. to Portland, Ore., Oregon Railroad & Navigation Co. to Huntington, Ore., Oregon Short Line RR. to Salt Lake City, Utah, and Denver & Rio Grande RR., or Denver & Rio Grande RR. and Colorado Midland Ry. in connection with Union Pacific RR., Chicago, Rock Island & Pacific Ry., Chicago, Burlington & Quincy RR., Atchison, Topeka & Santa Fe Ry., or the Missouri Pacific Ry.

"61. Via Southern Pacific Co. (Lines in Oregon) to Portland, Ore., Oregon Railroad & Navigation Co. to Huntington, Ore., Oregon Short Line RR. to Salt Lake City, Utah, and Denver & Rio Grande RR., or Denver & Rio Grande RR. and Colorado Midland Ry. in connection with Union Pacific RR. or Chicago, Rock Island & Pacific Ry.

"66. Via Astoria & Columbia River RR. to Portland, Ore., Oregon Railroad & Navigation Co. to Huntington, Ore., Oregon Short Line RR. to Salt Lake City, Utah, and Denver & Rio Grande RR. or Denver & Rio Grande RR. and Colorado Midland Ry. in connection with Union Pacific RR., Chicago, Rock Island & Pacific Ry., Chicago, Burlington & Quincy RR., Atchison, Topeka & Santa Fe Ry. or the Missouri Pacific Ry."

The above-mentioned TCFB Eastbound Tariff 2-H, R. H. Countiss' ICC No. 930, was cancelled "in full" effective December 16, 1912, by TCFB Eastbound Tariff 2-I, R. H. Countiss' ICC No. 958. The cancellation reads as follows:

"LIST OF TARIFFS CANCELLED IN FULL BY THIS TARIFF

ICC No.	Agent	Tariff	Cancellation
930	R. H. Countiss	2-H	In full"

The routes or western gateways shown above were not brought forward in Tariff 2-I, ICC No. 958, and were therefore cancelled effective December 16, 1912, on which date the Rio Grande from Utah junctions ceased to be a part of the through routes over which the joint rates applied.

In the tariffs effective at the time the Rio Grande filed its complaint with the I. C. C. and in those effective at the present time the joint rates apply only via routes or gateways published in the tariffs, and as the tariffs do not publish through routes or gateways via Utah junctions with the Rio Grande, there are none and can be none unless and until Union Pacific republishes routes or gateways the same as those that were cancelled in 1912 or prior thereto.

In addition to the complete absence of routes or gateways via Utah junctions with the Rio Grande in the present tariffs of the Trans-Continental Freight Bureau to and from what the Rio Grande calls the "Closed Door Territory", the Union Pacific publishes the following routing prohibition as a further safeguard against being short hauled:

> *Publishing Agent W. J. Prueter's I. C. C. No. 1563, Item 90* (Mr. Prueter is the present-day publishing agent for railroad freight rate tariffs that were issued by Agent Countiss in 1912.)
>
> "Westbound rates to points subject to the Western Gateways named herein do not apply on traffic delivered to the UP by connecting lines at junction points in the State of Utah.
>
> "Eastbound rates from points subject to the Western Gateways named herein do not apply on traffic delivered by the UP to connecting lines at junction points in the State of Utah."

No tariff of the Union Pacific publishes or has published or contained any statement or provision advertising or offering to perform through transportation of traffic between points in the northwest area and points in the eastern and southern parts of the country in connection with the Rio Grande at the combination or sum of the local rates.

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA

STATEMENT AS TO JURISDICTION

In compliance with Rules 13 and 15, Revised Rules of the Supreme Court of the United States (effective July 1, 1954), appellants, Union Pacific Railroad Com-

pany; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Wabash Railroad Company; Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, submit herewith their statement[1] particularly disclosing the basis upon which this Court has jurisdiction on appeal to review the judgment of the district court entered in this case on December 20, 1954.

Opinions Below

The report of the Interstate Commerce Commission is found in 287 I. C. C. 611, and is attached hereto as Appendix B. The majority opinion of the three-judge district court, and the dissenting opinion of Circuit Judge Johnsen, were filed October 22, 1954, and have not been reported, but are attached hereto as Appendix D. The court's findings of fact and conclusions of law are set forth in the majority opinion.

Jurisdiction

This action was brought in the District Court of the United States for the District of Nebraska by the Union

---

1 Counsel for these appellants fully appreciate the desirability for brevity and the requirement of this Court's Rule 15 for conciseness in preparing jurisdictional statements. The geographical, physical and other facts essential to an understanding of the case and material to consideration of the unusual number and variety of questions presented are, however, so involved and voluminous as necessarily to extend this statement beyond the length ordinarily required in less complicated cases.

Pacific Railroad Company and seven other railroads pursuant to 28 U. S. C. 1336, 1398, 2284 and 2321-2325, to enjoin, annul, suspend and set aside the order issued January 12, 1953, by the Interstate Commerce Commission in a proceeding entitled "Docket No. 30297, Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co., et al."

The order (Appendix C hereto) was issued upon a complaint filed with the Commission by The Denver & Rio Grande Western Railroad Company (hereinafter called "Rio Grande"). It requires, among other things, that the railroad appellants herein[2] and over 200 other railroads establish and maintain through routes and joint rates in connection with the Rio Grande "the same" as the joint rates maintained by them over transcontinental routes embracing the lines of the Union Pacific Railroad Company through Wyoming on certain commodities that move by railroad between points in the northwest area and points in the eastern and southern areas described in the order.[3]

The order presents the unique situation of an attempt by the Commission to short haul the railroads that have the shortest and most efficient routes and lowest rates by compelling them to establish longer and more onerous through routes and equal joint rates in connec-

---

2 The railroad appellants herein were among 221 railroads named in the Rio Grande's complaint to the Commission. The public service commissions of the five States, appellants herein, intervened in opposition to the Rio Grande before the Commission, and as plaintiffs in the court below.

3 The lines and termini of the Union Pacific and the Rio Grande (main lines) are indicated on the map attached hereto as Appendix A. Figures in the oblongs on the map show the number of additional miles shipments would move via the Rio Grande compared to mileage via Union Pacific.

tion with the Rio Grande, a short-line railroad, so that it can divert traffic for a "bridge" haul over its line. The Commission's action has implications of vital and far-reaching future effect not only upon the appellant railroads and the economic welfare of shippers and communities served by them in the five appellant States but also upon shippers in communities located upon long-established routes and channels of commerce of the larger railroads generally throughout the country.

Final judgment and decree of the majority of the district court sustaining the validity of the order "in part" and enjoining it "in part" is dated and was entered December 20, 1954. On the same day the district court entered an order in which it "overruled and denied" a motion of the Rio Grande and a motion of these appellants for new trial and reconsideration. The district court also on December 20, 1954, issued an "Injunction Pending Appeal", staying, suspending and restraining enforcement of the Commission's order pending final determination of this appeal. Copies of these documents are attached hereto as Appendices E, F and G, respectively.

Notice of appeal was filed by these appellants in the District Court of the United States for the District of Nebraska on February 18, 1955.[4] On March 22, 1955, an order by Circuit Judge Johnsen, who was the presid-

---

4 Notice of appeal from the judgment of the district court in this case was also filed:

1. By The Denver & Rio Grande Western Railroad Company, February 3, 1955.
2. By the United States of America, February 17, 1955.
3. By the Interstate Commerce Commission, February 18, 1955.
4. By the Secretary of Agriculture of the United States, February 18, 1955.

ing member of the three-judge district court, was entered extending to June 1, 1955, the time for filing the record and docketing the cases of all appellants in this Court. Copy of that order is attached hereto as Appendix H.

The jurisdiction of this Court to review the judgment by direct appeal is conferred by 28 U. S. C. 1253 and 2101 (b).

The following decisions sustain the jurisdiction of this Court to review the judgment in this case on direct appeal: *United States v. Mo. Pac. R. Co.*, 278 U. S. 269; *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588; *Thompson v. United States*, 343 U. S. 549; *U. S. v. Great Northern R. Co.*, 343 U. S. 562; *I. C. C. v. Columbus & Greenville Ry.*, 319 U. S. 551; *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499; see also *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538.

Statutes Involved

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out verbatim in Appendix I, hereto:

National Transportation Policy (preceding Section 1), and Sections 1 (3) (a), 1 (4), 1 (5), 3 (1), 3 (4), 15 (1), 15 (3) and 15 (4).

Questions Presented

The following questions are presented by this appeal.[5]

I. Whether the court below erred in refusing to hold that, in this proceeding, brought by the Rio Grande for the admitted purpose of enhancing its financial position by diverting for a "bridge" haul over its line transcontinental through traffic now and for some 75 years moved over Union Pacific routes between points on those routes in the northwest and points in the eastern and southern parts of the United States, the Commission was prohibited from issuing the order by the provision of Section 15 (4) of the Interstate Commerce Act that, "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs," and that this prohibition may not be evaded or circumvented by the Commission's assertion that in making the order "no consideration has been given to the financial needs" of the Rio Grande.

II. Whether the court erred in refusing to hold that, in view of the short haul prohibition of Section 15 (4) of the Act (49 U. S. C., § 15 (4)), the Commission acted arbitrarily and unlawfully in issuing the order

---

5 The plurality of questions presented by this appeal results from the Rio Grande's commingling in its complaint of separate and independent provisions of the Act concerning its rights as a carrier, the rights of shippers, and the "public interest"; also from what Circuit Judge Johnsen's dissenting opinion aptly decribes as "all the confusion in which the (Commission's) report is wrapped", "the loose and improper basis and manner in which * * * the Commission has dealt with the entire situation", and from the further confusion and apparent misconception of the majority of the district court concerning its judicial functions in reviewing the order.

short-hauling Union Pacific routes at least 925 miles, upon the Commission's own findings of fact:

(a) That Union Pacific routes have lower rates than the Rio Grande and are shorter, faster, efficiently operated, adequate and have surplus capacity to haul any foreseeable volume of the through traffic involved;

(b) That movement of the same through traffic via the Rio Grande would require over 200 miles additional transportation, at least 24 hours more time in transit, and one or two additional interchange services; and that the Rio Grande maintains higher rates, is less favorably located and has more onerous operating conditions than the Union Pacific or any of the other western lines.

III. Whether the court erred in failing to hold that the entire order is void because the Commission misconstrued, departed from and failed to observe and make the findings required by the controlling statutory standards and criteria of Sections 1 (4), 3 (1) and (4) and 15 (3) and (4) (b), in basing its order:

(a) Upon the premise that the standards and conditions of Section 15 (4) (b) [which permit establishment of a proposed route short-hauling existing routes of other railroads, *only* if "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic transportation"] are lawfully observed and applied by the Commission's findings here:

1. of a need for "more" adequate and economic service than that afforded by Union Pacific routes, and

2. that the Rio Grande route is "necessary and desirable" to provide "adequate and more economic transportation",

without any finding by the Commission that the Rio Grande route is "needed" or that it will provide "more efficient" transportation than Union Pacific routes for the involved through traffic between the same origins and the same ultimate destinations;

(b) Upon the premise that the conditions which permit short-hauling Union Pacific routes under Section 15 (4) (b) can be met and satisfied by merely substituting the lower joint rates applicable over Union Pacific routes for the higher combination rates via the proposed Rio Grande route;

(c) Upon the premise that, under Section 15 (4) (b), Union Pacific routes may lawfully be condemned and found "inadequate and less economical" than the Rio Grande route for through traffic because, *at points located on and served only by the Rio Grande,* "the Union Pacific routes and the joint rates that apply over them are not available, and higher rates apply";

(d) Upon the premise that the Commission may invoke its power under Section 15(3) and (4) (b) for the purpose of making additional transit privileges available by equalizing rates via the Rio Grande with rates applicable over Union Pacific routes;

(e) Upon the criteria that the marketing system for food articles of a perishable nature requires "as wide a distribution as possible", "as many routes as possible", "as much flexibility as possible" and "as many markets and outlets as possible", although Section 1 (4) requires carriers to establish only "reasonable" through routes;

(f) Upon the inconsistent criteria that:

1. food articles of a perishable nature must move to markets "with expedition and care" and "without unnecessary interruptions";

2. the longer Rio Grande route is necessary to permit the through transportation of such articles to be interrupted so that the articles may be held as long as 12 months at points on the Rio Grande for "commercial operations" called transit privileges, and

3. ordinary livestock to stop for grazing or feeding, and marble and granite monuments to stop for partial unloading at points on the Rio Grande fall within the category of perishable food articles found by the Commission to require expeditious, careful and uninterrupted transportation;

(g) Upon the premise that the Commission may lawfully invoke its powers under Section 15(3) and (4) to obtain the remedy it desires for rates found violative of Sections 1 and 3, and that findings of violations of the latter sections afford a lawful basis for ordering the through routes and joint rates.

IV. Whether the court erred in holding that the Commission may require Union Pacific routes to short haul themselves by establishing through routes and joint rates with the Rio Grande for the sole purpose of permitting through traffic to be stopped at points on the Rio Grande, not served by the Union Pacific, for "commercial operations" (known as "transit" privileges), such as storing, processing and cattle grazing, at the same rates the same shippers have when using Union Pacific routes between the same points of origin and the same ultimate destinations.

V. Whether the lower court's finding that transportation service via the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical" for through shipments requiring transit at points on the

Rio Grande and reshipment to final destinations beyond its termini, affords a lawful basis for the order short-hauling Union Pacific routes under Section 15 (4) (b), which permits short-hauling other railroads only if "the Commission finds that the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation."

VI. Whether the court erred in failing to review and consider the whole record of evidence and all of the issues tendered by the pleadings and arguments of the parties, and in failing to hold that the order is entirely null and void, because:

(a) The order is based upon erroneous interpretations of law, and there is no rational basis or support for the order or any part of it, in the evidence or in the findings made by the Commission;

(b) The Commission *did not make,* and the evidence does not justify or support findings essential to the validity of the order, among others:

1. that Union Pacific routes are inadequate, inefficient and uneconomic for movement of the involved traffic,
2. that the Rio Grande route is "needed" for the involved traffic, and that it will provide "more efficient" transportation service than Union Pacific routes,
3. that diverting traffic and revenues from Union Pacific routes to the Rio Grande would serve such beneficial purpose as maintaining good service or improving it,
4. that the Rio Grande is efficiently operated, furnishes satisfactory service or has surplus capacity or ability to haul any additional volume of traffic,

5. that diverting the traffic to the Rio Grande's longer route will speed up its movement,

6. that the Rio Grande will generate new or additional traffic or contribute additional transportation facilities in the northwest area, or that existing routes are insufficient or incapable of moving the traffic to and from that area,

7. that by including the Rio Grande in the through routes shippers to and from the northwest area will have lower rates than they have via Union Pacific routes,

8. that the overall transportation system of shippers using it would benefit by including the longer Rio Grande line in present routes for a "bridge" haul over its line,

9. that shippers have ever made complaint against service rendered by Union Pacific routes for the traffic involved, or demanded that the Rio Grande be included in present through routes;

(c) The evidence does not support or justify the Commission's findings—

1. that the combination of local rates via the Rio Grande are unjust and unreasonable,

2. that the joint rates which now apply over Union Pacific's shorter and more direct routes are reasonable for application via the longer and more onerous Rio Grande route,

3. that the combination rates via the Rio Grande are unduly prejudicial of shippers and receivers using or desiring to use the Rio Grande route and unduly preferential of shippers and receivers using the Union Pacific routes,

4. that the Union Pacific and other railroads discriminate against the Rio Grande in violation of Section 3 (4) in maintaining joint rates with the Bamberger Railroad at points on its line between Ogden and Salt Lake City, while refusing to make like joint rates with the Rio Grande at the same points,
5. that through routes and joint rates with the Rio Grande are "necessary and desirable" in the public interest to provide "adequate and more economic transportation",
6. that shippers in the northwest producing area (who testified that they sell their products in all markets in all the 48 states and 5 foreign countries) "are debarred from effective participation" in the marketing system because they must pay higher rates if they ship through traffic via the Rio Grande than the joint rates available to them via Union Pacific routes for the same through traffic moving between the same origins and the same destinations;

(d) The Commission arbitrarily refused to give effect to the requirement in Section 15 (4) that reasonable preference be given the originating carriers;

(e) The Commission refused to consider or give effect to the National Transportation Policy and to the evidence showing that diversion to the Rio Grande of any substantial part of the traffic would result in wasteful transportation and economic waste and in serious detriment to Union Pacific service and its employees, to certain other railroads and their employees and would inflict serious economic injury to numerous communities and the public served by Union Pacific routes;

(f) The Commission arbitrarily commingled and misused its authority under, and the remedies for violations of the separate and independent provisions of Sections 1(4), 3 (1) and (4) and Sec-

tion 15 (3) and (4), and its order is vague, uncertain, indefinite and conflicting in its requirements;

(g) Upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and contrary to law in failing to dismiss the complaint and in ordering through routes and joint rates on the theory that because shippers had intervened and testified, the Rio Grande's complaint became a shipper complaint;

(h) The Commission acted arbitrarily and unlawfully in refusing to dismiss the entire proceeding on the ground that it was vitiated and nullified by the fact that shipper witnesses on whose testimony the order is based were admittedly solicited and procured by the Rio Grande to testify in such manner as to help it win its case.

Statement of the Case

The Rio Grande operates a short-line railroad with its eastern termini at Denver, Pueblo and Trinidad, Colorado, and its western terminus at Ogden, Utah, the distance between Denver and Ogden being 607 miles via its main line, and 782 miles via Pueblo (see map, App. A). Its history has been essentially one of financial difficulty and of bankruptcy. It has been a "financial needs" railroad throughout most of its existence.[6]

---

6 *Denver & Rio Grande Investigation*, 113 I.C.C. 75; *Reconstruction Finance Corp. v. Denver & R.G.W.R. Co.*, 328 U.S. 495.

Its mountainous location and tortuous physical features have resulted in "operating conditions on the Rio Grande" that are "more onerous than those on the lines of the Union Pacific" or any other transcontinental railroad (App. B, p. 74) and caused the Commission to grant the Rio Grande's demand for higher rates, based on its "financial necessities," than rates prescribed for other western railroads.

Commercial Club, Salt Lake City v. A.T.&S.F. Ry. Co., 19 I.C.C. 218, 221-222; *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I.C.C. 481, 486; *Livestock-Western District Rates*, 176 I.C.C. 1, 98, and 190 I.C.C. 175; *Utah Coal Operators Assn. v. Atchison, T. & S.F. Ry. Co.*, 218 I.C.C. 663.

Constructed in 1870 as a narrow-gage line and converted to standard gage in 1890, the "Rio Grande was built for the purpose of handling the local business tributary to its line"[7] but its management soon determined to enhance its financial position by diverting for a "bridge"[8] haul over its line transcontinental Pacific Coast traffic moving over the Union Pacific-Central (now Southern) Pacific route, construction of which had been completed from Council Bluffs, Iowa, through Ogden, Utah, to Oakland, California, in 1869.[9]

Concentrating on its policy of diverting traffic and revenues from other railroads, the Rio Grande's revenues from "bridge" traffic increased over 326 per cent in the 15-year period ending with 1948, while traffic originated and terminated on its line increased only 155 per cent and its local traffic originating and terminating at points on its line was less annually throughout that period than during the period 1924-1929.

---

7 *Commercial Club, Salt Lake City v. A.T. & S.F. Ry., supra,* p. 221.

8 The term "bridge traffic" is used to designate traffic hauled by a carrier on whose line the traffic neither originates nor terminates. A "bridge haul" is the transportation of such "bridge" traffic some part of the distance between its point of origin and its final destination. "Bridge" traffic is most attractive because it is generally least expensive to haul since the "bridge" carrier performs none of the expensive branch line, gathering or switching services required at the point of origin and point of final destination. The Rio Grande's President testified that the reason it is pressing for more "bridge" traffic is that "there is more money in it" than in traffic it originates or terminates.

9 Consistent with its determination to act as a "bridge line," the Rio Grande adopted a "policy to favor the facilities and service of their principal arteries at the expense of the remainder of the system" and to abandon or "to divest themselves of all lines not consistent with that general policy . . ." *Denver & R.G.W.R. Co. Trustees Abandonment,* 247 I.C.C. 381, 384. Between 1930 and 1948, it abandoned branch lines consisting of about 17 per cent of its total mileage.

Further pursuing its "bridge" traffic policy, the Rio Grande filed its complaint with the Commission in this case on August 1, 1949. Although the complaint alleged violations of Sections 1 (4), 3, 15 (1) and 15 (3) of the Interstate Commerce Act, the Rio Grande admitted that it filed the complaint for the purpose of improving its financial position by diverting for a "bridge" haul over its line so much as it can of abut 172,000 carloads annually of transcontinental freight traffic now and for some 75 years moved under joint transcontinental rates[10] over through routes which include lines of the Southern Pacific, Great Northern, Union Pacific, Northern Pacific and Milwaukee railroads (designated herein as "Union Pacific routes") between points in the northwestern states of Oregon, Washington, Montana, Idaho and Utah, north of Ogden (designated in this statement as "northwest area"), and points in the eastern and southern parts of the United States, generally east of the Missouri and Mississippi rivers, including points on the Atlantic and the Gulf coasts.[11] These joint rates do not apply via the Rio Grande, except in connection with routes over the Southern Pacific through central California and Nevada

---

10 "Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, *but there are many exceptions.*" (App. B, p. 6, emphasis supplied.)

11 The Commission found that the traffic the Rio Grande seeks to divert to its line in this case ordinarily moves over the Union Pacific through Wyoming and Nebraska to and from Missouri River gateways rather than over the Rio Grande; "because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande" for that traffic. (App. B, p. 21)

to Ogden and over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City, on traffic to and from that part of the northwest area lying north of the southern boundary of Oregon and west of the irregular black line shown near the left or west end of the map attached hereto as Appendix A. The joint rates are lower than the combination or sum of the local rates that would have to be charged if the traffic moved via Union Pacific and the Rio Grande. The Rio Grande demanded that its line be included in all of the through routes to and from the northwest area over which the joint rates are applicable, despite the fact it has no trackage and performs no service in that area; that any route via the Rio Grande for movement of the involved traffic would be from 33 to 219 miles longer than the Union Pacific (see figures in oblongs on map, App. A), and would range from 33 percent to more than 50 percent longer than many routes maintained by the Union Pacific with other railroads; that movement of the traffic over the Rio Grande as a "bridge" line would require at least 24 hours more time and one or two more terminal interchanges between carriers, and would short haul the Union Pacific and other railroads 925 miles.[12]

Consistent with the protection afforded by Section 15 (4) of the Act against short hauling, the Union Pa-

---

12 As pointed out in footnote "1" of Circuit Judge Johnsen's dissenting opinion:

"1. It should be noted that the situation covered by the Commission's order does not involve the matter of joint rates to intermediate points on the Rio Grande as final destinations. Joint rates already apply to such traffic. The question is one of through routes and joint rates for traffic having a billing origin and destination outside of Rio Grande territory, and for which the Rio Grande therefore would merely be serving as a 'bridge' line only, while the Union Pacific, on whose branch lines most of the traffic originates, would be caused to lose a line-haul thereon of 975 miles." (App. D, p. 22)

cific and other roads serving the northwest area have always insisted, with immaterial exceptions, upon retaining their long hauls on traffic to and from the northwest area.[13]

No complaint has ever been filed by shippers or the public or by any state public service commission demanding the through routes and joint rates sought by the Rio Grande.

After lengthy hearings, a proposed report of its examiner recommending the granting of the Rio Grande's full demands, exceptions to that report, and two oral arguments, the full Commission issued its report and the order herein assailed, January 12, 1953. On June 10, 1953, the Commission denied petitions for reconsideration.

The order requires the Union Pacific and numerous other railroads, whose connecting lines form through routes extending from the Pacific to the Atlantic and Gulf coasts, to establish through routes with the Rio Grande and "the same" joint rates maintained on Union Pacific routes on westbound carloads of granite and marble monuments from Vermont and Georgia to points in the northwest area, and on eastbound carloads of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from points in

---

13 Union Pacific and some of the other railroad appellants have served the northwest for more than 75 years. Union Pacific now owns and operates 5,606.7 miles of railroad in that area, of which 2,913.19 miles, or over 50 per cent, consist of numerous branch lines extending from and serving as "feeders" to its main lines. About 50 per cent of the traffic the Rio Grande wants routed via its line originates and terminates on these branch lines. The Rio Grande demands, and the effect of the order is that, all these main and branch lines serve as "feeders" of bridge traffic to its line.

the northwest area to points in the eastern and southern parts of the country, indicated above. These articles comprise about 57,000 carloads annually, or a third of the total volume of the traffic the Rio Grande seeks to divert to its line. Diversion of all the traffic permitted by the order would result in estimated revenue loss to the Union Pacific alone of more than $11,000,000 annually, and in very large losses to others of the railroad appellants.

The Commission's Findings and Conclusions

The Commission made the following findings, among others, which are material to consideration of the questions presented. The findings are described here rather fully because of the apparent inconsistency between them and the Commission's ultimate conclusions and its order:

1. That it must overrule a motion of the defendant railroads to dismiss the complaint on the ground that the Commission was estopped by the "financial needs" prohibition of Section 15 (4) of the Act from issuing the order demanded by the Rio Grande. The Commission stated that, in reaching its conclusions, "no consideration has been given to the financial needs" of the Rio Grande (15)[14];

2. That there are at present no through routes, as that term is used in the Act, over the Rio Grande on the traffic here concerned (except on eastbound sheep and goats) and that any order requiring such routes and joint rates over them must be grounded upon findings as specified in Section 15 (4) (b) of the Act, that the routes sought are necessary or desirable in the public interest,

14 Figures in parentheses refer to pages of the Commission's report, as printed in Appendix B hereto.

and "are needed in order to provide adequate, and more efficient or more economic transportation" (14);

3. That the proposed new route via the Rio Grande could not be required "unless the existing (Union Pacific) routes can be found not to provide 'adequate' transportation" (72);

4. That the Union Pacific has surplus transportation capacity, is efficiently operated, furnishes good service to shippers over its line, and its "facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" (60);

5. A large number of shippers and representatives of communities served by the Union Pacific, traffic, commercial and civic associations, opposed the Rio Grande's complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado (65);

6. Shippers in opposition to the Rio Grande's complaint testified to the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. They testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event (65);

7. That the Rio Grande route is from 33 to 219 miles longer than the Union Pacific (25), and that routes

via the Rio Grande would be from 33 to 50% longer than many of the present Union Pacific routes (75);

8. That evidence as to physical characteristics of the two lines shows that the Rio Grande is less favorably situated than the line of the Union Pacific; that traffic routed over the Rio Grande, as a "bridge" line would require at least 24 hours more time in transit than when routed over the Union Pacific and would require one or two more terminal interchange services (60), and that operating conditions on the Rio Grande are "more onerous than those on the lines of the Union Pacific or any of the other transcontinental" lines (74);

9. That diversion of the traffic over the Rio Grande would deprive the Union Pacific of its long haul and would short haul it at least 925 miles in each instance (27);

10. That the traffic sought by the Rio Grande moves over Union Pacific routes through Wyoming because those routes are shorter and they offer lower rates than the Rio Grande (21);

11. Concerning public need for the proposed Rio Grande route and damage to Union Pacific routes by diversion of traffic from them to the Rio Grande, the Commission found that it was impossible to determine or estimate accurately what volume of traffic might be diverted to the Rio Grande if all of the joint rates were made applicable over its line (67), but that whatever the volume so diverted would be the result of "active solicitation" by the Rio Grande "to persuade" shippers and receivers to use its line as an overhead or "bridge" route, the value of its service to shippers, and the extent to which the Rio Grande can "induce" shippers to route

traffic via its line for the purpose of using transit facilities at points on its line and subsequent reshipment beyond at the balance of joint through rates from the point of origin (35);

12. That there are substantial dissimilarities or differences between transportation conditions, operating conditions and lengths of hauls over Union Pacific routes and over the Rio Grande but that the differences in transportation conditions become "relatively insignificant" and "substantially similar" when "spread" over the longer hauls between the northwest area and the eastern and southern parts of the country (76);

13. That the evidence failed to prove that the Union Pacific and other lines discriminate against the Rio Grande (except at points on the Bamberger Railroad between Ogden and Salt Lake City) under Section 3 (4) of the Act in refusing to include its line in their through routes and joint rates (77);

14. That (notwithstanding the dissimilarities in transportation conditions over the respective routes) the combination rates via the Rio Grande on the articles named in the order from and to the areas therein described are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, to the extent those rates exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes (79);

15. That the Rio Grande, a railroad, could not raise in its own behalf an issue of undue prejudice and pref-

erence under Section 3 (1) against another railroad, but that testimony of intervening shippers raised that issue, and also raised a question as to a need for "more" adequate and economic service than afforded by Union Pacific routes with respect to perishable food articles (72);

16. That the present complex and far-flung marketing system for perishable food articles requires that such articles move with expedition and care "over as many routes as possible" with "as much flexibility as possible" and without "unnecessary interruptions" (73), to "as many markets and outlets as possible" (51);

17. That, while through service over Union Pacific routes in general is as satisfactory to shippers as the service which could be provided over routes including the Rio Grande, this is not true with respect to perishable food articles, and that shippers of those articles from the northwest area "are debarred from effective participation in the widespread system developed for the marketing of such commodities" (73), (apparently, only because, if routed over the longer Rio Grande route to eastern and southern markets, higher rates apply than when routed via Union Pacific routes, for the undisputed evidence shows that those shippers market their products via Union Pacific routes in all 48 states and several foreign countries.);

18. That on shipments of perishable food articles reconsigned or accorded transit privileges such as stop-off for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, *at points on the Rio Grande,* "the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply", and that "on such traffic the

defendants' (Union Pacific) routes are inadequate and less economical than are the Rio Grande routes" (74);

19. That through routes via the Rio Grande and joint rates "the same" as apply over Union Pacific routes for the commodities named in the order between points in the areas described therein are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" (78);

20. That there is no indication that witnesses admittedly solicited and procured by the Rio Grande to testify so as to help it win its case were improperly influenced or had been stimulated in any questionable manner (38).

Opinions of the District Court

Majority Opinion:

The majority opinion holds that the Commission's order is valid only to the extent that it embraces shipments of the articles named in the order which move to and from the northwest area from and to points east of Denver and which require stoppage-in-transit at points on the Rio Grande not also served by the Union Pacific.[15] To that limited extent the majority holds that the evidence supports the order and that it is valid under Sections 1, 15 (3) and 15 (4) of the Act and does not violate the direction of Section 15 (4) that reasonable preference be

15 The transit privileges described in the majority opinion are feeding and grazing livestock, cleaning, packaging, processing, freezing and storing fresh fruits, vegetables, poultry, food products, butter, eggs and beans, at points on the Rio Grande and later shipped to points east of its eastern termini, and westbound carload shipments of monuments to be stopped for partial unloading at points on the Rio Grande with final destination at points on the Union Pacific northwest of Ogden.

given the carrier which originates the traffic, and that so limited, it would "eliminate" the contention that the order was for the purpose of assisting the Rio Grande to meet its financial needs and would rest squarely within Section 15 (4) (b).

The majority further holds that the order is not valid to the extent that it embraces carload shipments of the articles named in the order which do not require stoppage-in-transit privileges at points on the Rio Grande.

The majority holds that the Commission's finding that Union Pacific routes are inadequate is based on the lack of in-transit privileges at points on the Rio Grande (although the Commission's report (App. B, p. 39) clearly states the fact that all customary transit privileges are available at points on the Rio Grande) and that upon that finding the Commission had power to require through routes and joint rates.

In sustaining the order "in part" the majority adopted a different theory or legal basis from that of the Commission, in that, the majority sustains the order "in part" upon its own finding from the evidence that transportation service *via the Rio Grande* between the northwest area and the area east of Denver is "inadequate and also inefficient and uneconomical" (App. D, p. 18). That is, the majority condemns as inadequate the Rio Grande's own *proposed route* which both the Commission and the majority find necessary to provide adequate and more economic transportation, whereas the Commission held that it could not require the through routes and joint rates demanded by the Rio Grande "unless the existing (Union Pacific) routes can be found not to provide 'adequate' transportation". It found Union Pacific routes

"inadequate and less economical than are the Rio Grande routes" because, on shipments of the articles named in the order reconsigned or stopped for processing, storage or other transit privileges *at points on the Rio Grande*, "the Union Pacific routes and the joint rates that apply over them are not available, and higher rates apply."

The majority holds that the evidence does not support the Commission's finding that present transportation service via Union Pacific routes between the northwest and points east of Denver is inadequate; that the evidence shows that present service over the Union Pacific between such points is adequate and that establishment of "the same" joint rates via the Rio Grande between the northwest and points east of Denver "would not make such service more economical because the rates for such service would only equal the present rates via the Union Pacific between those points" (App. D, p. 18). But the majority also holds that establishment of through routes and equal joint rates on shipments of the articles named in the order that require stoppage-in-transit at points on the Rio Grande (not also served by the Union Pacific) is necessary "to provide adequate and more economic transportation" (App. D, p. 19), and "will result in more economical transportation" (App. D, p. 13).

The majority holds that the Commission is without power to order through routes and joint rates to remove undue preference and prejudice under Section 3 (1) between shippers located on different railroads because, if it did so, the short-hauling prohibition of Sec. 15 (4) "would be practically emasculated" (App. D, p. 16). But the majority also holds that in its requirement of through routes and joint rates in connection with the Rio

Grande at points from Ogden to Salt Lake City, the order "is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3 (4) of the Act" (App. D, p. 21). The majority also holds that the order requiring through routes and joint rates which short haul the Union Pacific is valid for the purpose of establishing reasonable joint rates in lieu of the Rio Grande's combination rates found unreasonable by the Commission in violation of Section 1.

Dissenting Opinion:

Circuit Judge Johnsen's dissenting opinion holds that the order should be enjoined and annulled in its entirety because of the "pervading infirmities" on which it rests, and because "The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute" (App. D, p. 22). Pointing out that the Commission purports to make as its primary basis for ordering through routes and joint rates over the Rio Grande, "perishable food articles" and requirements of the marketing system for such articles, including an alleged need for as many transit privileges on as many routes "as possible", and the fact that the Commission has used such new standards and criteria in attempting to justify equalizing rates via the Rio Grande with rates over Union Pacific routes, the dissenting opinion holds—

> "* * * the philosophy and standard of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' can not be made the basis for overriding the short-hauling provisions of section 15(4), through the merry-go-round device of calling all transportation inadequate without the

availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term 'more economic transportation' to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing." (App. D, p. 29.)

Observing that where short-hauling other carriers under Section 15 (4) (b) is involved, as it is here, the Commission must find that the proposed additional route will provide "more efficient or more economic transportation" than that provided by present through routes, and further observing that in final analysis what the Commission's order does is simply to reduce the Rio Grande's combination rates to the level of the joint rates over Union Pacific routes, the dissenting opinion holds:

"* * * where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term 'more economic transportation' under section 15(4), in the addition of another carrier's route as a mere 'bridge' line for such traffic." (App. D, p. 26.)

Circuit Judge Johnsen evaluated the Commission's report and order as a new method by which the Commission attempts "to gain a new foothold, under another disguise" to evade the short-hauling prohibition of Section 15 (4) and he characterizes the Commission's inclusion of marble and granite monuments and ordinary livestock within the "perishable commodities" classification as a further attempt by the Commission "to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an

apparently wider future reach", and holds that to gain a true picture of the order, requires that the Commission's report be "stripped of all the confusion in which the Report has been wrapped".

Pointing to the Commission's findings of more onerous operating conditions and substantially dissimilar and less favorable transportation conditions on the Rio Grande and its conclusion that those dissimilarities become relatively insignificant when spread over hauls of great length, and further pointing to the Commission's finding of discrimination against the Rio Grande without any evidence, but merely upon the lack of evidence concerning either dissimilarity or similarity in transportation conditions along the Bamberger, Circuit Judge Johnsen holds that these instances are "characteristic or in the pattern of the loose and improper basis and manner" in which the Commission has dealt with the entire case and are illustrative of the reasons why the order should be stricken down.

The Questions Presented Are Substantial

The major underlying issue in this case is whether, upon complaint of the Rio Grande, a perenially impecunious short-line railroad seeking to divert additional bridge traffic from other carriers, the Commission may ignore the "financial needs" prohibition of Section 15 (4) of the Act, and use clause (b) of Section 15 (4) to break down admittedly adequate and long-established Union Pacific through routes and channels of commerce and compel them to short haul themselves at least 925 miles to "feed" to the Rio Grande for a "bridge" haul over its longer route traffic which has always moved over the existing Union Pacific routes. The substantiality and public importance of the questions presented is force-

fully indicated by the inevitable fact that, if the interpretations and methods employed by the Commission and the majority of the district court in this case are permitted to stand, then existing through routes and communities served by and dependent on them will no longer have any of the protection under Section 15 (4) against being short hauled which Congress has always refused to yield.[16] That protection is vital to the existence of the essential long-line railroads of the country, and its public importance in this case is demonstrated by the fact that numerous shippers and the public service commissions of Oregon, Washington, Montana, Wyoming and Nebraska, appellants here, intervened and submitted strong testimony to the Commission vigorously opposing the Rio Grande's scheme to enhance its financial position by diverting traffic and revenues to its line from the long-established Union Pacific routes and communities served by them. These five appellant States have continued their opposition to the Rio Grande by intervening as plaintiffs in the district court and joining in the attack

---

16 That the Commission in this case has not only departed from but has abused and misused clause (b) of Section 15 (4) clearly appears from the history of legislative action leading to enactment of clause (b). In its report No. 404, April 22, 1937, on Senate Bill 1261, 75th Congress, 1st Session, the Senate Committee on Interstate Commerce said at page 2:

"Your committee feels that the shippers of the country should be given the right to use the *shortest, quickest, and cheapest routes available** * *The bill does not give the Commission power to order the railroads to route shipments in any particular way, but merely provides that *if a shorter route exists*, and if it is in the public interest for the shippers to have this route available, the railroads shall, upon the Commission's order, publish the route and rate in their tariffs. It is not the intention of the committee to interfere with the right of the trunk lines to their long haul, except where this right conflicts with the shippers' right to the *shortest route and lowest rate*. If there is this conflict, the *shipper is merely given the opportunity, if he wishes, of using the shorter or cheaper route.*" (Italics added.)

on the Commission's order, and by their appeal to this Court.[17]

In *U. S. v. Great Northern R. Co.*, 343 U. S. 562, while sustaining the Commission's power to aid a carrier in meeting its "financial needs" by redistributing revenues between carriers forming "an existing through route", where no diversion of traffic from one carrier to another was involved, this Court warned the Commission against the very "form of regulation" its order attempts in this case.[18]

---

17 The following statement of the interests and position of those States is made at page 2 of their brief in the district court:

"These states were moved to intervene in the proceeding before the Commission because of the overwhelming detriment the shippers and general public of such states would suffer as a result of the diversion of traffic away from the Union Pacific proposed by the Rio Grande. Any such diversion of traffic would immediately affect the service of the Union Pacific to shippers and would also inflict very serious consequences upon employees of the Union Pacific that are now engaged in the handling of such traffic. Moreover, such diversion, as shown by testimony reviewed hereafter, would greatly impair the capacity of the Union Pacific to continue to provide at lowest cost the transportation service so essential in all this territory.

"It was made indisputably clear by these states that in their area there is no substantial need for the new routes and joint rates proposed by Rio Grande and that the granting of proposed relief to this local mountain railroad of Colorado and Utah would adversely affect the economy of all these intervening states."

18 At pages 574-575, the Court held:

"It is one form of regulation to redistribute revenues between connecting carriers by determining divisions of revenues received on existing through routes. The economic ramifications are quite different if the Commission establishes through routes which divert traffic to the lines of a financially weak carrier. Such action not only serves to assist that carrier financially *but can also, at the same time, cause important changes in the movement of traffic, diverting traffic to a new geographic area at the expense of other carriers and other areas. Congress amended Section 15 (4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs.* But the provisions of Section 15 (4) — the restrictions against short hauling, the financial needs prohibition and the emergency route provision — all deal with the Commission's power to establish through routes." (Italics added.)

And in *Thompson v. United States*, 343 U. S. 549, the Court rejected the Commission's effort to limit by construction the impact of the short-hauling restriction on its power to establish through routes by altering "the form of its order", and attempting to divert traffic to a new route by equalizing rates under an order purportedly issued as an exercise of the power to prescribe reasonable local rates in lieu of rates found unreasonable in violation of Section 1. Those two decisions were handed down by this Court June 2, 1952, about seven months before the Commission issued its report and order January 12, 1953, in this case. Notwithstanding those warnings from this Court, the Commission proceeded in this case to adopt new disguises and devices to completely evade or nullify the protection railroads have under Section 15 (4) against being short hauled by compulsory establishment of additional through routes and joint rates.

The Commission here short hauls the shorter, admittedly adequate, efficient and long-established Union Pacific routes by ordering new through routes and joint rates over the longer and more onerous Rio Grande route, as an indirect remedy for rates via the Rio Grande found unreasonable under Section 1 and unduly prejudicial and discriminatory under Section 3 (1) and (4), and to equalize rates over the longer Rio Grande route with those on the shorter Union Pacific routes. In its efforts to reach its objective, the Commission has not only ignored its direct powers to remedy violations of those sections, but it has also departed from the special Congressional formula or jurisdictional standards and cri-

teria of Section 15 (4) (b)[19] upon which it purports to base its order, and has, by its findings and conclusion dealt with the standards and special formula of that clause as if it read:

> "(b) unless the Commission finds that the through route proposed to be established is *necessary and desirable in the public interest,* in order to provide *more* adequate and more economic transportation."

Thus, by importing "necessary or desirable in the public interest" from Section 15 (3) (which is the standard for ordering new routes that do not short haul exising routes), and substituting that standard for "needed"[20] (which is one ingredient of the formula prescribed by clause "(b)"), and by adding "more", so as to qualify and dilute "adequate", and by deleting "more efficient" from clause "(b)", the Commission has not only departed from the controlling statutory standards and criteria, but has written its own new and different formula to suit its purpose in this case.

In addition to this mutilation of the statutory standards and criteria, the Commission, although finding existing Union Pacific routes to be adequate, efficient, shorter, less onerous and offering lower rates, nevertheless condemns those routes as "inadequate and less economical than are the Rio Grande routes" upon the novel

19 Section 15 (4) prohibits the Commission from ordering a new through route which short hauls existing routes unless (a) the existing route is unreasonably long, or — "(b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation"

20 *Western Air Lines v. C.A.B.*, 347 U.S. 67, 71; *Delta Air Lines v. Summerfield*, 347 U.S. 74, 79.

ground that "at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply." A similarly unique and untenable reason for condemning and short-hauling an existing route was rejected by this Court in *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538.

The result of the Commission's efforts over many years to evade or "limit * * * the impact of the short-hauling restriction on its power to establish through routes"[21] is that in three out of four short-hauling through route cases reviewed by this Court, the Commission's orders have been stricken down because they violated or ignored the short haul prohibition. See *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538 (1910); *United States v. Mo. Pac. R. Co.*, 278 U. S. 269 (1929); and *Thompson v. United States*, 343 U. S. 549 (1952). The only short-hauling order of the Commission which this Court has sustained was in *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588 (1945).[22]

The necessity for briefs, oral argument and a decision by this Court settling the contrariety of views and the legality or illegality of the novel interpretations and

---

21 *Thompson v. United States*, 343 U.S. 549, 555-556, and footnotes.

22 But the through routes required in that case eliminated four extra days' time in transit, a 149-mile out-of-line haul costing 90 cents per ton and two switching interchanges, in contrast with a completely reverse set of facts in the instant case, where the longer Rio Grande route required by the Commission's order would result in some 200 miles of additional transportation over the most "onerous" operating conditions of any western railroad, adding $124 per car to transportation cost, two additional interchanges between carriers at an additional cost of $20.44 per car per interchange, and at least one or two days' more time in transit, and would short haul existing routes at least 925 miles, and would deprive some of the appellant railroads of their entire hauls.

methods by which the Commission and the majority of the district court reached the results here presented is further indicated by the facts that—

(1) Of the eleven Commissioners, three dissented "in part", one dissented, in effect, by "concurring in part" and one did not vote upon the issuance of the Commission's order in this case;

(2) The majority of the district court found it necessary to "remake" the Commission's order but, even by doing so, was able to sustain it only "in part" by adopting a different legal basis for it and by limiting it to shipments of the articles named in the order that would actually stop for transit privileges at points on the Rio Grande. The dissenting opinion of Circuit Judge Johnsen, however, exhibits views widely divergent from those of the majority and would strike down the order in its entirety because of the "pervading infirmities" on which it rests and because the Commission used "standards and criteria" which are beyond the warrant of the statute, and dealt with the entire case in a "loose and improper" manner so as "to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach", all in "another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advisable, without being required to give consideration to the question of short hauling another carrier";

(3) Five separate appeals, involving both facets of the final decree sustaining the order "in part" and

enjoining it "in part," have been taken to this Court by adverse parties to this suit from the judgment below;

(4) The Rio Grande itself brought a suit in the District Court for the District of Colorado, *The Denver and Rio Grande Western Railroad Company v. United States of America and Interstate Commerce Commission*, Civil Action No. 4492, in which it sought to enjoin and annul the Commission's failure and refusal in this same proceeding to grant its full demands for through routes and joint rates on all commodities. On February 14, 1955, that Court entered a final judgment and decree, upon its opinion filed January 13, 1955, enjoining and setting aside the Commission's order "insofar as it denied and withheld relief" to the Rio Grande. A motion for new trial, reargument and reconsideration was overruled and denied by order of that court entered April 22, 1955. That case will also be appealed to this Court.

The questions presented by this appeal are new and different from questions presented on different factual situations in other through route cases reviewed by this Court. The questions here presented have not been considered by this Court. If the new methods and criteria by which the Commission and the majority of the court below reached the ends the Commission attempts to accomplish in this case are allowed to stand, then, as pointed out in the dissenting opinion of Circuit Judge Johnsen—

> "* * * the railroads of the country may as well forget section 15(4) entirely, as affording them any protection whatsoever against deprivation of their long hauls." (App. D, p. 27.)

It is submitted that the questions presented by this appeal are substantial and of general public importance not only to the appellant railroads and the five appellant States but also to the more essential railroads comprising long-established routes and channels of commerce and trade, and to shippers and communities served by them throughout the country.

Respectfully submitted,

BERT L. OVERCASH,

DENVER & RIO GRANDE WESTERN RAILWAY COMPANY v. UNION PACIFIC RAILROAD COMPANY, ET. AL.

Submitted October 16, 1952. Decided January 12, 1953

---

1. Through routes and joint rates found necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with complainant, on certain commodities from and to points in the excluded territory in the northwest area as described in the report, to and from points in official, southern, and southwestern territories, including Missouri and a portion of Iowa.

2. Rates on the same commodities from and to the same points over complainant's routes via Ogden or Salt Lake City, found unreasonable and unduly prejudicial to and preferential of shippers and receivers.

3. Maintenance by defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the line of complainant south of Ogden, found to subject complainant to unlawful discrimination.

4. Order entered requiring removal of unlawfulness found to exist and establishment of through routes and joint rates found reasonable.

Robert E. Quirk, Otis J. Gibson, and *H. L. Mulliner* for complainant.

Elmer B. Collins, L. H. Anderson, John B. Burchell, Robert H. Bierma, L. E. Clarahan, F. H. Cole, Jr., Eugene S. Davis, Lee S. Davis, P. H. Draver, F. G. Fitzpatrick, P. F. Gault, R. J. Hagman, L. W. Hobbs, Roland J. Lehman, B. P. Leverich, James E. Lyons, E. F. McGuire, F. J. Melia, Conrad Olson, W. R. Rouse, James S. Souby, Jr., Carson L. Taylor, and *L. E. Torinus, Jr.,* for defendants.

C. A. Miller for a railroad association; *Chas. B. Bowling, Carl R. Bullock, Henry A. Cockrum,* and *J. L. Pease* for Secretary of Agriculture; *Ralph C. Horton, John H. Winchell, Joseph W. Hawley, T. S. Wood,* and *Ralph Sargent, Jr.,* for Public Utilities Commission of the State of Colorado; *W. B. Joy, H. N. Beamer, B. Auger* and *L. F. Purvis* for Public Utilities Commission of Idaho; *Byron M. Gray* for State Corporation Commission of the State of Kansas; *Edwin S. Booth* and *Sidney T. Smith* for Board of Railroad Commissioners of the State of Montana; *Clarence S. Beck, Harold A. Palmer, Bert L. Overcash,* and *Harry C. King* for State of Nebraska and Nebraska State Railway Commission; *John H. Carkin* and *Thomas W. Dench* for Public Utilities Commissioner of Oregon; *Smith Troy, Phil H. Gallagher, Joseph Starin,* and *Bartlett Burns* for Washington Public Service Commission; *Norman B. Gray* and *Jefferson C. Church* for the State Board of Equalization and Public Service Commission of Wyoming; *Hal S. Bennett, Donald Hacking, W. R. McEntire,* and *Chas. A. Root* for Public Service Commission of Utah; and *George F. Guy* for the city of Cheyenne, Wyo., interveners.

Calvin L. Blaine, Chas. E. Blaine, Maurice H. Greene, Alden T. Hill, E. K. Kohlwes, Lowe P. Siddons, Reginald T. Titus, and *Lee J. Quasey* for other interveners.

Report of the Commission

BY THE COMMISSION:

Exceptions to the report proposed by the examiner were filed by the complainants, the defendants, and cer-

tain interveners and the issues were twice argued orally. Our conclusions differ in part from those recommended. Exceptions and requested findings not discussed in this report nor reflected in our findings or conclusions have been given consideration and found not justified.

The complainant, sometimes called the Rio Grande, a common carrier by railroad operating in interstate commerce within the States of Colorado, Utah, and New Mexico, requests us to order the Union Pacific Railroad Company, which with its leased lines is referred to as the Union Pacific system or the Union Pacific, and the other defendants to establish and maintain for the future just, reasonable, and non-discriminatory competitive joint through rates[1] and charges for the transportation of freight in connection with the complainant through Salt Lake City or Ogden, Utah, referred to as the Ogden gateway. More particularly, we are asked to require the defendants to establish such joint rates on freight traffic in connection with the complainant through its Colorado and Utah gateways, (1) between (*a*) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington,[2] and British Columbia, Canada, and (*b*) Colorado common points and the northwest territory specified in 1 (*a*).

No evidence was submitted with respect to rates from or to British Columbia, and such rates will not be considered.

---

1 Rates and rate differences named herein are per 100 pounds and are those in effect at the time of the hearing herein.

2 This area is referred to in this report as the northwest area or territory.

Interveners in support of the complaint include the Secretary of Agriculture of the United States, the public utility commissions of the States of Colorado and Utah, the American National Live Stock Association, other livestock and stock-feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce, and certain groups of employees of the complainant.

Interveners in support of the defendants include the State of Nebraska, city of Cheyenne, Wyo., the public utility commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska and Kansas, various chambers of commerce and other associations, certain employee groups in Wyoming, and employee groups of the Union Pacific, the Chicago and North Western Railway Company, and the Wabash Railroad Company.

In its exceptions to the proposed report, the State Corporation Commission of the State of Kansas took the position that the recommended finding that joint rates should be established over the existing through routes by way of Ogden and the Rio Grande is amply sustained by the evidence with respect to the rates on wheat and livestock but not otherwise, and that the recommended findings as to commodities generally are too broad in scope.

The Public Utility Commission of the State of Idaho intervened but presented no evidence. It filed a brief in which it took the position that the relief sought by the complainant should be denied, except that joint through competitive rates should be required to be established via Ogden and the Rio Grande on livestock and fruits and vegetables.

We granted a petition for leave to intervene filed by the American Short Line Railroad Association. That association appeared in support of the complaint and was represented at the hearing and the oral argument, but offered no evidence. The defendants filed a petition for reconsideration of the order permitting intervention. The request was denied at the hearing, but it is renewed on brief. It appears that 44 of the defendants named in the complaint are members of the association and that 8 defendant members are subsidiaries under common control and management with other defendants. Additional facts were developed at the hearing with respect to the relation of certain members of the association as defendants and indicating that they, as well as some others, opposed the complaint. The association filed a brief from which it appears that it has a current membership of 314 common carriers by railroad and that the association as such and many of its members are interested in the issues presented in the complaint. The intervention sought and granted was by the association as such, and not by or in behalf of the respective members thereof named herein as defendants. The petition of intervention was properly granted, and the petition for reconsideration is denied.

Immediately prior to the oral argument, counsel for the defendants submitted a memorandum of additional authorities and discussion relating to certain exceptions filed by the Union Pacific to the proposed report of the examiner. The complainant and certain interveners objected to the receipt of the document. Our rules of practice do not permit the submission of such a document so late in the proceeding. Permission to file it was not requested in time to permit opposing parties to examine it and to make reply thereto prior to the oral argument when

the proceeding was finally submitted. The objection to its receipt in the proceeding is sustained.

The complainant alleges that the defendant's failure and refusal to join with it in establishing joint rates to and from the territories described on transcontinental and other traffic through the gateways referred to result in violations of sections 1 (4) and 3 of the Interstate Commerce Act, and is contrary to the national transportation policy as declared by the Congress. We are asked to prescribe just and reasonable rates over the Rio Grande routes to remove the alleged unlawfulness.

Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions. The principal ones of importance in this proceeding are those under which the Union Pacific for the most part restricts routing on traffic to and from points in Utah north of Ogden and in Idaho, Montana, Oregon, and Washington over its lines so that it may obtain the long haul from and to the Missouri River. On transcontinental traffic that moves over its lines to and from California, Nevada, and portions of Utah, the Union Pacific participates in through routes and joint rates with other lines, including the Rio Grande. On that traffic interchange is made with the Rio Grande at Salt Lake City and Provo, Utah.

As hereinafter explained, the Rio Grande participates in joint rates on transcontinental traffic with all of its connections at its Utah junctions, except the Union Pacific, from and to the western portions of the northwest area. Routes are available to and from points in the northwest area over the Union Pacific from and to Ogden and the Rio Grande and its eastern connections beyond, but generally shippers must pay combination rates when using such routes. The maintenance of those rates produces higher charges than those resulting from the joint rates maintained by the defendants over other routes. The higher rates and charges act as deterrents to shippers and, in effect, close the Ogden gateway in a commercial sense. We are asked to exercise our authority under section 15 (3) of the act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest.

The power to establish through routes and joint rates is limited by the provisions of section 15 (4), which declares that, except as provided in section 3 of the act, and except where one of the carriers is a water line, we may not require a railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (*a*) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (*b*) unless we find that the through route proposed is needed in order to provide "adequate, and more efficient or more economic, transportation." The foregoing provisions are subject to the further proviso that in prescribing through routes,

we shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (*a*) and (*b*), give reasonable preference to the carrier by railroad which originates the traffic. The section further provides that no through route and joint rates applicable thereto shall be established by us for the purpose of assisting any carrier that would participate therein to meet its financial needs.

The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15 (4) are not applicable and need not be considered. It further contends that the principal task here is to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such through routes are unjust, unreasonable, or discriminatory, in violation of sections 1 and 3 of the act, and contrary to the national transportation policy. The complainant argues that there is public need for joint rates via the Ogden gateway equal to the joint rates now maintained by the defendants over the competitive routes, and the public interest as well as the national transportation policy will be served by the establishment of such rates.

Through Routes

The first question for our determination, therefore, is whether or not the present routes by way of the Ogden gateway constitute "through routes" as that term is used in section 15 (3) and (4) of the act. As above stated and as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or

through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess.

In *Thompson v. United States*, 343 U. S. 549, decided June 2, 1952, the Supreme Court considered the question of the content of the term "through route" as used in the act, upon an appeal from a decision of a lower court sustaining our order in *Omaha Grain Exc. of Omaha, Nebr. v. Missouri Pac. R. Co.*, 278 I. C. C. 519. Therein, we had affirmed a prior finding of division 2 that a through route on grain from points on the Central branch of the Missouri Pacific Railroad Company in Kansas, Concordia and west thereof (Lenora, Kans., was used as a typical origin), to Omaha, Nebr., and Council Bluffs, Iowa, in connection with the line of the Chicago, Burlington & Quincy Railroad Company beyond Concordia, was already in existence and therefore did not have to be established preliminary to the exercise of our power to prescribe reasonable rates under sections 1 and 15 (1) of the act. The Court held:

> In short, the test of the existence of a "through route" is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.
>
> In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such

through route. * * * Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha * * *. Since there is admittedly no evidence that the Missouri Pacific ever offered through transportation service over the route in question, the Commission's order is without evidentiary support under the accepted tests for determining the existence of a through route.

The Court cited with approval *Beaman Elevator Co. v. Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, wherein the Commission held that proof of one shipment on a through bill of lading over a particular route was not sufficient to show the existence of a through route, because, as stated by the Court, "that one shipment was not representative of the carriers' course of business." It thus becomes necessary to determine whether the carriers in this proceeding "hold themselves out as offering through transportation service" from and to the points here concerned via the Ogden gateway as indicated by their "course of business" in respect of traffic over the routes in question.

The evidence shows that 37 carload shipments were made in 1948, which may be accepted as a representative year, on through bills of lading from origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo, and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned goods, canned salmon, machinery, contractors' equipment,

paper bags, lumber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that 2 carloads of canned salmon moved from Seattle, Wash., to Provo, 2 carloads of acid from Dupont, Wash., to Louviers, 2 carloads of canned goods from Logan, Utah, to Denver, 2 carloads of sheep from Bellevue, Idaho, to Pueblo, 3 carloads of lumber from McCall, Idaho, to Salt Lake City, 3 carloads of canned goods from Logan to Pueblo, and 6 carloads of lumber from Emmett, Idaho, to Midvale. No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points.

West-bound, in the same year, 18 carload shipments were made on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed hull bran, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destinations so as to avoid paying the applicable combination rates on Ogden.

In that same year, 21 carload shipments moving on through bills of lading from various origins east of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint through rates were not applicable over that road via the Ogden gateway. Under service orders issued by us during and subsequent to World War II, a substantial number of shipments were diverted from the regularly used routes to the routes here sought to be opened commercially. For example, in February, 1949, when the main line of the Union Pacific in Wyoming was blocked by snow storms, the traffic was diverted to the route of the Rio Grande between Denver and junctions with the Union Pacific in Utah. During World War II, special combination trains of troops in passenger cars and of military supplies in freight cars from eastern and southern origins to destinations in the northwest area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific. The rates and charges for these freight movements were not filed with us and were adjusted, under the authority of section 22 of the act, on the basis of the joint rates applicable over the Union Pacific routes through Wyoming. These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable and have no bearing upon the issue of whether or not those routes constitute "through routes" within the meaning of that term as used in the act.

So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by

the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, "the carriers' course of business" has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads eastbound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co. v. Chicago & N. W. Ry. Co., supra,* cited with approval by the Supreme Court in *Thompson v. United States, supra.* Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15 (3) and (4) of the act simply by preliminarily making a shipment or two over

the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15 (4) made in 1940 (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra.*

We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic[3] here concerned, and that any order requiring the establishment of such routes and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.

The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15 (3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower that the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together.

---

3 Except on east-bound shipments of sheep and goats, to which reference is made later in this report.

Before proceeding to a discussion of the evidence relating to the foregoing issues, we shall give consideration to a procedural contention and a motion made by the defendants. The contention is that an allegation of undue prejudice and preference under section 3 (1) of the act is not properly before us. As stated, the complaint embodies an allegation, among other things, of violation of section 3, without specifying any particular paragraph or paragraphs of that section. We agree that complainant, a railroad, could not raise, in its own behalf, an issue under section 3 (1) against another railroad. Intervening shippers, however, have raised such an issue. Testimony, pro and con, was received on this issue and we think it has been fairly tendered here for decision.

The motion is that the complaint be dismissed on the ground that the request of the complainant for joint rates over the Rio Grande via the Ogden gateway is for the purpose of assisting that carrier to meet its financial needs. As stated, section 15 (4) of the act forbids us to require the establishment of any through route and joint rate applicable thereto for the purpose of assisting any carrier that would participate therein to meet its financial needs. Consistently throughout the proceeding, the complainant disclaimed any intent to prosecute the complaint with the object of assisting it in meeting its financial needs. The prohibition referred to is directed to us; not to any complaining carrier. In reaching our conclusions herein, no consideration has been given to the financial needs of the complainant. The motion is overruled.

Proponents' Testimony

Joint rates now apply via the Ogden gateway over the Rio Grande on traffic from and to Colorado common

points and points east thereof to and from California and certain Pacific coast points in connection with the Union Pacific, the Southern Pacific Company, The Western Pacific Railroad Company, and The Great Northern Railway Company, as more particularly described later.

The Union Pacific with its leased lines has operated since January, 1936, as a single system. It consists of the Union Pacific Railroad Company operating from Omaha, Nebr., and Kansas City, Mo., to Ogden via Julesburg, Colo., Cheyenne and Granger, Wyo., and via Limon and Denver, Colo., and Cheyenne; the Oregon Short Line Railroad Company operating in Utah north of Ogden, and in Wyoming, Idaho, Oregon, Montana, and Nevada, extending from Salt Lake City to Butte, Mont., and Huntington, Oreg., the Oregon-Washington Railroad and Navigation Company operating in Idaho, Oregon, and Washington north and west of Huntington to Spokane, Wash., Portland, Oreg., and Seattle, Wash.; the Los Angeles & Salt Lake Railroad Company from Salt Lake City to Los Angeles, Calif.; and the St. Joseph & Grand Island Railroad Company in Kansas, Nebraska, and Missouri from St. Joseph, Mo., and Grand Island, Nebr. Lease of the properties of the foregoing roads, which had been operated with the Union Pacific under common control and management, was considered and approved in *Union Pac. R. Co. Unification*, 189 I. C. C. 357 (1933) and 207 I. C. C. 543 (1935).

The railroad now operated by the complainant was originally the Denver, Rio Grande Railway organized in 1870 as a narrow-gage line. After passing through various hands and receiverships, the Denver and Rio Grande Railroad Company was organized in 1886 to operate the property. When the main line was converted to standard

gage in 1890, the railroad was opened for through traffic between Denver and Ogden by way of Pueblo, Rio Grande, and Tennessee Pass, Colo. Prior to that date, the Rio Grande could participate in transcontinental traffic only by transferring the lading to its narrow-gage cars. In 1901, it acquired the Rio Grande Western Railroad Company operating between Grand Junction, Colo., and Ogden via Provo and Salt Lake City.

Although opened for through business, the line was handicapped by the fact, among others, that traffic originated at or destined to its Colorado gateways or east thereof could not be interchanged at joint through rates at Ogden or Salt Lake City with its connections, the Oregon Short Line, to or from points on that line in Utah north of Ogden and through southern Idaho to Butte and Huntington. Also, traffic from and to Oregon over the Southern Pacific, to or from Colorado common points and east, could not be transported over the Rio Grande at joint rates equal to those over competitive routes. In 1897, however, the Union Pacific and its controlled lines, the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company operating north and west of Huntington, were in separate receiverships. In that year the two lines last named established joint through rates to and from points in the northwest area with the Rio Grande via Ogden and thus opened that gateway at rates equal to the rates then in effect over the Wyoming line of the Union Pacific through Cheyenne and Granger. Those rates applied on traffic between the Pacific coast terminals, including Portland, Tacoma, and Seattle, and Missouri and Mississippi River points and numerous points east thereof.

In the same year, the Oregon-Washington Railroad and Navigation Company established joint through rates

between its Oregon and Washington stations and points on, or reached by, the lines of the Great Northern and Northern Pacific Railway Company through Spokane and Wallula, Wash. Joint rates through those junctions from and to Union Pacific stations have been continued in effect.

Ogden remained as an open gateway through which joint rates over the Rio Grande applied until 1906, when such rates were canceled by the Union Pacific from and to Colorado common points and east, to and from points in Montana, Idaho, and Oregon on the Oregon Short Line and its connections. In 1912, transcontinental freight rates to and from points on the Oregon-Washington Railroad and Navigation Company (resulting from reorganizations in the interval) over the Rio Grande and its Utah junctions were also canceled. During this period the Southern Pacific was controlled by the Union Pacific and that circumstance greatly influenced the routing of freight and passenger traffic over the Union Pacific to and from Oregon and California. As a result of competitive stresses, as well as for other reasons, the Rio Grande financed the construction of a new railroad, the Western Pacific, to obtain an outlet to the Pacific coast. The Western Pacific was opened in July 1911 and participates in through routes and joint rates on transcontinental traffic via Salt Lake City with the Rio Grande and the Union Pacific, its two connections at that point. In 1912, the Union Pacific was required to divest itself of control of the Southern Pacific. *United States v. Union Pac. R. Co.*, 226 U. S. 61.

Through passenger fares also were in effect over the lines of the Union Pacific and the Rio Grande via the latter's Colorado and Utah junctions from 1897 to 1915,

when they were canceled by the Union Pacific. *Ogden Gateway Case*, 35 I. C. C. 131.

In 1915, the Western Pacific and, in 1918, the Rio Grande, went into receivership. After various changes, the latter was reorganized on April 11, 1947, as the Denver and Rio Grande Western Railroad Company. *Denver & R. G. W. R. Co. Reorganization*, 267 I. C. C. 862. As a part of its reorganization on that date, the Rio Grande merged with the Denver and Salt Lake Railway Company, and thereby acquired the Moffat tunnel line of that carrier. By that line and the Dotsero cut-off, completed in 1934, from Orestod, Colo., on the Denver & Salt Lake to Dotsero, Colo., on its own line, the Rio Grande obtained a route from Denver to Ogden 175 miles shorter than its route through Pueblo.

The Rio Grande now operates between Denver and Ogden over the two routes. By way of the Moffat tunnel the distance is 607 miles, and the other route through Pueblo is 782 miles. These two are the main lines and constitute 951 miles, or 51 percent, of the Rio Grande standard-gage tracks. In addition, there are 1,452 miles of branch lines, of which 527 miles are narrow gage serving western Colorado and northwestern New Mexico in areas of small population and light traffic. In all, it operates about 2,400 miles of road.

Eastern connections of the Rio Grande are in Colorado at Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad. At Denver, it connects and interchanges traffic with the Union Pacific, the Chicago, Burlington & Quincy Railroad Company, called the Burlington, the Chicago, Rock Island and Pacific Railroad Company, called the Rock Island, The Atchison, Topeka and Santa

Fe Railway Company, called the Santa Fe, and The Colorado and Southern Railway Company, of the Burlington system. At Colorado Springs, 75 miles south of Denver, it interchanges with the Rock Island and the Santa Fe. At Pueblo, 119 miles south of Denver, it interchanges with the Missouri Pacific Railroad Company (Guy A. Thompson, trustee), the Santa Fe, and the Colorado & Southern. At Walsenburg, 51 miles farther south, it interchanges with the Colorado & Southern. At Trinidad, a short distance from the Colorado-New Mexico State line and 92 miles south of Pueblo, it interchanges with the Colorado & Southern and the Santa Fe.

Western connections of the Rio Grande are in Utah at Ogden, Salt Lake City and Provo. At Ogden, the connecting lines are the Union Pacific and the Southern Pacific. At Salt Lake City, 37 miles south of Ogden, the connections are the Western Pacific and the Los Angeles line of the Union Pacific. At Provo, 44 miles south of Salt Lake City, it again connects with the Union Pacific's Los Angeles line.

Since 1890, when its standard-gage line was completed between Denver and Ogden via Pueblo, the Rio Grande, through its eastern and western connections, has been a part of several transcontinental routes. It now participates in through routes and joint rates on equal terms with other carriers on transcontinental traffic between (1) points in an area generally described as west of a line beginning at Vancouver, British Columbia, thence south, just east of Seattle and Portland, and southeasterly to a point west of Ogden and Salt Lake City, crossing the line of the Union Pacific at Lynndyl, Utah, 118 miles west of Salt Lake City, and thence southwesterly, east of the Union Pacific's Los Angeles line, to a point

south of San Diego, Calif., and (2) all points in the United States east of a line beginning at the Canadian border and extending southward along the Montana-North Dakota State line and the western border of South Dakota, thence southwesterly through the extreme southeastern portion of Wyoming, west of Cheyenne, and the eastern part of Colorado just west of Denver, Pueblo, and Trinidad, thence southwest and south through the central or western part of New Mexico to a point just west of El Paso. However, joint rates generally do not apply in connection with the Rio Grande on transcontinental traffic originating at or destined to points in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington east of the line first described. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande such traffic would move at higher combinations of rates to and from Ogden or Salt Lake City.

The area in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington, to and from which joint rates generally do not apply in connection with the Union Pacific and the Rio Grande, will be referred to as the excluded territory. Transcontinental traffic to or from such territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than over the Rio Grande route because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande route. The Rio Grande desires to participate as a bridge line on such traffic via its Colorado gateways and Ogden at the joint through rates. This also would include traffic to or from points in the excluded territory on lines which join with the Union Pacific in joint rates.

Representative origins, destinations, commodities, rates distances, average loadings per car, and revenues per car-mile are shown in an appendix to this report, for east-bound and west-bound movements, compiled from exhibits of record. The distances shown are those over existing routes over the Union Pacific and its connections by which joint through rates apply, and over the Rio Grande and its connections over which combination rates apply. Revenues per car-mile are computed for such rates and distances and, in addition, for the distances over the Rio Grande at joint rates on the same basis as those over the Union Pacific routes, as sought herein.

Traffic between the excluded territory and Colorado common-point territory (points in eastern Colorado from Denver south to Trinidad and west to Canon City) generally must move over the Union Pacific through Denver to get the lowest rate. Similarly, traffic between the excluded territory and Utah common-point territory (points in Utah from Ogden south to Provo and Payson) generally must move over the Union Pacific to get the lowest rate. There are some exceptions, however, with respect to rates between Utah common points on the Rio Grande and the northwest area on livestock, lumber, grain, and other commodities.

An analysis of distances from and to 5 representative points[4] on the Union Pacific in Utah north of Ogden, and in Idaho and Washington, to 14 destinations, Denver and east, over restricted routes of the Union Pacific for distances, computed over the short routes, ranging from 649 miles to Denver to 3,279 to Boston, Mass., shows that routes via Ogden and the Rio Grande to the same points

4 Logan, Utah; Boise, Idaho Falls, and Twin Falls, Idaho; and Spokane, Wash.

are longer by from 1 percent (from Spokane to New Orleans, La.) to 16 percent (from Idaho Falls to Kansas City). To the same destinations from nine other representative points[5] on the Union Pacific, from which through routes and joint rates are available in connection with the Chicago, Milwaukee, St. Paul, and Pacific Railroad Company, referred to as the Milwaukee, the Great Northern, the Northern Pacific, or the Southern Pacific, the routes via Ogden and the Rio Grande would be longer than the short workable and service routes by from 1 percent (from Seattle to Fort Worth, Tex., and Oklahoma City, Okla.) to 37.5 percent (from Yakima to Minneapolis, Minn.). To Minneapolis from seven of the nine origin points, the routes via the Great Northern form the short workable and service routes.

The Ogden-gateway routes of the Union Pacific consist of two lines. The Los Angeles line runs southwesterly through Salt Lake City, Provo, and Delta, Utah, Caliente and Las Vegas, Nev., and Barstow, Calif., to Los Angeles. Through routes with joint rates are maintained over that route in connection with the Rio Grande, as hereinbefore described. The other line of the Union Pacific runs north from Ogden, 111 miles to McCammon in southeastern Idaho. At that point it meets the Wyoming line of the Union Pacific leading west 186 miles from Granger, the junction point with the main line through Cheyenne to Ogden from the east. From McCammon the line extends north to Pocatello, Idaho, 22 miles, and from that point the main line runs in a northwesterly direction across Idaho into Oregon and Washington. From Pocatello another line extends northerly to Butte. From

5 Hood River, Milton, Pendleton, Portland, Elgin, and Redmond, Oreg., and Yakima, Kent, and Seattle, Wash.

Cheyenne, the main line extends east across Nebraska to Omaha, 507 miles, and south to Denver, 109 miles. From Ogden through Granger to Cheyenne the distance is 483 miles.

All shipments to or from points in Idaho, Montana, Oregon, and Washington north or west of McCammon over present Union Pacific routes, or over routes through Ogden and the Rio Grande, must pass through McCammon. That point therefore, is used as the point of divergence in computing distances over the Union Pacific routes and the routes over the Rio Grande by way of Ogden. A shipment from McCammon over the Union Pacific to Cheyenne would move 529 miles; and to the Denver gateway, also over the Union Pacific, 623 miles. But over the Union Pacific to Ogden, thence the Rio Grande to the Denver gateway, the shipment would move 718 miles, or 198 miles farther than over the Union Pacific route to Cheyenne and 95 miles farther than over its route to Denver. On shipments carried through to the Missouri River and points east, the Union Pacific route through Cheyenne also has the advantage in distance.

From Cheyenne to Kansas City a shipment would move 624 miles, as compared with 636 miles for a movement off the Rio Grande from Denver to Kansas City over the Rock Island, its short-line connection. A through shipment, therefore, from McCammon to Kansas City over the direct line of the Union Pacific through Granger and Cheyenne would move 1,153 miles, as compared with 1,352 miles, 199 miles longer, via Ogden and the Rio Grande to Denver, thence the Rock Island. The latter route on such a shipment would be 17.2 percent circuitous. To points east of Kansas City the maximum excess mileage from McCammon over the Rio Grande route is on a

haul to Pittsburgh, Pa. Over the Union Pacific to Omaha, thence the Chicago & North Western to Chicago, Ill., and The Pennsylvania Railroad Company beyond, the haul would be 1,991 miles, and over the Union Pacific to Ogden, the Rio Grande to Denver, the Burlington to Chicago, thence the Pennsylvania, the haul would be 2,203 miles, 212 miles longer, or a circuity of 10.7 percent.

In the following table are shown representative destinations and the distances from McCammon over routes using the Rio Grande from Ogden to Denver, as compared with distances over routes using the Union Pacific through Wyoming. Joint through rates apply over the latter routes. Over routes that include the Rio Grande higher combination rates apply. The table does not contain complete routing, except over the Union Pacific direct to Omaha and Kansas City. The last column of the table shows the percentages by which the Rio Grande routes are longer, or the circuity, from the point of divergence, McCammon, to the points shown.

From McCammon, Idaho, to—	Via Union Pacific	Distance	Via Rio Grande	Distance	Difference	Circuity via Rio Grande
		Miles		Miles	Miles	Percent
Omaha, Nebr.	(1)	1,036	(2)	1,255	219	21.1
Kansas City, Mo.	(3)	1,153	(2)	1,352	199	17.2
Minneapolis, Minn.	(3)	1,396	(2)	1,593	197	14.1
St. Louis, Mo.	(3)	1,428	(2)	1,627	199	13.9
Chicago, Ill.	(1)	1,524	(2)	1,735	211	13.8
Pittsburgh, Pa.	(1)	1,991	(2)	2,203	212	10.7
Charleston, W. Va.	(3)	2,018	(2)	2,218	200	10.0
Columbia, S. C.	(3)	2,274	(2)	2,473	199	8.8
Baltimore, Md.	(1)	2,319	(2)	2,521	202	8.7
Norfolk, Va.	(3)	2,438	(2)	2,637	199	8.2
New York, N. Y.	(1)	2,477	(2)	2,674	197	8.0
Tulsa, Okla.	(4)	1,377	(5)	1,427	50	3.6
Dallas, Tex.	(6)	1,456	(5)	1,489	33	2.3
Fort Smith, Ark.	(4)	1,458	(5)	1,538	80	5.5
Memphis, Tenn.	(3)	1,593	(5)	1,786	193	12.1
New Orleans, La.	(6)	1,970	(5)	2,003	33	1.7
Atlanta, Ga.	(3)	2,044	(5)	2,204	160	7.8
Savannah, Ga.	(3)	2,327	(5)	2,486	159	6.8

1 Union Pacific through Wyoming to Omaha.
2 Union Pacific to Ogden, Rio Grande to Denver.
3 Union Pacific through Wyoming to Kansas City.
4 Union Pacific to Pacific Junction, Kans.
5 Union Pacific to Ogden, Rio Grande to Pueblo.
6 Union Pacific to Denver, Colorado & Southern to Sixala, N. Mex.

The differences in the distances to destinations in the Southwest over routes including the Rio Grande from points in the excluded territory, as compared with the Union Pacific routes through Wyoming, are much less than they are to Missouri River crossings and points east and southeast. About 90 per cent of the traffic upon which joint through rates are sought via Ogden and the Rio Grande moves to the latter areas, and about 10 percent to the Southwest.

Over its routes through Wyoming, the Union Pacific gets its long haul from McCammon to Omaha, 1,036 miles, and to Kansas City, 1,153 miles. If joint rates were prescribed over the Union Pacific to Ogden and the Rio Grande to Denver, the Union Pacific's haul from McCammon to Ogden on traffic to Omaha or Kansas City and beyond would be 111 miles. However, if such traffic were routed beyond Denver over the Union Pacific, the latter would get a further haul of 560 miles to Omaha via Julesburg, or 640 miles to Kansas City via Salina, Kans., a total haul from McCammon of 671 miles to Omaha or 751 miles to Kansas City. Joint through rates are in effect over that route on sheep from Union Pacific origins in southern Idaho and eastern Oregon, but are 19 cents higher to the Missouri River and east (20 cents to Chicago) than rates over more direct routes of the Union Pacific. That railroad would establish a similar basis on cattle if requested. Over the route in connection with the Rio Grande, it would lose its haul of 529 miles from McCammon to Cheyenne, or 623 miles to Denver. On traffic routed via Ogden, the Rio Grande, and Pueblo to destinations east thereof, the Union Pacific would not be in a position to get any additional haul.

All of the foregoing distances, as stated, are computed from McCammon as the point of divergence. The great bulk of the traffic, however, from the excluded territory in Idaho, Montana, Oregon, and Washington originates or terminates on the Union Pacific or its connections west and north of that junction. On such traffic the Union Pacific would have a substantial haul in addition to that of 111 miles from McCammon to Ogden.

The hauls to Ogden would be, for example, from Lewiston, Idaho, 847 miles; from Centralia, Wash., 937 miles; and from Seattle, 1,029 miles. Over the Union Pacific direct from those respective origins to Omaha, the hauls would be 1,772, 1,862, and 1,954 miles. Those figures show the extent to which the Union Pacific would lose its long haul, the loss in mileage being 925 miles in each instance.

From and to points in the excluded territory in Oregon and Washington, and on the Burke and Headquarters branches of the Union Pacific in northern Idaho, the Union Pacific and certain other defendants have arrangements for the interchange of traffic in various commodities at junctions or gateways in Oregon, Washington, and Idaho, under joint rates. On traffic through such gateways moving under the joint rates, the Union Pacific in many instances foregoes its long haul. The gateways through which the rates are in effect, with certain limitations upon their application specified in the tariffs, are: Portland, in connection with the Southern Pacific; Marengo, Wash., and Plummer, Idaho, in connection with the Milwaukee; Spokane, in connection with the Great Northern; Wallula, Wash., and Spokane, in connection with the Northern Pacific; and Spokane, in connection with the Spokane International Railroad Company con-

necting with the Canadian Pacific Railway Company at Eastport, Idaho, at the Canadian border.

Illustrative of the hauls over the Union Pacific on traffic routed through these gateways are the following: From Lewiston, 132 miles via Marengo or 193 miles via Spokane; from Centralia, 393 miles on a route through Marengo; from Seattle, 184 miles through Portland; and from Pendleton, Oreg., 165 miles via Marengo, 227 miles via Spokane, or 70 miles via Wallula, Wash.; on traffic routed over its connections at such points. If joint rates were established from the same origin points to Omaha and beyond via Ogden and the Rio Grande, the hauls of the Union Pacific to Ogden would be substantially greater than many of its hauls via other junctions with its connections, as illustrated.

For example, from Pendleton, a representative point, on traffic to Chicago the Union Pacific has a haul of 1,560 miles on its route through Omaha, but only 70 miles over an established through route via Wallula and the Northern Pacific and connections. The rates are the same over both routes. Over a route via Ogden and the Rio Grande to Denver, thence the Burlington, the distance is 2,257 miles, or 6.4 percent longer than the route via Wallula and 10.4 per cent longer than the Union Pacific route through Omaha. The Union Pacific's haul over the Rio Grande route would be 633 miles. From Pendleton to St. Louis, the Rio Grande route sought would be shorter by 168 miles than a through route now available via Spokane and the Spokane International and its connections, and would be 201 miles, or 10.3 percent, longer than the Union Pacific route through Kansas City. To Oklahoma City, Okla., the haul of the Union Pacific would be increased from 227 miles, over the present route via Wal-

lula and the Northern Pacific and connections, to 633 miles via Ogden and the Rio Grande to Pueblo and the Santa Fe beyond. The distance over the latter route is 1,910 miles, or only 34 miles, 1.3 percent, longer than the route which gives the Union Pacific its long haul, and 692 miles, or 36.2 percent, shorter than the foregoing route through Wallula.

The foregoing are illustrative of numerous established through routes in which the Union Pacific participates from points in the excluded territory which short haul that carrier. Many of such routes are longer than those here sought via Ogden and the Rio Grande, and this is true to all sections of the country east of the Rocky Mountains, except western trunk-line territory. To the latter territory the short-hauling routes are generally shorter than the routes by which the Union Pacific retains its long haul, and considerably shorter, for example, by 37.5 percent from Yakima to Minneapolis, than the routes sought via Ogden and the Rio Grande. As indicated, the portion of the excluded territory from and to which this short hauling of the Union Pacific occurs does not include points in Utah nor points in Idaho, except on the Burke and Headquarters branches of the Union Pacific in the northern portion of that State.

These short-hauling routes have been in effect for many years. Most of them were established prior to the dates when the Union Pacific assumed control of the portions of its line west of Huntington and south of Salt Lake City. Joint rates with the Southern Pacific through Portland have been in effect since about 1910, with the Milwaukee through Marengo and Plummer since about 1902, with the Great Northern through Spokane since about 1894, with the Northern Pacific through Wallula

since about 1883, and with the Spokane International through Spokane since about 1907.

On some of the traffic interchanged at these gateways the Union Pacific obtains a short haul, as compared with its connections, and on other traffic a long haul. Eastbound traffic through the specified Washington and Idaho gateways consists of apples, pears, lumber and other forest products, some steel products, and miscellaneous commodities. A large portion of the traffic, particularly lumber, moves to North and South Dakota, Minnesota, and Wisconsin over the northern routes. Traffic over such routes moves also to Midwestern States and to States east of the Mississippi River. West-bound traffic through the same gateways consists of manufactured products and miscellaneous commodities from the Middle West and from eastern and southern territories.

These interchange arrangements are warranted and in the public interest, according to the defendants, because each carrier shares in long hauls on some traffic as well as short hauls on other traffic, and because the arrangements make it possible for the carriers to handle traffic over shorter routes in many instances. This latter statement, however, applies only, except to an insignificant extent, to such routes to and from points in western trunk-line territory.

As indicated, through routes and joint rates apply in connection with the Rio Grande through Provo on traffic to or from points on the Los Angeles line of the Union Pacific. Such routes generally are shorter than routes over the Union Pacific direct to or from Omaha, Kansas City, or Denver. The following is illustrative:

From Los Angeles, Calif., to—	Via Union Pacific	Distance	Via Rio Grande	Distance
		Miles		Miles
Omaha, Nebr.	(1)	1,808	(2)	1,813
Minneapolis, Minn.	(1)	2,168	(2)	2,152
Kansas City, Mo.	(3)	1,925	(2)	1,911
St. Louis, Mo.	(3)	2,200	(2)	2,185
Denver, Colo.	(4)	1,395	(2)	1,276
Chicago, Ill.	(1)	2,296	(2)	2,293
Atlanta, Ga.	(3)	2,816	(5)	2,762
Little Rock, Ark.	(3)	2,430	(5)	2,272
Dallas, Tex.	(4)	2,226	(5)	2,045

1 Union Pacific to Omaha.
2 Union Pacific to Provo and Rio Grande to Denver.
3 Union Pacific to Kansas City.
4 Union Pacific to Denver.
5 Union Pacific to Provo and Rio Grande to Pueblo.

Other defendants also participate in through routes with joint rates on traffic moving to or from points on the Union Pacific in the excluded territory from and to eastern points and voluntarily forego their long hauls. For example, the Burlington, the Rock Island, the Santa Fe, and the Missouri Pacific participate in joint rates with the Union Pacific through Kansas City and Omaha. The railroads named could haul the traffic for longer distances over their own rails to Pueblo, Denver, or Cheyenne, instead of permitting shippers to route through Kansas City and Omaha in connection with the Union Pacific.

The total amount of traffic moving between the four Northwestern States and points east of the Colorado common points is substantial. According to figures computed by the Union Pacific, transcontinental carload traffic from the East in the year 1948 over the Union Pacific through Wyoming to those Northwestern States totaled 55,631 cars. Of these, (1) 81.7 percent originated in eastern

Colorado, Kansas, Missouri, Kentucky, Virginia and all States north thereof, (2) 10.8 percent in Texas, Oklahoma, Arkansas, and Louisiana, and (3) 7.5 percent in Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina, and South Carolina. About 62 percent of the total consisted of manufactures and miscellaneous traffic, most of which originated in group (1). East-bound traffic from the four States to the same three groups in the same year totaled 116,278 carloads, of which 84.1 percent went to group (1), 10.5 percent to group (2), and 5.4 percent to group (3). About 75 percent of that total consisted of agricultural and forest products.

Of the total carloads, 171,909 in both directions, 121,909 originated or terminated in the excluded territory and the remainder, 50,000, originated or terminated at points in Oregon and Washington west of that territory. The Rio Grande is in a position to solicit movements of the latter traffic over its line at competitive joint through rates in connection with longer routes over the Southern Pacific from Portland to Ogden or over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City. These joint rates are the same as the rates which apply over the direct routes of the Union Pacific from origins on that road in the same area west of the excluded territory. For example, from Seattle to Denver the distance is 1,538 miles over the Union Pacific direct and 1,894 miles over the Union Pacific to Portland, the Southern Pacific to Ogden, and the Rio Grande beyond. In addition to the joint rates sought via the Ogden gateway from the excluded territory, the complainant is also seeking joint rates from the northwest area west of the excluded territory, the same as those in effect over the Union Pacific, Southern Pacific, and Great Northern-

Western Pacific routes, for application in connection with the Union Pacific via the Ogden gateway.

A substantial volume of traffic is handled by the Rio Grande in connection with the described routes over which it participates in competitive joint through rates to and from Oregon, Washington, and British Columbia. For example, in 1948 the Rio Grande handled 30,486 carloads in connection with the Southern Pacific and 7,152 carloads in connection with the Western Pacific-Great Northern. In 1947, the volume was 22,722 and 8,909 carloads over the respective routes. Most of this consisted of lumber from Southern Pacific origins south of Portland.[6]

The complainant's estimate of the traffic in carloads that would be potentially available to and from the excluded territory for solicitation by the Rio Grande, in the event competitive joint rates were established over its line via Ogden, from Idaho, Montana, Oregon, and Washington is about 29 percent greater than the volume of traffic, according to the Union Pacific, that moved in 1948 over its Wyoming lines. The estimate was based upon the total carload traffic originated and terminated by the Union Pacific in the years 1944 to 1948, inclusive. It included commodities within the description of products of agriculture, animals and animal products, products of mines, products of forests, and manufactures and miscellaneous commodities. The total carloads estimated as ori-

6 Prior to February 1, 1949, joint rates applied over the Bieber route in connection with the Rio Grande to competitive territory in Colorado and east thereof on lumber from certain origins in Oregon and Washington on the Oregon Trunk Railway and the Spokane, Portland and Seattle Railway Company (subsidiaries of the Great Northern and Northern Pacific). Those rates were canceled on February 1, 1949, in connection with the Rio Grande; there is no indication that the cancellation was protested.

ginated by the Union Pacific annually in the area specified was 101,476 and the number terminated 56,286, a total "potential" of 157,762 carloads.

This estimate did not include any shipments that might originate or terminate off the line of the Union Pacific and moved over that carrier as a part of a longer haul. Although stated to be a conservative estimate of potential traffic, it was computed from a substantial number of reliable sources, and represents the complainant's best analysis of the traffic considered available for solicitation. No attempt was made to estimate the amount of traffic that the Rio Grande might actually obtain from these potential sources other than a statement that there was no probability that it would get more than 10 percent and that the amount probably would be less than 10 percent because of the vigorous competition of the Union Pacific. This figure of 10 percent as a maximum was derived from the experience of the Rio Grande in obtaining other transcontinental traffic now moving at joint rates in competition with the Santa Fe, Southern Pacific, Union Pacific, Great Northern, Northern Pacific, and Milwaukee. If the Ogden gateway were opened to traffic to and from the four States named, there would be active competition with the Union Pacific, the Wabash, the Chicago & North Western, and the Missouri River connections that favor Union Pacific routing. At the present time the Rio Grande gets less than 5 percent of the traffic to and from California over the available through routes, with joint rates in connection with its line, because of competition with other routes.

A transportation specialist of the United States Department of Agriculture testified that the Rio Grande would be doing well if it obtained 1,000 cars additional

annually from this traffic, an amount that is less than 1 percent of the estimated potential total traffic.

Whatever the amount, it would be the result mainly of (*a*) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (*b*) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it.

Since 1934, when the Dotsero cut-off was constructed, affording a shorter route by the Rio Grande between Denver and the Utah gateways, there has been a marked increase in the traffic carried over that railroad. For the 2 years prior thereto, the total tons carried were less than 6,000,000 although the tons carried exceeded that figure in each year before that, back to 1924. Beginning in 1934, the traffic gradually increased and reached a maximum of 18,517,000 tons in the war year of 1944. In 1945 it dropped to 14,213,000 tons, but increased in 1947 to 18,331,000 tons and in 1948 to 18,473,000 tons. This tonnage has shown a considerable increase percentagewise in traffic received from connecting lines and a decrease in traffic originated. In 1924, 23.2 percent was received from connections and 76.8 percent originated. In 1934, the respective percent-

ages were 39.3 and 60.7. In 1947, they were 49.8 and 50.2, and in 1948 they were 52.3 and 47.7 percent. This traffic in 1948 did not differ markedly from the traffic handled in the four war years 1942-45, when the percentages of traffic received from connections ranged from 52.6 percent in 1942 to 58.2 percent in 1945.

Of the traffic received from connections in the 15-year period 1934 to 1948, inclusive, the percentage terminated on the line of the Rio Grande has ranged from 16.4 percent in 1941 to 20.7 percent in 1948. In the war years the percentages were 16.7 to 19.9 percent. In the same 15-year period, of the traffic received from connections, the amount delivered to connections, that is, bridge traffic ranged from 20.7 percent in 1935 to 39.6 percent in the war year of 1945. Excluding the war years, the percentage of traffic received from connections that was delivered to connections was 30.1 percent in 1947 and 31.6 percent in 1948. In 1934, the corresponding percentage was 21.7 percent and in 1924 it was 9 percent. These percentages show the increasing importance of the Rio Grande as a bridge line. In tons of freight carried in 1947, such traffic accounted for 5,519,239 tons out of a total of 18,331,176 tons, and in 1948 accounted for 5,846,793 tons of a total of 18,473,356 tons carried. In revenue, the Rio Grande received in 1947 from its bridge traffic $22,894,412, which was 43.3 percent of its total revenue of $52,883,339; and in 1948. $27,654,086 or 44.2 percent of its total revenue of $62,505,951.

Although the percentage relation of the traffic originated on the Rio Grande to the total traffic of that carrier has decreased, such traffic both in tonnage and revenue has increased in the same 15-year period. In 1934, the tons originated were 3,826,049 and the revenue received therefrom was $8,311,254; in 1947, the tons originated were 9,202,867 and the revenue therefrom $20,190,318; and in

1948, the corresponding figures were 8,804,334 tons and $22,018,519. The 1947 and 1948 figures exceeded those of the war years. The volume of strictly local traffic; that is, traffic both originated and terminated on the line, also increased; this traffic in 1934, for example, accounted for 2,048,544 tons and $4,351,807 in revenue, and in 1948, for 3,307,374 tons and $7,630,587. Strictly local traffic was less annually throughout the 15-year period, including the war years, than during the 6-year period 1924 to 1929, inclusive.

The reasons given for the decline or lack of proportionate growth in traffic originated are (1) depletion of nonferrous ores in Colorado and the closing of smelters, except one now operating at Leadville, Colo.; (2) decline in the amount of coal originating on the road; (3) decline in production of lumber and its products in the area served, and the discontinuance of operation by many sawmills; and (4) loss of local traffic to other forms of transportation.

The relative decline in strictly local traffic has been offset by increases in traffic originated and shipped out over connecting lines, and traffic received from connecting lines and terminated. Such traffic affords a measure of the increasing importance of the Rio Grande to the shippers and receivers of freight in the localities and areas in the States of Colorado and Utah served by it. Although percentagewise, bridge traffic in relation to the total was greater in 1948 than in 1934, and increased by over 326 percent in the 15-year period, traffic originated or terminated also increased by substantial amounts, or over 155 percent. In terms of revenue, however, less was received from bridge traffic than from the other traffic. In 1934, for example, the Rio Grande received from bridge traffic $5,648,891, and

in 1948 it received $27,654,086; from the other traffic, it received $11,519,335 in 1934 and $34,851,865 in 1948.

The record shows that both the Rio Grande and the Union Pacific sought to interest the public in the controversy and to inform other persons, especially shippers, as to the merits of their respective views. For example, the Rio Grande issued a pamphlet entitled "20 Questions" as a means of informing the public of the Rio Grande's side of the case and its reasons for seeking opening of the gateway. In its brief, the Railroad Commission of the State of Montana states that it had informal conferences with official representives of both the complainant and the defendants before it intervened in the proceeding. A number of witnesses related that they had listened to representatives of both sides before appearing to give testimony. All witnesses were men of responsibility in their communities and were successfully engaged in their respective occupations. Many appeared and testified as representatives of large groups of producers, shippers, and receivers of freight in their areas. There is no indication that these witnesses, whether for or against the complaint, were improperly influenced, or that their respective interests in the subject matter of the controversy had been stimulated in any questionable manner.

Transit.—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be stopped in transit for various commercial operations and reshipped at the balance of the joint rate from the point of origin are of great value to shippers, receivers, and distributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.

The Rio Grande, like other railroads, offers a large number of such transit arrangements, including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding. Such arrangements are of importance to shippers and receivers in the territory served by the Rio Grande. Traffic from the excluded territory consists of perishable commodities, other agricultural products, milled products, livestock, and lumber and its products. West-bound traffic to that territory is made up for the most part of manufactures and partially manufactured articles, some of which are stopped for storage, partial unloading at a number of points, and fabrication in transit.

On traffic from Colorado common points and points east thereof through Pueblo, Colorado Springs, or Grand Junction, and Price, Utah, to final destinations north or west of Ogden on the Union Pacific or points on its connecting lines, failure to have joint through rates in connection with the Rio Grande hinders the use of the stoppage-in-transit arrangements offered by that railroad at such Rio Grande points. Pueblo has a population of about 75,000; Colorado Springs, 50,000; Grand Junction, 17,500; and Price, 5,000. All of these are distributing points for surrounding areas. A shipper at Chicago, for example, may have a carload containing shipments for consignees at Pueblo and Boise, Idaho. If the car is partially unloaded at Pueblo it cannot be reshipped over the Rio Grande to Boise at a joint through rate; but the car can be moved to Boise via Pueblo and Denver, thence the Union Pacific at a joint through rate. If stops are desired on the Rio Grande at Grand Junction, Price, or Provo, for example, joint through rates would not be available.

A discussion of the evidence offered by shippers and receivers of particular commodities who testified in support of the complainant follows:

Building Materials.—A dealer in and distributor of general building materials in Salt Lake City, who handles from 400 to 500 carloads annually, obtains from 150 to 200 cars from points east of Colorado common points, including cellotex from Marrero, La., roofing from Cincinnati, Ohio, doors from Louisville, Ky., hardwoods and plywoods from Algoma, Wis., and Orangeburg, N. C., asbestos products from St. Louis, and asphalt siding from Minneapolis. Distribution is made in carloads, from pool cars, and from warehouses to customers located on the Rio Grande on the western slope of Colorado, such as Glenwood Springs and Grand Junction Colo., and in Utah, such as Price, Helper, Ephraim, and Manti; and also on the Union Pacific in northern Utah; in Wyoming, Rock Springs and west; and in southern Idaho northward to and including Ashton on the West Yellowstone branch and westward to and including Magic, Shoshone, and Buhl. This dealer cannot now serve these customers from shipments made in through cars at joint rates over the Rio Grande when such cars also carry shipments for points on the Union Pacific beyond Ogden. Ephraim and Manti are on a branch line about 52 and 59 miles, respectively, south of Thistle, Utah.

In some instances this shipper has had to forego business east of Salt Lake City at points as far as Glenwood Springs because of the rate situation. If joint through rates were established, this distributor could give customers at a number of intermediate points on the Rio Grande, who generally are small dealers and can take only less-

than-carload quantities, better service through partial unloading in transit and more efficient service by frequent deliveries under more flexible schedules, instead of being limited, as at present to furnishing service in connection with pool cars consigned to Salt Lake City as the ultimate destination. Pool cars with partial loads for that point or Ogden and points on the Union Pacific beyond do not now move over the Rio Grande, but are routed over the Union Pacific to get the benefit of joint rates.

Of the 150 or more cars annually from the east, this distributor estimated that he would have stopped for partial unloading about 25 percent. Witness made no mention of commercial competition, but indicated that his chief concern was better service to his customers and a saving in cost to his company if such carloads could be stopped for partial unloading at intermediate points on the Rio Grande while moving at the through rates to Union Pacific destinations in the area served by him.

Farm machinery.—A distributor of farm machinery and equipment at Salt Lake City receives carloads of these commodities from eastern origins, including farm tractors from Detroit, Mich., and distributes them by his own motor vehicles to points in Utah and Idaho. This business was established in 1947, at which time the production of these commodities was insufficient to meet all demands, and a system of allocations based on prior needs was introduced. While the system of allocations was in effect, it was found to be more convenient and efficient to bring all shipments to Salt Lake City and distribute them by truck. This distributor is located on the Rio Grande at Salt Lake City and all shipments move over that line. He expressed a desire for joint through rates from eastern origins to points in

Utah and Idaho in connection with the Rio Grande, but admitted that no attempt was being made to partially unload shipments at points on the Rio Grande south of Salt Lake City when carloads are consigned to the latter point, or to ship over the Union Pacific to Salt Lake City where carloads could be partially unloaded or stored and later shipped to Union Pacific destinations in Utah and Idaho at joint through rates. The witness for this distributor stated that he preferred to ship in-bound over the Rio Grande and forego the stopping-in-transit provisions that are now in effect at Salt Lake City and other points on the Union Pacific when traffic is routed over that line.

A factory branch of a large manufacturer of farm machinery and equipment which distributes in the intermountain area is located on the Rio Grande at Salt Lake City. In 1949 it received 369 carloads from its eastern manufacturing points. Of these, 70 percent were sold at points north of Salt Lake City, mostly at points served by the Union Pacific as far as Ontario, Oreg., and the remainder in Utah and western Colorado. About one-half of the shipments to Salt Lake City moved over the Rio Grande route and one-half over the Union Pacific. Shipments which move in over the Union Pacific may be stopped at Salt Lake City for partial unloading or storage in transit at the joint through rates when the ultimate destinations are on the lines of that carrier, but combinations of rates to and from Salt Lake City apply when such shipments move into that point over the Rio Grande. The manager of this branch testified that it would be desirable to establish joint through rates over the Rio Grande so that shipments moving over that line could be stored in transit at Salt Lake City and later reshipped, or partially unloaded thereat and the remainder forwarded to points on the Union Pacific at charges no greater than apply on similar

shipments moving over the Union Pacific. However he did not know what effect this would have on the parent company as some shipments have been routed over the Rio Grande when Union Pacific routing was requested. To indicate a need for joint through rates reference was made to a shipment of tractors which were routed over the Rio Grande to Salt Lake City. At that time a customer at Ontario needed two tractors and it cost about $50 each to ship them from Salt Lake City by motor carrier. If joint through rates had been in effect the car could have been partially unloaded at Salt Lake City and the two tractors could have been forwarded to Ontario at the joint rate from origin to Ontario. The record fails to show the difference in the joint rates to Salt Lake City and to Ontario. On a 34,000-pound shipment of tractors from Chicago, the joint through rate is $2.68 to Ogden and $2.98 to Boise, which is southeast of Ontario, representing a difference of $102 in charges.

Monuments.—A fabricator and wholesaler of granite and marble monuments at Brigham City, Utah, on the Union Pacific 21 miles north of Ogden, obtains his stone from Vermont, Georgia, Wisconsin, and Minnesota and sells in Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington. This dealer has keen competition with dealers in like articles in Salt Lake City. Its business is such that straight carloads rarely can be shipped to retailers. If joint through rates were established over the Rio Grande through Ogden, cars could be stopped in transit at Colorado points, such as Grand Junction. A retailer at the latter point testified that he finds it impracticable, except in unusual instances, to purchase the various kinds of monuments needed in the trade in carloads, and that the keen competition cannot be met when

shipments are made in less than carloads. There is thus an urgent need for the establishment of joint through rates on this traffic to destinations in the excluded territory with stop-off privileges at intermediate points on the Rio Grande. A substantial portion of this traffic has been lost to the trucks, chiefly because of rate differences and the lack of stop-off privileges on the Rio Grande at competitive through rates.

Livestock.—Large volumes of traffic are involved in connection with the livestock industry and with the processing and marketing of agricultural products. With respect to livestock, evidence was submitted by producers, feeders, and marketers. A number of producers in the northwest area, particularly in Idaho at such points as Pocatello, Burley, Soda Springs, and Blackfoot, desire joint rates via Ogden and the Rio Grande to markets in Denver, Pueblo, and east thereof on the same basis that applies on shipments moved over the Union Pacific through Cheyenne. Much of the evidence dealt with the advantages from such joint rates when applied on livestock shipped to grazing and feeding areas in Utah and Colorado on the Rio Grande for reshipment beyond under transit arrangements. In the areas in Utah and Colorado served by the Rio Grande are good pasture lands for grazing livestock. In addition to livestock produced locally in those areas, substantial quantities are shipped in the summer season from other sections of Colorado, Utah, and surrounding States, both for feeding in feed lots and pastures and for grazing on the livestock ranges. Movements of livestock, both sheep and cattle, into and out of Colorado are substantial in volume.

Evidence as to the needs of raisers of livestock and operators engaged in fattening livestock for markets was

submitted by persons engaged in those pursuits, individually and as representatives of livestock and feeder associations. These came from several representative points or districts served by the Rio Grande, such as Heber City and La Sal, Utah, and Burns, Lamar, and Las Animas, Colo. Those served only by the Rio Grande generally buy from areas from which joint rates apply in connection with that road in order to obtain the benefit of grazing or feeding in transit on feeder stock when the fattened animals are shipped to Denver or markets east thereof. The evidence shows that such operators have to absorb the difference in transportation costs and are not able to purchase cattle or sheep economically in the northwest area in competition with buyers from Iowa, Wyoming, Nebraska, Colorado, and Kansas that have the benefit of competitive joint rates from the excluded territory over Union Pacific routes with grazing or feeding in transit arrangements.

Due to the curtailment of the use of grazing lands in national forests in Colorado, as part of a general policy for all such forest lands, livestock raisers in Colorado have curtailed their operations in raising livestock, and have engaged more in fattening stock by grazing in private pastures or feeding in feed lots. They purchase most of their feeder stock in Colorado and surrounding areas, but for supply, quality and price reasons they have been seeking some feeder stock from more distant origins, and the need for doing so, particularly by reason of the curtailment of the pasture area, has been increasing. Livestock produced in the northwest area, particularly in Idaho, Montana, and Oregon, is of excellent grade, does well on the range, and is considered very desirable for feeding and breeding purposes. About 90 percent of the

sheep produced in Colorado are produced in the area served by the Rio Grande, and the operators in this territory purchase replacement or breeding ewes in the excluded territory for summer grazing and the production of white-faced or mutton-type lambs. One witness indicated that in-bound billing on breeding ewes is used under the feeding-in-transit arrangements, when available, at points on the Rio Grande when the new-born, fattened lambs are shipped to markets, but the feeding-in-transit arrangements apparently do not apply for breeding in transit.

Operators on the Rio Grande in western Colorado and those in the eastern Arkansas Valley sections (in southeastern Colorado east of Pueblo and in southwestern Kansas) feel that they cannot now profitably purchase stock in the excluded territory for feeding in transit in competition with similar operators on the Union Pacific in Wyoming, Colorado, Nebraska, and Kansas, due to the rate situation. For example, from Dillon, Mont., to Kansas City the rate on sheep or goats in double-deck cars is $1.21 over the Union Pacific direct and $1.40 over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond, a difference of 19 cents. The 19-cent differential over the latter route applies generally on sheep and goats from Union Pacific origins in the excluded territory to Missouri River markets and points east thereof. These rates are published as joint rates over through routes via Ogden and the Rio Grande. On sheep and goats to destinations west of the Missouri River, including Colorado common points, and on cattle to all of the territory Colorado common points and east thereof, via Ogden and the Rio Grande, the rates are on a combination basis. Cattle and sheep may be shipped from the excluded territory over the Union Pacific to Denver and con-

meeting lines beyond to points in the Arkansas Valley, such as Lamar, for feeding in transit and subsequent reshipment to Missouri River markets, or markets east thereof, at the rates applicable over the Union Pacific direct to the Missouri River markets, plus an arbitrary of 8.5 cents per 100 pounds. Feeders of livestock located on the Union Pacific in northern Colorado and Nebraska are now able to overbid the Arkansas Valley feeders on northwest stock when destined to the Missouri River and east thereof, and the latter are thus unable to compete successfully because of their unfavorable rate situation. The northern Colorado-Nebraska operators feed a majority of the lambs fattened for market in the United States.

A packing plant at Pueblo purchases lambs at the Ogden market, some of which originate at points on the Union Pacific in Idaho and Oregon. These shipments are routed over the Rio Grande from Ogden even though it costs from $70 to $80 per car more than the total charges would be if the shipments were routed over the Union Pacific to Denver at the transit balance of the through rate. The Rio Grande is used from Ogden because shipments do not have to be stopped for feed and water en route to Pueblo, whereas shipments routed from Ogden over the Union Pacific usually require feed and water at Denver. There is less shrinkage on shipments moved over the Rio Grande, but not enough to offset the additional freight charges.

The rates on livestock in western territory were prescribed in *Livestock, Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535. Generally, the rates are predicated on the shortest routes over which carload traffic can be moved without transfer

of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the act. The rates on stocker or feeder livestock were prescribed on a basis not in excess of 85 percent of the rates prescribed on the same kind of stock when fit for slaughter, and the carriers were authorized to establish tariff provisions which allow stock moving toward a market to be fed in transit at intermediate points on the basis of the through rates plus a reasonable charge for such privilege. On December 6, 1932, the Rio Grande was authorized (190 I. C. C. 175) to add certain arbitraries to the rates prescribed for mountain-Pacific territory for hauls over its standard-gage lines between Pueblo and Walsenburg on the east, and Provo on the west, including branch lines connecting with the main lines between those points. For hauls of 500 miles or more, the arbitrary authorized at that time was 6 cents on cattle and on hogs and sheep, double deck. Later, these same arbitraries were authorized for application between Denver and Provo over the Dotsero cut-off (200 I. C. C. 535).

In establishing the prescribed rates on livestock, the carriers appear to have limited their application over routes which do not result in short hauling, and over other and longer routes to have provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. As indicated, operators in the Arkansas Valley may now obtain cattle and sheep in the excluded territory for feeding in transit at an arbitrary of 8.5 cents, and this same arbitrary applies when the stock originates on the Burlington in Montana and Wyoming. On the other hand, such operators may ob-

tain feeder stock in other areas, such as Texas and New Mexico, for feeding in transit and reshipment to the Missouri River markets or markets east thereof, at lower rates than would apply if the same stock were fed in transit by operators on the Union Pacific in Colorado, Nebraska, or Kansas. For example, the rate on cattle from Las Vegas, N. Mex., to Chicago is $1.13 when stopped for feeding at Lamar, but if the same cattle were fed at Barton, Nebr., just east of Julesburg on the Union Pacific, the rate would be $1.26, or 13 cents higher. On cattle from Raton, N. Mex., fed in transit at Lamar, the rates are $1.07 to Chicago and 76 cents to Kansas City, but if the same cattle were fed in transit at Barton the rates would be $1.21 and 89 cents, respectively. Many other examples of a similar nature are shown.

The arbitrary of 19 cents, originally 13 cents, applicable on lambs from the northwest area and moving over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond was established prior to the opening of the Dotsero cut-off, and was based in part on the mileage over the Rio Grande via Pueblo. The evidence indicates that this arbitrary was based on the difference between the prescribed scale rates for the average distance from 12 representative origins, on the line of the Union Pacific from Pocatello north to Butte and west to Pendleton, to the several Missouri River markets over the Union Pacific direct and over that road to Ogden, the Rio Grande to Denver via Pueblo, and the Union Pacific beyond. Using the same formula, but giving consideration to the shorter distance over the Rio Grande's Dotsero cut-off, the Union Pacific states that the arbitraries on traffic routed over the Rio Grande should be 5 cents to Denver and Pueblo and 15 cents to the Mis-

souri River markets, and it is willing to establish these arbitraries and make them applicable to cattle as well as sheep. The arbitrary of 8.5 cents on cattle and sheep from origins on the Union Pacific and the Burlington when fed in transit at points in the Arkansas Valley and reshipped to the Missouri River and beyond apparently is based on a similar formula. Reasonable groupings were authorized in *Livestock Western District Rates, supra.*

In seeking to have the rates on livestock which apply over the Union Pacific made applicable over its lines from Ogden, the Rio Grande indicates a desire to waive the arbitraries which were authorized over its line from Provo to Denver and Pueblo and, in addition, to have established over its routes lower rates than would result from the application of the prescribed scales for the distances over its routes. On shipments moving over the Union Pacific-Ogden-Rio Grande route, this would result in short hauling the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City, which are the differences in the Union Pacific distances from McCammon to Ogden and from McCammon to Denver and Kansas City.

Reference is made to *Crouch v. Nevada N. Ry. Co.*, 208 I. C. C. 586, which concerned the rates on feeder cattle moved from East Ely, Nev., to Davis, Calif., over the lines of the Nevada Northern Railway Company to Shafter, Nev., thence the Western Pacific to Sacramento, Calif., and the Southern Pacific beyond, 760.4 miles. A rate of 47.5 cents was applicable over the Nevada Northern to Shafter and the Southern Pacific beyond, 705 miles. This rate was collected, but the defendants later sought to collect a rate of 58 cents, which was the combination rate based on Sacramento. Division 4 found that the combination rate was applicable but unreasonable to the ex-

tent that it exceeded 49.5 cents, which was the prescribed scale rate for distances of 775 miles and over 750 miles. See also *Routing Livestock to and from Oregon Points*, 209 I. C. C. 349. We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive rates over the Rio Grande via the Ogden gateway.

Agricultural commodities.—Growers of wheat, potatoes, onions, peas, other vegetables, and fresh fruits at Idaho Falls, Burley, Twin Falls, Blackfoot, Aberdeen, Caldwell, and Parma on the Union Pacific and also those engaged at such points in buying, selling, packing, and distributing vegetables and fresh fruits, market such products throughout the United States. In order to get as wide a distribution as possible those growers and other growers in the northwest area need as many markets and outlets as possible.

In marketing the large production of such products, particularly Idaho potatoes, it is the general practice to divert carloads in transit as markets are found and sales are made. Routes over which joint through rates apply are generally used so that a shipment can be diverted or reconsigned without the application of a combination of rates. If a shipment reaches a point through which a combination of rates applies and the sale is lost, it is frequently necessary to dispose of the shipment at that point at a forced or distress price. Such points are called closed or pocket markets.

The principal outlets for Idaho fruits and vegetables vary from year to year, but large markets are in the Central, Southwestern, and Southeastern States. Carloads

moved over the Union Pacific to the Central States can be diverted to the Southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect. Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City. One Idaho shipper has made few sales of potatoes in the Southwest in the last several years because of pocket markets there.

Wichita and Liberal, Kans., are described as pocket markets on potatoes and other vegetables originating in Idaho because they cannot be diverted or reconsigned therefrom to points east of the Missouri River at joint through rates. However, the record indicates that shipments refused at these two points may be diverted or reconsigned to destinations in the Southwest at the joint through rates. Wichita is not located on the direct line of any carrier operating between the Colorado common points and the Missouri River gateways, and Liberal is located in the southwestern part of Kansas near the Oklahoma border. Shipments to Kansas City and east thereof would require an out of line haul via Wichita and a substantial back haul via Liberal.

Storage facilities are available at Pueblo for the storage of perishables, including potatoes, onions, apples, pears, frozen poultry, frozen foods, butter and eggs. Joint through rates are applicable from the excluded territory via Pueblo on shipments routed over the

Union Pacific to Denver and connecting lines beyond to destinations in the Southwest and to points west of the Missouri River. The route of the Rio Grande from Ogden would be used if joint through rates were available over that route to additional destinations with storage in transit at Pueblo. Storage operators at Pueblo are now handicapped, in relation to two competitors at Denver, because the through rates do not apply via Pueblo to Denver and other northern destinations where a back haul would be required on shipments routed to Pueblo via Denver, whereas the competitors can ship at the through rates in all directions, except westward. The application of the through rates via Ogden and the Rio Grande is sought so that these shippers may have available the same distribution markets as their competitors.

A shipper who deals in dried beans from Idaho and other Western States is located at Colorado Springs. His principal markets are in southeastern territory. Beans which originate in California, Colorado, and Wyoming may be stopped at Colorado Springs for cleaning and packaging and reshipped at the balance of the joint through rates. Beans which originate in Idaho may be shipped over the Union Pacific to Denver and the Rio Grande or other connections to Pueblo and reshipped therefrom at the balance of the through rates, except to points east of the Missouri River. The route of the Rio Grande from Ogden would be used on Idaho beans if it would result in the application of joint through rates to points east of the Missouri River on the same competitive basis as is now applicable when such beans are transited at points on the Union Pacific. Another bean dealer at Fruita, Colo., on the Rio Grande about 10 miles west of Grand Junction, would like to transit Idaho beans

on the same competitive basis as is applicable at Union Pacific points. This dealer is now engaged primarily in buying pinto beans from growers in the vicinity of Fruita and shipping them in carload lots to others, including the shipper at Colorado Springs. These dealers in dried beans are in competition with like dealers at points on the Union Pacific who have the benefit of transit at the through rates to destinations, among others, east of the Missouri River.

A company which is engaged in the purchase and sale of dried beans and peas maintains plants in Nebraska at Morrill on the Burlington and at Gering on the Union Pacific. Carloads of dried beans and peas originating in California, Utah, Oregon, Washington, Idaho, Colorado, Wyoming, Montana, and Nebraska are shipped to Morrill and Gering where they are cleaned, sorted, and packaged, and reshipped generally eastward and to Oklahoma and Texas. This company can obtain Idaho beans and reship them from Gering to eastern and southern destinations at the joint through rates. It was stated, however, that a substantial amount of pinto beans (about 6,000,000 pounds per year) are obtained from Colorado, mostly on the Rio Grande, on which an out-of-line charge of 7 cents per 100 pounds is applicable in addition to the joint through rates over direct routes when such beans are processed at Gering and reshipped to the Missouri River and points east thereof; also that when such beans are processed at Gering and reshipped to destinations west of the Missouri River, combinations of rates to and from Gering are applicable.

The Utah Growers' Cooperative operates throughout Utah in the production and shipment of vegetables.

including potatoes and onions. It has two branches on the Union Pacific and three on the Rio Grande in Utah, the latter at Midvale, American Fork, and Springville, all south of Salt Lake City. These three points are served by the Union Pacific and the Rio Grande, but track connections exist only at Midvale. Shipments of box shooks and of seed potatoes from Idaho and of fertilizer from Montana may move into American Fork and Springville over the Union Pacific at lower rates than when they are interchanged with the Rio Grande at Ogden or Salt Lake City, but when they are received over the Union Pacific they must be trucked to the plants on the Rio Grande. The differences in the rates are not shown.

Various flour mills at southern Kansas points, such as Moundridge and Wichita, support the complaint because they cannot at present purchase wheat at points on the Union Pacific in Idaho, Oregon, and Washington, mill it in transit, and reship to the Missouri River and points east thereof at the same rates that are applicable when similar wheat is milled at points on the Union Pacific. A specific instance was shown where nine carloads of wheat moved from Ogden to Moundridge on which the Ogden shipper applied in-bound transit billing on wheat originating at Idaho Falls. The shipments moved from Ogden over the Union Pacific to Denver, the Rio Grande to Pueblo, and the Missouri Pacific beyond. Moundridge is a local point on a branch line of the latter carrier north of Eldorado, Kans. After the wheat was milled at Moundridge the in-bound billing thereon was applied against an out-bound movement of flour to New Cumberland, Pa. The rate on flour from Idaho Falls to New Cumberland over the route of movement through Denver and Moundridge was $1.335, or 12.5 cents higher than the

rate would have been if the same wheat had been milled at a point on the Union Pacific. The distances over the route of movement through Denver and Moundridge and the more direct route of the Union Pacific are not shown.

The rate restrictions complained of by shippers of and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from the excluded territory to Colorado common points and east thereof have placed these shippers and dealers at a serious disadvantage in marketing their products, as compared with competing shippers and dealers located on the Union Pacific and having the benefit of the lower joint through rates from and to the same points. Some of these restrictions complained of, such as those by operators of flour mills in southern Kansas, could be remedied by the establishment of additional joint through rates from the excluded territory over routes of the Union Pacific to Denver and connecting lines beyond. From McCammon and points north thereof such routes would in all instances be shorter than the routes over the Union Pacific to Ogden, the Rio Grande to Denver or Pueblo, and connecting lines beyond. The Union Pacific states that it has not been requested to establish additional joint through rates via Denver. Its position with respect thereto is that the rates on agricultural commodities are on a low basis and, therefore, the carriers should be permitted to limit their application to more direct routes, thereby maintaining their long hauls and preventing undue circuity. For example, it believes that if competitive joint through rates were established on grain for milling at Wichita and other southern Kansas points and reshipment beyond to the Missouri River and east, other and longer routes probably would be demanded on the

same basis at points in Oklahoma and Texas where competing mills are located.

The establishment of additional routes and rates by way of the Union Pacific, however, would not remedy the disadvantage complained of by the shippers of and dealers in these products in the excluded territory who are compelled to pay combination rates on shipments diverted or reconsigned at intermediate points on the Rio Grande, including those stored at Pueblo or Colorado Springs on that road, and reshipped to Colorado common points and east thereof. The only effective remedy in those instances would appear to be the establishment of through rates, the same as those over the Union Pacific routes, over Rio Grande routes via Ogden or Salt Lake City.

Lumber.—A number of lumber dealers and lumber mills are located at Grand Junction and other points, and a wood-treatment or preserving plant is located at Salida, Colo., all on the Rio Grande. Generally, the complaints of these parties relate to their inability to ship lumber and millwork from the excluded territory on competitive joint rates via Ogden and the Rio Grande with stoppage in transit for partial unloading, storage, milling, or treatment and reshipment beyond to Colorado common points and east thereof at the balance of the joint rates. Mention also was made of a handicap in diverting or reconsigning at the joint rates to such points carloads originally shipped to local stations on the Rio Grande via Ogden. As previously indicated, joint through rates apply on lumber and mill work from points in California and in Oregon and Washington west of the excluded territory, including areas around Seattle, Tacoma, and Portland, over the Southern Pacific or the Western Pacific and the Rio Grande through the Utah gateways to points

on the Rio Grande and east thereof, with storage, milling, and treatment under transit arrangements. Lumber may be shipped at joint through rates from the excluded territory when the final destinations are local points on the Rio Grande, but such rates are not applicable from that territory over the Union Pacific to Ogden and the Rio Grande when the final destinations are Colorado common points or points east thereof, whether the shipments move direct or are stopped for milling or other transit purposes.

A lumber company with a wholesale yard, a box factory, a mill, and a storage and drying yard is located at Grand Junction. This company buys most of its lumber, both rough and dressed, and plywood and doors at points west of the excluded territory and sells in Colorado and points east and south thereof. This company also has a financial interest in a wholesale lumber company at Colorado Springs. It has purchased some lumber at points in the excluded territory, such as Cascade and Winchester, Idaho, Burns, Oreg., and Metaline Falls, Wash. Lumber shipped from Cascade, Winchester, and other points in the excluded territory over the Union Pacific to Ogden and the Rio Grande to Grand Junction could not be stored in transit at the latter point and later reshipped to Colorado common points or points east thereof at the joint through rates as those rates apply only over the Union Pacific routes.

Another lumber company on the Rio Grande at Military Junction, Colo., about 10 miles south of Denver, purchases lumber in California and Oregon; also a small amount in Washington, for milling in transit and reshipment beyond. Lumber from the excluded territory can now be milled in transit at Military Junction and re-

shipped to Colorado points south thereof and to points in the Southwest at the joint through rates to final destination, but this is not true to other destinations east of the Rocky Mountains. Military Junction is about 1 mile outside of the Rio Grande's switching limits at Denver.

The wood-treatment plant at Salida purchases some lumber, poles, piling, and cross ties in Colorado, Utah, and New Mexico but most is obtained from points in Oregon and Washington west of the excluded territory. This plant has a contract for treating cross ties for the Rio Grande, but about 60 percent of the forest products which it treats are reshipped to points outside of Colorado. It has not purchased products in the excluded territory, but probably would do so if the joint through rates to eastern and southern destinations were made applicable over the Union Pacific to Ogden and the Rio Grande through Salida. The company which owns the plant at Salida has a similar plant at Denver and 22 others scattered throughout the country. The plant at Denver can perform treatment in transit at the joint through rates from the excluded territory to final destinations in the East, South, and Southwest, and apparently joint through rates apply on about 40 percent of the business at Salida which does not move outside of Colorado.

Opposition Testimony

The Union Pacific operates about 9,724 miles of railroad serving over 1,700 points in 13 States.[7] It reaches the Pacific coast at Seattle, Portland, and Los Angeles, and the Missouri River at Council Bluffs, Iowa, and Kansas City. Its line between Pocatello and North Platte,

7 Iowa, Nebraska, Wyoming, Idaho, Oregon, Washington, Missouri, Kansas, Colorado, Montana, Utah, New Mexico and California.

Nebr., the point of divergence of traffic via Council Bluffs and Kansas City, runs through a substantial portion of the territory principally involved in this proceeding. It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.

Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity and efficiency in operation, shows that the railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line.

The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile, as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. East-bound on the Union Pacific the maximum grade at any point is 1.52 percent and west-bound 1.55 percent. The Rio Grande's maximum grade is 2 percent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union Pacific. The total rise and fall in feet on the Rio Grande is 66.3 percent greater than that of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services.

The Union Pacific objects to the establishment of joint through rates to points beyond Denver or Pueblo via Salt Lake City or Ogden over the Rio Grande upon the principal grounds that such routes would short haul the Union Pacific and that the diversion of traffic over such route from the Union Pacific routes now available would curtail the service and growth of the Union Pacific in the teritories it alone serves and in which it pioneered in railroad construction. Such diversion, it fears, would adversely affect the operation of its numerous branch lines in Idaho, Montana, Oregon, and Washington, which are feeders for its main line and are not self-sustaining. In those States the Union Pacific operates a total of 5,606 miles of railroad, with 2,913 miles of branch lines upon which about 46 percent of the total traffic in that territory originates or terminates. It contends that unless it has a substantial main-line haul on branch-line traffic, the operation of many, if not most, of such branches would not long be justified.

Another objection is that yard facilities of the Ogden Union Railway and Depot Company, referred to as the Depot Company, jointly owned by the Southern Pacific and the Union Pacific, at Ogden terminal are inadequate to interchange any additional volume of traffic with the Rio Grande that may be routed to or from the northwest area through Ogden, and that expansion of facilities there is not possible. Several instances of delays to trains, particularly in the fall when traffic is heavy, are shown. The record describes in detail the yard and track lay-out at this terminal and interchange point. At present the Union Pacific finds it necessary to bypass the Ogden terminal as much as possible by taking its trains for Pocatello, Salt Lake City, or Green River over an outside wye

track which avoids the terminal proper. In addition to these deficiencies, icing facilities now maintained at Ogden for east-bound and west-bound traffic are not considered adequate for icing perishable commodities from Idaho and the Pacific Northwest for delivery to the Rio Grande. The Depot Company estimated that the cost of interchanging cars between the Rio Grande and the Union Pacific and Southern Pacific is at least twice the average cost of cars in the terminal because of the additional handling required.

The largest volume of traffic was moved through the Ogden terminal in the war year 1945, when a total of 2,847,277 cars were handled. In July, the peak month in that year, the total was 284,711 cars in 2,966 trains, an average of 96 trains daily, which required an average of 70 switching shifts a day. Of that number in July, 894 were solid trains that moved through the terminal without switching. The handling of such a large volume caused considerable congestion and delays to trains. In 1949 the total number of cars handled was 1,955,219. In the peak month of that year, 2,359 trains were handled, an average of 76 trains per day, requiring about 59 switching shifts daily. These figures show that 892,058 fewer cars were handled in 1949 than in the peak year of 1945.

To show that the Union Pacific cannot afford to lose any part of its haul on traffic, attention is directed to the large deficits which the Union Pacific incurred in its passenger service. In 1948 that deficit amounted to $28,462,000, equivalent to $4,291 per mile of road operated, as compared with a passenger deficit incurred by the Rio Grande of $4,954,000, equivalent to $3,127 per mile of road. In the last 20 years the Union Pacific in only 6 years, principally in the war years, has had railway

operating income sufficient to pay fixed charges plus declared dividends, and in 1949 it had a net railway operating income of $21,707,437, which was not sufficient by $10,269,865 to pay declared dividends and interest on funded debt. That is contrasted with the results on the Rio Grande, which in 1948 had a net railway operating income of $12,156,284, out of which it provided for all fixed charges, paid a declared dividend, provided for sinking-fund requirements, and had left for its surplus account $5,167,148.

The Wabash and the Chicago & North Western, important eastern connections of the Union Pacific, furnished estimates of the possible loss of traffic to those roads, and its effect upon train service and employment on their lines in the event that the volume of traffic embraced in the Rio Grande estimate of potential traffic were diverted over the Rio Grande route.

The Wabash in 1948 participated in 9.07 percent of the total traffic handled by the Union Pacific from the Northwest and about one-half of that on west-bound traffic to that area. It estimates the value to it of the potential traffic which it might lose at $1,602,000.

The revenue derived by the Chicago & North Western from the traffic to and from the northwest territory handled in connection with the Union Pacific in 1948 was about $4,000,000. Based on the loss of the potential traffic as estimated by the Rio Grande, it urges that it will lose that amount of revenue if the joint through rates sought in this proceeding are established.

The Great Northern, Northern Pacific, Santa Fe, and Milwaukee oppose granting the Rio Grande's re-

quest for the establishment of competitive joint through rates via Ogden. Neither of these defendants, except the Santa Fe, connects with the Rio Grande. They participate, however, in joint rates with the Union Pacific on traffic between the northwest area and eastern points, but there are numerous exceptions. For example, from origins on the Great Northern joint rates are not applicable via Spokane and the Union Pacific on wool, livestock, ores, concentrates, or smelter products, and the joint rates east-bound on fruits and vegetables over that route are limited to destinations reached by the Union Pacific. These restrictions became effective on September 15, 1932, although they were protested by various shipping interests. On lumber from origins on the Great Northern, joint rates apply over that line to Spokane and the Union Pacific only when the traffic is destined to points on and west of the Missouri River, Council Bluffs to Kansas City, thence the line of The Kansas City Southern Railway Company to the Gulf of Mexico. Reference is made also to *Transcontinental Traffic Routed via Bieber, Calif.*, 213 I. C. C. 487, wherein the Great Northern was permitted to cancel joint rates via Bieber and Salt Lake City on transcontinental traffic originating at or destined to various points on the Great Northern in Idaho and Washington.

The Milwaukee, the Santa Fe, and the Wabash, in a joint brief, contend, as does the Great Northern, that upon the evidence submitted the establishment of joint rates which would short haul the defendants is not warranted.

A large number of shippers and representatives of communities served by the Union Pacific, and traffic asso-

ciations, opposed the complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado. Those three supported the complaint in whole or in part, and as indicated, the Kansas commission later qualified its opposition by supporting the position of the complainant insofar as it pertains to wheat and livestock.

It is not practicable to deal with all of this evidence in detail, but the testimony and position of the parties have been considered. Most of the shippers in opposition to the complaint commented upon the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. Many of them testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event. Most of the opposition arises from the assumed effects of the diversion from the Union Pacific of the full amount, or a very large portion, of the traffic estimated by the Rio Grande as the potential traffic that would be subject to solicitation by that carrier for movement over its lines if the joint rates sought should be established. Upon the assumption that the Union Pacific would lose its long haul on the full estimated potential traffic of 101,476 carloads originated and 56,286 carloads terminated annually on the Union Pacific in the four Northwestern States, a total of 157,762, that number was used as a base by the Union Pacific to determine possible revenue losses. These were computed as amounting, in the aggregate, to $49,880,000 yearly.

Diversion of traffic with such a large loss in revenue would result, according to Union Pacific estimates, in (*a*) the discontinuance of four trains daily east-bound and four trains daily west-bound between Pocatello and North Platte; (*b*) three trains east-bound and three west-bound daily between North Platte and Council Bluffs; and (*c*) one train east-bound and one west-bound daily between North Platte and Kansas City. Extending this loss to show the direct effect upon employment, it was calculated that 1,240 employees, with annual payroll earnings of $5,000,000 yearly, would be laid off, with additional losses in employment by employees in other departments, bringing the total to about 5,300. Other losses are calculated, such as loss of employment of Union Pacific employees engaged in moving fuel coal from the company's mines in Wyoming. Based on these assumptions, derivative losses were computed by communities and localities on the Union Pacific's line whose local industries and merchants depend more or less upon the wages paid to railroad employees.

Considerable evidence of the same general character was submitted by representatives of employees of the Union Pacific, to show the effect upon them if all of the potential traffic were routed via Ogden and the Rio Grande. The number of employees that might be laid off was computed as 5,144, with a total loss of wages of $21,080,400. Losses by reason of possible loss of homes due to forced changes in places of employment, decline in real-estate values, and other contingent losses were calculated. Similar figures for possible loss of employment were calculated for certain lines connecting with the Union Pacific, such as the Wabash, the Chicago & North Western, and the Milwaukee.

The record contains detailed computations and estimates upon all of these matters. Employee representatives contend that if joint rates are required to be established we must determine what would be the probable extent of diversion of traffic from one or more routes to the route via Ogden and the Rio Grande. Based on such a finding, they further contend that we must determine the probable adverse effects of the diversion on employees of the railroads affected and impose measures to compensate or to protect such employees from loss, as conditions upon the establishment of the joint rates and through routes.

There is no specific provision in section 15 (3) or (4) requiring that such conditions be imposed, but it is argued that in finding joint rates and through routes necessary and desirable in the public interest, as required by section 15 (3), the interests of employees must be considered as they are in proceedings involving consolidations, mergers, and abandonments. Reference is made to the decision in *Cancelation of Rates and Routes via Short Lines*, 245 I. C. C. 183. In that proceeding certain carriers sought to cancel their joint rates over through routes with specified short lines. It was found that cancellation of the rates and routes would result in abandonment of the short lines with resulting inconvenience and loss to shippers and to carrier employees. Permission to cancel certain of the routes was denied.

Upon the record before us it is impossible to find definitely, or to estimate with any degree of accuracy, how much traffic might be diverted to the Rio Grande if all of the rates sought were to be made applicable over that carrier, nor how much traffic will be diverted to the Rio Grande under the restricted findings herein made.

Shippers have a right to route their own traffic, and where traffic is not routed by the shipper, the originating carrier has the right to control the routing within certain limitations.

General Discussion and Ultimate Fact Findings

In support of its contention that the assailed rates over its line are unreasonable, the Rio Grande submitted a large number of comparisons showing the differences in such rates and the competitive joint through rates on various commodities, together with the car-mile and ton-mile revenue under the respective rates and what the revenue would be if the lower joint rates were made applicable over its line. Neither factor of the combination rates is assailed, but the aggregates of such factors are alleged to be unreasonable to the extent that they exceed the competitive joint rates.

Many of the present joint rates on the transcontinental traffic here affected are commodity rates which were established originally on particular commodities to meet water competition. Others, such as those applicable on agricultural commodities, were established from producing areas in the excluded territory to enable growers and shippers to market such commodities in eastern and midwestern territories. For these reasons, and others, the defendants contend that it would be unreasonable to require the application of the joint rates over the Rio Grande, as it would result in depleting their revenues and in wasteful transportation over circuitous routes, as well as in short hauling the defendants, especially the Union Pacific. For example the rates on potatoes to Chicago are 96 cents from Monte Vista and Greeley, Colo., and $1.14 from Idaho Falls, Idaho, a difference of 18

cents, although the distance from Idaho Falls to Chicago, 1,597 miles, is 315 miles greater than from Monte Vista and 590 miles greater than from Greeley. Computations were submitted which indicate that on a carloads of potatoes weighing 45,120 pounds from Idaho Falls to Chicago the joint rate of $1.14 would yield a net profit of $1.97 per car when moved over the Union Pacific to Omaha and the Chicago & North Western beyond, and a net loss of $62.93 per car if routed over the Union Pacific to Ogden, the Rio Grande to Denver, and the Burlington beyond, 1,809 miles. The computed costs were based on general cost scales compiled by our Bureau of Accounts and Cost Finding and were not based on studies of particular movements of traffic over the respective routes. Many other examples of this nature were submitted.

With unimportant exceptions, the only rates of record with which comparison is made by or in behalf of the complainant are the joint rates in effect over routes embracing the lines of the Union Pacific which are sought for application over the lines of the Rio Grande and the Union Pacific via Ogden or Salt Lake City. As above indicated, many of those rates are the result of competition. However, they are the going rates on this traffic and, except for authorized general increases therein, have been in effect for many years. There is no claim that any of those rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates.

With respect to the issue under section 15, the facts before us here are in some respects similar to those con-

sidered in *United States v. Union Pac. R. Co.*, 28 I. C. C. 518, and *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127, in both of which the complaints were dismissed. In the first, the complainant sought through routes and joint rates over the Rio Grande, among others, in connection with the Santa Fe at Pueblo or Denver on the east and the Oregon Short Line at Salt Lake City or Ogden on the west, on traffic moving between Chicago and certain Mississippi and Missouri River points, on the one hand, and stations on the Oregon Short Line, on the other. The joint rates sought were the same as those then in effect over generally shorter routes of the Union Pacific and other defendants. The short-hauling provision of the statute was held to be a bar to the establishment of the routes and rates sought.

In the second proceeding, the Western Pacific alleged that the failure of the defendants to join with it in the establishment and maintenance of joint rates between points in California on the Northwestern Pacific Railroad Company, controlled by the Southern Pacific, on the one hand, and eastern defined groups, on the other hand, over routes in which the Western Pacific would be an intermediate participating carrier, was discriminatory and prejudicial, and that the combination rates between such points over such routes were unreasonable. Therein, division 2 said, at pages 136 and 137:

> In requesting the application of the joint rates over its line complainant is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic which, under the act, belongs, in the absence of emergency, to the Northwestern Pacific and Southern Pacific.

The instant complainant likewise is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic on which the Union Pacific refuses to relinquish its long haul. In that proceeding, the distance over the Southern Pacific route to Ogden was about 200 miles shorter than the route sought, which is substantially the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves. Again, the short-hauling provision was held to be a bar to the relief sought.

Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the "through route proposed to be established is needed in order to provide adequate, and more efficient or more economic transportation." Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In *Pennsylvania R. Co. v. United States*, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in *D. A. Stickell & Sons, Inc. v. Alton R. Co., supra*, the Supreme Court said that the expressions "more efficient or more economic" transportation, as used in section 15 (4), "may well embrace both shippers' and carriers' interests," * * that both interests should be considered and a fair balance found."

These latter considerations are not determinative, however, unless the existing routes can be found not to provide "adequate" transportation.

In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests.

There is no contention here by complainant that the present routes of the defendants are not adequate for the traffic hauled, and no finding is sought by complainant to that effect. The absence of such a request may well be due to complainant's contention, not sustained herein except as to sheep and goats to points on the Missouri River and east thereof, that through routes via Ogden and the Rio Grande already exist within the meaning of section 15 (3) of the act. Testimony on behalf of shippers, however, does raise a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities.

In order properly to evaluate the testimony of shippers it is necessary to consider the nature, extent, and functioning of our intricate and far-flung commodity marketing system. The growth of our population and the development of the country have required a constantly expanding flow of diverse commodities. Great consuming areas in many instances are far distant from the points of production of the necessities of every-day life, particularly articles of food. Movements of transcontinental proportions are involved in important instances. That is true here. A complex but efficient marketing system has been evolved to provide as orderly a distribu-

tion of food commodities as possible. Adequate transportation facilities and services are required for the proper functioning of the system. Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and over as many routes as possible. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that as much flexibility as possible in the distribution process be permitted. A number of services, not only at origin and destination, but en route, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities. *Southeastern Vegetable Case*, 200 I. C. C. 273, and *Routing Lumber and Fruits, South to C. F. A. Territory*, 256 I. C. C. 223.

While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities. This conclusion is also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services which are generally accorded such traffic and are necessary for its efficient marketing. For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing,

or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. On such traffic the defendants' routes are inadequate and less economical than are the Rio Grande routes.

In addition to the above-mentioned commodities, we are of the opinion that a special need for joint routes and joint rates on granite and marble monuments, in carloads, from origins in Georgia and Vermont to destinations in the excluded area, has been established.

The situation as to the commodities above named, as to which the defendants' routes are inadequate, is largely similar to that considered in *D. A. Stickell & Sons, Inc. v. Alton R. Co., supra.* There is one point of difference. There, the operating conditions, mile for mile, on the respective routes were substantially similar. Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recognized by the Commission in prior proceedings. See *Livestock, Western District Rates, supra,* and *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486. There is before us no data from which the exact differences in costs over the Union Pacific routes and the Rio Grande routes can be determined. Several estimates were made by witnesses for both the Rio Grande and the defendants, but the estimates vary so widely and are so obviously incomplete as to be practically useless. The record is sufficiently complete, however, to enable us to make a rough approximation of the differences in the operating con-

ditions and to appraise the weight which should be given to those differences, as well as to the differences in the distances over the respective routes, in determining the issues before us.

The differences in the distances between the Union Pacific routes through Wyoming, on the one hand, and the Rio Grande routes sought, on the other, using Boise, Idaho, as a representative point in the excluded territory, vary approximately from 95 miles or 11 percent to Denver, short-route distance 880 miles; 200 miles or 14 percent to Kansas City, 1,410 miles; 211 miles or 8 percent to New York, N. Y., 2,691 miles; 200 miles or 9 percent to Atlanta, Ga., 2,289 miles, to 33 or 35 miles, or 2 percent, to New Orleans, and to Fort Worth and other points in the Southwest, with short-route distances varying from 1,612 miles at Oklahoma City to 2,282 miles at New Orleans. From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the Northern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and range up to more than 50 percent, than the short routes. From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska, except Omaha, the short-route distances are less than 1,000 miles. We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls

between the excluded territory, on the one hand, and ponts in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago & North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United States east and south of the points and territory above described, the differences in the transportation conditions are, in general spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar.

As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments westbound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs eastbound, who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3 (1) of the act.

As before indicated, on a number of commodities, from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates the same as those in effect over the routes of

the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections here defendant, its long haul, while refusing to apply the same joint rates over routes in connection with the Rio Grande via the Ogden gateway. Such routes by which the Union Pacific and certain of its connections short haul themselves are generally about as long as, and in many instances substantially longer than, the Rio Grande routes here sought, and the hauls of the Union Pacific, as well as of certain of the other defendants, are shorter over such established routes than over routes in connection with the Rio Grande via Ogden.

There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than the over routes said to be preferred. No such a showing has here been made.

The situation is different with respect to traffic between Utah common points, on the one hand, and the northwest area, on the other. On such traffic the Union Pacific interchanges with the Bamberger Railroad Company at Ogden at joint through rates to and from points on that line, including Salt Lake City. There is no apparent reason why similar arrangements should not apply on like traffic interchanged with the Rio Grande. The Bamberger operates, for about 36 miles between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande.

The evidence is convincing that the joint rates sought, which now apply over the Union Pacific routes, would be reasonable for application also over the Rio Grande routes via the Ogden gateway on the traffic, and from and to the points, embraced within the findings of unlawfulness herein made.

The testimony dealing with the terminal facilities at Ogden has been carefully considered. We are persuaded that the additional traffic over the Rio Grande routes which will result under the findings herein made can be interchanged at that point or at Salt Lake City by the use of the present facilities and without serious detriment to the operating efficiency of the railroads concerned.

Conclusions

We conclude:

1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans.

to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas.

2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

An appropriate order will be entered.

LEE, *Commissioner*, concurring in part:

I concur in the conclusions of the majority that joint [illegible] me as apply over the Union [illegible] and [illegible]

connecting lines should be established via Ogden or Salt Lake City, in connection with the Rio Grande, on the commodities and from and to the origins and destinations specified by the majority; that the rates assailed on such commodities from and to such origins and destinations are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes; and that the maintenance by the Union Pacific and other defendants of joint rates from and to points on the Bamberger Railroad south of Ogden, while refusing to participate in like rates from and to the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section (3) (4) of the act. The decision in this case will correct in part, a long-standing, unlawful rate adjustment, an adjustment which has discriminated against the industries and people of Washington, Oregon, Idaho, Montana, and Utah, the area from and to which such unlawful adjustment applies being referred to in the report as the "excluded territory." However, I am of the opinion that the action of the Commission should not be limited to a partial correction of this unlawful rate adjustment. On the facts shown in the record, the act requires that the rates on all commodities, between points in the excluded territory and Colorado common points and points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes. The act contemplates that there shall be no excluded territory with respect to any commodity or persons.

Transcontinental joint rates on freight traffic were established in 1897, from and to the territory here considered, applicable over the Rio Grande routes via Ogden. These joint rates were in effect for many years, until 1906 from and to some points and until 1912 from and to other points, when they were canceled by the Union Pacific and higher combination rates became effective. However, the through routes were not closed. Numerous shippers testified that these routes are open and available and that they can route traffic over them. This testimony was not challenged or contradicted. On the contrary, a responsible traffic official of the Union Pacific testified that the Rio Grande routes are "actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon, and Washington." That these routes are open and used is proved by evidence in the record (1) of east-bound shipments of various commodities made in 1948 from points on the Union Pacific in the excluded territory to Colorado common points, and which moved over the Rio Grande routes, including the entire length of the Rio Grande line, on through bills of lading issued by the Union Pacific, (2) of west-bound shipments of various commodities made in the same year from various eastern points to points in the so-called excluded territory, and which moved on through bills of lading over carriers east of Colorado junctions to the Rio Grande at such junctions and thence over the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond, and (3) of numerous shipments moved over the Rio Grande routes between eastern points and the excluded territory during World War II and in 1949 when the Union Pacific main line in Wyoming was blocked by snow. The year 1948, the calendar year immediately preceding the hearing, was selected as typical of the sit-

uation which prevailed in the prior years and which continued up to the time of the hearing.

I am unable to agree with the majority that the shipments referred to above must be regarded as of an isolated nature and as falling in the same category as the single shipment considered in the *Beaman Elevator case*, 155 I. C. C. 313, referred to in a footnote to the opinion of the United States Supreme Court in *Thompson v. United States*, 343 U. S. 549. In the *Beaman* case a single carload shipment of grain moved over the lines of two connecting railroads from Beaman, Iowa, via Clinton, Iowa, to St. Louis, Mo. The evidence plainly showed that the bill of lading covering this shipment was issued and recognized by these railroads through error. There was no evidence "of any like movement before or since." Adequate service was available over nine other routes. A wholly different situation is before us in this proceeding. Numerous shipments of a variety of commodities have been transported in both directions over the Rio Grande routes on through bills of lading deliberately issued and recognized by the Union Pacific and the other participating carriers. The situation here before us is similar to that considered by the Supreme Court in *Virginia Ry. v. United States*, 272 U. S. 658, also referred to in a footnote to the decision in *Thompson v. United States, supra*, in which, in referring to the route over which the Commission there prescribed reasonable and nondiscriminatory rates, the Court stated that "that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive."

The Court held however, that even though the route was closed commercially, open through routes to the West were in existence.

In the *Thompson* case the court pointed out that "there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line" or that the carriers have ever offered through service over the Missouri Pacific-Burlington route. Thus, the facts before the Court in that case likewise were wholly different from those before us in this proceeding. I think that the Court's opinion in that case supports the conclusion that through routes on freight traffic over the Rio Grande routes have existed for many years and now exist and that the short-hauling provision of section 15 (4) is not applicable.

If, however, the Rio Grande routes were actually closed, the short-hauling provision of section 15 (4) of the act would not be a bar to the correction in full of the present discriminatory rate adjustment. The discrimination in violation of section 3 of the act, shown by the evidence, makes that provision of section 15 (4) inapplicable. In any event, the Rio Grande routes are shown to be needed in order to provide adequate, and more efficient and more economic transportation, and, if they were not already open through routes, we could and should require that they be opened.

As stated in the report of the majority, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments, livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, who reconsign shipments or take advantage of transit arrangements at intermediate points

on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges enjoyed by their competitors located on the Union Pacific. The evidence is equally impressive with respect to the disadvantage or handicap to shippers or receivers of lumber, building materials, farm machinery, and other commodities. For instance, the lumber company at Military Junction, Colo., referred to in the majority report, is handicapped in its efforts to compete with mills at Denver and Kansas City because it cannot obtain lumber from the excluded territory for milling in transit on the same basis as these competing mills. A representative of that company testified that it would purchase several million feet of lumber annually from points in the excluded territory if it had available reasonable and nonprejudicial joint rates over the Rio Grande routes. By reason of the rate situation complained of, the lumber dealer at Grand Junction, Colo., who is also referred to in the majority report, has lost business to competitors who have the benefit of transit at the joint rates applicable over the Union Pacific routes. This evidence is only typical; it was presented as representative of the prevailing situation.

Shippers and receivers of freight at points in eastern Oregon and southern Idaho, on the line of the Union Pacific, have been, and are, excluded from additional markets that would be available to them if reasonable and nonprejudicial joint rates were in effect over the Rio Grande routes. Some of these shippers express the belief that the establishment of such joint rates would provide them with a better car supply, in that the Rio Grande would furnish additional cars to move out shipments routed over its line. It is common knowledge that better supply of cars is available to shippers who have com-

petitive routes to the consuming markets. The record clearly establishes that the present rate adjustment results in a substantial disadvantage to the industries, shippers, and receivers located in the considered territory, and in undue prejudice to them.

Likewise, the evidence establishes that the defendant railroads discriminate against the Rio Grande, in that from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections, its long haul, while refusing to establish the same joint rates over the Rio Grande routes. The routes by which defendants short haul themselves are generally as long as, and in many instances substantially longer than, the Rio Grande routes, and the hauls of the Union Pacific and of other defendants are shorter over such established routes than over the Rio Grande. The evidence does not establish that transportation conditions are more favorable over these routes than over the Rio Grande routes which are discriminated against by defendants. On the contrary, the record, in my opinion, warrants finding that the transportation conditions over such routes are, in general, no more favorable than over the Rio Grande routes. The Union Pacific and the other defendants are, and for the future will be, violating section 3 (4) of the act by failing and refusing to participate in joint rates with the Rio Grande, from and to points in the excluded territory, to and from points in official, southern, and southwestern territories, while participating with each other in joint rates from

and to the same points, over routes over which the Union Pacific and other defendants short haul themselves.

The Union Pacific is a strong and progressive rail road. It is ably managed and efficiently and economically operated. Being the only railroad in southern Idaho, every shipper in that area is dependent on it for rail service. I am persuaded that, instead of being allowed to continue to maintain an "excluded territory," it should be required to provide these shippers with joint rates which will enable them to buy and sell in all markets on an equality with other shippers, and that such joint rates will not result in any substantial diversion of the traffic now moved over its lines.

The joint rates now in effect on freight traffic over the Union Pacific routes are shown by the record to be reasonable for application over the Rio Grande routes. We should require that these rates be maintained over the latter routes.

PATTERSON, *Commissioner*, concurring in part:

I concur in the relief granted to the Rio Grande and transit operators thereon who are handicapped by the lack of through routes and joint rates the same as those over the Union Pacific routes. It seems to me, however, that the findings of unlawfulness are inconsistent in that they fail to include lumber and articles taking lumber rates in the relief granted.

The showing made of a need for such through routes and joint rates, in my opinion, is more persuasive as to lumber and articles taking lumber rates than as to any of the commodities included in the foregoing findings, with the possible exception of livestock. The record shows

that at least one lumber dealer at Grand Junction, another at Military Junction, near Denver, and a wood-treatment plant at Salida, all on the Rio Grande, are handicapped in their efforts to compete with like dealers on the Union Pacific routes, and that at least the dealer at Grand Junction has lost business, by reason of the rate situation complained of, to competitors who have the benefit of transit at the joint rates over the Union Pacific routes. I believe this evidence is adequate support for the inclusion of this commodity group in the findings of unlawfulness made.

The order entered in connection with this report requires the establishment on particular commodities in connection with the Rio Grande, of through routes and joint rates the same as those now in effect over the Union Pacific routes. The formation of those through routes is appropriately left, in large measure, to the carriers. I want to make it clear that in my view, on traffic to or from the area east of the Colorado common points, where the provisions of the order so permit, these new routes should be formed in such a manner as to short haul the Union Pacific only to the extent necessary to afford the Rio Grande its line haul and avoid unduly circuitous routes.

ARPAIA, *Commissioner*, concurring:

In my opinion there are through routes over the Rio Grande and the Union Pacific via the Ogden Gateway on traffic between the territories included in this proceeding, and therefore a finding under the provisions of section 15 (4) of the Interstate Commerce Act is not required.

The evidence of record shows that these routes presently are open and available to shippers on combination

rates. The history of the relationship between these carriers leaves no doubt as to that fact.

When joint rates over these routes, which were in effect from 1897 to 1906 and 1912, were canceled by the Union Pacific, no specific cancellation was made of the through routes over which the joint rates applied. To my mind it would be necessary for the Union Pacific to have shown affirmatively that it refused traffic on through billing over the Ogden Gateway in order to negative the existence of such through routes. Instead, the record shows information elicited from an official of the Union Pacific to the effect that routes via Ogden were available subject to the application of combinations of local rates.

The question then is to what extent should we compel joint rates. Joint rates over the routes through Ogden, I believe, are warranted in the public interest only on the commodities for which relief is included in the majority report.

We should interfere in the management of a railroad only when the reasons for doing so are clear and compelling, as they are here, and only to the extent the public interest actually requires.

MAHAFFIE, *Commissioner*, dissenting in part:

I dissent from the majority report insofar as it fails to find that the existing routes to and from the northwest territory, described in the report, via the Rio Grande through the Ogden gateway are effective through routes and that the failure of the Union Pacific and other defendant railroads to establish joint rates with the Rio Grande via Ogden unjustly discriminates against that carrier. I disagree also because the report does not find that

it is necessary and desirable in the public interest that joint rates on commodities generally, in addition to those specified, should be established over such through routes.

We are not called upon in this proceeding to exercise our authority, under section 15 (4) of the Interstate Commerce Act, to establish new through routes via that gateway. Therefore, the conditions in that paragraph are not applicable. We are free to exercise our power under section 15 (3) to establish joint rates unhampered by those restrictions.

A finding that these routes are open and freely available to shippers today is fully supported by the evidence. It was acknowledged by a freight traffic official of the Union Pacific that a shipper has the right under the act (section 15 (8)), to specify such routes for the carriage of his shipments. That right, it should be noted, can be availed of only when two or more through routes and through rates are actually established and in existence.

The record shows that some joint through rates, as distinguished from combination rates, are in fact now published in a Union Pacific tariff for application through Ogden over the entire length of the Rio Grande to Denver and the Union Pacific beyond. These apply on shipments of sheep or goats originating on the Union Pacific in southern Idaho and eastern Oregon, billed to destinations on the Missouri and Mississippi Rivers and to Chicago and other points. The joint rates are higher than rates on like livestock moved over the direct route of the Union Pacific and, therefore, retard use of the Rio Grande route. But the publication of such joint rates in connection with transportation over the whole length of the Rio Grande is proof of the consent of the Union Pacific for

the use of that rail line as part of a through route at joint rates. And it was further stated by the same witness that the Union Pacific has no objection to publishing the same joint rate arrangement on shipments of cattle.

In 1941-42 mixed military trains with troops in passenger cars and military supplies in freight service were transported over this route on through billing. Four examples of such trains are described in the record. These moved from Fort Sill, Okla., and Camp Claiborne, La., to Fort Lewis, Wash., in December 1941 and February 1942. The trains were routed and moved to Colorado junctions of the Rio Grande, thence over that railroad to Ogden and the Union Pacific beyond. Unlike certain other movements to and from the northwest area via Ogden in the war period in connection with these two lines, the military trains were not routed under service orders issued by us or the Office of Defense Transportation. Arrangements for the through movements were made with the railroads and the rates charged were settled on the basis of the joint rates applicable in connection with the Union Pacific routes through Wyoming.

The existence of the route as an established through route was undoubtedly an important consideration for its use in February 1949, when the line of the Union Pacific was blocked by snow. In that emergency, freight cars, passenger cars, express and mail were promptly diverted by the Union Pacific through Denver over the Rio Grande to Salt Lake City and to Ogden for movement beyond. Of the freight cars diverted, 1,493 were for destinations in Idaho on the Union Pacific and in the northwest area.

Actual and continuous use of the Rio Grande route at through rates made by combinations of separate rate factors via Ogden to and from the Northwest without op-

position or objection by the Union Pacific or other participating railroads is amply shown by the evidence of typical movements of numerous commodities. The calendar year 1948 was used by the Rio Grande as a representative year. In that year 16 carloads of various commodities were shipped from the northwest territory over the Union Pacific to Ogden and the Rio Grande beyond to Denver, Louviers, Pueblo and Trinidad, Colo., over the entire length of the Rio Grande. They originated on the Union Pacific and moved on through bills of lading. Some of the cars were partly unloaded at Rio Grande points and then continued through to their destinations. Seventeen carloads of various commodities moved, from late in December 1947, and in the year 1948, from various eastern points on through bills of lading at through combinations of rates over rail lines east of the Colorado junctions to the Rio Grande at such junctions thence over that line to Salt Lake City or Ogden and the Union Pacific beyond. Some of the cars were stopped for partial unloading at stations on the Rio Grande or the Union Pacific.

The same kinds of movements as those exhibited in 1948 prevailed to about the same extent in years prior to 1948 and continued into 1949 at the time of the hearings.

All of this evidence clearly supports a finding that the routes are existing established through routes over which through rates apply and that the railroads participating therein consent to their use as through routes and freely hold themselves out to shippers as ready and willing to perform transportation service over them. They meet completely the requirements necessary as prerequisites for a finding that they are established through routes announced by the United States Supreme Court in

Thompson v. United States, 343 U. S. 549. In that case, the Court said "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." However, as stated by the Court, there was no evidence that any through transportation had ever been offered from and to the points involved in the suit and, therefore, no through routes existed between those points.

The situation here is in striking contrast to that in the *Thompson* case. Here there is substantial evidence of a holding out that through transportation will be furnished and of execution of such offers by the issuance of through bills of lading and the performance of through service over many years. We cannot ignore the fact that the joint rates over these routes that were in effect from 1897 to 1906 and 1912 were canceled by the Union Pacific without canceling its participation in the same through routes thereafter at higher through combination rates. That railroad's course of conduct evidenced no more than a desire to discontinue joint rates so as to make the higher combinations applicable. Its action in canceling its participation in joint rates did not, without more, cancel its participation as a carrier in the through routes. The latter were never disestablished but continued to exist. The record taken as a whole inevitably leads to that conclusion. To find under such a state of facts that no through routes exist for commodities generally is directly contrary to the evidence.

Even if a finding that no through routes exist over this line be sustained there is substantial evidence that the rate situation results in undue prejudice and undue

disadvantage to shippers and to districts and localities in Utah and Colorado dependent upon the Rio Grande for rail service, in violation of section 3 (1) of the act. Such violation removes the restrictions imposed in section 15 (4) upon our authority to establish through routes. That undue prejudice and undue disadvantage exist is fully supported by the testimony of numerous witnesses. Briefly, the testimony shows that livestock producers in Utah and Colorado, in areas served by the Rio Grande, are not able, due to the combination through rates via Ogden, to buy on a reasonably competitive basis, cattle and sheep in Idaho, Montana, Oregon and Washington for grazing and feeding in transit on the ranges in Utah and Colorado, in competition with buyers and stock feeders in northern Colorado, Nebraska, and northern Kansas. The same undue prejudice and undue disadvantage is experienced by buyers and feeders in southeastern Colorado east of Pueblo, Colo., and in southwestern Kansas served by the Santa Fe and the Missouri Pacific railroads. Their failure to obtain joint through rates from the producing areas in the Northwest over the Union Pacific to Ogden, Rio Grande to Pueblo and its connections beyond places them at an undue disadvantage.

The record contains convincing evidence by representatives of large groups of shippers that there is undue prejudice and undue disadvantage to wool producers, as well as to livestock operators in Colorado served by the Rio Grande; also to lumber dealers and processors; dealers in farm machinery and other commodities; and to a cold storage warehouse operator in Pueblo. There is substantial evidence from producers and shippers of agricultural commodities in the Northwest, particularly in Idaho, to support findings that the refusal of the defendant railroads to join in joint through rates via Ogden

and the Rio Grande to and from points beyond the Colorado gateways of that carrier exclude them from additional markets needed for their products. All of that evidence sustains and fully supports the finding that there is a violation of section 3 (1) of the act and justifies a general finding that joint through rates via the Ogden gateway should be established on commodities generally. The findings should not be limited, as are the findings of the majority, to particular commodities as to which evidence was offered but should be broadened to include all commodities.

We are fully warranted in dealing with this situation broadly, in considering what is necessary and desirable in the public interest, with respect to joint rates over these established through routes. We are not limited to consideration of proof as to every rate on every commodity from every origin to every destination. Such a view of our authority is too narrow and is not justified by the law or the evidence.

In other types of proceedings where we found it necessary to deal generally with a comprehensive rate situation, the Supreme Court has held that we may properly make general findings upon typical evidence representative of the situation as a whole.

In exercising authority under section 13 (4) as to the lawfulness of rail rates on intrastate traffic in a State and under section 15 (6) as to divisions of joint rates of rail carriers we may make general findings when the evidence is shown in numerous and representative instances that are typical of the rate situation as a whole. Similarly we need not attempt the impracticable, if not impossible, task of examining every rate on every commodity

and class of commodities, from every origin to every destination in the large areas and territories under scrutiny here. We can adjust the remedy to the evil and make our order as broad as the discrimination and undue prejudice. *See Illinois Central R. Co. v. Public Utilities Commission*, 245 U. S. 493, 507. In *Wisconsin Railroad Comm. v. Chicago, B. & Q. R. Co.*, 257 U. S. 563, 579, a proceeding dealing with intrastate rates on a State-wide basis, the Court stated that "any rule which would require specific proof of discrimination as to each fare or rate and its effect would completely block the remedial purpose of the statute." In *Georgia Public Service Comm. v. United States*, 283 U. S. 765, 774, the Court said that "when an investigation involves shipments from and to many places under varying conditions, typical instances justify general findings." That case also arose under section 13 (4) of the act with respect to intrastate rates. There the order related to a few commodities but the rates prescribed were State-wide in operation and applied to shipments between hundreds of points of origin and destination. Under those circumstances the Court held that "To require specific evidence and separate adjudication in respect to each would be tantamount to denying the possibility of granting relief."

To the same effect is the holding of the Court in *New England Divisions Case*, 261 U. S. 184, 197. There the Court had under consideration contentions with respect to the nature of the evidence in support of our order as to divisions of joint rates between groups of rail carriers. The Court pointed out that our order was based on evidence which we assumed was "typical in character, and ample in quantity, to justify the finding made in respect to each division of each rate of every carrier." That method of proof was found to be our common practice in

adjudicating comprehensively upon substantially all rates in a large territory, and that the actual necessities of procedure and administration had led to the adoption of that method also in passing upon the reasonableness of proposed rate increases. That method was found equally appropriate in passing upon multitudes of divisions of joint rates. That it has similar application in a comprehensive case such as we have here where we are called upon to establish joint rates via a gateway through which substantially all joint rates have been refused, is equally clear. In the case cited, the Court said that there was no constitutional obstacle to the adoption of the method pursued and that only in the way could the task be performed.

The same rule should be applied in the instant case, in order to carry out effectively our authority to prescribe, in the public interest, joint rates by way of the Ogden gateway. The report of the majority finds it necessary in the public interest that joint rates via that gateway be established on particular commodities as specified in the report. The same evidence is, and should be concluded to be typical of the rate situation as a whole. In accordance with our practice in other types of comprehensive proceedings which has been found lawful and necessary under principles announced in the Supreme Court cases cited, that evidence should be found adequate to support an order that joint rates be established via that gateway on commodities generally.

I am authorized to state that COMMISSIONERS SPLAWN and CROSS join in this expression.

COMMISSIONER KNUDSON did not participate in the disposition of this proceeding.

APPENDIX C

Order

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 12th day of January, A. D. 1953.

No. 30297

Denver & Rio Grande Western Railroad Company

v.

Union Pacific Railroad Company, et al.

This proceeding being at issue upon complaint and answers on file and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand; and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination;

It is ordered, That the defendants named in the complaint, according as they participate in the transportation, be and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of

the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

(Seal)

GEORGE W. LAIRD,
Acting Secretary.

APPENDIX D

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

Civil Action No. 76-53

Union Pacific Railroad Company, et al.,
Plaintiffs,

v.

United States of America and Interstate Commerce Commission,
Defendants.

Messrs. Elmer B. Collins, Asst. Western General Counsel, John J. Burchell and W. R. Rouse, Of Counsel, Omaha, Nebraska, for Union Pacific Railroad Company.

Mr. F. O. Steadry, Chicago, Illinois, for Chicago and North Western Railway Company and Chicago, St. Paul, Minneapolis & Omaha Railway Company.

Mr. Carson L. Taylor, Chicago, Illinois, for Chicago, Milwaukee, St. Paul and Pacific Railroad Company.

Mr. Eugene S. Davis, St. Louis, Missouri, for Wabash Railroad Company.

Messrs. Robert E. Quirk, Washington, D. C., Harry L. Welch, Omaha, Nebraska, and Herbert M. Boyle, Denver, Colorado, for Denver & Rio Grande Western Railroad Company.

Mr. L. E. Torinus, Jr., St. Paul, Minnesota, for Great Northern Railway Company.

Mr. Bert L. Overcash, Lincoln, Nebraska (Mr. Clarence S. Beck, Attorney General of Nebraska, was on the brief) for the State of Nebraska and Nebraska State Railway Commission.

Mr. Robert L. Simpson, Olympia, Washington (Mr. Don Eastvold, Attorney General of Washington, was on the brief) for Washington Public Service Commission.

Mr. John H. Carkin, Salem, Oregon (Mr. C. W. Ferguson was with him on the brief) for Public Utilities Commission of Oregon.

Mr. John H. Risken, Helena, Montana, for Board of Railroad Commissioners of the State of Montana.

Mr. Howard B. Black, Attorney General of Wyoming, Cheyenne, Wyoming, for State Board of Equalization and Public Service Commission of Wyoming.

Mr. Justus R. Moll, Washington, D. C., and Messrs. J. D. Cranny and J. P. Moore, Omaha, Nebraska, for M. P. Caveny of Omaha, chairman of the Union Pacific General Chairmen's Association.

Mr. Ray McGrath for Idaho Farm Bureau, Public Service Commission of Utah, Committees of the Railroad Brotherhoods who work for the D&RG, and National Livestock Producers Association.

Messrs. Warren H. Ploeger and Roland J. Lehman, on the brief, Messrs. Nye F. Morehouse, M. L. Countryman, Jr., Edwin C. Matthias, J. C. Gibson, M. L. Bluhm, Joseph H. Miller, Of Counsel, for the plaintiffs.

Mr. Edward M. Reidy, Chief Counsel, and Mr. Samuel R. Howell, Asst. Chief Counsel, Of Counsel, for Interstate Commerce Commission.

Mr. Henry B. Cockrum, Acting Assoc. Solicitor, United States Department of Agriculture, Washington D. C.; Mr. Charles W. Bucy, Assoc. Solicitor, was with him on the brief for the Department of Agriculture.

Mr. E. Riggs McConnell, Special Asst. to the Attorney General, Washington, D. C.; Messrs. Stanley N. Barnes, Asst. Attorney General, James E. Kilday, Special Asst. to the Attorney General, and Donald

R. Ross, United States Attorney, were with him on the brief for the United States.

Before JOHNSEN and COLLET, Circuit Judges, and DELEHANT, District Judge.

COLLET, Circuit Judge.

The Denver and Rio Grande Western Railroad Company, hereafter referred to as the Rio Grande, filed a complaint with the Interstate Commerce Commission requesting the Commission to order the Union Pacific Railroad Company (and other lines comprising the Union Pacific System, together with connecting carriers comprising, in all, 221 railroads, which will be referred to as the Union Pacific) to file joint rates over through routes with the Rio Grande for the transportation of freight from and to certain areas. The Commission granted the request as to certain types of freight with substantial territorial limitations. The Union Pacific brings this action to enjoin and set aside the order. A reference to a map of the United States will be helpful in understanding the following summarization of the facts.

The northern terminus of the Rio Grande is Ogden, Utah. From Ogden it runs south through Salt Lake City and Provo, Utah, then southeasterly and east, entering Colorado at about the south central part of that state, thence east and somewhat north through the central part of Colorado to Dotsero, west of Denver, where it divides, one branch going on east to Denver, the other swinging south and east to Pueblo, Colorado. From Denver the Rio Grande line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serve territory in southern Utah, northwestern New Mexico, and southern Colorado. These latter lines are not of special

importance in this action. At Denver, Colorado Springs, Pueblo, and Trinidad the Rio Grande maintains joint rates and through routes with lines other than the Union Pacific to destinations east and south of those points.

The Union Pacific (including connecting lines which were defendants in the I. C. C. proceedings) serves the greater part of the east, south and midwestern sections of the United States. Traffic involved in this action from those sections flowing westward over the Union Pacific and connecting lines converges at Denver and Cheyenne, Wyoming, then moves westwardly across the southern part of Wyoming to Ogden and Salt Lake City. One of its lines runs from Salt Lake City south to Provo, Utah, thence southwest to Los Angeles, California.

The Union Pacific also serves the northwestern part of the United States, including that part of Utah north of Ogden, Idaho, Montana, Oregon, and Washington. It is traffic from and to this latter territory, referred to herein as the northwest territory or area, which is the principal subject of the present controversy.

The Union Pacific maintains joint rates and through routes over its lines and with many connecting carriers from and to the northwest territory through Ogden and Salt Lake City, Cheyenne, Denver, and points east and south to the Atlantic Seaboard and the Gulf of Mexico. For a comparatively short distance, from Ogden through Salt Lake City to Provo, where the Los Angeles line swings southwest, the Union Pacific and the Rio Grande parallel and serve some common points. To and from these points, joint rates and through routes are maintained by the Union Pacific over its lines with the northwest territory and the area east of Cheyenne and Denver served by the Union Pacific. The Union Pacific does not maintain joint through rates with the Rio Grande, with

certain exceptions not material in this proceeding. Freight moving from the northwest territory to points in southern Utah and Colorado on the Rio Grande, finally destined to points east of the eastern termini of the Rio Grande, moves on the combination rate, consisting of the total of the Union Pacific rate to Ogden via Union Pacific and the Rio Grande rate from Ogden via Rio Grande to points on the Rio Grande. The same is true of the rates on shipments from points east of Denver to those points on the Rio Grande finally destined to the northwest territory. This combination of rates, or combination rate, as it is called, is considerably higher than a joint through rate Freight moving from and to the northwest territory from and to all points east of Denver[1] served by the Union Pacific and connecting car-

---

1 "All points east of Denver" will be used as the designation of all points included in the Commission's order to or from which through routes and joint rates were ordered established by the Union Pacific with the Rio Grande. The Commission's order in this respect was (287 I. C. C. 611, 659):

> "We conclude:
>
> "1. That is is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

riers has the benefit of joint through rates via Union Pacific, with accompanying in-transit privileges en route, while freight originating on the Union Pacific in the northwest territory and moving to the area east of Denver, which is routed over the Rio Grande, pays the combination rate without in-transit privileges at points on the Rio Grande. The result is that practically all of the long-haul traffic originating in the northwest area and destined to the area east of Denver goes over the Union Pacific all the way on the lower joint and through rates. Since the formal record before the Commission consists of 1,957 pages of testimony, 57 exhibits and 74 verified statements, the foregoing statement is obviously only a salient outline of the basis for the Rio Grande's complaint. For a complete understanding of the intricacies of the case by one unfamiliar with the record, it will be necessary to refer to the extensive report and order of the Commission reported in 287 I. C. C. 611.

The Commission ordered the establishment of through routes and joint rates via Ogden or Salt Lake City by the Union Pacific with the Rio Grande for the transportation of granite and marble monuments in carloads from points of origin in Vermont and Georgia to destinations in the northwest area, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, in carloads, from points of origin in the northwest territory to destinations "east of Denver." The order is based upon three primary basic findings. First, that the through routes and joint rates are necessary and desirable in the public interest, in order to provide *adequate and more economic transportation;* second, that the existing joint rates maintained by the Union Pacific are and will be *unjust and*

unreasonable and unduly prejudicial to shippers and receivers of freight using or desiring to use the Rio Grande and *unduly preferential to shippers and receivers of freight using the Union Pacific;* third, that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad between the northwest area and points on the Bamberger line between Ogden and Salt Lake City, while refusing to establish joint rates with the Rio Grande to and from the same points on the Rio Grande between Ogden and Salt Lake City, subjects the Rio Grande to discrimination in violation of Sec. 3 (4) of the Interstate Commerce Commission Act. Finding No. 1 has heretofore been quoted in footnote 1. Findings 2 and 3 are set out below.[2] To understand the import of these findings it is necessary to explain the factual theory upon which they are based.

First as to the finding that the rates ordered are necessary and desirable to provide adequate and more economic transportation. Located along the route of the Rio Grande, between Ogden on the west and Denver, Pueblo and Trinidad on the eastern termini, are a num-

---

2 "2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes:

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act."

287 I. C. C. 611, 659-660.

ber of livestock feeders. Some of these are ranchers who graze and feed cattle and sheep. Others are operators of beet sugar plants which produce livestock feed as a by-product and feed the by-product to livestock. These livestock feeders buy cattle and sheep in the northwest area, which are ultimately destined for the market, and ship them to points on the Rio Grande for feeding. Many of the principal livestock markets of the United States are located east of Denver. Without joint through rates with in-transit privileges which would permit these livestock feeders to ship from the northwest area to the feeding points on the Rio Grande and then reship on joint through rates to points east of Denver, Pueblo, and Trinidad, they are at a substantial rate disadvantage with similar livestock feeders following the same practice who are located on the Union Pacific lines between Ogden and Provo, and between Ogden and Salt Lake City and Denver, located on the Union Pacific, who reship to points east of Denver. They are also at a substantial rate disadvantage in purchasing livestock in the northwest area in competition with buyers located on the Union Pacific lines west of Denver and Cheyenne who have the benefit of joint through rates and in-transit privileges over the Union Pacific.

Also located on the Rio Grande are a number of industries which clean, package, process, freeze, and store fresh fruits, vegetables, poultry, food products, butter, eggs and beans, and ship them on east to points beyond Denver, Pueblo and Trinidad. These industries are at a comparable rate disadvantage, without in-transit privileges, as livestock feeders, and for the same reasons.

Monument dealers obtaining or shipping granite and marble from Vermont and Georgia are unable to ship full carloads to the northwest territory and have the rate ad-

vantage of partially unloading cars at intermediate points on the Rio Grande under in-transit privileges of through routes and joint rates which are available at points located on the Union Pacific.

This finding, which is finding No. 1 quoted in the footnote, is held by the Commission to justify ordering the establishment of through routes and joint rates under Secs. 15 (3) and 15 (4), Title 49 U. S. C. A. Secs. 15 (3) and 15 (4). Sec. 15 (3) empowers the Commission to establish through routes and joint rates when necessary or desirable in the public interest,[3] but Sec. 15 (4) prohibits the Commission from ordering the establishment of through routes by a carrier under Sec. 15 (3) without the carrier's consent if the result would be to short-haul that carrier unless, as provided by Sec. 15 (4), the Commission finds that the through route is needed in order to provide (1) *adequate* and (2) *more efficient* or *more economic* transportation.[4]

---

3 "Sec. 15 (3) The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, * * * establish through routes, * * * and joint rates, * * * applicable to the transportation of * * * property by carriers subject to this part, * * *."

4 "Section 15 (4) In establishing any such through route the Commission shall not * * * require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, * * *. (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: **Provided, however,** That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. * * *."

The Commission accurately states the legal effect of Sec. 15 (4) in its report (*Denver & R. G. W. R. Co. v. Union Pac. R. Co.*, 287 I. C. C. 611) at page 655 as follows:

> "Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the 'through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation.' Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In Pennsylvania R. Co. v. United States, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in D. A. Stickell & Sons, Inc., v. Alton R. Co., supra, the Supreme Court said that the expressions 'more efficient or more economic' transportation, as used in section 15 (4), 'may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found.' These latter considerations are not determinative, however, unless the existing routes can be found not to provide 'adequate' transportation.
>
> "In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests."

Was there evidence to support the finding of inadequacy? Only in the event there was inadequacy of trans-

portation can the question of efficiency or economy be reached. It is clear from the report and the evidence that the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande as to the commodities embraced in the order. There is no evidence to support a finding that the physical transportation facilities furnished by the Union Pacific between the northwest area, on the one hand, and points east of Denver are inadequate. There is abundant support, however, for the finding that the service is inadequate to patrons of the Rio Grande, located on the Rio Grande between Ogden on the west and Denver, Pueblo, and Trinidad on the east (not served by the Union Pacific between Ogden and Provo), who do not have in-transit privileges with respect to freight moving from the northwest area which is to be reshipped to points east of Denver, if under the law the lack of in-transit privileges many constitute "inadequacy." That is also true as to the service to shippers of marble and granite from Vermont and Georgia to initial points on the Rio Grande who need the in-transit privileges of partial unloading or processing enroute, incident to reshipment to final destination points beyond Ogden in the northwest area. The foregoing inadequacies are based upon the premise that the lack of in-transit privileges constitutes inadequacy of service within the meaning of clause (b) of Sec. 15 (4). The Union Pacific vigorously contends that it does not. This question presents the crux of this case. If, as the Union Pacific contends, in-transit rights and privileges are matters over which the Commission under the law has no control, the existence or granting of which is subject only to managerial discretion of the carrier, and relate only to economy or efficiency of transportation to the exclusion of considerations of adequacy of transportation, then the lack

of in-transit privileges will not suffice as a proper basis for ordering "adequate" transportation. The argument is made in effect that since the transportation facilities are now available over the Union Pacific and the Rio Grande on the higher combination rates, the present non-existence of in-transit privileges relates only to the cost or economy of transportation. Reference is made to excerpts from opinions which it is said support the conclusion that the Commission may not under its general regulatory power force a carrier to provide or establish in-transit privileges. The question has many ramifications. We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. *Pennsylvania R. Co., et al., v. United States, et al.*, 323 U. S. 588, 54 F. Supp. 381.

But the inadequacy established by the evidence does not extend to shipments from the northwest area to initial destinations east of Denver. The same is true of shipments of monuments from Vermont and Georgia to points of initial destination in the northwest territory. Transportation service is now adequate between those points. There is ample evidence to support the finding that the establishment of the through routes and joint rates between the northwest area and points on the Rio Grande (not also served by the Union Pacific between Ogden and Provo), as to shipments which require in-

transit privileges at points on the Rio Grande for reshipment to points east of Denver, will result in more economical transportation. Differences in mileage and other comparative factors are for the Commission to weigh, evaluate and determine. Its ultimate factual conclusion may not be overturned when supported by the evidence. But, again, there is no evidence that the service is inadequate or that more economical transportation service will result with respect to shipments from the northwest area to points between Ogden and Provo served by both the Union Pacific and the Rio Grande and to be reshipped to final points of destination east of Denver. The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific. And that service is as economical via the Union Pacific as it would be over the Union Pacific and the Rio Grande if the through route and joint rates were established. The evidence therefore sustains the finding of inadequacy and the need for more economical transportation only as to (1) carload shipments of commodities embraced in the Commission's order from points in the northwest territory destined to points of final destination east of Denver which require in-transit privileges at points on the Rio Grande; (2) shipments of granite and marble monuments from Vermont and Georgia to final destinations in the northwest territory which require in-transit privileges at points on the Rio Grande not also served by the Union Pacific. If the order had been so limited to the evidence it would eliminate short-hauling the Union Pacific except as to shipments requiring service which is now inadequate and which service the Union Pacific cannot now give. It would eliminate the charge made by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its fi-

nancial needs, and, more important, it would have rested squarely within the authority of clause (b) of Sec. 15 (4).

The second finding, that the combination rates maintained by the Union Pacific and the Rio Grande are unduly prejudicial to shippers using or desiring to use the Rio Grande and unduly preferential to shippers and receivers using the Union Pacific to the extent they exceed the joint and through rates available to shippers located on the Union Pacific, is made for the purpose of bringing the order within the authorization of Sec. 3 (1). Title 49 U. S. C. A. Sec. 3 (1). That section is as follows:

> "Sec. 3 (1). It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

The situation which this finding seeks to correct, simply stated, is that the shippers and receivers of the designated commodities located on the Rio Grande who do not have in-transit privileges and joint and through rates are at an economic disadvantage compared to shippers

and receivers located on the route of the Union Pacific who do have joint and through rates and in-transit privileges.

If the prejudice and preference shown by the evidence falls within the prohibitions of Section 3 (1) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15 (3) and 15 (4) heretofore considered. But the prejudice and preference prohibited by Sec. 3 (1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3(1) which are served by the one carrier or the combination acting as one. The prohibition of Sec. 3 (1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion. Although the factual situation in *Central R. Co. of New Jersey v. United States*, 257 U. S. 247, was different, the purpose of Sec. 3 (1) was there stated as follows (Loc. cit. 259-260):

> "What Congress sought to prevent by that section, as originally enacted, was not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them by the same carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose or scope of § 3."

If the Commission could order through routes and joint rates between two or more competing railroads under

Sec. 3 (1) merely because a shipper entity described in Sec. 3 (1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15 (4) would be practically emasculated. The evidence of preference, advantage, prejudice or disadvantage, under these circumstances, furnishes no basis for the order under Sec. 3 (1).

The third finding, heretofore quoted, to the effect that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad to and from points in the northwest area and points on the Bamberger line from Ogden to Salt Lake City, inclusive, while refusing to maintain joint rates with the Rio Grande on shipments from the northwest area to the points served by both the Rio Grande and the Bamberger Railroad from Ogden to Salt Lake City, inclusive, discriminates against the Rio Grande, is based on Sec. 3 (4), which is as follows:

> "Sec. 3 (4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

The Bamberger Railroad is an electric line operating only from Ogden to Salt Lake City, serving those

cities and intermediate points. The Rio Grande serves all points served by the Bamberger. The criterion for determining unlawful discrimination under Sec. 3 (4) is stated by the Commission at page 658 of its order as follows:

> "A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred."

The Commission found there was no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande. Upon this record that factual conclusion may not be disturbed. Section 3 (4) clearly prohibits such discrimination. The Commission's order in this respect is valid under Section 3 (4).

Considerable attention has been given by the Union Pacific in its brief to the action of the Commission in rejecting a portion of evidence offered by it in an attempt to show improper conduct in the preparation and presentation of the Rio Grande's case before the Commission. We do not find justification for serious consideration of that question.

Findings of Fact

I.

The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the estab-

lishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points.

II.

The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver.

III.

The record supports the Commission's finding that present transportation service for granite and marble monuments, in carloads, originating in Vermont and Georgia, consigned to initial destination points on the Rio Grande, requiring unloading and in-transit privileges for continued movement to points in the northwest territory, is inadequate and uneconomical and that the establishment of joint rates and through service is necessary in order to provide adequate and more economic transportation for such shipments.

IV.

The evidence supports the finding that as to designated items of traffic moving from the northwest area,

shippers and receivers of freight located on the Rio Grande are at an economic disadvantage compared with shippers and receivers of freight from the northwest area who are located on the Union Pacific. But there is no community of interest between the Union Pacific and the Rio Grande and hence there is no discrimination by the Union Pacific within the prohibition of Sec. 3 (1).

V.

The evidence supports the finding of the Commission, referred to and quoted herein as Finding 3, that unlawful discrimination prohibited by Sec. 3 (4) is being practiced by the Union Pacific in refusing to establish through routes and joint rates with the Rio Grande comparable to those existing between the Union Pacific and the Bamberger Line on traffic moving from the northwest area to points served by both the Bamberger Line and the Rio Grande between Ogden and Salt Lake City.

Conclusions of Law

I.

The absence of in-transit and other privileges involved herein, incident to through joint rates will, under the law, support a finding that transportation service without such services and privileges is inadequate within the meaning of Sec. 15 (4). The evidence therefore supports the finding of the Commission that the establishment of through routes and joint rates between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the designated commodities in carloads originating in the northwest area, consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trini-

dad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad. As to such commodities the order of the Commission is valid under Secs. 1, 15 (3) and 15 (4) of the Act and does not violate the direction of Sec. 15 (4) that reasonable preference be given the carrier which originates the traffic.

II.

The evidence supports the finding of the Commission that it is necessary, in order to provide adequate and more economic transportation of shipments of marble and granite monuments in carloads from points in Vermont and Georgia to points of final destination in the northwest territory, which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest area, that through routes and joint rates be established between the Union Pacific and the Rio Grande as to such shipments.

III.

To the extent that the order of the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, which are incident to in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo or Trinidad, said order is not valid, because Sec. 15 (4) constitutes a limitation on the power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary

in order to provide, inter alia, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations specified in this paragraph, that factual premise, essential to the validity of the order, is lacking.

IV.

To the extent the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande at Ogden on carload traffic moving from the northwest area to points between Ogden and Salt Lake City, inclusive, served by both the Rio Grande and the Bamberger Line, the order is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3 (4) of the Act.

To the extent stated in the foregoing opinion, findings of fact, and conclusions of law, the order of the Commission will be enjoined. The cause is remanded to the Interstate Commerce Commission for such further proceedings as it may deem appropriate, consistent herewith.

Civil Action No. 76-53

Union Pacific R. Co. vs. United States.

JOHNSEN, Circuit Judge, dissenting:

The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute. The majority opinion upholds in part the result which the Commission has so reached.

What the Commission purports to make the primary basis for its establishing of through routes and joint rates over the Rio Grande is "perishable food articles." Here, as taken from its Report, are the manner and perspective of its approach to the question.

"Growers [of perishable food articles in Idaho, located on the Union Pacific] * * * market such products throughout the United States. In order to get as wide a distribution as possible, those growers and other growers in the northwestern area [that part of Utah lying north of Ogden, and the States of Idaho, Montana, Oregon and Washington] need as many markets and outlets as possible."[1] 287 I. C. C. at page 642. To comprehend or evaluate that need, says the Commission, "it is necessary to consider the nature, extent and functioning of our in-

1 It should be noted that the situation covered by the Commission's order does not involve the matter of joint rates to intermediate points on the Rio Grande as final destinations. Joint rates already apply to such traffic. The question is one of through routes and joint rates for traffic having a billing origin and destination outside of Rio Grande territory, and for which the Rio Grande therefore would merely be serving as a "bridge" line only, while the Union Pacific, on whose branch lines most of the traffic originates, would be caused to lose a line-haul thereon of 975 miles.

tricate and far-flung commodity marketing system." P. 655. The importance, in our condition of growing population and national development, of having "a constantly expanding flow of diverse commodities" and "particularly articles of food" is emphasized. The comment is made that "A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible," and the truism is expressed that "Adequate transportation facilities and services are required for the proper functioning of the system." P. 656.

Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

1. "Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible*. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that *as much flexibility as possible in the distribution process*, be permitted." (Emphasis mine.) P. 656.

2. "A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities." In-transit privileges, "such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit," are available at various points on the Union Pacific to through-shippers, on the basis of the joint rates applicable over that route, and

similar privileges exercisable on the Rio Grande could be made available to such shippers, at a lower cost than under the present combination rates, by establishing competitive through routes and joint rates over that road, so that those desiring to have the benefit of these additional facilities would be able to enjoy them on the same basis as those on the Union Pacific. Because the use of such transit facilities on the Rio Grande are not available in the same manner as those on the Union Pacific, "The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities." P. 656.

3. The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them "from effective participation in the widespread system developed for the marketing of such commodities." In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given "as many routes as possible" and "as much flexibility as possible in the distribution process," because otherwise they will be "debarred from effective participation in * * * the marketing of such commodities."

In other words, whenever it is possible physically and practicably to open up a new or an additional through

route for such commodities, the Commission apparently feels entitled to exercise its power to do so, in order to make available any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use, and on the basis of further holding that the other prerequisite of section 15 (4) of the Act, 49 U. S. C. A. § 15 (4), where the element of short-hauling another carrier is involved, as it is here, that such an added through-route must also provide "more efficient or more economic transportation" than that existing on the present through routes, can sufficiently be satisfied by merely resorting to the Commission's power under section 15 (3) to prescribe joint rates and pointing out that joint rates necessarily in the situation will provide "more economic transportation," since they obviously are lower than the previous combination rates.

I have grave legal doubt whether the Commission's power to establish joint rates under section 15 (3) has any relationship to the term "more economic transportation" in section 15 (4), dealing with the Commission's right to open up through routes. Rather, it seems to me that the term "more economic transportation" in section 15 (4) is intended to have reference to the elements of distance, time, equipment, cost of operation, territorial reach, and all those other quantitative and qualitative factors which are inherent in a transportational comparison from the standpoint of the interests of both the public and the carriers—and that the Com-

mission's power to establish joint rates under section 15 (3) is one which has application only after through routes exist or are established, without the right to use it as a factor under section 15 (4) for satisfying the requirements of opening up a long-haul-depriving, additional through route.

But however this may be, I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term "more economic transportation" under section 15 (4), in the addition of another carrier's route as a mere "bridge" line for such traffic. If that be not so, then there is not any situation in which the Commission can not make a finding of "more economic transportation" for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination rates otherwise applying.

Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to "as many routes as possible" and "as much flexibility as possible in the distribution process," so that on this basis, and without regard to any other factor, any existing through route can be called inadequate, because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad, serving as a bridge line, and further such new route can be declared to provide "more economic transportation," because by placing joint rates in effect the cost of using

such new through route for its transit facilities will be less than under the general combination rates previously existing, then the railroads of the country may as well forget section 15 (4) entirely, as affording them any protection whatsoever against deprivation of their long hauls.

Here the opening up of a through route over the Rio Grande as a bridge carrier for the transcontinental freight involved will deprive the Union Pacific of a long haul of 975 miles upon such traffic as the Rio Grande is able to solicit away from it. But this is not the sole purport or effect of the Commission's order. If the order is upheld either in whole or in part, on the basis on which the Commission's result has been reached, the Commission can hereafter exercise its power to require through routes and joint rates from every connecting point in the country against every existing carrier, since every new through route necessarily will afford additional transit privileges and every joint rate necessarily will reduce the cost of using the new through route as against the combination rate previously applicable.

Nor should one allow oneself to be blinded to what the real scope and significance of the Commission's reach here is. What it has purported to paint the picture of, in relation to its standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" is, as previously indicated, "perishable food articles." But it has, by means of some artificial classification, included ordinary livestock as a perishable food article (p. 656), saying merely, before doing so, that "We think, however, that the situation here as to livestock is no different from that portrayed as to certain

other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway." And it has further held that a little monument dealer, located on the Union Pacific in Utah, is entitled to have established for him a through route and joint rates on the Rio Grande, in order to have the transit privilege available to him of unloading locally, here and there in Colorado, on a through rate basis, some individual monuments out of an estimated four-carload lot of monuments per year.[2]

All of this to me is but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advisable, without being required to give consideration to the question of short hauling another carrier. It has repeatedly asserted that viewpoint and sought to gain that end. But Congress has never been willing to accede to that philosophy and position, and the courts have on a number of occasions had to strike down the Commission's efforts in that direction. All

2 I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one of "urgent need" (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones, constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of "as many routes as possible" and "as much flexibility as possible in the distribution process" for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country.

this is familiar history in the railroad world, and I shall not bother to go into it further here.

It is on the basis of the unqualified use of that standard here in relation to perishable commodities, and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which the Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out.

I do not mean to make any implication, nor do I here assume to pass judgment, on whether the Ogden gateway is in other manner or to other extent subject to being opened up. All I say is that the philosophy and standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" can not be made the basis for overriding the short-hauling provisions of section 15 (4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term "more economic transportation" to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing.

The philosophy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the coun-

try has never yet been relegated by Congress to the full impact of marketing principles alone. There is not a distributor of any commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did.

I have previously referred to the fact that most of the traffic that is here involved originates on the branch lines of the Union Pacific, and that on such of this traffic as the Rio Grande is able to solicit to use its route, the Union Pacific will lose a line haul of 975 miles. The Report of the Commission admits that "the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves" is about 200 miles. Page 654. It also recognizes that the Rio Grande is a mountainous route, of higher grades, more circuity, and greater operational costs than the Union Pacific. "The total rise and fall in feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific. Other data as to physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services." Page 648.

All of these matters, however, the Commission lightly brushes aside, as not having relationship to the question

of "more economic transportation" in the situation, and so leaving it free to hold, as above indicated, that the new through route provides "more economic transportation," because its joint rates necessarily are lower than the previously applicable combination rates. All that the Commission says, in brushing aside the transportational differences which I have set out, as not requiring consideration on the question of "more economic transportation" in the situation, is that, when they are spread over hauls of such great lengths as are here involved "they become relatively insignificant." Page 658.

The Report does not undertake to show what amount of traffic goes where. It merely says that "About 90 per cent of the traffic upon which joint rates are sought via Ogden and the Rio Grande moves to (Missouri River crossings and points east and southeast) and about 10 per cent to the Southwest." Page 626. How much terminates at the Missouri River crossing-points or at other midwestern destinations, the Report does not state. As to livestock, however, it certainly is a matter of common knowledge that the primary markets are Chicago, Omaha, Kansas City and some other Missouri River points. To each of these points, as well as to the Minneapolis and St. Louis markets, the record shows that a haul of 200 miles more, and a transportation time of at least 24 hours longer, as well as at least one or two more terminal-yard services, are involved over the Rio Grande route. I do not believe that without rational demonstration the Commission can say, except arbitrarily, that in relation to hauling distances of 1036 miles (Omaha) or 1153 miles (Kansas City) or 1524 miles (Chicago), the elements of difference which I have set out are so "relatively insignificant" as to be entitled to be ignored on the ques-

tion of whether "more economic transportation" is being provided. And in the absence also of some demonstration or analysis of quantities and destinations as to the various other commodities involved, I do not believe that the Commission can be said to have any less arbitrarily brushed off the facts of the transportational and service differences existing, as related to the question of "more economic transportation" under the statute, than in the case of livestock, when it merely attempts to push all of the facts abstractly to a far-distant horizon, without establishment of the reality of that horizon for lumping purposes.

Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock, Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611; 200 I. C. C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the statute. In establishing the prescribed rates, the carriers limited their application, as the Commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting

of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations.

This dissent is being written hastily in order not to delay the filing of the majority opinion, and I shall accordingly not take the time to go into detail on other matters. I agree with the majority that the Commission had no right here to find a violation of section 3 (1) of the Act against the Union Pacific and its connecting through-route carriers, but the basis for my view is not that adopted by the majority, that a discrimination under this section cannot at all exist, unless the complaining person or entity is located upon the lines of the carrier or combination of carriers claimed to have committed the discrimination. I do not believe that this viewpoint is tenable on the language of section 3 (1), nor on the expressions contained in *St. Louis Southwestern Ry. Co. v. United States*, 245 U. S. 136, 144, as well as on the plain, contrary assumptions made in *Texas & Pacific Ry. Co. v. United States*, 289 U. S. 627. But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3 (1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at

the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3 (1). If the Commission had attempted to predicate the relief which it here granted upon the existence of a violation of section 3 (1), I am certain that its action resting on this basis alone could not on these facial realities be upheld. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15 (4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the prescribing of through routes and joint rates in relation to the existing conditions.

In the pattern of the Commission's apparent attempt to strike at as much in the present situation as possible, the Commission further, as noted in the majority opinion, required the Union Pacific to establish joint rates with the Rio Grande to and from the same points where it maintained joint rates with the Bamberger Railroad. The Report says: "The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande." P. 659. The brief of the Union Pacific argues pointedly that "No evidence was submitted concerning or comparing transportation conditions on the Bamberger's electric line between Ogden and Salt Lake City with conditions on the Rio Grande." The brief of the Commission makes

no denial of the fact that no such evidence is contained in the record. The most that the Commission could properly have said, I think, was that it had not been made to appear by the evidence that there was any important dissimilarity in the conditions on the two roads. But the lack of any such evidence of dissimilarity could hardly afford a basis for a finding of similarity on the part of the Commission. This segment of the Commission's order is perhaps of relatively small importance in the present controversy. I refer to it simply as being characteristic or in the pattern of the loose and improper basis and manner in which it seems to me that the Commission has dealt with the entire situation.

I would strike down the Commission's order, generally, on the basis and manner in which its result has been reached. In taking that position, however, I would again emphasize that I intend no implication that there may not exist some proper basis and some proper manner of reach as to some parts of the Ogden gateway situation. I have not allowed my mind to look at that avenue, in either one direction or the other. The pervading infirmities on which the Commission's present order seems to me to rest make it sufficient and compel me to halt my judicial consideration right there.

APPENDIX E

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

Civil Action No. 76-53

Union Pacific Railroad Company, et al.,

Plaintiffs,

v.

United States of America and Interstate Commerce Commission,

Defendants,

The Denver and Rio Grande Western Railroad Company, et al.,

Intervening Defendants.

Filed Dec. 20, 1954

Final Judgment and Decree

The above-entitled action having come on for final hearing on November 23 and 24, 1953, before Circuit Judges Johnsen and Collet and District Judge Delehant, constituting a District Court of three judges, convened pursuant to Title 28 U. S. C., Sections 2284 and 2325, and all parties being represented by counsel and the Court having received the evidence offered by the parties and heard the arguments of counsel and having considered the pleadings, the evidence and the arguments and briefs of counsel, and the Court being fully advised in the premises and having filed its opinions, findings of fact and conclusions of law herein on October 22, 1954, and the majority of the Court being of opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297, is valid and lawful in part and invalid and unlawful in the particulars set forth in the majority opinion,

Now, therefore, upon the basis of such findings of fact and conclusions of law, and for the reasons set forth in the majority opinion of the Court, heretofore filed, it is ordered, adjudged and decreed that the injunction and other relief prayed for in the complaint be granted and denied, consistent with said findings of fact, conclusions of law and the majority opinion of the Court filed herein;

It is further adjudged and decreed that this Court has no power under the Interstate Commerce Commission Act to determine whether it would be in the public interest and consistent with good transportation practices to put into effect only that part of the order of the Interstate Commerce Commission held to be lawful, without regard to and independent of that part of the order held to be unlawful, and, that question being one which should under the law be determined by the Interstate Commerce Commission in the exercise of its informed judgment in its specialized field;

It is ordered, adjudged, and decreed that this cause be and is hereby remanded to the Interstate Commerce Commission for such further proceedings and orders, consistent with the majority opinion, the findings of fact and conclusions of law, as the informed judgment of the Commission may dictate.

Dated this 20th day of December, 1954.

Injunction Pending Appeal

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, having filed their application stating that they will appeal to the Supreme Court of the United States from the final judgment and decree entered herein by this Court on December 20, 1954, and praying for an injunction, pursuant to Rule 62(c) of Federal Rules of Civil Procedure, staying and

suspending the operation, enforcement and execution pending final determination of their appeal to the Supreme Court, of the Interstate Commerce Commission's order which is sustained in part by the majority opinion and final decree of this Court;

And it appearing to this Court that unless said order is stayed and its operation suspended and enjoined pending determination of their appeal, each of the plaintiffs and numerous other railroads may be subjected to a penalty of $5,000.00 per day if they do not comply with the requirements of the order, or to irreparable injury from loss of large sums of money in compiling and publishing the required rates and from loss of traffic and revenues, if they do comply with the order;

And the Court, finding no reason for permitting the order to become effective while its validity is being litigated, and being of opinion that the status quo should be preserved by staying and suspending the operation and enforcement of said order pending final determination of plaintiffs' appeal to the Supreme Court, it is hereby

ORDERED, ADJUDGED and DECREED that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297, Denver & Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al., be and it is hereby stayed, and suspended and the defendants and their officers, agents and employees are enjoined and restrained from enforcing or attempting in any way to enforce said order or any part thereof pending final determination of the

plaintiffs' appeal to the Supreme Court of the United States.

Order

This matter having been presented to the Hon. Harvey M. Johnsen, one of the members of the three-member Court which tried the above-entitled cause, on the ex parte motion and application of the intervener, The Denver and Rio Grande Western Railroad Company, for an order enlarging the time to docket the case on appeal and file the record thereof with the Clerk of the United States Supreme Court, and good cause having been shown:

IT IS ORDERED that the time within which the intervener, The Denver and Rio Grande Western Railroad Company, must docket the case and file the record with the Clerk of the United States Supreme Court shall be and hereby is enlarged from April 4, 1955, to June 1, 1955.

IT IS FURTHER ORDERED that the times within which each and all of the other parties or interveners who have filed appeals herein must docket their cases with the Clerk of the United States Supreme Court shall likewise be and hereby are enlarged to June 1, 1955.

March 22, 1955.

APPENDIX I

The Pertinent Provisions of the Interstate Commerce Act (United States Code, Title 49), Involved in this Case are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1 (3) (a)—

"* * * The term 'transportation' as used in this part shall include locomotives, cars, and other vehicles, vessels, and all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, and transfer in transit.

ventilation, refrigeration or icing, storage and handling of property transported. * * *"

Section 1 (4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 1 (5)—

"All charges made for any service rendered or to be rendered in the transportation of passengers or property, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

Section 3 (1)—

"It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district,

gateway, transit point region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3 (4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15 (1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or

property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15 (3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classification, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the

terms and conditions under which such through routes shall be operated. * * *"

Section 15 (4)—

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

	Page
Opinions Below	1
Jurisdiction	1
Statute Involved	2
Questions Presented	2
Statement	15
The Commission's Findings and Conclusions	19
Opinions of the District Court	24
Summary of Argument	30
Argument	42
I. Upon the Admission by the Rio Grande's President and Other Evidence that the Sole Objective of the Proceeding is to Increase its Revenues and Improve its Financial Condition by Diverting Traffic and Revenues from the Union Pacific and Other Railroads, the Commission Acted Arbitrarily and Contrary to Law in Overruling the Motion to Dismiss the Complaint on the Ground that Section 15(4) of the Act Prohibits the Commission from Compelling Through Routes and Joint Rates for that Purpose, and the District Court Erred in Refusing to Annul the Order on that Ground	42
II. The District Court Erred in Failing to Judge the Order by the Standards the Commission Invoked, and in Substituting its own Standards for Those used by the Commission; and the Court Further Erred in Refusing to hold that the Order is Entirely void Because the Commission Misconstrued, Departed from and Failed to Observe and make Findings Required by Controlling Statutory Standards and Substituted its own Standards and Criteria for the Statutory Standards it Invoked	52
1. The district court erred in failing to judge the order as made, and by the standards the Commission invoked; in substituting its own finding, that transportation service of the proposed Rio Grande route "is inadequate and also inefficient and uneconomical," and sustaining the order "in part" upon the untenable premise that Section 15(4)(b) permits short-hauling Union Pacific routes because service via Rio Grande routes is inadequate	54

INDEX—Continued

Page

2. The district court erred in refusing to enjoin the entire order because the Commission misconstrued, departed from and failed to make the special findings required by Section 15(4)(b) which it expressly invoked as the basis of the order..... 64

3. The district court erred in refusing to enjoin the entire order because the Commission foresook the statutory standard of Section 15(4)(b) expressly invoked by it, and adopted its own standard, based upon its asserted requirements of the marketing system for perishable food products for "as many routes as possible"..... 80

4. By including marble and granite tombstones and ordinary livestock in its order, the Commission departs from its own criterion that short-hauling Union Pacific routes is justified as to perishable food products because the marketing system for those products requires "as many routes as possible"..... 86

5. The conditions specified in the exceptions to the short-hauling prohibition in Section 15(4) cannot be met or satisfied, as the Commission here attempts, by merely substituting the lower joint rates of Union Pacific routes for the higher combination rates via the proposed Rio Grande route..... 90

6. The district court erred in holding that the Commission has power under Section 15(3) and (4) to short haul Union Pacific routes by reducing and equalizing the Rio Grande's combination rates with the joint rates of Union Pacific routes, for the sole purpose of making "in-transit privileges" available on the Rio Grande at the same rates those privileges are available on Union Pacific routes..... 92

7. The district court erred in holding that the Commission may lawfully order through routes and joint rates under Section 15(3) and (4) to remedy rates found unreasonable under Section 1, and "for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3(4) of the Act".. 96

8. In condemning Union Pacific routes as "inadequate" because (1) they have lower rates and are "not available" at points served only by the Rio Grande,

INDEX—Continued

Page

and (2) on the theory that shippers from the northwest area are "debarred" from effective participation in the marketing system for perishable products because they must pay higher rates when they ship via the Rio Grande than when they ship via the shorter, adequate and efficient Union Pacific routes, the Commission misconstrued and misapplied Section 15(4)(b) and departed without justification from the norms of its prior decisions..... 107

III

The District Court Erred in Refusing to Hold That the Entire Order is Void Because the Basic Facts Found by the Commission Contradict and are Inconsistent with its Conclusions, and Afford no Rational or Valid Basis for the Ultimate Conclusions and Order; and Because the Commission did not Make Findings Essential to the Validity of the Order..... 114

IV.

The District Court Erred in Refusing to Enjoin the Entire Order Because the Commission's Ultimate Findings and Conclusions and the Order are not Supported by the Evidence and are Contrary to the Overwhelming Preponderance of the Evidence 131

1. The evidence on which the Commission based its conclusions and order is without credibility or probative force, and affords no support for the order, because it was admittedly solicited and procured by the Rio Grande to help it win its case..... 131

2. The Commission's conclusion, on which the order rests, that the required through routes and joint rates "are necessary and desirable in the public interest, in order to provide adequate and more economic transportation" is based on (a) solicited and procured testimony that legally has no probative value; (b) is contrary to the overwhelming preponderance of the evidence, and (c) is the result of the Commission's arbitrary and biased treatment of the evidence 139

(a) The "indisputable character" of the testimony on which the order is based..... 140

(b) The Commission arbitrarily ignored, distorted and gave no weight to the overwhelming

INDEX—Continued

Page

preponderance of evidence against the Rio Grande 158

3. The finding that the commodities specified in the order must be moved to market "over as many routes as possible" is contrary to the requirements of the Act, in conflict with other facts found in the report, and is contrary to the evidence..... 173

4. The finding that "the shippers of the originating area" of the specified commodities "are debarred from effective participation" in the system for marketing such commodities, is incorrect, capricious and contrary to the evidence..... 177

5. There is no evidence to justify or support the findings that combination rates via the Rio Grande are unjust and unreasonable and that joint rates now applicable via the Union Pacific are reasonable for application via the Rio Grande, and the latter finding is contrary to the evidence..... 181

6. There is no basis in law or in facts found by the Commission for its conclusion that Combination Rates via the Rio Grande are unduly prejudicial to shippers desiring to use that route and unduly preferential of shippers using Union Pacific routes, and the conclusion is contrary to basic findings of fact and the overwhelming preponderance of the evidence. 194

   a. As the shippers found to be unduly prejudiced when they ship via the Rio Grande route are the same shippers found to be unduly preferred when they ship via the Union Pacific routes, and since they have the right to select the route of their choice, there is neither a legal nor a factual basis for the Commission's finding of a violation of Section 3(1) of the Act..... 194

   b. Refusal of the Union Pacific and other railroads to equalize availability of transit privileges offered by the Rio Grande with those offered by Union Pacific is not, in law, a violation of Section 3(1) of the Act, and the order requiring such equalization is null and void 198

INDEX—Continued

Page

c. Even if the essential foundation existed, which it did not, for finding a violation of Section 3(1), the facts found by the Commission and the testimony of record do not support or justify the conclusion that the combination rates via the Rio Grande are unduly prejudicial to shippers and receivers in the northwest area "using or desiring to use the Rio Grande routes" for westbound shipments of monuments, and eastbound shipments of livestock, fresh fruits, and vegetables, dried beans, frozen poultry, frozen foods, and butter and eggs, and unduly preferential of shippers and receivers "using the Union Pacific routes"..... 206

d. The finding that the substantial differences in transportation conditions found in the report to exist in hauls over the Union Pacific and over the Rio Grande via Ogden between the "excluded territory" and points north and west of the southern and eastern boundaries of Kansas, the Missouri River and the lines of the Union Pacific and Chicago and North Western Railroads from Omaha to Chicago "become relatively insignificant" and that "transportation conditions are substantially similar" for hauls between points in the "excluded territory" and points south and east of the line described, is arbitrary, erroneous, contrary to law and the evidence.. 212

7. There is no evidence at all to support or justify the finding that maintenance by the Union Pacific of joint rates with the Bamberger Railroad south of Ogden while refusing to participate in like rates with the Rio Grande discriminates against the latter in violation of Section 3(4) of the Act..... 221

V.

The Order Should be Annulled and set Aside Because the Commission Acted Arbitrarily and Unlawfully with Respect to the Essential Matters Discussed Under This Heading.... 223

1. Upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbi-

INDEX—Continued

Page

trarily and contrary to law in failing to dismiss the complaint and, in ordering through routes and joint rates on the theory that because shippers had intervened, the Rio Grande's complaint became a shipper complaint 223

2. The Commission acted arbitrarily and unlawfully in failing and refusing to give any effect to the requirement in Section 15(4) that reasonable preference be given to the originating carrier..... 229

3. The order should be enjoined and set aside because of its uncertainty, indefiniteness, and conflicting requirements, and because the Commission has exceeded its authority by using its through routes power under Section 15(3) and (4) to require a rate reduction under Sections 1 and 15(1) and to remove undue prejudice and discrimination under Section 3(1) and (4), and to equalize rates via the Rio Grande with rates of the Union Pacific routes..... 232

4. The Commission acted arbitrarily and contrary to law in refusing to give weight and effect to evidence showing that diversion to the Rio Grande of any substantial part of the traffic it seeks would result in wasteful transportation and economic waste, and in serious detriment to Union Pacific service and its employes, to certain other railroads and their employes, to numerous communities, and would do violence to the National Transportation Policy..... 236

No. 118
Consolidated with Nos. 117, 119, 332, 333 and 334

In the Supreme Court of the United States

OCTOBER TERM, 1955

UNION PACIFIC RAILROAD COMPANY; CHICAGO AND NORTH WESTERN RAILWAY COMPANY; CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY; NORTHERN PACIFIC RAILWAY COMPANY; GREAT NORTHERN RAILWAY COMPANY; THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY; WABASH RAILROAD COMPANY,

Appellants,

v.

UNITED STATES OF AMERICA and INTERSTATE COMMERCE COMMISSION.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA

BRIEF FOR ABOVE NAMED APPELLANTS

OPINIONS BELOW

The majority opinion and the dissenting opinion of the three-judge United States District Court for the District of Nebraska (R. 151) are reported in 132 F. Supp. 72. The report of the Interstate Commerce Commission (R. 25) appears in 287 I. C. C. 611.

JURISDICTION

This action was brought June 25, 1953 (R. 3), by the above-named railroads pursuant to 28 U. S. C. 1336, 1398, 2284 and 2321-2325, to enjoin, annul and set aside the order issued January 12, 1953, by the Interstate Commerce Commission in a proceeding entitled "Docket

No. 30297, *Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co., et al.*" Petitions for reconsideration were denied by the Commission on June 10, 1953 (V. II, 1778).*

Final judgment and decree of the majority of the district court sustaining the validity of the order "in part" and enjoining it "in part" was entered December 20, 1954 (R. 210). Notice of appeal[1] was filed February 18, 1955 (R. 230). On March 22, 1955, Circuit Judge Johnsen, presiding member of the district court, entered an order extending to June 1, 1955, the time for filing the record and docketing the cases of all appellants in this Court. The jurisdiction of this Court is conferred by 28 U. S. C. 1253 and 2101(b). Probable jurisdiction was noted on October 24, 1955.

STATUTE INVOLVED

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out verbatim in Appendix B hereto:

National Transportation Policy (preceding Section 1), and Sections 1(3)(a), 1(4), 1(5), 3(1), 3(4), 15(1), 15(3) and 15(4).

QUESTIONS PRESENTED

The Commission's order in this case was issued upon a complaint filed by The Denver and Rio Grande Western Railroad Company (herein called "Rio Grande"). The Rio Grande has been a chronically bank-

---

1 Jointly with Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska; and Nebraska State Railway Commission, who are filing a brief for those States.

* Because of duplication in page numbering of part of the record, this abbreviation will be used to designate pages of the record in Vols. I and II, proceedings before the Commission.

rupt and a "financial needs" railroad throughout its existence, and its President testified that the sole purpose of the complaint was to improve the Rio Grande's financial condition. The order requires the Union Pacific and over 200 other railroads to establish and maintain through routes and joint rates in connection with the Rio Grande "the same" as the joint rates maintained over their transcontinental routes (herein called "Union Pacific routes") on traffic[2] originated and terminated at points on Union Pacific routes and hauled under joint rates maintained over those routes through Wyoming, Nebraska and Kansas for 7½ years between points in the northwest area, embracing Utah north of Ogden, Idaho, Oregon, Washington and Montana, and points in the eastern and southern parts of the United States generally east and south of the Missouri River.[3] The joint rates do not apply via the Rio Grande and they are lower than the combination or sum of the local rates that would have to be charged if the traffic moved via that line.

The commodities named in the order comprise about 57,000 carloads of traffic annually or about one-third of the total traffic the Rio Grande seeks to divert to its line. Diversion of the traffic to the Rio Grande would short haul Union Pacific routes 925 miles, leaving those routes hauls as short as 100 to 400 miles on most of the traffic, in lieu of their present hauls of 1,000 to more than 2,000 miles.

---

2 Carloads of granite and marble monuments from origins in Vermont and Georgia to destinations in the northwest area embracing Utah north of Ogden, Idaho, Oregon, Washington and Montana, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, in carloads, from origins in the northwest area to destinations in the eastern and southeastern parts of the United States.

3 The lines and termini of the Union Pacific and the Rio Grande (main lines) and other data are indicated on the map attached as Appendix A hereto.

Section 15(4) of the Act prohibits the Commission from ordering additional routes that would short haul existing routes, except under the conditions therein specified. Such additional routes ordinarily are sought not, as in this case, by a railroad seeking to improve its financial position, but by shippers seeking better transportation service. The ordering of such additional routes is justified only when the existing routes are unreasonably long or fail to render adequate, efficient or economic service, and when the *proposed* additional routes are shorter and are needed to provide "adequate and more efficient or more economic" service than that provided by existing routes.[4]

The physical, geographic and transportation conditions in the instant case are exactly the reverse of those upon which the Commission is justified in ordering an additional route that short hauls existing routes.

---

4 See *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588; and *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I. C. C. 331, in which the Commission said at pages 333-334:

"Section 15(4) of the act has been in its present form since September 18, 1940. In several proceedings since then, reasonable through routes which short haul one or more carriers have been prescribed. See *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333 (sustained in *Pennsylvania R. Co. v. United States*, 323 U. S. 588); *Allied Mills, Inc., of Virginia v. Alton R. Co.*, 272 I. C. C. 49; *California Milling Corp. v. Atchison, T. & S. F. Ry. Co.*, 269 I. C. C. 725, and 274 I. C. C. 120. In the first two of those proceedings it appeared that the routes required to be established eliminated expensive out-of-line hauls, and in the latter proceeding the routes required were shown to be shorter in many instances than those which had existed. In all of those proceedings the routes required were at least as economical, from the standpoint of the carriers as well as of the shippers, as were most of the existing routes. . . .

"The instant situation differs. All of the routes sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic transportation. In addition, because of the circumstances here present, we believe a requirement that the routes sought be established would not 'give reasonable preference' to the originating carrier."

The Commission found that existing Union Pacific routes are shorter and faster than the Rio Grande; are efficiently operated; have surplus transportation capacity; furnish service "as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande" (R. 70), and are adequate to move over their "direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" (R. 62).

On the other hand, the Commission found that the Rio Grande has no trackage in the northwest and proposes to render no service in that area; that routes via the Rio Grande for movement of the involved traffic would be from 33 to 219 miles longer than the Union Pacific and would range from 33% to more than 50% longer than many of the Union Pacific routes; that movement of the traffic over the Rio Grande as a "bridge" line would require at least 24 hours more time and one or two more terminal interchanges between carriers than is now required in movement of the traffic over Union Pacific routes. The Commission further found that the Rio Grande route is "less favorably situated than that of the Union Pacific"; that "operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental" lines (R. 62, 70), and that dissimilarities in transportation and operating conditions are so substantial and unfavorable to the Rio Grande as to prevent a finding of discrimination against the Rio Grande resulting from refusal of lines comprising Union Pacific routes to make their joint rates on the involved traffic applicable via the Rio Grande.

Notwithstanding those findings, the Commission concluded that through routes in connection with the longer,

slower and "more onerous" Rio Grande line, and joint rates "the same" as the rates maintained over Union Pacific routes were "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" for the commodities named in its order (R. 73).

The Commission found that through service over Union Pacific routes, in general, "is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City," but that the testimony of shippers "does raise a question" as to a need for "more adequate and economic" service than is afforded by existing routes with respect to some commodities (R. 70, 69). It asserted that shippers of perishable food articles in the northwest area "are debarred from effective participation in the widespread system developed for the marketing of such commodities" (apparently, only, because they must pay higher rates if they ship over the Rio Grande to markets in the eastern and southern parts of the country), and that for perishable articles "reconsigned or accorded transit privileges" *at points on the Rio Grande*, "the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply", and that, therefore, Union Pacific routes are "inadequate and less economical than are the Rio Grande routes" (R. 70). In other words, the Commission condemned Union Pacific routes as "inadequate" because they do not serve points located exclusively on the Rio Grande, and because higher rates apply via the Rio Grande.

The district court (Circuit Judge Johnsen dissenting on the ground that the order was void and should be enjoined in its entirety because the Commission used

standards and criteria that were beyond warrant of the Act) held that the order is valid only to the extent that it embraces shipments of the articles named therein stopped for processing, milling, grazing cattle in transit and other "commercial operations" known as "transit privileges", at points on the Rio Grande and later reshipment to destinations beyond its termini.

The majority of the court, however, though correctly holding that the evidence does not support the Commission's finding that service over Union Pacific routes is inadequate or less economical than that of Rio Grande routes, proceeded to make its own finding that transportation service for the involved traffic over the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical" and that, therefore, the through routes and joint rates ordered by the Commission are justified for shipments stopped for in-transit privileges at points on the Rio Grande and later reshipment to points beyond its termini. For those shipments the court held that the order "is valid under Secs. 1, 15(3) and 15(4) of the Act" and "for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3(4) of the Act" at points along the Bamberger Railroad between Ogden and Salt Lake City (R. 167, 168).

For shipments *not* stopped for in-transit privileges on the Rio Grande, the court held the order invalid.

The following questions are presented by this appeal.[5]

---

5 The plurality of questions presented and the length of this brief are results of the Rio Grande's commingling in its complaint of separate and independent provisions of the Act concerning its rights as a carrier, the rights of shippers, and the "public interest"; also from

(Continued on next page)

I. Whether the court below erred in refusing to hold that, in this proceeding, brought by the Rio Grande for the admitted purpose of enhancing its financial position by diverting for a "bridge" haul over its line transcontinental through traffic now and for some 75 years moved over Union Pacific routes between points on those routes in the northwest and points in the eastern and southern parts of the United States, the Commission was prohibited from issuing the order by the provision of Section 15(4) of the Interstate Commerce Act that, "[n]o through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs", and that this prohibition may not be evaded or circumvented by the Commission's assertion that in making the order "no consideration has been given to the financial needs" of the Rio Grande.

II. Whether the court erred in refusing to hold that, in view of the short haul prohibition of Section 15(4) of the Act (49 U. S. C., § 15(4)), the Commission acted arbitrarily and unlawfully in issuing the order short-hauling Union Pacific routes at least 925 miles, upon the Commission's own findings of fact:

(a) That Union Pacific routes have lower rates than the Rio Grande and are shorter, faster, efficiently operated, adequate and have surplus capacity to haul any foreseeable volume of the through traffic involved;

(Continued from preceding page)

what Circuit Judge Johnsen's dissenting opinion aptly describes as "all the confusion in which the [Commission's] report is wrapped," "the loose and improper basis and manner in which * * * the Commission has dealt with the entire situation," and from the further confusion and apparent misconception of the majority of the district court concerning its judicial functions in reviewing the order.

(b) That movement of the same through traffic via the Rio Grande would require from 200 miles to as much as 50% more transportation, at least 24 hours more time in transit, and one or two additional interchange services; and that the Rio Grande maintains higher rates, is less favorably located and has "more onerous" operating conditions than the Union Pacific or any of the other western lines.

III. Whether the court erred in failing to hold that the entire order is void because the Commission misconstrued, departed from and failed to observe and make the findings required by the controlling statutory standards and criteria of Sections 1(4), 3(1) and (4) and 15(3) and (4)(b), in basing its order:

(a) Upon the premise that the standards and conditions of Section 15(4)(b) [which permit establishment of a proposed route short-hauling existing routes of other railroads; *only* if "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic transportation"] are lawfully observed and applied by the Commission's findings here:

1. of a need for "more" adequate and economic service than that afforded by Union Pacific routes and

2. that the Rio Grande route is "necessary and desirable" to provide "adequate and more economic transportation",

without any finding by the Commission that the Rio Grande route is "needed" or that it will provide "more efficient" transportation than Union Pacific routes for the involved through traffic between the same origins and the same ultimate destinations;

(b) Upon the premise that the conditions which permit short-hauling Union Pacific routes under Section 15(4)(b) can be met and satisfied by merely substituting the lower joint rates applicable over the Union Pacific routes for the higher combination rates via the proposed Rio Grande route;

(c) Upon the premise that, under Section 15(4)(b), Union Pacific routes may lawfully be condemned and found "inadequate and less economical" than the Rio Grande route for through traffic because *at points located on and served only by the Rio Grande*, "the Union Pacific routes and the joint rates that apply over them are not available, and higher rates apply";

(d) Upon the premise that the Commission may invoke its power under Section 15(3) and (4)(b) for the purpose of making additional transit privileges available by equalizing rates via the Rio Grande with rates applicable over Union Pacific routes;

(e) Upon the criteria that the marketing system for food articles of a perishable nature requires "as wide a distribution as possible", "as many routes as possible", "as much flexibility as possible" and "as many markets and outlets as possible", although Section 1(4) requires carriers to establish only "reasonable" through routes;

(f) Upon the inconsistent criteria that:

1. food articles of a perishable nature must move to markets "with expedition and care" and "without unnecessary interruptions";

2. the longer Rio Grande route is necessary to permit the through transportation of such articles to be interrupted so that the articles may be held as long as 12 months at points on the Rio Grande for "commercial operations" called transit privileges, and

3. ordinary livestock to stop for grazing or feeding, and marble and granite monuments to stop for partial unloading at points on the Rio Grande fall within the category of perishable food articles found by the Commission to require expeditious, careful and uninterrupted transportation;

(g) Upon the premise that the Commission may lawfully invoke its powers under Section 15(3) and (4) to obtain the remedy it desires for rates found violative of Sections 1 and 3, and that findings of violations of the latter sections afford a lawful basis for ordering the through routes and joint rates.

IV. Whether the court erred in holding that the Commission may require Union Pacific routes to short haul themselves by establishing through routes and joint rates with the Rio Grande for the sole purpose of permitting through traffic to be stopped at points on the Rio Grande, not served by the Union Pacific, for "commercial operations" (known as "transit" privileges), such as storing, processing and cattle grazing, at the same rates the same shippers have when using Union Pacific routes between the same points of origin and the same ultimate destinations.

V. Whether the lower court's finding that transportation service via the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical" for through shipments requiring transit at points on the Rio Grande and reshipment to final destinations beyond its termini, affords a lawful basis for the order short-hauling Union Pacific routes under Section 15(4)(b), which permits short-hauling other railroads only if "the Commission finds that the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation."

VI. Whether the court erred in failing to review and consider the whole record of evidence and all of the issues tendered by the pleadings and arguments of the parties, and in failing to hold that the order is entirely null and void, because:

(a) The order is based upon erroneous interpretations of law, and there is no rational basis or support for the order or any part of it, in the evidence or in the findings made by the Commission;

(b) The Commission *did not make*, and the evidence does not justify or support findings essential to the validity of the order, among others:

1. that Union Pacific routes are inadequate, inefficient and uneconomic for movement of the involved traffic,

2. that the Rio Grande route is "needed" for the involved traffic, and that it will provide "more efficient" transportation service than Union Pacific routes,

3. that diverting traffic and revenues from Union Pacific routes to the Rio Grande would serve such beneficial purpose as maintaining good service or improving it,

4. that the Rio Grande is efficiently operated, furnishes satisfactory service or has surplus capacity or ability to haul any additional volume of traffic,

5. that diverting the traffic to the Rio Grande's longer route will speed up its movement,

6. that the Rio Grande will generate new or additional traffic or contribute additional transportation facilities in the northwest area, or that existing routes are insufficient or incapable of moving the traffic to and from that area,

7. that by including the Rio Grande in the through routes shippers to and from the northwest area will have lower rates than they have via the Union Pacific routes,

8. that the overall transportation system or shippers using it would benefit by including the longer Rio Grande line in present routes for a "bridge" haul over its line,

9. that shippers have ever made complaint against service rendered by Union Pacific routes for the traffic involved, or demanded that the Rio Grande be included in present through routes;

(c) The evidence does not support or justify the Commission's findings—

1. that the combination of local rates via the Rio Grande are unjust and unreasonable,

2. that the joint rates which now apply over Union Pacific's shorter and more direct routes are reasonable for application via the longer and more onerous Rio Grande route,

3. that the combination rates via the Rio Grande are unduly prejudicial of shippers and receivers using or desiring to use the Rio Grande route and unduly preferential of shippers and receivers using the Union Pacific routes,

4. that the Union Pacific and other railroads discriminate against the Rio Grande in violation of Section 3(4) in maintaining joint rates with the Bamberger Railroad at points on its line between Ogden and Salt Lake City, while refusing to make like joint rates with the Rio Grande at the same points,

5. that through routes and joint rates with the Rio Grande are "necessary and desirable" in the public interest to provide "adequate and more economic transportation",

6. that shippers in the northwest producing area (who testified that they sell their products in all markets in all the 48 states and 5 foreign countries) "are debarred from effective participation" in the marketing system because they must pay higher rates if they ship through traffic via the Rio Grande than the joint rates available to them via Union Pacific routes for the same through traffic moving between the same origins and the same destinations;

(d) The Commission arbitrarily refused to give effect to the requirement in Section 15(4) that reasonable preference be given the originating carriers;

(e) The Commission refused to consider or give effect to the National Transportation Policy and to the evidence showing that diversion to the Rio Grande of any substantial part of the traffic would result in wasteful transportation and economic waste and in serious detriment to Union Pacific service and its employees, to certain other railroads and their employees and would inflict serious economic injury to numerous communities and the public served by Union Pacific routes;

(f) The Commission arbitrarily commingled and misused its authority under, and the remedies for violations of the separate and independent provisions of Sections 1(4), 3(1) and (4) and Section 15(3) and (4), and its order is vague, uncertain, indefinite and conflicting in its requirements;

(g) Upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and contrary to law in failing to dismiss the complaint and in ordering through routes and joint rates on the theory that because shippers had intervened and testified, the Rio Grande's complaint became a shipper complaint;

(h) The Commission acted arbitrarily and unlawfully in refusing to dismiss the entire proceeding on the ground that it was vitiated and nullified by the fact that shipper witnesses on whose testimony the order is based were admittedly solicited and procured by the Rio Grande to testify in such manner as to help it win its case.

STATEMENT

The Rio Grande operates a short-line railroad with its eastern termini at Denver, Pueblo and Trinidad, Colorado, and its western terminus at Ogden, Utah, the distance between Denver and Ogden being 607 miles via its main line, and 782 miles via Pueblo. Its history has been essentially one of financial difficulty and of bankruptcy. It has been a "financial needs" railroad throughout most of its existence.[6] Its mountainous location and tortuous physical features have resulted in "operating conditions on the Rio Grande" that are "more onerous than those on the lines of the Union Pacific" or any other transcontinental railroad (R. 70), and caused the Commission in prior cases to grant the Rio Grande's demands for higher rates, based on its "financial necessities", than rates prescribed for other western railroads.[7]

Constructed in 1870 as a narrow-gage line and converted to standard gage in 1890, the "Rio Grande was built for the purpose of handling the local business tributary to its line"[8] but its management soon determined

to enhance its financial position by diverting traffic from other lines for a "bridge"[9] haul over its line, including transcontinental Pacific Coast traffic moving over the Union Pacific-Central (now Southern) Pacific route, construction of which had been completed from Council Bluffs, Iowa, through Ogden, Utah, to Oakland, California, in 1869.

Concentrating on its purpose to enhance its financial position by diverting traffic and revenues from other railroads, the Rio Grande's revenues from "bridge" traffic increased over 326 per cent in the 15-year period ending with 1948, while traffic originated and terminated on its line increased only 155 per cent and its local traffic originating and terminating at points on its line was less annually throughout that period than during the period 1924-1929.

Further pursuing its "bridge" traffic policy, the Rio Grande filed its complaint with the Commission in this case on August 1, 1949. Although the complaint alleged violations of Sections 1(4), 3, 15(1) and 15(3) of the Interstate Commerce Act, the Rio Grande's President testified that the complaint was filed for the purpose of

9 The term "bridge traffic" is used to designate traffic hauled by a carrier on whose line the traffic neither originates nor terminates. A "bridge haul" is the transportation of such "bridge" traffic some part of the distance between its point of origin and its final destination. "Bridge" traffic is most attractive because it is generally least expensive to haul since the "bridge" carrier performs none of the expensive branch line, gathering or switching services required at the point of origin and point of final destination. The Rio Grande's President testified that the reason it is pressing for more "bridge" traffic is that "there is more money in it" than in traffic it originates or terminates.

The traffic the Rio Grande seeks to divert to its line is "bridge" traffic which originates and terminates on Union Pacific routes. Joint rates already apply to traffic originated at or destined to points on the Rio Grande.

improving and enhancing its financial position by diverting for a "bridge" haul over its line so much as it can of about 172,000 carloads annually of transcontinental freight traffic now and for some 75 years moved under joint transcontinental rates[10] over through routes which include lines of the Southern Pacific, Great Northern, Union Pacific, Northern Pacific and Milwaukee railroads (designated herein as "Union Pacific Routes") between points in the northwestern States of Oregon, Washington, Montana, Idaho and Utah, north of Ogden (designated in this brief as "northwest area"), and points in the eastern and southern parts of the United States, generally east of the Missouri and Mississippi rivers, including points on the Atlantic and the Gulf coasts.[11] These joint rates do not apply via the Rio Grande (except in certain instances not relevant here) and they are lower than the combination or sum of the local rates that would have to be charged if the traffic moved via the Rio Grande.

The Rio Grande demanded before the Commission that its line be included as a "bridge line" in all of the multitude of through routes of Union Pacific and other railroads to and from the northwest area over which the

10 "Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions." (R. 28.)

11 The Commission found that the traffic the Rio Grande seeks to divert to its line in this case ordinarily moves over the Union Pacific through Wyoming and Nebraska to and from Missouri River gateways rather than over the Rio Grande, "because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande" for that traffic. (R. 37.)

joint rates are applicable, despite the fact it has no trackage and performs no service in that area; that any route via the Rio Grande for movement of the involved traffic would be from 33 to 219 miles longer than the Union Pacific and would range from 33 per cent to more than 50 per cent longer than Union Pacific routes; that movement of the traffic over the Rio Grande as a "bridge" line would require at least 24 hours more time and one or two more terminal interchanges between carriers, and would short haul the Union Pacific and other railroads 925 miles.

Consistent with the protection afforded by Section 15(4) of the Act against short-hauling, and having their own direct and shorter routes, the Union Pacific and other roads serving the northwest area have always insisted, with immaterial exceptions, upon retaining their long hauls on traffic to and from that area.[12]

No complaint has ever been filed by shippers or the public or any state public service commission demanding the longer through routes and joint rates sought by the Rio Grande.

After lengthy hearings, a proposed report of its examiner recommending the granting of the Rio Grande's full demands, exceptions to that report, two oral arguments before the full Commission, it issued the subject

12 Union Pacific and some of the other railroad appellants have served the northwest for more than 75 years. Union Pacific now owns and operates 5,606.7 miles of railroad in that area, of which 2,913.19 miles, or over 50 per cent, consist of numerous branch lines extending from and serving as "feeders" to its main lines. About 50 per cent of the traffic the Rio Grande wants routed via its line originates and terminates on these branch lines. The Rio Grande demands and the effect of the order is that all these main and branchelines serve as "feeders" of bridge traffic to its line.

order January 12, 1953. Petitions for reconsideration were denied June 10, 1953.

The order (R. 21) requires the Union Pacific and numerous other railroads, whose connecting lines form through routes extending from the Pacific to the Atlantic and Gulf coasts, to establish through routes with the Rio Grande and "the same" joint rates maintained on Union Pacific routes on westbound carloads of granite and marble monuments from Vermont and Georgia to points in the northwest area and on eastbound carloads of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from points in the northwest area to points in the eastern and southern parts of the country, indicated above. These articles comprise about 57,000 carloads annually, or a third of the total volume of the traffic the Rio Grande seeks to divert to its line. Diversion of the traffic permitted by the order would short haul Union Pacific routes at least 975 miles, leaving them hauls as short as 100 to 400 miles on most of the traffic in lieu of their present hauls of 1000 to more than 2000 miles, resulting in a potential estimated revenue loss to the Union Pacific alone of more than $11,000,000 annually, and in very large losses to others of the railroad appellants.

The Commission's Findings and Conclusions

The Commission made the following findings, among others, which are essential to consideration of the questions presented. The findings are described here rather fully because of the obvious inconsistency between them and the Commission's ultimate conclusions and its order:

1. That it must overrule a motion of the defendant railroads to dismiss the complaint on the ground that the Commission was estopped by the "financial needs"

prohibition of Section 15(4) of the Act from issuing the order demanded by the Rio Grande. The Commission stated that, in reaching its conclusions, "no consideration has been given to the financial needs" of the Rio Grande (R. 34);

2. That there are at present no through routes, as that term is used in the Act, over the Rio Grande on the traffic here concerned (except on eastbound sheep and goats), and that any order requiring such routes and joint rates must be grounded upon findings as specified in Section 15(4)(b) of the Act, that the routes sought are "necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation" (R. 33);

3. That the proposed new route via the Rio Grande could not be required "unless the existing (Union Pacific) routes can be found not to provide 'adequate' transportation" (R. 69);

4. That the Union Pacific has surplus transportation capacity, is efficiently operated, furnishes good service to shippers over its line, its "facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" (R. 62), and that "through service" over Union Pacific routes is "as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande" (R. 70), except with respect to perishable food articles;

5. A large number of shippers and representatives of communities served by the Union Pacific, traffic, commercial and civic associations, opposed the Rio Grande's complaint. These were from localities in Washington,

Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah and Colorado (R. 65);

6. Shippers in opposition to the Rio Grande's complaint testified to the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. They testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event (R. 65);

7. That the Rio Grande route is from 33 to 219 miles longer than the Union Pacific (R. 40), and that routes via the Rio Grande would be from 33 to 50% longer than many of the present Union Pacific routes (R. 71);

8. That evidence as to the physical characteristics of the two lines shows that the Rio Grande is less favorably situated than the line of the Union Pacific; that traffic routed over the Rio Grande, as a "bridge" line would require at least 24 hours more time in transit than when routed over the Union Pacific and would require one or two more terminal interchange services (R. 62), and that operating conditions on the Rio Grande are "more onerous than those on the lines of the Union Pacific or any of the other transcontinental" lines (R. 70);

9. That diversion of the traffic over the Rio Grande would deprive the Union Pacific of its long haul and would short haul it at least 925 miles in each instance (R. 41);

10. That the traffic sought by the Rio Grande moves over Union Pacific routes through Wyoming because those

routes are shorter and they offer lower rates than the Rio Grande (R. 37);

11. Concerning public need for the proposed Rio Grande route and damage to Union Pacific routes by diversion of traffic from them to the Rio Grande, the Commission found that it was impossible to determine or estimate accurately what volume of traffic might be diverted to the Rio Grande if all of the joint rates were made applicable over its line (R. 66), but that whatever the volume so diverted would be the result of "active solicitation" by the Rio Grande "to persuade" shippers and receivers to use its line as an overhead or "bridge" route, the value of its service to shippers, and the extent to which the Rio Grande can "induce" shippers to route traffic via its line for the purpose of using transit facilities at points on its line and subsequent reshipment beyond at the balance of joint through rates from the point of origin (R. 46);

12. That there are substantial dissimilarities or differences between transportation conditions, operating conditions and lengths of hauls over Union Pacific routes and over the Rio Grande but that the differences in transportation conditions become "relatively insignificant" and "substantially similar" when "spread" over the longer hauls between the northwest area and the eastern and southern parts of the country (R. 72);

13. That the evidence failed to prove that the Union Pacific and other lines discriminate against the Rio Grande (except at points on the Bamberger Railroad between Ogden and Salt Lake City) under Section 3(4) of the Act in refusing to include its line in their through routes and joint rates (R. 72);

14. That (notwithstanding the dissimilarities in transportation conditions over the respective routes) the combination rates via the Rio Grande on the articles named in the order from and to the areas therein described are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, to the extent those rates exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes (R. 73);

15. That the Rio Grande, a railroad, could not raise in its own behalf an issue of undue prejudice and preference under Section 3(1) against another railroad, but that testimony of intervening shippers raised that issue (R. 33), and also raised a question as to a need for "more" adequate and economic service than afforded by Union Pacific routes with respect to perishable food articles (R. 69);

16. That the present complex and far-flung marketing system for perishable food articles requires that such articles move "with expedition and care" and "over as many routes as possible" with "as much flexibility as possible" (R. 70), without "unnecessary interruptions", to "as many markets and outlets as possible" (R. 70, 56);

17. That, while through service over Union Pacific routes in general is as satisfactory to shippers as the service which could be provided over routes including the Rio Grande, this is not true with respect to perishable food articles, and that shippers of those articles from the northwest area "are debarred from effective participation in the widespread system developed for the mar-

keting of such commodities" (R. 70) (apparently, only because, if routed over the longer Rio Grande route to eastern and southern markets, higher rates apply than when routed via Union Pacific routes, for the undisputed evidence shows that those shippers market their products via Union Pacific routes in all 48 states and several foreign countries);

18. That on shipments of perishable food articles reconsigned or accorded transit privileges such as stop-off for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, *at points on the Rio Grande*, "the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply", and that "on such traffic the defendants' (Union Pacific) routes are inadequate and less economical than are the Rio Grande routes" (R. 70);

19. That through routes via the Rio Grande and joint rates "the same" as apply over Union Pacific routes for the commodities named in the order between points in the areas described therein are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" (R. 73);

20. That there is no indication that witnesses admittedly solicited and procured by the Rio Grande to testify so as to help it win its case were improperly influenced or had been stimulated in any questionable manner (R. 48).

Opinions of the District Court

The majority opinion holds that the Commission's order is valid only to the extent that it embraces shipments of the articles named in the order which must stop

for in-transit privileges at points on the Rio Grande not also served by the Union Pacific.[13]

To that limited extent the majority holds that the evidence supports the order, and that it is valid under Sections 1, 15(3) and 15(4) of the Act and does not violate the direction of Section 15(4), that reasonable preference be given the carrier which originates the traffic; that so limited, it would "eliminate" the contention that the order was for the purpose of assisting the Rio Grande to meet its financial needs and would rest squarely within Section 15(4)(b).

The majority further holds that the order is not valid to the extent that it embraces carload shipments of the articles named in the order which do *not* stop for in-transit privileges at points on the Rio Grande.

The majority holds that the Commission's finding that Union Pacific routes are inadequate is based on the lack of in-transit privileges at points on the Rio Grande (although the Commission's report (R. 48) clearly states the fact that all customary transit privileges are available at points on the Rio Grande) and that upon that finding the Commission had power to require through routes and joint rates.

---

13 The "transit privileges" described in the majority opinion are feeding and grazing livestock, cleaning, packaging, processing, freezing and storing fresh fruits, vegetables, poultry, food products, butter, eggs and beans, at points on the Rio Grande and later shipped to points east of its eastern termini, and westbound carload shipments of monuments to be stopped for partial unloading at points on the Rio Grande with final destination at points on the Union Pacific northwest of Ogden. The Commission and the courts hold that "transit privileges" are not transportation service, but are "commercial operations."

In sustaining the order "in part" the majority adopted a different theory or legal basis from that of the Commission, in that, the majority sustains the order "in part" upon its own finding from the evidence that transportation service *via the Rio Grande* between the northwest area and the area east of Denver is "inadequate and also inefficient and uneconomical" (R. 166). That is, the majority condemns service of the Rio Grande's own *proposed route* which both the Commission and the majority find necessary to provide adequate and more economic transportation, whereas, the Commission, correctly holding that it could not require the through routes and joint rates demanded by the Rio Grande "unless the existing (Union Pacific) routes can be found not to provide 'adequate' transportation", incorrectly condemned Union Pacific routes as "inadequate and less economical than are the Rio Grande routes" because, on shipments of the articles named in the order reconsigned or stopped for processing, storage or other transit privileges *at points on the Rio Grande*, "the Union Pacific routes and the joint rates that apply over them are not available, and higher rates apply."

The majority holds that the evidence does not support the Commission's finding that present transportation service via Union Pacific routes between the northwest and points east of Denver is inadequate; that the evidence shows that present service over the Union Pacific between such points is adequate and that establishment of "the same" joint rates via the Rio Grande between the northwest and points east of Denver "would not make such service more economical because the rates for such service would only equal the present rates via the Union Pacific between those points" (R. 165). But the majority also holds that establishment of through

routes and equal joint rates on shipments of the articles named in the order that stop for in-transit operations at points on the Rio Grande (not also served by the Union Pacific) is necessary "to provide adequate and more economic transportation" (R. 167), and "will result in more economical transportation" (R. 161).

The majority holds that the Commission is without power to order through routes and joint rates to remove undue preference and prejudice under Section 3(1) between shippers located on different railroads because, if it did so, the short-hauling prohibition of Sec. 15(4) "would be practically emasculated" (R. 164). But the majority also holds that in its requirement of through routes and joint rates in connection with the Rio Grande at points from Ogden to Salt Lake City, the order "is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3(4) of the Act" (R. 168). The majority also holds that the order requiring through routes and joint rates which short haul the Union Pacific is valid for the purpose of establishing reasonable joint rates in lieu of the Rio Grande's combination rates found unreasonable by the Commission in violation of Section 1.

Circuit Judge Johnsen, dissenting, holds that the order should be annulled in its entirety, among other reasons, because:

> "The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute." (R. 169)

He points out that:

> "What the Commission purports to make the primary basis for its establishing through routes and

joint rates over the Rio Grande is 'perishable food articles'." (R. 169)

* * * * *

"Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

"1. 'Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible*. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that *as much flexibility as possible in the distribution process*, be permitted.' (Emphasis mine.) P. 656.'" (R. 170)

"* * * the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given 'as many routes as possible' and 'as much flexibility as possible in the distribution process,' because otherwise they will be 'debarred from effective participation in * * * the marketing of such commodities.'" (R. 171)

"* * * the philosophy and standard of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' can not be made the basis for over-riding the short-hauling provisions of section 15(4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term 'more economic transportation' to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing." (R. 175)

"It is on the basis of the unqualified use of that standard here in relation to perishable commodities,

and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which the Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out." (R. 175)

Observing that where short-hauling other carriers under Section 15(4)(b) is involved, as it is here, the Commission must find that the *proposed* additional route will provide "more efficient or more economic transportation" than that provided by present through routes, and further observing that in final analysis what the Commission's order does is simply to reduce the Rio Grande's combination rates to the level of the joint rates over Union Pacific routes, the dissenting opinion holds:

"* * * where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term 'more economic transportation' under section 15(4), in the addition of another carrier's route as a mere 'bridge' line for such traffic." (R. 172)

Pointing to the Commission's findings of more onerous operating conditions and substantially dissimilar and less favorable transportation conditions on the Rio Grande, and its "brushing aside" of those dissimilarities "without rational demonstration" but by arbitrarily saying they "become relatively insignificant" when spread over hauls of great length, and further pointing to the Commission's finding of discrimination against the Rio

Grande at points on the Bamberger Railroad, without any evidence, but merely upon the lack or absence of evidence concerning either dissimilarity or similarity in transportation conditions along the Bemberger, Circuit Judge Johnsen holds that these instances are "characteristic or in the pattern of the loose and improper basis and manner" in which the Commission has dealt with the entire case and are illustrative of the reasons why the entire order should be stricken down (R. 179).

SUMMARY OF ARGUMENT

Congress has declared that the National Transportation Policy is, *inter alia*, to promote "adequate, economical, and efficient service" to the end of developing and preserving an "adequate" transportation system. A "primary aim" of that Policy is "avoidance of waste", *Texas v. United States*, 292 U. S. 522, 530. The Policy seeks to preserve the earning capacity of "individual carriers" and to avert losses and public injury resulting from "the building of unnecessary lines" of railroad and from cut-throat competition, *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 277.

Consistent with its purpose to promote adequate, economical and efficient service, Congress has conferred power on the Commission to order new through routes and joint rates applicable thereto when "necessary or desirable in the public interest", (Section 15(3).) But that power is limited by Section 15(4) which expressly prohibits the Commission from establishing and diverting traffic to a new route where the effect will be to short haul[14] a carrier or carriers directed to participate there-

14 To short haul a carrier is to require it to contribute to a route substantially less than the entire length of its railroad between the termini of such route.

in, unless existing routes are (a) "unreasonably long", or—

> "(b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation."

As the Rio Grande's demands would short haul Union Pacific routes 925 miles, even though they are as much as 50 per cent shorter than the *proposed* Rio Grande route and, therefore, could not be condemned as "unreasonably long" and short hauled under clause "(a)", the Commission invoked the standards of clause "(b)" as the statutory or legal basis on which to justify its order short-hauling existing Union Pacific routes.

In prescribing a through route, the Commission is required by Section 15(4) to give "reasonable preference to the carrier which originates the traffic", subject to certain exceptions, and the Commission is expressly forbidden by Section 15(4) from establishing a new through route and joint rates to confer a financial benefit upon a particular carrier or to assist any carrier participating in such new route "to meet its financial needs", and from "tinkering" with through routes for that purpose, *U. S. v. Great Northern R. Co.*, 343 U. S. 562, 575.

Ordinarily the establishment of a new route that short hauls existing routes is ordered upon complaint of shippers where existing routes are shown to be inadequate, inefficient or uneconomical, contrary to the National Policy and that the proposed new route is shorter and will furnish better, more efficient, or cheaper transportation service than that provided by existing routes, within contemplation of the Policy.

The order in the instant case is unique in that it was issued upon complaint filed by the Rio Grande, a chronically bankrupt short line railroad, for the admitted purpose of improving its financial condition by diverting traffic and revenues from existing Union Pacific routes so that the Rio Grande can participate as a "bridge" line in the through transportation between points in the northwest area and points in the eastern and southern parts of the country.

The order is also novel and unprecedented in that it would short haul existing Union Pacific routes 925 miles, which routes originate[15] the traffic and are found by the Commission to be shorter (by as much as 50%), faster and efficient and with "adequate" surplus capacity to haul any foreseeable volume of traffic. The order would divert the traffic and revenues to the longer, mountainous Rio Grande route, which the Commission finds is "less favorably situated", would require at least 24 hours additional time in transit and one or two more terminal-yard services, and has "more onerous" operating conditions than the Union Pacific or any other transcontinental line. The order is plainly at war with the National Transportation Policy.

I. Since no railroad, in demanding through routes and joint rates to divert traffic from other railroads for a "bridge" haul over its line, could have any other purpose than to enhance its financial position and aid it-

15 The Union Pacific's costs of gathering and hauling to its main lines the involved traffic originated on its 2,900 miles of branch lines in the northwest area range from $19 to $106 per car and average $45.59 per car. These gathering costs are and would be borne entirely by Union Pacific in addition to its cost of the line-haul movement to Ogden, while the Rio Grande, as a "bridge" line, would incur no gathering or originating costs whatever on the traffic it seeks. (Orig. I. C. C. Ex. 27.)

self in meeting its financial needs, and as the President of the Rio Grande admitted that this was its sole purpose in this case, the Commission was prohibited from issuing the order by the provision of Section 15(4) that—

> "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

The Commission may not escape that prohibition by its mere assertion that in reaching its conclusions "no consideration has been given to the financial needs" of the Rio Grande. That assertion is contrary to the Commission's own recognition of the Rio Grande's perennial financial needs, and contradicted by and inconsistent with the extraordinary emphasis the Commission gave to the financial importance of "bridge" traffic to the Rio Grande. Nor may the Commission evade the "financial needs" prohibition by altering the "form" of its order in attempting to make it appear that its purpose was to grant "relief" to intervening shippers by reducing the Rio Grande's combination rates to the level of the joint rates on the Union Pacific routes, *Thompson v. United States*, 343 U. S. 549, 559-560. The order violates the intent of Congress in adding the "financial needs" prohibition to Section 15(4) "to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs", *U. S. v. Great Northern R. Co.*, 343 U. S. 562, 575.

The majority of the district court, in "remaking" and limiting the order to shipments actually stopped for transit operations on the Rio Grande, not only failed to save the order from the "financial needs" prohibition but also exceeded its authority and usurped administrative powers.

II. In refusing to judge the validity of the order by the standards of Section 15(4)(b) expressly invoked by the Commission, the district court ignored or violated principles laid down by this Court controlling judicial review of administrative actions, *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, 87; 332 U. S. 194, 196; *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 488. The court clearly erred in refusing to annul the entire order because, *first*, the Commission misconstrued clause "(5)" as authorizing it to condemn and short haul the shorter, faster and adequate Union Pacific routes merely because they are "not available" at points served exclusively by the Rio Grande and higher rates apply on the Rio Grande; *second*, the Commission did not make the special findings required by the standards of clause "(b)" which it expressly invoked; *third*, the Commission forsook the standards of clause "(b)" which it had invoked, and substituted therefor the standards or criteria of its asserted need of the marketing system for perishable articles for as many markets "as possible", as wide a distribution "as possible" and as many routes "as possible"; and, *fourth*, the substituted standard is beyond warrant of the Act and affords no legal basis for the order, nor did the Commission adhere even to that standard.

Upon its own holding that the evidence would not support the Commission's finding that service via Union Pacific Routes is "inadequate", the district court clearly should have held the entire order void. Instead, the court made its own administrative finding that service via the Rio Grande is "inadequate and also inefficient and uneconomical" and substituted that finding as a basis on which it held the short-hauling order could be partly justified. In doing so the court not only usurped adminis-

trative power, but also attempted to save part of the order upon still another unwarranted and illegal basis, for clearly, clause "(b)" does not authorize short-hauling faster, shorter and cheaper existing routes by substituting for them a *proposed* route which, the court finds, is "inadequate and also inefficient and uneconomical."

The legislative history of clause "(b)" clearly shows that its only purpose was to empower the Commission to order through routes that are "shorter or cheaper" than existing routes which could not be condemned as "unreasonably long" and short hauled under clause "(a)" of Section 15(4), but which do not provide the adequate, efficient and economic through service contemplated by clause "(b)", and the National Transportation Policy.

If, as the Commission held, clause "(b)" permits short-hauling the shorter, faster Union Pacific routes because they are not available, and higher rates apply *at points served exclusively by the Rio Grande*, or if, as the district court held, clause "(b)" permits short-hauling the shorter and faster Union Pacific routes because *service via the Rio Grande* is "inadequate and also inefficient and uneconomical", then the carriers' "right guaranteed by Section 15(4)" against short-hauling is wiped out and the short-haul prohibition is "unnecessary surplusage." This Court has steadfastly rejected any such treatment of the short-haul prohibition. See *Thompson v. United States*, 343 U. S. 549, and cases therein cited.

The undisputed facts found by the Commission prove that through service over Union Pacific's shorter and faster routes is not only adequate but greatly superior in every way to any service that could be furnished by the Rio Grande for the through traffic concerned, and the district court erred in refusing to hold that upon those

facts the Commission's view that the law permits it to condemn and short haul Union Pacific routes because they are not available at points served exclusively by the Rio Grande and because higher rates apply on the Rio Grande is foreclosed by this Court's decision in *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538.

The Commission not only misconstrued clause "(b)" as authorizing it to condemn and short haul the shorter, faster and adequate Union Pacific routes because they are "not available" at points served exclusively by the Rio Grande and because the latter has higher rates, and to compel "more" adequate service by ordering the longer Rio Grande route at equal rates, but it also departed from and failed to make the special findings listed in clause "(b)". It did not find that the Rio Grande route was "needed" or that it would furnish "more efficient" service, and its finding that the Rio Grande route would furnish "more economic" service is a plain distortion of fact, since its rates are higher, and under the order would only equal those via Union Pacific routes, and the Rio Grande route, found by the Commission to be longer and more onerous, is necessarily less economical than Union Pacific routes.

Being precluded by the basic evidential facts from making the special findings required by the standards of clause "(b)" which it expressly invoked, the Commission forsook the statutory standards and adopted as the basis for its order its own asserted requirements of the marketing system developed for perishable articles for as many markets and outlets "as possible", as wide a distribution "as possible", over "as many routes as possible". In thus substituting its own standard for the statutory standards it had invoked, the Commission clearly exceeded its authority and its order is void.

Chenery cases, *supra*. If, as it has done in this case, the Commission may cast aside the statutory standard of "reasonable through routes" (Section 1(4)) that are "needed" to provide "adequate and more efficient or more economic" transportation (Section 15(4)(b)) and short haul existing routes upon its mere assertion that perishable articles require as many markets and outlets "as possible", as wide a distribution "as possible" and "as many routes as possible", then it has found a way to short haul every existing through route by compelling additional through routes via every junction of connecting carriers until it has established every "possible" route, or, in other words, to completely emasculate the prohibition against short-hauling existing routes.

The Commission not only forsook the statutory standards of adequate and more efficient and more economic transportation which it had invoked and substituted its own standard of as many markets, outlets and routes "as possible", for *perishable articles*, but it also departed from its own substituted standard by including ordinary livestock, dried beans and granite and marble monuments in the order.

Both the Commission and the district court misconstrued clause "(b)" in holding that it authorizes short-hauling existing routes by the simple expedient of reducing the Rio Grande's combination rates and equalizing them with the joint rates via Union Pacific routes. The Commission and the court also misconstrued clause "(b)" in holding that it authorizes short-hauling Union Pacific routes for the purpose of making transit privileges (which the Commission finds to be "commercial operations") available on the Rio Grande at the same rates those privileges or commercial operations are avail-

able on the Union Pacific, and, further, in holding that the carefully restricted through route powers may be invoked to remedy rates found to be in violation of Section 1, and Section 3. Since the Commission expressly invoked the standards of clause "(b)" as the legal basis for the order, it must be judged by those standards, and the contention of the Government and the Rio Grande that the Commission's finding of a violation of Section 3(1) may now be used as an "independent basis" for sustaining the validity of the order must be rejected. The Commission's order cannot be upheld upon "considerations" that are "not those upon which its action was based" (318 U. S., p. 92).

Moreover, as the shippers in the northwest area found to be unduly prejudiced when they ship via the Rio Grande are *the same shippers* found to be unduly preferred when they ship via Union Pacific routes, and as all of them are located on Union Pacific routes in the northwest and all of them have the *same choice* of routing their traffic over either the Union Pacific or the Rio Grande, there is no basis in law or fact for the Commission's finding of a violation of Section 3(1); nor would the evidence support such finding, for the Commission may not ignore the substantial differences in "more onerous" transportation conditions which it finds over the Rio Grande compared to conditions on Union Pacific.

III. The Commission's findings, among numerous others, that Union Pacific routes have lower rates, are shorter, faster and are adequate to haul any foreseeable volume of the traffic concerned do not, as a matter of law, support or afford a rational or valid basis for the order short-hauling Union Pacific routes by diverting the traffic to the longer, more onerous and less favorably situated Rio Grande route. Nor did the Commission make findings es-

sential to the validity of its order; for example, it did not find that diversion of the traffic to the Rio Grande "would serve some beneficial purpose such as maintaining good service and improving it", *F. C. C. v. RCA Communications, Inc.*, 346 U. S. 86, 97, or that the Rio Grande route is "needed" or that it will furnish "more efficient" service, or that it is efficiently operated or furnishes satisfactory service, or that it has ability or capacity to haul any additional volume of traffic. The facts found by the Commission and those it did not and could not find from the evidence compel the conclusion that its order is void and the district court erred in refusing so to hold.

IV. The order is not only unsupported by evidence but is contrary to the overwhelming preponderance of the evidence. The testimony on which the Commission based its order was that of a few shippers which the Rio Grande admitted it solicited and procured to testify so as to help it win its case and is, therefore, without credibility, weight or probative force. Since that testimony is the only evidential basis for the Commission's conclusions that the Rio Grande's combination rates are unreasonable and unduly prejudicial, that the Rio Grande route and the prescribed joint rates are necessary "in the public interest", the order is clearly without support of substantial evidence. Moreover, the Commission's findings that the combination rates are unreasonable and unduly prejudicial and that the joint rates via the Union Pacific are reasonable for application via the longer Rio Grande route and are preferential of shippers using Union Pacific routes are based entirely on the fact that the combination rates via the Rio Grande are higher than the joint rates via the Union Pacific and the Commission's report admits that there was no other evidence of record concerning the lawfulness of the rates.

Witnesses for the State public service commissions of Washington, Oregon, Montana, Wyoming and Nebraska, and a far greater number of shippers than the number solicited and procured by the Rio Grande testified that service provided by existing Union Pacific routes is entirely adequate, satisfactory and efficient, and that not only was there no necessity for the longer, slower and more onerous Rio Grande route, but also that diversion of the traffic to that route would jeopardize the ability of Union Pacific routes to continue to furnish the adequate and efficient service they now provide and result in deterioration of that service to the detriment of the public and the shippers using those routes and the economic welfare of communities served by and dependent upon them. The Commission's assertion that shippers in the northwest or originating area "are debarred from effective participation" in the markets for their products is capricious and contrary to the evidence which shows that shippers from that area, including those who supported the Rio Grande, market their products in all of the 48 States and in several foreign countries through the use they now make of Union Pacific routes.

There is no basis in either law or fact for the finding that shippers desiring to use the Rio Grande are unduly prejudiced or disadvantaged because its rates are higher than those of Union Pacific routes for those shippers and all others in the northwest area are located on Union Pacific routes and have exactly the same privilege of routing their traffic over either the Union Pacific routes at lower joint rates or over the Rio Grande route at higher combination rates. The record is devoid of any evidence on which the Commission could base any finding of discrimination against the Rio Grande resulting from the Union Pacific's refusal to establish joint rates with

it while maintaining such rates with the Bamberger Railroad at Ogden and Salt Lake City and intermediate points.

V. Having found that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and unlawfully in failing to dismiss the complaint and in seizing upon the Rio Grande's solicited and procured shipper testimony and ordering through routes and joint rates on the theory that because those shippers had testified the complaint became a shipper complaint. The Commission further acted arbitrarily and erroneously in refusing to give effect to the requirement in Section 15(4) that reasonable preference be given to the carriers that originate the traffic concerned, and in refusing to give weight and effect to substantial evidence showing that diversion to the Rio Grande of any substantial part of the traffic it seeks would result in wasteful transportation and economic waste and in serious detriment to Union Pacific service and its employes, to certain other railroads and their employes, and to communities and areas served by and dependent upon them. Further, the entire order should be annulled because of its uncertainty and conflicting requirements, and because the Commission exceeded its authority in using its through route powers to require a rate reduction, to remove undue prejudice and discrimination and to equalize rates via the Rio Grande with those of Union Pacific routes.

ARGUMENT

I.

Upon the Admission by the Rio Grande's President and Other Evidence That the Sole Objective of the Proceeding is to Increase its Revenues and Improve its Financial Condition by Diverting Traffic and Revenues from the Union Pacific and Other Railroads, the Commission Acted Arbitrarily and Contrary to Law in Overruling the Motion to Dismiss the Complaint on the Ground that Section 15(4) of the Act Prohibits the Commission from Compelling Through Routes and Joint Rates for that Purpose, and the District Court Erred in Refusing to Annul the Order on that Ground.

The pertinent provision of Section 15(4) of the Act is that:

> "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

As no railroad in demanding through routes and joint rates to divert traffic to its line from other railroads could have any other purpose than to enhance its financial position or aid itself in meeting it financial needs, and as the President of the Rio Grande admitted that this was the sole purpose of this case, the Union Pacific moved that the Commission dismiss the complaint on the ground that the quoted provision, to which we shall refer as the "financial needs" prohibition, prohibits the Commission from compelling in whole or in part the through routes and joint rates demanded by the Rio Grande in this case. The Commission overruled this motion and sought to evade the "financial needs" prohibition, *first*, by stating that in reaching its conclusions

to compel the through routes and joint rates required by its order "no consideration has been given to the financial needs of the complainant" (R. 34), and, *second*, by abandoning the Rio Grande's case, creating new issues, treating the case as if it were a shipper complaint and granting a third of the demands of the Rio Grande under the guise and in the "form" of relief to shippers and "the public" (R. 69).

The first of these two efforts to escape the "financial needs" prohibition is merely an "artificial use of words" and a self-serving "declaration" that cannot be permitted to stand in the face of actual facts and realities, *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 545.[16]

The Rio Grande's President stated that since he came to that property in 1935 a planned program was progressed to enable the Rio Grande to participate to a greater extent as a "bridge" line in transcontinental traffic, that it has been the policy of the Rio Grande under his management to divert from the trafiscontinental lines more and more "bridge" traffic, and filing of the complaint in this case is but another step in that direction. On cross-examination, he testified as follows (V. I, 48):

> "Q. That is, from the standpoint of what I will say the treasury of the Rio Grande and the stockholders, that would be the purpose?
>
> "A. Yes, we hope to improve our condition if we can get these through rates.

16 "This Court has refused to accept assumptions of fact which are demonstrably false, *United States v. Provident Trust Co.*, 291 U. S. 272 [286], even when agreed to by the parties, *Swift & Co. v. Hocking Valley R. Co.*, 243 U. S. 284, [289]; *Universal Camera Corp. v. Labor Bd.*, 340 U. S. 474, 497.

"Q. Insofar as the corporate management and the stockholders of the Rio Grande are concerned, that would really be the only immediate purpose to them, would it not?

"A. Yes—that they would want to improve the financial condition of our railroad."

He further testified that the reason for pressing for an increased volume of "bridge" traffic over the Rio Grande is that "there is more money in it", than in traffic it originates or terminates (V. I, 50). It has been a part of his program since 1935 to have through routes and joint rates published via the Rio Grande on the traffic involved in this case as a further means of enhancing the financial position of the Rio Grande (V. I, 49).

The "financial needs" of the Rio Grande for the "bridge" traffic it seeks in this case was confirmed by its Vice President of Traffic, witness Hogue, who testified on this point as follows (V. I, 69):

"With the decline experienced in the originated commodities named, plus a heavy tonnage loss of untold volume to other forms of transportation in the states served by the Rio Grande, we are forced to turn our thoughts and efforts to main line through freight traffic. In no other way could we have survived and continued to render rail transportation service to those people of Colorado, Utah, and New Mexico who are reached only by the Rio Grande."

The point is further emphasized in the testimony of witness Earley, Assistant Freight Traffic Manager of the Rio Grande, who described the decline in the local and originated traffic which has not kept pace with the increase in traffic it now takes from connecting lines (V. I, 81) and concluded that: "The importance of overhead or bridge traffic to the Rio Grande is thus emphasized" (V. I, 82).

The Commission's assertion that it gave no consideration to the Rio Grande's "financial needs" is at variance with the allegation in paragraph V, page 2, of its answer to the complaint herein, that the Rio Grande "has numerous branch lines connecting with and extending from its main lines in Utah and Colorado" (R. 92), which quite clearly implies that at least one of the Commission's purposes in issuing the order was to aid the Rio Grande in maintaining and operating its branch lines by diverting traffic and revenues from the Union Pacific. The assertion is also at variance with the Commission's own statement that the Rio Grande "is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic on which the Union Pacific refuses to relinquish its long haul" (R. 68).

The Rio Grande's complaint asked the Commission to issue an order compelling through routes and joint rates via its line for the purpose, stated by its own President, of improving the financial condition of the Rio Grande. The Commission has issued such order. Its assertion that in doing so it gave no consideration to the Rio Grande's financial position necessarily seems futile. If not, then the financial needs prohibition in Section 15(4) is futile, for, to avoid it, the Commission need only deny that it gave any consideration to the financial needs of the carrier that seeks the order for the sole purpose of improving its financial condition.

Furthermore, the Commission's assertion that it gave no consideration to the Rio Grande's financial needs is at variance with the extraordinary emphasis which the report places upon the financial importance to the Rio Grande of "bridge traffic", which is traffic now being transported by the Union Pacific and other railroads and which the

Rio Grande would take at one end of its line and deliver at the other end of its line to another carrier. There can be no public interest in diverting "bridge traffic" from the Union Pacific to the Rio Grande. *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127. "Bridge traffic" is "financial needs" traffic, and since that is the only traffic affected by the order, it cannot be denied that this is a "financial needs" case.

While the report is so written as to de-emphasize, by not discussing the long history of the Rio Grande's bankruptcy and financial distress, it does concede that the Rio Grande passed "through various hands and receiverships" in its early days (R. 34), and that it again went into receivership in 1918 and remained in that status until April 11, 1947 (R. 36). As shown earlier in this brief, the Rio Grande has always been a chronically bankrupt and a "financial needs" short line railroad.

As we have said, the emphasis upon "bridge traffic" throughout its report contradicts the Commission's assertion that in reaching its conclusions it gave no consideration to the Rio Grande's financial needs. The report states that in 1890 the Rio Grande was opened for "through traffic between Denver and Ogden" but was "handicapped" because it did not have joint through rates with the Oregon Short Line on bridge traffic between the northwest and points at or east of its Colorado gateways (R. 35); that the Rio Grande wants to participate as a "bridge line" on such traffic via its Colorado gateways and Ogden at joint through rates (R. 37); that rearrangement of portions of the Union Pacific lines with that of the Rio Grande would enable the latter to obtain a full main-line haul on the involved "bridge" traffic and yet leave the Union Pacific a "substantial" haul west of

Ogden and the possibility of a haul east of Denver (R. 41). The Rio Grande "as a bridge line" is discussed and emphasized by showing that its "bridge traffic" diverted from other railroads increased 326 per cent in the period 1934-1948 and that its revenue from "bridge traffic" increased from $5,648,891 to $27,654,086 during that period. The importance of transit privileges on the Rio Grande to attract "bridge traffic" to that line is again emphasized. All of the traffic involved in the long and detailed recitals at pages 635-647 of the report (R. 48-61) is "bridge traffic". The report and order are not concerned with traffic originated or terminated at points on the Rio Grande, for joint rates now apply to that traffic.

There could be no reason for the emphasis which the Commission thus places upon bridge traffic and its financial importance to the Rio Grande except to attempt to justify diverting such traffic to that line so that it may benefit from revenues now earned by the Union Pacific and other carriers which originate or terminate the traffic in the northwest area.

The second method by which the Commision, in giving its order "the form" of relief to shippers and the public, seeks to evade the financial needs prohibition is even more untenable. Acceptance of this method of dealing with the case "would mean that Congress' insistence on protecting carriers from being required to short haul themselves could be evaded whenever the Commission chose to alter the form of its order," *Thompson v. United States*, 343 U. S. 549, 559. In that decision, which was hardly six months old when the Commission rendered its report and order in the instant case, the Court not only annulled the order because of the Commission's attempt to evade the restrictions in Section 15(4) upon its power

to compel through routes and joint rates by the simple expedient of reducing the sum of the local rates, thus putting its order in the "form" of a case under Section 1 of the Act, but the Court also warned the Commission against the identical result it attempts to accomplish in this case by giving its action "the form" of an order granting relief to shippers and the public. At pages 559-560 the Court said:

> "The Commission, by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of section 15(4), before the Court in *United States v. Great Northern R. Co.*, 343 U. S. 562 (decided this day). In short, acceptance of the Commission's argument would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage."[17]

In the case cited in the quotation, dealing with the very provision which the Commission here seeks to evade by altering "the form" of its order, *U. S. v. Great Northern R. Co.*, 343 U. S. 562, the Court said at pages 574-575:

---

17 The Commission's defiance of this Court's decision in the *Thompson* case, its efforts to evade the "financial needs" prohibition, as well as the short-hauling prohibition of Section 15(4), and its distortion and abuse of its through routes and joint rates powers in the instant case, are all the more amazing in view of the fact that, although the case was argued and submitted for decision by the full Commission on October 11 and 12, 1951, the Commission withheld its decision until after this Court handed down its decision, June 2, 1952, in the *Thompson* case, significantly, at page 555, warning the Commission against continuation of its past efforts to evade the short-haul prohibition. Whereupon, the Commission ordered complete reargument of the instant case—October 15 and 16, 1952—after which it issued its report and order, January 12, 1953.

"It is one form of regulation to redistribute revenues between connecting carriers by determining divisions of revenues received on existing through routes. The economic ramifications are quite different if the Commission establishes through routes which divert traffic to the lines of a financially weak carrier. Such action not only serves to assist that carrier financially but can also, at the same time, cause important changes in the movement of traffic, diverting traffic to a new geographic area at the expense of other carriers and other areas. Congress amended Section 15(4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs."

Remedies and rights accorded to shippers by the Act do not give the Commission "a roving commission" to use such rights and remedies to accomplish the purpose of carriers or to attain some objective that the Commission itself may desire, *Interstate Comm. Comm. v. D., L. & W. R. R.*, 216 U. S. 531, 537. In that case, the Commission's order was enjoined and annulled because it "had exceeded its power" in granting demands of a railroad under a provision of the Act which gave only shippers the right to relief.

The result of the Commission's efforts over many years to evade or "limit * * * the impact of the short-hauling restriction on its power to establish through routes"[18] is that in three out of the four short-hauling through route cases reviewed by this Court, the Commission's orders have been stricken down because they violated or ignored the short haul prohibition. See *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538 (1910); *United States v. Mo. Pac. R. Co.*, 278 U. S. 269 (1929); and *Thompson v. United States*, 343 U. S. 549 (1952).

18 *Thompson v. United States*, 343 U. S. 549, 555-556, and footnotes.

The only short-hauling order of the Commission which this Court has sustained was in *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588 (1945).[19]

In *U. S. v. Great Northern R. Co.*, 343 U. S. 562, this Court said at page 575:

> "Congress amended Section 15(4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs."

The Rio Grande's complaint asked the Commission to indulge in "tinkering" with through routes and "through joint rates" in order that, according to its own President's testimony, the Rio Grande could improve its financial position. In ordering through routes and joint rates on the specified commodities, the Commission has affirmatively responded to the complaint and in so doing it has "tinkered" with through routes and joint rates inevitably to improve the Rio Grande's financial position and help it meet its "financial needs".

If it be said that the Rio Grande is not presently a "financial needs" carrier, then all the more reason why traffic and revenues should not be diverted just to improve an already healthy financial position.

---

19 But the through routes required in that case eliminated four extra days' time in transit, a 149-mile out-of-line haul costing 90 cents per ton and two switching interchanges, in contrast with a completely reverse set of facts in the instant case, where the longer Rio Grande route required by the Commission's order would result in some 200 miles of additional transportation over the most "onerous" operating conditions of any western railroad, adding $1.24 per car to transportation cost, two additional interchanges between carriers at an additional cost of $20.44 per car per interchange, and at least one or two days' more time in transit, and would short haul existing routes at least 925 miles, and would deprive some of the appellant railroads of their entire haul. (R. 41.)

As Section 15(4) prohibits the Commission from helping even the most "needy" carrier financially by compelling through routes to divert traffic from existing routes, *a fortiori* it prohibits compelling through routes to aid the less "needy" or the financially healthy carrier.

The Commission's denial that it gave any consideration to the Rio Grande's financial needs is equivalent to saying that in reaching its conclusions and issuing its order it gave no consideration to the case which the Rio Grande called upon it to decide. In the circumstances the Commission's refusal to dismiss the complaint on the grounds we have discussed was clearly arbitrary, erroneous and contrary to the "financial needs" prohibition of Section 15(4).

The majority of the district court refused to enjoin the order on the grounds just discussed. Instead, it undertook to "remake" the order by limiting it to shipments stopped for in-transit privileges at points on the Rio Grande, not served by the Union Pacific. The majority then held that "[i]f the order had been so limited" by the Commission, "it would eliminate the charge by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its financial needs" (R. 162).

In both its refusal to test the validity of the order as issued by the Commission, and its attempt to save the order in part by usurping administrative authority to "remake" it, the majority of the district court was clearly wrong, *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, and 332 U. S. 194. Because the order is prohibited by the "financial needs" prohibition of Section 15(4) of the Act, this Court should set it aside and end its consideration of the case right there.

II.

The District Court Erred in Failing to Judge the Order by the Standards the Commission Invoked, and in Substituting its own Standards for Those Used by the Commission; and the Court Further Erred in Refusing to Hold that the Order is Entirely Void Because the Commission Misconstrued, Departed from and Failed to Observe and Make Findings Required by Controlling Statutory Standards and Substituted its own Standards and Criteria for the Statutory Standards it Invoked.

Basic principles laid down by this Court controlling judicial review of administrative actions were ignored or violated by the majority of the district court in sustaining the Commission's order "in part".

In *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, this Court held, at page 87, that:

> "The grounds upon which an administrative order must be judged are those upon which the record discloses that its action was based."

The Court said at page 89, the "action must be judged by the standards which the Commission itself invoked", and, pointing out that the grounds urged by counsel to the Court "in support of the Commission's order were not those upon which its action was based", the Court refused to sustain the validity of the order, saying at page 95 that:

> "* * * an administrative order cannot be upheld unless the grounds upon which the agency acted in exercising its powers were those upon which its action can be sustained."

At page 94, the Court repeated the settled rule that "orderly functioning of the process of review requires

that the grounds upon which the administrative agency acted be clearly disclosed and adequately sustained", and said that the "action must be measured by what the Commission did, not by what it might have done" and that the action "cannot be upheld merely because findings might have been made and considerations disclosed which would justify its order * * *."

The Court remanded the case to the Court of Appeals and, in an opinion in the same case upon its return to this Court the principles just quoted from the Court's first decision were reiterated, *Securities Comm'n v. Chenery Corp.*, 332 U. S. 194, 196:

> "This case is here for the second time. In *S. E. C. v. Chenery Corp.*, 318 U. S. 80, we held that an order of the Securities and Exchange Commission could not be sustained on the grounds upon which that agency acted.
>
> * * * * *
>
> "When the case was first here, we emphasized a simple but fundamental rule of administrative law. That rule is to the effect that a reviewing court, in dealing with a determination or judgment which an administrative agency alone is authorized to make, must judge the propriety of such action solely by the grounds invoked by the agency. If those grounds are inadequate or improper, the court is powerless to affirm the administrative action by substituting what it considers to be a more adequate or proper basis. To do so would propel the court into the domain which Congress has set aside exclusively for the administrative agency."

In *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, this Court set aside an order of the Commission because the report and findings did not clearly and definitely show that the Commission had fully complied with, properly applied statutory standards for granting operating rights to motor carriers. At page 488, the Court said:

"Congress has made a grant of rights to carriers such as appellee. Congress has prescribed statutory standards pursuant to which those rights are to be determined. Neither the Court nor the Commission is warranted in departing from those standards because of any doubts which may exist as to the wisdom of following the course which Congress has chosen. Congress has also provided for judicial review as an additional assurance that its policies be executed. That review certainly entails an inquiry as to whether the Commission has employed those statutory standards. If that inquiry is halted at the threshold by reason of the fact that it is impossible to say whether or not those standards have been applied, then that review has indeed become a perfunctory process. If, as seems likely here, an erroneous statutory construction lies hidden in vague findings, then statutory rights will be whittled away. An insistence upon the findings which Congress has made basic and essential to the Commission's action is no intrusion into the administrative domain. It is no more and no less than an insistence upon the observance of those standards which Congress has made 'prerequisite to the operation of its statutory command.' *Opp Cotton Mills, Inc. v. Administrator*, 312 U. S. 126, 144."

1. **The district court erred in failing to judge the order as made, and by the standards the Commission invoked; in substituting its own finding, that transportation service of the *proposed* Rio Grande route "is inadequate and also inefficient and uneconomical," and sustaining the order "in part" upon the untenable premise that Section 15(4)-(b) permits short-hauling Union Pacific routes because service via Rio Grande routes is inadequate.**

Section 15(4) of the Act prohibits the Commission from ordering a proposed new through route that short hauls existing routes unless (a) the existing routes are

unreasonably long as compared with the *proposed* new route, or—

> "(b) unless the Commission finds that the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic transportation".

As the Union Pacific routes are shorter and could not be found "unreasonably long", the Commission said that any order requiring through routes and joint rates demanded by the Rio Grande—

> "* * * must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate and more efficient or more economic transportation." (R. 33).

Recognizing that the clear and unambiguous purpose of clause "(b)" of Section 15(4) is to permit short-hauling existing routes *only* when they are inadequate to furnish service meeting all the tests specified in that clause *and* where service which meets all of those tests can and will be provided by a *proposed* new route, the Commission correctly held that it could not order the *proposed* Rio Grande route "unless the *existing* [Union Pacific] routes can be found not to provide 'adequate' transportation" (R. 69).

But, in its efforts to condemn and short haul Union Pacific routes, the Commission, without explanation or reason, asserted the palpably erroneous and untenable conclusion that Union Pacific routes are "inadequate" because they are "not available *at points on the Rio Grande* and because higher rates for the involved traffic apply at points on that line than at points on Union Pacific routes" (R. 70).

The Commission's own findings of facts, *ante* pp. 19-24, prove that service over Union Pacific's shorter and faster routes is not only equal but greatly superior in every way to service via the Rio Grande for the through traffic concerned. Upon those indisputable facts the Commission's view that the law permits it to condemn and short haul Union Pacific routes because they are not available at points not reached by their rails and because higher rates apply on the Rio Grande is precluded by this Court's decision in *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, in which this Court held unlawful a short-hauling through route order based on the Commission's conclusion that the Northern Pacific route through the northernmost states to Seattle and Portland was not "reasonable or satisfactory" because it did not serve and was not available at points on other railroads traversing Wyoming and Utah en route to Portland.[20] Although

20 In that case, this Court annulled the Commission's order requiring the Northern Pacific to short haul itself by establishing through routes via Portland with the Union Pacific and its connections between Chicago and Seattle, and publishing joint passenger fares "the same" as those of the Northern Pacific between the same points. At that time the Commission's power to order through routes was conditioned by the proviso that "no reasonable or satisfactory through route exists." Holding that the Commission had proceeded upon an erroneous "view of the law," the Court said at pages 544-545:

"But in the present instance there is no room for difference as to the facts, and the majority of the Commission plainly could not and would not have made the declaration in their order that there was no such through route, but for a view of the law upon which this court must pass. It is admitted that the Northern Pacific route is shorter than that of the Union Pacific by way of Portland and the running time somewhat less, and it is added by the majority that the 'passenger goes in as good a car and is provided with as good a berth and as good a meal.'

"There is some suggestion that at times the northern route may not be as good as the southern, although at other times it may be better, but the ground of the order avowedly was that the personal

(Continued on next page)

clause "(b)" has been added as an exception to the short-haul restriction since the Court rendered the decision just cited, the Commission's interpretation of that clause as authorizing it to short-haul Union Pacific routes because they do not serve points located exclusively on other railroads that maintain higher rates is not merely to "limit by construction the impact of the short-hauling restriction" on the Commission's power to order through routes, but to completely emasculate and nullify the short-haul restriction, *Thompson v. United States*, 343 U. S. 549, 555. Such interpretation of clause "(b)" is diametrically opposed to the purpose of Congress in denying the Commission's request "to delete completely the short-hauling restriction"; and in adopting clause "(b)" as a compromise under which the short-hauling restriction was retained subject to the new exception "applicable only where the Commission makes the special findings listed" in Section 15(4) as amended by clause "(b)" (*ibid.*).

The history of legislative action leading to enactment of clause "(b)" clearly shows that the purpose of Congress was to empower the Commision to order additional

---

(Continued from preceding page)

preferences of many travelers is to go by the Southern way. If they do, it is said, they can select from a great variety of routes as far as Ogden, Utah, they can visit cities not reached by the northern lines, they can search over a wide area for homesteads, they can behold the natural beauties that may be rivalled but not repeated on the other roads. It appears to us that these grounds do not justify the order. The most that can be said of them is that they are reasons for desiring a second through route; but they are not reasons warranting the declaration that 'no reasonable or satisfactory through route exists.' Obviously that is not true, except by an artificial use of words. It cannot be said that there is no such route, because the public would prefer two. The condition in the statute is not to be trifled away. Except in case of a need such as the statute implies, the injustice pointed out by the Chairman in his dissent is not permitted by the law."

through routes that are "shorter or cheaper" than existing routes between the same termini which could not be condemned as "unreasonably long" and short hauled under clause "(a)" of Section 15(4). In its report No. 404, April 22, 1937, on Senate Bill 1261, 75th Congress, 1st Session, the Senate Committee on Interstate Commerce said at page 2:

> "Your committee feels that the shippers of the country should be given the right to use the *shortest, quickest, and cheapest routes available* * * * The bill does not give the Commission power to order the railroads to route shipments in any particular way, but merely provides that *if a shorter route exists*, and if it is in the public interest for the shippers to have this route available, the railroads shall, upon the Commission's order, publish the route and rate in their tariffs. It is not the intention of the committee to interfere with the right of the trunk lines to their long haul, except where this right conflicts with the shippers' right to the *shortest route and lowest rate*. If there is this conflict, the *shipper is merely given the opportunity, if he wishes, of using the shorter or cheaper route.*" (Italics added.)

The district court refused to decide expressly whether the order was void because of the Commission's construction of clause "(b)", but the court did hold that there was no evidence to support the Commission's finding that Union Pacific routes are inadequate.[21]

---

21 Under "Findings of Fact I," the majority opinion reads:

> "The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points."

Upon that holding, and apart from its erroneous refusal to hold that the order is entirely void because the Commission misinterpreted clause "(b)", we submit that it was clearly the court's duty to enjoin and annul the order in its entirety, for an order based on a finding unsupported by evidence is void, *Int. Comm. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88, 91.

Instead of judging the order as made by the Commission, and disregarding the rules laid down by this Court in the *Chenery* cases, *supra*, that an order "must be measured by what the Commission did, not by what it might have done" (318 U. S. 80, 93-94), and that, if the grounds on which an order is based are inadequate or improper, "the court is powerless to affirm the administrative action by substituting what it considers to be a more adequate or proper basis" (332 U. S. 194, 196), the district court proceeded to make its own finding of fact that "transportation service" via the Rio Grande "is inadequate and also inefficient and uneconomical"[22] for shipments of the specified articles which require in-transit operations at points on the Rio Grande and reshipment to final destinations beyond its termini (R.

22 In making these findings of fact the district court clearly exceeded its authority and "usurped an administrative function," *F. P. C. v. Idaho Power Co.*, 344 U. S. 17, 20. Those findings are "a substitution of judicial for administrative discretion," *Communications Comm'n v. WOKO*, 329 U. S. 223, 229. See also *Interstate Comm. Comm. v. Ill. Cent. R. R.*, 215 U. S. 452, 470, and *Federal Comm'n v. Broadcasting Co.*, 309 U. S. 134, 144. The statute authorizing judicial review of the Commission's order grants the courts no authority "to revise the Commission's decision and to enter such judgment as the Court may think just," *Radio Comm'n v. Nelson Bros. Co.*, 289 U. S. 266, 276. Instead, the statute authorizes courts "to enjoin, set aside, annul, or suspend in whole or in part any order" of the Commission, 28 U. S. Code, Sec. 1336, and "the court must act within the bounds of the statute and without intruding upon the administrative province," *Ford Motor Co. v. Labor Board*, 305 U. S. 364, 373.

166). The Commission made no such finding, nor did it purport to base its order upon inadequacy of service via the Rio Grande. It avowedly based its order upon its view that under clause "(b)" it had power to condemn Union Pacific routes as "inadequate" and to short haul them because they are not available at points served exclusively by the Rio Grande and because higher rates apply to the traffic if moved via the Rio Grande (R. 70).

In making its own finding of fact the court said:

> "If the order had been so limited to the evidence it would eliminate short-hauling the Union Pacific except as to shipments requiring service which is now inadequate and which service the Union Pacific cannot now give. It would eliminate the charge made by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its financial needs, and, more important, it would have rested squarely within the authority of clause (b) of Sec. 15(4)." (R. 162)

The court thus not only failed to judge the order as made and upon the standards invoked by the Commission, and exceeded its judicial authority in usurping administrative power to make its own finding of fact which it substituted as a "more adequate or proper basis" for the order than the basis used by the Commission, but in

---

23 The court's finding is that:

"II.

"The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver."

doing so, the court also misconstrued, distorted and reversed the statutory pattern and circumstances under which short-hauling existing routes is permitted by clause "(b)". That is to say, Section 15(4)(b) permits short-hauling existing routes when they are inadequate and when it can be found that a *proposed* route will provide adequate and more efficient or more economic transportation than that provided by existing routes, but the court condemns the very route *proposed* to be established as "needed" to provide the "adequate and more efficient or more economic transportation" contemplated by clause "(b)", and holds that short-hauling Union Pacific routes is justified—not because service via those routes is inadequate or fails to meet the tests of clause "(b)" but—because service via the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical."

To summarize the errors and confusion of both the Commission and the court:

The Commission found that the shorter, faster, efficient Union Pacific facilities "are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" (R. 62), and furnish "through service", in general, "as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande" (R. 70). Nevertheless, the Commission found Union Pacific routes "inadequate", *first*, because they "are not available" for perishable traffic reconsigned or accorded transit privileges at points that are not located on Union Pacific routes but are served exclusively by the Rio Grande, and, *second*, because higher rates apply on such traffic via the Rio Grande than the rates via Union Pacific.

Thus, the Commission attempts to justify short-hauling Union Pacific routes not because their service is inadequate, inefficient or uneconomical or that the Rio Grande could furnish better service, but because Union Pacific routes are not available for shipments reconsigned or stopped for transit operations at points served exclusively by the Rio Grande and because Union Pacific routes have lower rates than the rates via Rio Grande.

The court refused to decide whether, as a matter of law, the Commission erred in condemning Union Pacific routes as inadequate and in short-hauling them under clause "(b)" on the sole ground that they are not available at points served exclusively by the Rio Grande and because higher rates apply at Rio Grande points, and, though holding that the evidence would not support a finding that Union Pacific routes are inadequate, refused to enjoin and annul the entire order. Instead, the court held that the evidence does support a finding that "transportation service" *via the Rio Grande* for shipments of the specified commodities from and to the northwest area requiring stoppage for transit operations at points on the Rio Grande "is inadequate and also inefficient and uneconomical", and, substituting that premise, in lieu of the Commission's basis for the order, holds that it is valid as to such shipments.

It is too plain for argument that Union Pacific routes may not be short hauled upon either the ground asserted by the Commission or the substituted ground asserted by the court. It is clear beyond a shadow of a doubt that clause "(b)" of Section 15(4) does not permit short-hauling the shorter, adequate, efficient and more economic Union Pacific routes because, as asserted by the Commission, they are not available for transit operations

at points served exclusively by the Rio Grande, or for the purpose, asserted by the court, of improving the Rio Grande's "inadequate and also inefficient and uneconomical" service, or reducing the cost of it to shippers using the Rio Grande.

If the Commission is correct in its view that Union Pacific routes may be condemned as inadequate and uneconomical, and short hauled by establishment of longer routes via the Rio Grande because higher rates apply on that line, and because the shorter Union Pacific routes with their lower rates are "not available" *at points on the Rio Grande*, then the Commission is at liberty to condemn and short every railroad and every through route in the country as inadequate and uneconomical, and to require them to short haul themselves by joining in through routes that pass through every point on every railroad in the country on the theory that such disregard of the short haul prohibition in Section 15(4) is necessary to provide adequate and more economic transportation.

If the court is correct in its view that the shorter, efficient, and adequate Union Pacific routes may be short hauled because service for shipments requiring transit at points on the *proposed* Rio Grande route "is inadequate and also inefficient and uneconomical", then every *existing* through route may be short hauled wherever the Commission can find a connecting railroad that has higher rates and is inadequate, inefficient and uneconomical.

Neither the Commission's nor the court's plain distortion of the Act can afford any possible legal basis for the order, and, because both completely nullify the short-hauling prohibition of Section 15(4), and ignore the

adequate, efficient and economic service admittedly provided by existing Union Pacific routes, the order clearly is void and must be annulled. *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538; and *United States v. Mo. Pac. R. Co.*, 278 U. S. 269; *Thompson v. United States*, 343 U. S. 549, 560.

2. The district court erred in refusing to enjoin the entire order because the Commission misconstrued, departed from and failed to make the special findings required by Section 15(4)(b) which it expressly invoked as the basis of the order.

The Commission is authorized by Section 15(3) of the Act to compel a carrier to join in a through route that does *not* short haul it upon a finding that such route is "necessary or desirable in the public interest." But that finding is not a lawful basis for an order compelling a carrier to join in a through route which *does* short haul it. Before it can compel a carrier to join in a through route that *does* short haul it, the Commission must find upon substantial evidence that one or more of the exceptions to the short-hauling prohibition in Section 15(4) has been established by the evidence. Such findings are prerequisite to the exercise by the Commission of its jurisdiction or power to compel through routes that short haul a carrier. In the absence of findings clearly stated in the report from which the Court can discern with certainty that the exception invoked by the Commission is fully satisfied, there is no basis for the order and it must be enjoined.

This was clearly recognized by the Commission in the instant case and it was definite in specifying the exception and the precise standard invoked by it in ordering through routes and joint rates. After finding

that there were no through routes via the Rio Grande for the traffic it seeks, the Commission stated (R. 33):

> "* * * that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation."

The specific exception to which the Commission refers is Section 15(4)(b) which authorizes the Commission to order a new route that short hauls existing ones if "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or[24] more economic, trans-

---

24 The Commission and the courts construe the word "or" in this context as meaning "and". In *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333, at page 343, the Commission said:

"We interpret that exception to mean adequate and more efficient *and* more economic from the public's or shippers' as well as the participating carriers' standpoint" (Emphasis supplied.)

That interpretation was sustained by the three-judge court in *Pennsylvania R. Co. v. United States*, 54 F. Supp. 381, in an opinion which was affirmed by the Supreme Court, *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, at page 593. The Commission has consistently adhered to that interpretation. *Richards Milling Co. v. Erie R. Co.*, 268 I. C. C. 237, 240; *General Mills, Inc., v. Great Northern Ry. Co.*, 269 I. C. C. 457, 465; *Borough of Edgewater, N. J. v. Arcade & A. R. Corp.*, 280 I. C. C. 121, 142. (Order held valid in *Baltimore & O. R. Co. v. United States*, 100 F. Supp. 1002).

Interpretation of the word "or" as meaning "and" has long had the approval of the courts when such interpretation is necessary to give effect to the clear intention of the legislature. *United States v. Fisk*, 70 U. S. 445, in which the Court said at page 447:

"In the construction of statutes, it is the duty of the court to ascertain the clear intention of the legislature. In order to do this, courts are often compelled to construe *'or'* as meaning *'and'* and again *'and'* as meaning *'or.'*"

(Continued on next page)

portation". But this authority is "applicable only where the Commission makes the *special findings listed*" in Section 15(4) as amended by clause "(b)", *Thompson v. United States*, 343 U. S. 549, 555. (Italics added.)

In *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, this Court held at pages 592-593:

> "* * * if the Commission is asked to abrogate the general rule with regard to the short-haul, *the statute says it must have regard to several matters.* The first of these is adequacy of transportation. The expression would seem to apply only to the interest of the shipping public. The second and third matters to be considered are efficient *and* economic transportation. These expressions may well embrace both shippers' and carriers' interests." (Italics added.)

That is to say all of the words taken together in clause "(b)" constitute a "standard" pursuant to which

---

(Continued from preceding page)

The Commission's interpretation, sustained by this Court, of the word "or" as meaning "and" is necessary to conform clause (b) of Section 15(4) with the declared purpose of the National Transportation Policy to promote "safe, adequate, economical, *and* efficient service *and* foster sound economic conditions in transportation and among the several carriers," and to the "Rule of Rate Making" in Section 15a of the Act. In other words, all of the descriptive words are in the conjunctive and not the disjunctive. Each word or term specifies one of several desired elements, aspects, or attributes, and the accomplishment of each of them is essential—"all to the end" of providing "a national transportation system" that is "adequate to meet the needs" of the country. The same ultimate objective is the basis of permitting the Commission to short haul a carrier under clause (b) of Section 15(4).

In *California Milling Corp. v. Atchison, T. & S. F. Ry. Co.*, 276 I. C. C. 531, the Commission's finding at page 555 was that through routes and joint rates there prescribed were needed in order to provide "adequate and more economic transportation," omitting the finding of "more efficient" transportation. There was no court decision in that case and the finding there made does not have judicial sanction.

the Commission, upon evidence meeting *all* requirements of that standard, may short haul a carrier, but the Commission may not pick and choose particular words from or parts of the complete standard prescribed by Congress in clause "(b)". It must apply the standard as Congress wrote it, and it is not at liberty to depart from it, or to make a new or different standard by adding to, taking from or ignoring any part of the statutory standard. In *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, this Court set aside an order of the Commission because the report and findings were insufficient to show definitely that the Commission had fully complied with the statutory standard for granting operating rights to motor carriers. At page 489 the Court said:

> "Congress has made a grant of rights to carriers such as appellee[25] Congress has prescribed statutory standards pursuant to which those rights are to be determined. Neither the Court nor the Commission is warranted in departing from those

---

25 The right of carriers to their long hauls has been granted and reserved to them by Congress throughout the life of the Interstate Commerce Act. It is "a right guaranteed by Section 15(4)" of the Act, and it may be taken from them by the Commission only when it complies strictly with one or more of the exceptions specified in Section 15(4). *Thompson v. United States*, 343 U. S. 549, 556, 559.

The reason for the prohibition against short-hauling a carrier and the limitation upon the Commission's authority to compel through routes was explained by Senator Elkins in 1910 as follows (see page 2, Report No. 404, April 22, 1937, by Senate Committee on Interstate Commerce, on S. 1261):

"The second exception to the grant of this power is one which has always been recognized in the transportation business of the country. The road that initiates the freight and starts it on its movement in interstate commerce should not be required, where it is a line not unreasonably long, to transfer its business from its own road to that of a competitor, especially when the commerce initiated by it can be as promptly and safely transported from the point of shipment to the point of destination by its road as by the line of its competitor."

standards because of any doubts which may exist as to the wisdom of following the course which Congress has chosen. * * * An insistence upon the findings which Congress has made basic and essential to the Commission's action is no intrusion into the administrative domain. It is no more and no less than an insistence upon the observance of those standards which Congress has made 'prerequisite to the operation of its statutory command.' *Opp Cotton Mills, Inc. v. Administrator*, 312 U. S. 126, 144. Hence, that requirement is not a mere formal one."

The necessity of strict adherence by an administrative agency to statutory standards is sharply illustrated in *Western Air Lines v. C. A. B.*, 347 U. S. 67, and *Delta Air Lines v. Summerfield*, 347 U. S. 74. In those cases the statutory standard for subsidy rates was "the need" of the carriers for subsidies. The Board allowed profits in addition to the "needed" subsidies. Rejecting that action, this Court said:

> "The difficulty here is that the Board, in concluding that a part of the profits from the sale to United should not be used as an offset, forsook the standard of 'need' and adopted a different one." (347 U. S., p. 72)

As noted above, the Commission correctly held (R. 69) that it could not order through routes via the Rio Grande "unless the existing routes can be found *not* to provide 'adequate' transportation."[26] The ma-

---

[26] The essentiality of a finding that existing service is "inadequate" as a prerequisite to ordering or permitting additional competitive service lies in the fact that such finding has been regarded as "jurisdictional." Both the Commission and the courts "have recognized inadequacy of existing facilities as a basic ingredient in the determination of public 'necessity'." *Hudson Transit Lines v. United States*, 82 F. Supp. 153, 157, setting aside a portion of a

(Continued on next page)

jority of the district court said that "[o]nly in the event there was inadequacy of transportation can the question of efficiency and economy be reached" (R. 166).

Thus, as construed by the Commission and the courts, the standard of Section 15(4)(b), expressly invoked by the Commission, required each of "the special findings" that—

1. Union Pacific routes are "inadequate", *and*
2. the proposed Rio Grande route is "needed" in order to provide
   a. adequate transportation, *and*
   b. more efficient transportation, *and*
   c. more economic transportation

   than the transportation provided by Union Pacific routes.

And, if the shorter and faster Union Pacific routes with lower rates and surplus capacity, could *not* be found, upon substantial, rational and probative evidential facts, to be "inadequate" for the transportation of the involved perishable and other products between the far northwest area and points in the eastern and southern parts of the country, then the Commission's inquiry and proceedings must end.

The Commission observed that the Rio Grande did *not* allege or contend that Union Pacific routes "are not adequate for the traffic hauled, and no finding is sought

(Continued from preceding page)

Commission order authorizing additional competing service without "any finding that the existing service is inadequate." The opinion of the three-judge court, by Circuit Judge Swan, cites numerous cases on this point, and was affirmed per curiam by this Court, 338 U. S. 802. See also *I. C. C. v. Parker*, 326 U. S. 60, 69, 70, 74; *Florida v. United States*, 282 U. S. 194; *United States v. B. & O. R. Co.*, 293 U. S. 454, 463-465; *American Trucking Assns. v. U. S.*, 326 U. S. 77, 86; *U. S. v. Detroit Navigation Co.*, 326 U. S. 236, 240.

by the complainant [Rio Grande] to that effect", but that testimony of shippers raises a question as to the need for "*more adequate* and economic service than afforded by existing routes with respect to some commodities" (R. 69).

While, as indicated above, the Commission was fully aware of *all* the elements required to be found under the standard of Section 15(4)(b), its finding and conclusion as to through routes and joint rates was as follows:

> "We conclude: 1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established * * *." (R. 73)

The very wording of the Commission's finding shows that it departs from and fails to meet the requirements of the standard in clause "(b)". The errors, omissions and deficiencies which nullify this finding and the order based upon it are these:

First, the Commission correctly held that the Rio Grande route could not be compelled under clause "(b)", "unless the existing routes can be found *not* to provide 'adequate' transportation." But, the Commission had already found that existing routes are "adequate". Discussing the routes of the Union Pacific, it found:

> "Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future." (R. 62)

The court agreed that:

> "There is no evidence to support a finding that the physical transportation facilities furnished by the

Union Pacific between the northwest area, on the one hand, and points east of Denver are inadequate." (R. 160).

* * * * *

"The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific." (R. 162)

Thus, at the very threshold the Commission, with the court's acquiescence, correctly made the basic finding which clearly called for dismissal of the complaint and which contradicts and precludes the later assertion that Union Pacific routes are "inadequate" (R. 70). The Commission cannot make transportation service of existing routes "inadequate" by mere "declaration" or "by an artificial use of words"; nor does a desire for an additional route warrant condemning existing routes as "inadequate", especially where, as in this case, the Commission has already found Union Pacific routes "adequate." "The condition in the statute is not to be trifled away", *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 545.

Second, having found that the Union Pacific routes are "adequate" to haul any volume of traffic that might be offered in the foreseeable future, and that the Rio Grande does not contend or allege in its complaint "that the present routes of the defendants are not adequate for the traffic hauled", the Commission sought to escape its dilemma by enlarging or expanding the authority conferred by the clause, saying that shipper testimony raises the question as to the need for "more" adequate and economic service. Thus, the Commission, although holding that it may not require additional routes if service of existing routes is "adequate", contradicts itself by holding that the question here is not whether service of ex-

isting routes satisfies the statutory standard of "adequate" transportation contemplated by Section 15(4)(b) but whether there is need for "more" adequate service than existing routes afford. This is not merely to construe or interpret the standard erroneously, but to enlarge the Commission's power by adding the word "more" to the statutory standard. As thus expanded and applied by the Commission, "adequate" means "more adequate", which necessarily means "more than adequate". By construing "adequate" to mean "more adequate", the Commission has created and substituted its own new and enlarged standard for that fixed by Congress to be used in determining whether it is justified in ordering a new route which short hauls existing ones.

Clearly, if the Commission may lawfully compel an additional short-hauling route on the premise that the more routes there are the "more adequate" the service will be, then the standard of "adequate" transportation fixed by the Act becomes meaningless, and the Commission's power to nullify the prohibition against shorthauling a carrier is complete. For, no matter how "adequate" the service afforded by existing routes, the Commission could always say, with logic and plausibility, that an additional route would afford "more" adequate service than that rendered by existing routes, and this process could be pursued until the Commission had compelled through routes and joint rates via every junction where tracks of two or more railroads connect.

Third, to justify exercising its power under clause "(b)", the Commission must find specifically that the proposed route is "needed". It has not so found here, the finding being merely that the Rio Grande route is "necessary and desirable in the public interest", which

is the more general finding required by Section 15(3) only in compelling a carrier to join in a route that does *not* short haul it. In short, the Commission "forsook the standard of 'need' and adopted a different one", as did the Board in *Western Air Lines v. C. A. B.*, *supra*, page 72, causing this Court to set the order aside.

In *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, at page 592, the Court rejected the contention that the words "necessary and desirable in the public interest" in Section 15(3), and the words "needed in order to provide adequate, and more efficient or more economic, transportation" in clause "(b)" of Section 15(4) are redundant as permitting short-hauling merely if the Commission thought it "in the public interest". Saying that "Congress had a purpose in amending the provision" in Section 15(4) against short-hauling, the Court made it plain that the requirements of all the elements specified in clause "(b)" must be fully satisfied before a carrier may be short hauled under that clause. While the Court did not attempt to draw the line between a new route that is "needed" for the purposes specified in clause "(b)" and one that is merely "necessary or desirable in the public interest" under Section 15(3), the decision makes it certain that the requirement of clause "(b)" for a finding that the proposed route is "needed" cannot be avoided by the Commission or satisfied by a finding in terms of the looser and more general expression "necessary or desirable in the public interest" used in Section 15(3).

Lacking the finding that the Rio Grande routes are "needed", an essential condition precedent has not been satisfied, leaving the Commission's ultimate conclusion deficient and inadequate to support the order.

Fourth, to justify short-hauling a carrier under clause "(b)", the Commission must also find upon substantial evidence that the proposed route will provide "more efficient" transportation service than that furnished by existing routes. The Commission itself admits that in making a finding to justify short-hauling a carrier under clause "(b)" it "must" give consideration to the "efficiency" as well as the economy of the transportation (R. 69). It has not made the finding that the Rio Grande will provide "more efficient" transportation than is provided by Union Pacific routes, and the order is void because *of this further deficiency*. Being precluded from making that finding by the facts of record and its own findings that operating conditions are "more onerous" on the Rio Grande, that routes via its line would be longer and require one or two more interchanges and at least a day more in transit time, the Commission has arbitrarily ignored the essential requirement of the clause for a finding that the *proposed* route will provide "more efficient" transportation than existing routes. This it may not do. Attainment of "efficient service" is one of the fundamental aims of the National Transportation Policy, which directs that "[a]ll of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy." In *N. Y. Central Securities Co. v. U. S.*, 287 U. S. 12, the Court said, at page 25, that the Act is concerned with adequacy of transportation service, and its essential conditions of "economy and efficiency" and "best use of transportation facilities."

The Commission's report says that "through service over defendants' routes, in general, is as satisfactory" (R. 70), as any that the Rio Grande route could provide, except as to the perishable commodities specified, which shippers may desire to reconsign or stop off for some

"commercial operation" (R. 48) called a "transit privilege", at local points on the Rio Grande. The report does not explain why the shorter and faster Union Pacific routes are not "efficient" for transporting perishable commodities which, it says, must move to markets "with expedition and care", or how the longer and "more onerous" Rio Grande route will be able to render the "more efficient" service required by clause "(b)". Thus, if it be contended that the Commission gave any consideration at all to the "efficiency" of transportation, since all of the traffic is "through" or "bridge" traffic requiring "through" transportation service as distinguished from "local" transportation between points on the Rio Grande, the Commission's test of the efficiency of Union Pacific routes in hauling a carload of apples, for example, from Yakima, Washington, to Chicago, apparently is whether the apples could stop for some "commercial" service *at local points on the Rio Grande.* And, since the report makes it plain that the only purpose of ordering the route via the Rio Grande is to enable shippers desiring to use that line to "reconsign" or to "stopoff for partial unloading, storing" (R. 70), or other in-transit privileges and services at the same transportation rates they pay when those privileges are exercised on the Union Pacific, it results that the order is based not upon the statutory criteria of adequacy, efficiency and economy of transportation, but upon the wholly erroneous view that the Commission can use its through route powers for the purpose of making "commercial operations" available on the Rio Grande for the same rates at which they are available on the Union Pacific routes.

The Commission's ultimate finding and conclusion clearly is not that which is required by clause "(b)" before the Union Pacific may be short hauled on the theory

that the Rio Grande route is "needed" to provide "adequate, and more efficient or more economic, transportation". Findings that the Rio Grande route is "needed" and that its service will be "more efficient" than that rendered by Union Pacific routes are essential prerequisites to the exercise of the power granted by clause "(b)" to compel a route that short hauls existing routes, and the Commission's inability to make those findings from the facts and evidence may not be overcome by such jumbling of standards of Section 15(3) with those of Section 15(4), or by rearranging, adding to and deleting from the language of clause "(b)" as it has indulged in this case. The absence of those findings renders the Commission's order void. In *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, 504, the Court said:

> "This Court has held that an order of the Interstate Commerce Commission is void unless supported by findings of the basic or quasi-jurisdictional facts conditioning its power. *Florida v. United States*, 282 U. S. 194, 215; *United States v. Baltimore & Ohio R. Co.*, 293 U. S. 454."

Fifth, the Commission's finding that through routes and joint rates via the Rio Grande are necessary to provide "more economic transportation" (R. 73), is obviously based upon the erroneous view that the requirement of clause "(b)" that the proposed route will provide "more economic transportation" means "more economic" transportation than that now provided by the Rio Grande under the higher combination of local rates. Use of the through route power was not appropriate to attain that result for it could readily be obtained directly by reducing the Rio Grande's rates if they were unreasonable under Section 1 of the Act.

The majority of the district court rejected this error of the Commission's as to shipments *not* stopped for in-

transit operations at points on the Rio Grande, saying that (R. 165):

> "* * * the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would *not* make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points."

But, incredibly, the majority adopted the Commission's error as to shipments *stopped* for in-transit operations at points on the Rio Grande, saying that for such shipments, establishment of the through routes and joint rates via the Rio Grande "will result in more economical transportation" (R. 161).

Of course, reducing the combination rates and requiring joint rates via the Rio Grande "the same" as rates maintained on Union Pacific routes will make transportation "more economic" than it now is via the Rio Grande under the present combination rates. But, quite clearly, that result does not meet the requirement of clause "(b)". To justify compelling a proposed route that short hauls existing routes, clause "(b)" requires a finding, among others, that the *proposed* route will provide "more economic" transportation that that provided by the *existing routes*. The Commission has not made that finding, and it obviously was unable to make it in the face of the fact that it merely orders "the same" rates, or an equalization of rates via the Rio Grande with those maintained via existing Union Pacific routes through Wyoming. Nor could the Commission make that finding in the face of other facts it had found, that the Rio Grande line is longer, requires at least 24 hours more

time in transit and one or two more interchanges with other carriers, has "more onerous" operating conditions than those of the Union Pacific or any of the other transcontinental lines, and is "less favorably situated" than the line of the Union Pacific.

Circuit Judge Johnsen refused to be deluded by the Commission's—

> "* * * merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term 'more economic transportation' to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing." (R. 175)

He denies that the Commission has power to open up a new or additional short-hauling through route—

> "* * * in order to make available any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use, and on the basis of further holding that the other prerequisite of section 15(4) of the Act, 49 U. S. C. A. § 15(4), where the element of short-hauling another carrier is involved, as it is here, that such an added through-route must also provide 'more efficient or more economic transportation' than that existing on the present through routes, can sufficiently be satisfied by merely resorting to the Commission's power under section 15(3) to prescribe joint rates and pointing out that joint rates necessarily in the situation will provide 'more economic transportation,' since they obviously are lower than the previous combination rates." (R. 171)

He gravely doubts whether—

"* * * the Commission's power to establish joint rates under section 15(3) has any relationship to the term 'more economic transportation' in section 15(4), dealing with the Commission's right to open up through routes. Rather, it seems to me that the term 'more economic transportation' in section 15(4) is intended to have reference to the elements of distance, time, equipment, cost of operation, territorial reach, and all those other quantitative and qualitative factors which are inherent in a transportational comparison from the standpoint of the interests of both the public and the carriers—and that the Commission's power to establish joint rates under section 15(3) is one which has application only after through routes exist or are established, without the right to use it as a factor under section 15(4) for satisfying the requirements of opening up a long-haul-depriving, additional through route.

"But however this may be, I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term 'more economic transportation' under section 15(4), in the addition of another carrier's route as a mere 'bridge' line for such traffic. If that be not so, then there is not any situation in which the Commission can not make a finding of 'more economic transportation' for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination 'rates otherwise applying.'" (R. 172)

The failure and inability of the Commission to make a rational or valid finding that the Rio Grande's line is needed to and will provide "more economic" transportation than that provided by Union Pacific routes leaves the order without support of this essential jurisdictional finding, and without it the order is void.

These new interpretations, misinterpretations and mutilations of the Act and the statutory standard invoked by the Commission are but the latest of its perennial efforts, recognized in this Court's decisions, to nullify or "limit by construction the impact of the short-hauling restriction on its power to establish through routes," and they must be rejected, *Thompson v. United States*, 343 U. S. 549, 555; *U. S. v. Great Northern R. Co.*, 343 U. S. 562, 575; and see *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, 277.

3. The district court erred in refusing to enjoin the entire order because the Commission forsook the statutory standard of Section 15(4)(b) expressly invoked by it, and adopted its own standard, based upon its asserted requirements of the marketing system for perishable food products for "as many routes as possible."

The Commission said at the beginning of its report that any requirement of through routes and joint rates via the Rio Grande must be grounded upon findings specified in Section 15(4)(b) (R. 33), but nearing the end of its report it is quite obvious that the Commission forsook the standards of Section 15(4)(b) and adopted its own new standards based on claimed requirements of the perishable food marketing system for "as wide a distribution as possible" to "as many markets and outlets as possible" with "as much flexibility as possible" and "over as many routes as possible" (R. 70).

The report clearly shows that the Commission thought the marketing system for perishable food articles from the northwest area requires more transportation facilities than could be compelled under the statutory standard of "reasonable through routes" required by Section 1(4) or under the standard of routes

that are "needed" to provide "adequate and more efficient or more economic transportation" as provided in Section 15(4)(b).

Thus, the Commission not only failed to adhere to the statutory standard invoked by it, but adopted new standards and criteria of its own which go the fullest possible distance beyond and are wholly unrelated to routes that are "needed" to provide "adequate and more efficient or more economic transportation". In basing its order on the requirements of the marketing system for perishable food products for as many markets and as many routes "as possible", the Commission has clearly and arbitrarily gone far beyond the power granted by the Act to compel through routes and joint rates that short haul existing routes.

We can best demonstrate the Commission's action in this respect by quoting at some length from the discerning and penetrating dissent of Circuit Judge Johnsen:

> "What the Commission purports to make the primary basis for its establishing of through routes and joint rates over the Rio Grande is 'perishable food articles.' Here, as taken from its Report, are the manner and perspective of its approach to the question.
>
> "'Growers [of perishable food articles in Idaho, located on the Union Pacific] * * * market such products throughout the United States. In order to get as wide a distribution as possible, those growers and other growers in the northwestern area [that part of Utah lying north of Ogden, and the States of Idaho, Montana, Oregon and Washington] need as many markets and outlets as possible.' 287 I. C. C. at page 642. To comprehend or evaluate that need, says the Commission, 'it is necessary to consider the nature, extent and functioning of our intricate and far-

thing 'commodity marketing system.' P. 655. The importance, in our condition of growing population and national development, of having 'a constantly expanding flow of diverse commodities' and 'particularly articles of food' is emphasized. The comment is made that 'A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible,' and the truism is expressed that 'Adequate transportation facilities and services are required for the proper functioning of the system.' P. 656.

"Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

"1. 'Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible*. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that *as much flexibility as possible in the distribution process*, be permitted.' (Emphasis mine.) P. 656.

"2. 'A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities.' 'In-transit privileges, 'such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit,' are available at various points on the Union Pacific to through-shippers, on the basis of the joint rates applicable over that route, and similar privileges exercisable on the Rio Grande could be made available to such shippers, at a lower cost than under the present combination rates, by establishing competitive through routes and joint rates over that road, so that those desiring to have the benefit of these ad-

ditional facilities would be able to enjoy them on the same basis as those on the Union Pacific. Because the use of such transit facilities on the Rio Grande are not available in the same manner as those on the Union Pacific, 'The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities.' P. 656.

"3. The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them 'from effective participation in the widespread system developed for the marketing of such commodities.' In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given 'as many routes as possible' and 'as much flexibility as possible in the distribution process,' because otherwise they will be 'debarred from effective participation in * * * the marketing of such commodities.' (R. 169-171)

* * * * *

"* * * All I say is that the philosophy and standard of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' can not be made the basis for overriding the short-haul ing provisions of section 15(4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term 'more economic transportation' to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing.

"The philosophy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the country has never yet been relegated by Congress to the full impact of marketing principles alone. There is not a distributor of any commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did." (R. 175)

We submit that Circuit Judge Johnsen is correct in his analysis of the Commission's report and in his conclusion that the order in reality is based not upon transportation standards and criteria provided by the Act but solely upon the Commission's concept of the requirement of the marketing system for perishable food articles that such articles must have as many markets and outlets "as possible" and move "over as many routes as possible". Indeed, the report clearly shows that the Commission's last hope of granting any part of the Rio Grande's demands lay in carving out perishable food products from the general body of the traffic and asserting that the marketing system for those products requires all "possible" transportation routes and service, regardless of statutory standards which require that carriers provide only "reasonable" transportation. The report states (R. 70):

"While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. The shippers in the

originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities."

The report makes no attempt to explain why the through service of Union Pacific's routes, which it admits are shorter, faster and have lower rates, for the perishable traffic from the northwest area to markets in the eastern and southern parts of the country is not as satisfactory as service that could be provided by including the Rio Grande's longer and more onerous route, and the absence of any explanation is particularly significant in view of the Commission's finding that the perishable articles must be moved to market "with expedition and care" and without "unnecessary interruptions". Although the shippers of perishable products from the northwest area testified that they now market those products in all of the 48 states and in several foreign countries, the Commission was content merely to say that those shippers "are debarred from effective participation" in the marketing system for such products, apparently and solely because, lacking equal rates via the Rio Grande route, they do not have "as many routes as possible" at exactly the same rates.

The Commission's further implication that the Rio Grande route at equal joint rates is needed to provide additional transit privileges on that line so that perishable products could be stopped and held at points on the Rio Grande for as long as twelve months for storage, processing, etc., not only contradicts its finding that these perishable products must move "with expedition and care" in order to avoid "unnecessary interruptions", but also ignores the fact that the same shippers of the same perishable products from the northwest to the same

eastern destinations already have available at points on the shorter, faster Union Pacific routes at lower rates, all of the same transit privileges they would have on the Rio Grande under the Commission's order.

The order clearly must be set aside because (1) the Commission forsook the transportation standards of Section 15(4)(b), which it purported to invoke, and adopted a different standard, *Western Air Lines v. C. A. B.*, 347 U. S. 67, 72, and *Delta Air Lines v. Summerfield*, 347 U. S. 74, and (2) because the Commission is without power to order through routes that short haul existing routes on the theory or premise that the requirements of the marketing system for perishable food products are such that the transportation standards of the Act requiring only reasonable through routes and adequate, efficient and economical transportation, must be abandoned as to those products because of the Commission's unsupported assertion that they require "as many routes as possible", *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538.

4. By including marble and granite tombstones and ordinary livestock in its order, the Commission departs from its own criterion that short-hauling Union Pacific routes is justified as to perishable food products because the marketing system for those products requires "as many routes as possible."

Having abandoned the transportation standards and criteria of the Act and adopted its own criterion that food products of a perishable nature from the northwest area to the east and south require "as many routes as possible", the Commission immediately proceeded to depart from its own criterion by including in that category or classification westbound granite and marble

tombstones,[27] saying merely that:

> "In addition to the above-mentioned commodities, we are of the opinion that a special need for joint routes and joint rates on granite and marble monuments, in carloads, from origins in Georgia and Vermont to destinations in the excluded area, has been established." (R. 70)

Again departing from its perishable food criterion, the Commission included in its order eastbound "ordinary livestock" from the northwest area to be stopped for grazing at points along the Rio Grande, for which its only explanation is as follows:

> "We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive rates over the Rio Grande via the Ogden Gateway." (R. 56)

These departures by the Commission from its own newly created standard for short-hauling are best described and discussed in the following comments in the dissenting opinion of Circuit Judge Johnsen:

> "Nor should one allow oneself to be blinded to what the real scope and significance of the Commission's reach here is. What it has purported to paint the picture of, in relation to its standards of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' is, as previously indicated, 'perishable food articles.' But it has, by means of some artificial classification, included ordinary livestock as a perishable food article (p. 656), say-

27 The Commission's inclusion of granite and marble tombstones and ordinary livestock within the category of perishable food products calls for application of the observation in *Universal Camera Corp. v. Labor Bd.*, 340 U. S. 474, 497, that:

"This Court has refused to accept assumptions of fact which are demonstrably false, *United States v. Provident Trust Co.*, 291 U. S. 272 * * *."

ing merely, before doing so, that 'We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway.' And it has further held that a little monument dealer, located on the Union Pacific in Utah, is entitled to have established for him a through route and joint rates on the Rio Grande, in order to have the transit privilege available to him of unloading locally, here and there in Colorado, on a through rate basis, some individual monuments out of an estimated four-carload lot of monuments per year.[28]

"All of this to me is but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advisable, without being required to give consideration to the question of short hauling another carrier. It has repeatedly asserted that viewpoint and sought to gain that end. But Congress has never been willing to acceed to that philosophy and position, and the courts have on a number of occasions had to strike down the Commission's efforts in that direction. All this is fa-

---

28 In his footnote 2 Circuit Judge Johnsen said:

"I shall not take the time to go into details of this trivial monument situation, which the Commission characterized as one of 'urgent need' (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country."

miliar history in the railroad world, and I shall not bother to go into it further here." (R. 173-174)

* * * * * *

"Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock, Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15(4) of the statute. In establishing the prescribed rates, the carriers limited their application, as the Commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure, as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations." (R. 177)

We submit that the following conclusions of Circuit Judge Johnsen are correct and should be the decision of this Court:

"It is on the basis of the unqualified use of that standard here in relation to perishable commodities, and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which the Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out." (R. 174)

* * * * * *

"I would strike down the Commission's order generally, on the basis and manner in which its result has been reached. * * * The pervading infirmities on which the Commission's present order seems to me to rest make it sufficient and compel me to halt my judicial consideration right there." (R. 179)

5. The conditions specified in the exceptions to the short-hauling prohibition in Section 15(4) cannot be met or satisfied, as the Commission here attempts, by merely substituting the lower joint rates of Union Pacific routes for the higher combination rates via the proposed Rio Grande route.

"* * * all the confusion in which the [r]eport has been wrapped", to use Circuit Judge Johnsen's description, leaves it difficult, if not impossible, to understand or reconcile various aspects of the Commission's report and order. One thing, however, is certain, namely, that, despite its long and discursive report, its various unexplained conclusions and its inconsistencies, the end result is that the Commission merely requires that the lower joint rates of Union Pacific routes be substituted for the higher combination rates of the Rio Grande. To accomplish this result, the Commission expressly declares

that it invoked its powers under Section 15(4)(b) to short haul Union Pacific routes.

We submit that a mere substitution of the joint rates for the Rio Grande's higher combination rates does not conform to or satisfy the requirements of Section 15(4)(b). Those requirements relate to the adequacy, efficiency and economy of transportation facilities, routes and service, while the reasonableness of rates involves the question whether or not the charges are too high for the services performed in the light of such basic facts as volume of the traffic, length of haul, value of commodities, competitive, operating and other conditions which influence cost and value of service. The through routes powers are for the purpose of compelling a sufficient number of routes adequately to transport the traffic from origins to destinations. The reasonable rate powers are for the purpose of preventing carriers from demanding extortionate or exorbitant charges for the services they perform in hauling the traffic of a shipper or shippers of traffic over a route or routes already in existence. There may be and usually are more than a sufficient number of through routes adequately, efficiently and economically to haul the traffic, thus satisfying the statutory requirement, Section 1(4) of the Act, that carriers shall establish "reasonable through routes", and yet the rates charged for transportation over those routes may be so high as to be "unreasonable". Clearly, the prescription by the Commission of a rate that is "reasonable" in lieu of a rate that is "unreasonable" would not satisfy or meet the requirements of Section 15(4)(b) for through routes that are needed to provide adequate and more efficient or more economic transportation where a sufficient number of routes to meet those requirements have not been voluntarily established by

the carriers. In short, the reasonableness of a rate has nothing whatever to do with adequacy or efficiency of transportation, and whatever relation the reasonableness of a rate has to "economic transportation" is a matter to be dealt with by the Commission under Section 1(5) and Section 15(1) of the Act.

Just as the Commission may not use its reasonable rate powers to defeat the requirements of Section 15(3) and (4), as this Court held it could not, in *Thompson v. United States*, 343 U. S. 549, neither can it use its through route powers to prescribe reasonable rates, or to equalize rates of different railroads.

6. The district court erred in holding that the Commission has power under Section 15(3) and (4) to short haul Union Pacific routes by reducing and equalizing the Rio Grande's combination rates with the joint rates of Union Pacific routes, for the sole purpose of making "in-transit privileges" available on the Rio Grande at the same rates those privileges are available on Union Pacific routes.

Although the majority of the district court erroneously assumed that there are no transit privileges available at points on the Rio Grande, and proceeded from the premise that "the lack of in-transit privileges constitutes inadequacy of service within the meaning of clause (b) of Sec. 15(4)" (R. 161), it sanctions and upholds the Commission's ordering of through routes and joint rates not only for the purpose of making transit privileges available on the Rio Grande but also for the purpose of reducing the Rio Grande's rates to equalize them with the rates under which transit privileges are available on Union Pacific routes. The majority opinion states (R. 161):

> "We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. *Pennsylvania R. Co., et al. v. United States, et al.*, 323 U. S. 588, 54 F. Supp 381."

While the lack of specificity, in which the Commission's report abounds, apparently confused the majority of the district court, it is clear that the Commission understood that all customary transit privileges are available on the Rio Grande (R. 48) and that the Commission's real and fundamental purpose was to reduce and equalize the Rio Grande's rates with those of Union Pacific routes so that transit privileges offered by the Rio Grande would be available at exactly the same rates they are available on Union Pacific routes. And, to the extent it sustains the order, this is what the opinion of the majority of the district court sanctions and upholds.

We submit that the court plainly erred in holding that the Commission has power under Section 15(4)(b) to order through routes and joint rates for the sole purpose of making transit privileges available on the Rio Grande and that it further erred in sustaining the Commission's requirement that the Rio Grande's rates be reduced and equalized with those of Union Pacific routes so that transit privileges offered on both sets of routes would be available at the same rate.

Section 1(3)(a) of the Act defines the various elements and services included in the term "transportation"

which carriers are required by Section 1(4) to furnish upon reasonable request. That definition does not include "in-transit privileges". Hence, the Commission may not order carriers to establish or furnish "in-transit privileges", for the Commission obviously is without authority to order the carriers to furnish what the statute does not require.

A so-called "transit privilege" is not "transportation" at all, but is a "commercial operation" and the Commission so found in the instant case (R. 48). In fact, an "in-transit privilege" is just the opposite of "transit" or transportation which carriers are required to furnish. It is a privilege granted by carriers to shippers of interrupting the actual transit or transportation of a shipment at a point designated by the shipper, who takes the shipment in his custody and holds it for periods as long as 12 months for the purpose of storing, processing, milling, or other such "commercial operations" and later reshipment at the balance of through rates as if there had been no interruption to the continuous through movement of the shipment. This has been called by this Court "the fiction of a through rate with transit privilege", *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 777.

As a "transit privilege" is held, by the Commission and the courts, *B. & O. R. Co. v. U. S.*, 305 U. S. 507, 525-526, to be a "commercial operation" and not transportation which carriers are required by the Act to furnish, plainly such commercial operations cannot be made the basis of an order requiring through routes and joint rates that short haul existing routes, nor the basis of an order, as in this case, equalizing rates on different routes so that transit privileges may be available at equal rates on both routes.

Moreover, a "transit privilege" is "a matter local to the railroad, on which the transit point is situated." "Whether the privilege shall be granted or withheld is determined by the local carrier", and the Commission is without power by the indirect process of ordering through routes or joint rates to require a carrier to establish or offer transit privileges on its line, to say nothing of ordering the Union Pacific to short haul itself by joining in through routes and joint rates for the purpose of utilizing at equal rates the transit privileges offered by the Rio Grande. *Central R. R. Co. v. United States*, 257 U. S. 247, 255-256.

The district court cited *Pennsylvania R. Co v. U. S.*, 323 U. S. 588 (affirming 54 F. Supp. 381), in support of its view that the Commission has power to order short hauling through routes and joint rates for the purpose of making transit privileges available at points on the new route ordered (R. 161). But the decision in that case is clearly inapposite. The order there was on complaint of a shipper, Stickell, whose plant was located on the Pennsylvania Railroad at Hagerstown, Maryland. He already had ample transit privileges but he objected to the time consumed in transporting his grain by the route over which the Pennsylvania insisted upon moving his shipments in order to retain its long haul. The case did not involve the question of establishing a new through route so that shipments could receive transit operations at points on a railroad other than the Pennsylvania. Stickell wanted routes that would avoid a back haul and save transit time, enabling him to operate on a more equal basis with his competitors. In short, he wanted better and faster transportation and not, as the Commission here orders, slower transportation over a longer and more onerous route.

The through routes required in that case eliminated four extra days' time in transit, a 149-mile out-of-line haul costing 91 cents per ton, and two switching interchanges, in contrast with a completely reverse set of facts in the instant case, where the longer Rio Grande route required by the Commision's order would result in from 200 miles to 50 per cent more miles of additional transportation over the most "onerous" operating conditions of any western railroad, adding $124 per car to transportation cost, two additional interchanges between carriers at an additional cost of $20.44 per car per interchange, and at least one or two days' more time in transit, and would short haul existing routes at least 925 miles, and would deprive some of the appellant railroads of their entire hauls (R. 41).

7. The district court erred in holding that the Commission may lawfully order through routes and joint rates under Section 15(3) and (4) to remedy rates found unreasonable under Section 1, and "for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3(4) of the Act."

The Commission concluded that the combination rates via the Rio Grande on the commodities specified in the order are and for the future will be "unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes", and that maintenance by Union Pacific and other railroads of joint rates on the traffic involved with the Bamberger Railroad at points between Ogden and Salt Lake City while refusing to participate in like rates with the Rio Grande at the same points "subjects the Rio Grande to discrimination in violation of section 3(4) of the act" (R. 73-74).

To remedy the violations so found of Section 1(5) and Section 3(1) and (4), the order requires establishment of through routes in connection with the Rio Grande for the specified commodities and "joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming" (V. II, 1596).

Although the order further requires the carriers to "cease and desist" from publishing and demanding rates in excess of those prescribed and from practicing undue prejudice and preference and unlawful discrimination and to maintain and apply rates which will prevent and avoid undue prejudice and preference and unlawful discrimination, it is apparent that to remedy all of the violations so found the Commission seized upon its powers to prescribe through routes and joint rates under Section 15(3) and (4). This is made clear by the Commission's own statement (R. 33) that any order requiring establishment of through routes and joint rates in connection with the Rio Grande must be grounded upon the provision in Section 15 that such routes are necessary and desirable in the public interest and are "needed in order to provide adequate and more efficient or more economic transportation".

While the district court held that there was no evidence to support the Commission's finding of undue preference and prejudice in violation of Section 3(1), it held that the order (as modified and restricted by the court) "is valid under Secs. 1, 15(3) and 15(4) of the Act" and that the order is valid "for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3(4) of the Act" (R. 167, 168).

Thus, the court expressly sustains the Commission's prescription of through routes and joint rates to remedy violations of Sections 1(5) and 3(4) of the Act, and in doing so we submit that the court was plainly in error.

The Rio Grande's complaint to the Commission alleged that the combination rates were unreasonable, unduly prejudicial and preferential, and the Commission so found. The Commission has direct power to remedy violations of Sections 1 and 3 of the Act but it could not, by using that direct power, require the exact equalization of rates demanded by the Rio Grande, *Thompson v. United States*, 343 U. S. 549. Seizing upon its through route powers, the Commission "sought to accomplish by indirection" what it could not accomplish by using its direct powers to remedy violations of Sections 1 and 3 of the Act, *Central R. R. Co. v. United States*, 257 U. S. 247, 257.

That the real and ultimate purpose in ordering the through routes and equal joint rates is to satisfy the Rio Grande's demand that the specified commodities pass through points on that line en route to destinations in the eastern and southern part of the country at exactly the same rates and charges which apply via the Union Pacific, is shown by the report where it is said:

> "For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply." (R. 70)

The Rio Grande has no right to demand that traffic en route, for example, from Portland, Oregon, to New

York, N. Y., pass through points on its line, nor may the Commission, upon such demand by the Rio Grande, order a through route for that purpose for it is prohibited by Section 15(4) from requiring a through route to help a carrier financially, and "* * * there is no express requirement of law that routes *must* pass through particular intermediate points," *Pennsylvania R. Co. v. United States*, 54 F. Supp. 381, 392, affirmed, 323 U. S. 588. As this is the Rio Grande's complaint and not that of a shipper, the Commission has acted arbitrarily and erroneously in ordering that the traffic pass through points on the Rio Grande.

In order to divert the traffic to its line, the Rio Grande demanded and the Commission has given it an exact equalization of rates with the rates on the specified commodities via the Union Pacific through Wyoming. That this was the only thing sought by the Rio Grande and that the Commission invoked its through route powers to accomplish that result clearly appears from the following language of the report (R. 28-29).
